# **Balancing Trade and Health in the SPS Agreement:**

## **The Development Dimension**

DISSERTATION

to obtain the degree of doctor at Maastricht University,  
on the authority of the Rector Magnificus,  
Prof. dr. G.P.M.F. Mols,  
in accordance with the decision of the Board of Deans,  
to be defended in public on Thursday  
the 7th of May 2009, at 16:00 hours

by

Marie Denise Prévost

**Supervisor:**

Prof. dr. P.L.H. Van den Bossche

**Assessment Committee:**

Prof. dr. E.I.L. Vos (Chairperson)

Prof. dr. C. Flinterman

Prof. dr. P.J. Kuijper (University of Amsterdam)

This doctoral research benefitted from financial assistance from the VerLoren Van Themaat grant of the Utrecht Universiteitsfonds, as well as additional financing from the School of Law of Utrecht University. The publication of this book was financed by the Maastricht Fund for Education and Research in International Economic Law (MUFERIEL).

## Acknowledgements

This book has been a lengthy project, and many people have contributed to its completion in a variety of ways. To them I owe my heartfelt thanks.

In particular, I would like to express my gratitude to Peter Van den Bossche, my thesis supervisor, whose unflagging support all these years has made the completion of this book possible. His willingness to provide thoughtful input and his exceptional depth of knowledge of WTO law have made this a challenging and rewarding project. My sincere thanks are also due to the members of my doctoral assessment committee, Ellen Vos (Chair), Pieter Jan Kuijper and Cees Flinterman for reading and commenting on the manuscript.

I am also grateful to Hildegard Schneider, at whose initiative the process was started that led to the position of Ph.D candidate being offered to me by the Board of Maastricht University. Further, I would like to express my appreciation to Sacha Prechal and my other former colleagues at Utrecht University, who gave me much support in my efforts to find time for my thesis research. Most particularly, I am thankful for the friendship and encouragement extended to me by Ige Dekker. During the period in which I worked at Utrecht University, my doctoral research was facilitated by financial assistance from the School of Law of Utrecht University and the VerLoren Van Themaat grant of the U-Fonds, for which I am grateful. I would also like to thank the Law Faculty of Maastricht University for granting me a six-month sabbatical to complete this book and my current colleagues for their understanding of my limited availability in this period. I gratefully acknowledge the financial contribution of the Maastricht Fund for Education and Research in International Economic Law (MUFERIEL) towards the publication of this book.

I have been fortunate to benefit from the experience and insights of many people in the process of writing this book, who found the time in their busy schedules either to meet with me or to send me useful information. In particular, I would like to thank Gretchen Stanton, Christiane Wolff and Michael Roberts (Agriculture and Commodities Division of the WTO Secretariat), Erik Wijkstrom (Environment Division of the WTO Secretariat), Shyam Kumar Gujadhur (International Trade Centre), Shishir Priyadashi (formerly at the South Centre in Geneva, now at the Economic Research Division of the WTO Secretariat), Jörgen Schlundt (WHO), Attie Swart (formerly the South African representative to, and Chairman of, the SPS Committee), Alex Thierman (US representative in Brussels, formerly Chairman of the SPS Committee), John Wilson (World Bank), Spencer Henson (University of Reading), Koen De Feyter (formerly at Maastricht University, now at the University of Antwerp), Gideon Brückner (Dept. of Agriculture of the Western Cape, South Africa), Mike Holtzhausen (Directorate of Plant Health and Quality, National Dept. of Agriculture, South Africa), Alice Baxter (Directorate of Plant Health and Quality, National Dept of Agriculture, South Africa), Cheryl French (APHIS, USDA, Pretoria office), Verna Carolissen-Mackay (Deputy Director, Food Control, National Dept. of Health, South Africa), Engela Schlemmer (UNISA), Rosalind Thomas (SADC), Jürgen Hoffmann (Meat Board of Namibia), Urs Thomas (University of Geneva), Simonetta Zarilli (UNCTAD). Their input has been invaluable to me. Of course, they bear no responsibility for the opinions expressed in this book, and any errors are mine alone.

During my research towards this book I was privileged to intern at the Legal Affairs Division of the WTO Secretariat. This experience provided me with valuable insights into the practical application of WTO law and the day-to-day work of this organisation. I would like to express my sincere gratitude to Pieter Jan Kuijper and Gabrielle Marceau for the confidence they showed in me by giving me challenging projects to work on during my internship. I have learnt a lot from them both.

I have benefited over the years from lively and stimulating discussions with a variety of participants at capacity-building courses and workshops I have given, organised by UNCTAD, the Asser Institute, the Clingendael Institute and the Trade Law Centre for Southern Africa. Through these workshops I have been able to hear developing-country participants' first-hand experiences in dealing with WTO rules and in addressing SPS trade barriers. I am deeply grateful to them for sharing their insights with me.

The proofreading, editing, layout and cover design of this book were very skilfully done by my sister, Michelle Verwey. Her high standard of professionalism and care have contributed greatly to the result you see before you. She has worked assiduously through many pages of text and graphs to present them in a clear, uncluttered and orderly manner. I am very grateful for the numerous hours of painstaking work she cheerfully invested in this task. I could not have done this without her.

Thanks is also due to my untiring student assistants, who have, over the years, been a great help in indexing countless articles, copying piles of literature, and carrying out a variety of other thankless tasks. They have done so with enthusiasm and diligence. In particular, I would like to thank Karla Vanessa Araujo, Jurga Stanciute, Isabel Puig Palermo, Eline Post, Matilda Troost, Lorin van Nuland, Bas Megens, Willemijn Noordhoek, Siavash Shamskho and Ilaria Vianello. In the last months of my research I also benefited from the willing and committed research assistance of Ana Maria Daza Vargas. I am grateful to Wies Rayar for quickly and professionally translating the summary of this book into Dutch for me. All these people have made my work significantly easier.

Indispensable to the completion of this book have been my incomparable friends. For their friendship and support, beyond measure, I would like to thank Esther Engelhard, Eva Rieter, Ilse Van den Driessche, Mathilda Berglin, Raffaella Lombardi, Annette Hoffmann, Joanna Sudajtis, Ruth Prinsloo, Ida Wendt, Mariëlle Matthee, Andrea Ott, Constance Johnson and Belinda Ormond. If I were to thank them individually for all the many ways in which they have been there for me, the result would have more pages than this book. I am exceptionally fortunate to have them in my life. Particular thanks are due to my two 'paranimfs', Esther Engelhard and Ilse van den Driessche, for their enthusiastic assistance and thoughtful advice.

I owe a very special thanks to my partner, Paul Byrne, for his endless patience in the face of my constant working weekends and nights. His cheerful forbearance and helpfulness have made the load infinitely lighter. With his optimism and humour he has brought happiness to my life. I would not have been able to finish this book without him. I look forward to our 'post-thesis' life together.

Last, but most importantly, I would like to express my boundless gratitude for the love and support of my family, throughout this long process. I especially thank my mother, for

her unshakeable belief in the success of this project and her constant loving encouragement. This book is dedicated to her. The love, wisdom and unconditional support of my sisters, Delmence and Michelle, have been a source of strength and inspiration to me. They are my pillars. My father has passed on to me the love of reading and intellectual pursuits that made this research possible. My nieces, Lucia, Milene and Halo, my nephew Ryan and my new sister Alexandra have brought me much joy. I am truly blessed.

The manuscript of this book was completed on the 31<sup>st</sup> of August 2008. Consequently, later developments, including the report of the Appellate Body in the *Canada/US – Continued Suspension* disputes, have not been taken into account in this analysis. They will be the subject of future work.

*Maastricht, 20 January 2009*

## Table of Contents

<b>Introduction</b>	1
1. The balance between trade and health and its development dimension	2
2. The development dimension of the SPS Agreement: policy spaces and special treatment	6
3. Structure of the discussion	8
<b>Part I - Background to the SPS Agreement: On the interface between globalised trade and globalised health</b>	15
Introduction to Part I	16
Chapter 1 - The globalisation of trade: Developing countries in the world trading system	17
1.1 The normative framework: The right to development and its relevance for the world trading system	18
1.2 The definition of 'developing countries'	27
1.3 Developing countries in the early years of the GATT 1947	31
1.4 The 1965 Protocol Adding Part IV to the GATT 1947	39
1.5 The Tokyo Round: The Enabling Clause and the Codes	42
1.6 The Uruguay Round negotiations	49
1.7 From the Uruguay Round to the Seattle Ministerial Conference	55
1.8 The Doha Development Agenda	59
1.9 Conclusion	75
Chapter 2 - The globalisation of health: Addressing transboundary health risks	78
2.1 The origins of international attention to the tension between trade and health in the mid-nineteenth century	78
2.2 The science paradigm in the globalisation of health	79
2.3 The re-nationalisation of health issues in developed countries in the first half of the twentieth century	80
2.4 Return to the international approach: The globalisation of health	81
2.5 The new approach to globalised health risks at the turn of the century: International and national strategies	84
2.6 Conclusion	87
Chapter 3 - The interface between globalised trade and globalised health: Health regulations and standards and their impact on developing countries	89
3.1 The importance of the agriculture and food sector for development	89
3.2 Problems with developing country trade in agriculture and food products	92
3.3 The proliferation of health regulations and standards in developed countries	100
3.4 Impact of health regulations and standards on health and trade in developing countries	102
Conclusion to Part I	111
<b>Part II - National and international SPS regulation and standard setting</b>	113
Introduction to Part II	114
Chapter 1 - General aspects of national SPS regulation and standard setting	116
1.1 Normative framework for national sanitary and phytosanitary protection	116

1.2	Reasons for sanitary and phytosanitary regulation	126
1.3	Nature of national sanitary and phytosanitary measures	134
1.4	Costs and benefits of sanitary and phytosanitary regulation	143
1.4.1	Benefits of SPS regulation	143
1.4.2	Costs of SPS regulation	146
1.4.3	Cost/benefit analysis	150
1.5	Role of scientific analysis in national SPS regulation	152
Chapter 2 - National SPS systems in selected developed- and developing-country Members		162
2.1	Choice of WTO Members	162
2.2	Choice of information provided	164
2.3	Sources of information	169
2.4	Australia	174
2.4.1	Factual background	174
2.4.2	Australia's SPS system	188
2.4.3	Overall assessment of the SPS system of Australia	226
2.5	Mauritius	228
2.5.1	Factual background	228
2.5.2	Mauritius's SPS system	241
2.5.3	Overall assessment of the SPS system of Mauritius	251
2.6	Jamaica	252
2.6.1	Factual background	252
2.6.2	Jamaica's SPS system	264
2.6.3	Overall assessment of the SPS System of Jamaica	287
2.7	Bangladesh	290
2.7.1	Factual background	290
2.7.2	Bangladesh's SPS system	300
2.7.3	Overall assessment of the SPS system of Bangladesh	309
2.8	Conclusion: The differences between SPS regulatory systems at different levels of development	310
Chapter 3 - International SPS standard-setting		313
3.1	General aspects of international standard setting	317
3.1.1	Reasons for harmonisation of SPS regulation around international standards	317
3.1.2	Failings of harmonisation	318
3.2	International standard setting process	322
3.2.1	Codex Alimentarius Commission	326
3.2.2	International Office of Epizootics/World Organisation for Animal Health	375
3.2.3	The Secretariat of the International Plant Protection Convention and the Commission on Phytosanitary Measures	392
3.3	Conclusion	437
Conclusion to Part II		442
<b>Part III - The rules balancing trade and health in the SPS Agreement</b>		445
Introduction to Part III		446
Chapter 1 - History of the SPS Agreement		451
1.1	Rules on SPS measures before the entry into force of the SPS Agreement	451

1.1.1 The GATT 1947, Articles III, XI and XX(b)	451
1.1.2 The Tokyo Round Standards Code	470
1.1.3 Insufficiency of the GATT 1947 and the Standards Code	473
1.2 The Uruguay Round negotiations on the SPS Agreement	481
1.2.1 Background to the negotiations	481
1.2.2 Positions of the developed-country participants and the Cairns Group	488
1.2.3 Positions of the developing-country participants	505
1.3 Conclusion	512
Chapter 2 - Scope of application of the SPS Agreement	515
2.1 Substantive scope of application	516
2.1.1 The concept of an SPS measure	516
2.1.2 Effect on international trade	533
2.2 Personal scope of application	534
2.3 Temporal scope of application	559
2.4 Relationship with other WTO agreements	560
2.4.1 The TBT Agreement	561
2.4.2 The GATT 1994	564
2.4.3 The Agreement on Agriculture	570
2.5 Conclusion	571
Chapter 3 - Basic principles	576
3.1 Right to impose SPS measures	576
3.2 Basic limits to the exercise of the right to impose SPS measures	577
3.2.1 Necessity	577
3.2.2 Prohibition on arbitrary or unjustifiable discrimination or disguised restrictions on trade	581
3.2.3 Basic scientific disciplines	587
3.3 Conclusion	600
Chapter 4 - Disciplines promoting harmonisation	603
4.1 International standards, guidelines or recommendations	604
4.1.1 Appropriate standards of other relevant organisations	604
4.1.2 Nature of the relevant international norms	609
4.2 Obligations with regard to international standards	614
4.2.1 Measures based on international standards	616
4.2.2 Measures conforming to international standards	621
4.2.3 Measures providing a higher level of protection than international standards	623
4.2.4 Measures providing a lower level of protection than international standards	626
4.3 Conclusion	629
Chapter 5 - Disciplines regarding risk analysis	633
5.1 Risk assessment	636
5.1.1 Definition of a risk assessment	637
5.1.2 Risk assessment as appropriate to the circumstances	654
5.1.3 Taking into account the risk assessment techniques developed by the relevant international organisations	657
5.1.4 Relevant factors to be considered in assessing risk	660
5.1.5 Requirement that SPS measures be based on a risk assessment	665
5.2 Risk management	678

5.2.1	Concept of an appropriate level of protection	679
5.2.2	The objective of minimising negative trade effects	680
5.2.3	Avoidance of arbitrary or unjustifiable distinctions in appropriate levels of protection	681
5.2.4	Least-trade-restrictive measure	697
5.2.5	Rules on provisional measures	709
5.3	Conclusion	733
	Conclusion to Part III	738
<b>Part IV - Procedural and institutional mechanisms under the SPS Agreement</b>		<b>747</b>
	Introduction to Part IV	748
	Chapter 1 - Institutional and procedural obligations on Members	750
1.1	Recognition of equivalence	750
1.1.1	Acceptance of equivalence	753
1.1.2	Agreements on recognition of equivalence	754
1.1.3	Procedure	755
1.1.4	Examples	757
1.1.5	Problems with implementation	759
1.1.6	The Equivalence Decision	761
1.1.7	International guidelines on equivalence	766
1.2	Regionalisation	769
1.2.1	Adaptation to regional conditions	770
1.2.2	Recognition of pest- or disease-free areas or areas of low pest or disease prevalence	771
1.2.3	Procedure	772
1.2.4	Examples	772
1.2.5	Problems with implementation	775
1.2.6	Regionalisation Decision	778
1.2.7	International guidelines on regionalisation	783
1.3	Transparency obligations	785
1.3.1	Publication obligation	787
1.3.2	Notification obligation	793
1.3.3	Explanation of reasons for SPS measures	800
1.3.4	Infrastructure for transparency	803
1.3.5	Implementation of transparency obligations by selected Members	806
1.3.6	Problems with implementation	811
1.3.7	Work on improving the implementation of the transparency provisions	817
1.4	Rules regarding control, inspection and approval procedures	822
1.4.1	Scope of application	824
1.4.2	Systems of prior approval and tolerance determination	825
1.4.3	Undue delay	830
1.4.4	Less favourable treatment	831
1.4.5	Operation of procedures	833
1.4.6	Information requirements	836
1.4.7	Requirements on individual specimens	837
1.4.8	Remaining obligations	837

1.5 Conclusion	838
Chapter 2 - Institutional and procedural arrangements for administration and enforcement	842
2.1 The SPS Committee	842
2.1.1 Furtherance of the implementation of the SPS Agreement	847
2.1.2 Forum for consultations	851
2.1.3 Monitoring and promotion of international harmonisation	863
2.1.4 Periodic review of the SPS Agreement	869
2.2 Dispute settlement procedures	871
2.2.1 Overview of the WTO dispute settlement system	873
2.2.2 Burden of proof	877
2.2.3 Standard of review	884
2.2.4 Role of international law in interpretation	897
2.2.5 Expertise of panellists and the use of panel experts	907
2.2.6 Resort to other dispute resolution mechanisms	918
2.2.7 Use of the dispute settlement mechanism	920
2.3 Conclusion	932
Conclusion to Part IV	938
<b>Part V - Special provisions for developing countries in the SPS Agreement</b>	941
Introduction to Part V	942
Chapter 1 - Special and differential treatment of developing-country Members	946
1.1 Consideration of the special needs of developing-country Members	946
1.2 Longer time frames for compliance for developing-country Members	953
1.3 Reasonable adaptation period	956
1.4 Delayed compliance with the SPS Agreement	959
1.5 Time-limited exemptions from specific obligations	960
1.6 Special provisions in the notification obligations	962
1.7 Work on improving implementation of SDT provisions	963
1.8 Transparency in the provision of SDT	972
1.9 Conclusion	976
Chapter 2 - Technical assistance for developing countries	978
2.1 Technical assistance needs of developing-country Members	979
2.2 Facilitation of provision of technical assistance	985
2.3 Technical assistance for compliance with SPS measures	986
2.4 Technical assistance for participation in international standard-setting	987
2.5 Provision of technical assistance	989
2.5.1 Bilateral provision of technical assistance	990
2.5.2 Multilateral provision of technical assistance	993
2.6 Problems with the implementation of technical assistance	1010
2.7 Efforts to improve the implementation of technical assistance	1014
2.8 Conclusion	1021
Conclusion to Part V	1023
<b>Conclusion</b>	1025
1. The SPS Agreement as a product of historical developments forming its background	1026

2. The factual context of national and international SPS systems within which the SPS Agreement operates	1030
3. The relevance of the history of the SPS Agreement	1034
4. The limits of the coverage of the SPS Agreement	1035
5. The delicate trade/health balance in the regulatory disciplines	1039
6. The underestimated benefits of the procedural and institutional arrangements	1044
7. The limits of special and differential treatment for developing-country Members in the SPS Agreement	1053
8. The need to turn technical assistance into capacity building	1055
9. Concluding remarks	1057

<b>Summary</b>	i
----------------	---

1. The SPS Agreement on the interface between globalised trade and globalised health	ii
2. National and international SPS regulation and standard setting	iii
3. The rules balancing trade and health in the SPS Agreement	vi
4. Procedural and institutional mechanisms under the SPS Agreement	vii
5. Special provisions for developing countries in the SPS Agreement	xii

# Introduction

## 1. The balance between trade and health and its development dimension

The link between free trade and measures for the protection of health<sup>1</sup> is not a new phenomenon. It has been recognised since the commencement of trading activities between newly emerged city-states in the fourteenth century.<sup>2</sup> Today, however, the proliferation of health measures on the one hand and the great advancements in trade liberalisation on the other mean that the interaction between these two policy areas has assumed critical importance.

Both trade liberalisation and health protection measures pursue important societal aims, which are, respectively, economic growth<sup>3</sup> through the earning of foreign revenue<sup>4</sup> and the protection of the life and health of humans, plants and animals. However, these two societal objectives are often in conflict with each other.<sup>5</sup> On the one hand, traded products, particularly in the food and agricultural sector, can introduce risks to human, animal or plant life or health into the importing region. Examples of such risks are the spread of insect pests hosted by imported fruit or vegetables, the transfer of infectious animal

---

<sup>1</sup> Unless otherwise indicated, the word ‘health’ in this book will be used to refer to human, animal or plant life or health. Similarly, the term ‘health measures’ refers to measures for the protection of human, animal or plant life or health.

<sup>2</sup> As noted in Chapter 2 below, Fidler reports various examples of measures taken by Italian city-states to reduce health risks from traded products. See David P. Fidler, ‘Microbialpolitik: Infectious Diseases and International Relations’, *American University International Law Review* 14, 1998, 1-52, 8.

<sup>3</sup> The idea that free trade promotes economic growth was postulated in 1776 by Adam Smith, in his seminal work, *The Wealth of Nations* and refined in 1817 by David Ricardo who advanced the theory of comparative advantage. Reliance on this theory by proponents of free trade has been criticised on the grounds that the prerequisite for its validity, namely perfect market conditions, does not exist in practice. See for example Joel R. Paul, ‘Do International Trade Institutions Contribute to Economic Growth and Development?’ *Virginia Journal of International Law* 44 (1), 2003, 284-340. It is beyond the ambit of this book to examine the arguments for and against free trade in general. Instead, this book will limit itself to the generally-accepted proposition that increased market access for exports of food and agricultural products from developing countries contributes to their foreign revenue earnings and thus to their economic growth. See further on this point below, Part I, Chapter 1, Section 1.1.

<sup>4</sup> It is important to note that free trade is not an aim in itself, but rather a tool to achieve important societal objectives. This fact is reflected in the first recital in the Preamble to the *Marrakesh Agreement Establishing the World Trade Organization*, which recognises that, ‘...[Members’] relations in the field of trade and economic endeavour should be conducted with a view to raising the standards of living, ensuring full employment and a large and steadily growing volume of real income and effective demand, and expanding the production of and trade in goods and services, while allowing for the optimal use of the world’s resources in accordance with the objective of sustainable development, seeking both to protect and preserve the environment and to enhance the means for doing so in a manner consistent with their respective needs and concerns at different levels of economic development’. See ‘Marrakesh Agreement Establishing the World Trade Organization’, in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 6-18.

<sup>5</sup> In a speech given in 2004, then EU Trade Commissioner Pascal Lamy noted that a community’s ‘collective preferences’, as reflected in regulatory standards, are a reflection of societal values and may clash with the ‘collective preferences’ of trading partners. He thus stated, ‘Trade is the natural point of intersection for different systems of collective preferences.’ He argued that, ‘...the trading system...brings two legitimate demands into conflict with each other: the demand that commitments given to the WTO be honoured on the one hand and the demand to exercise legitimate social choices on the other.’ Pascal Lamy, ‘The Emergence of Collective Preferences in International Trade: Implications for Regulating Globalisation’, presented at the *Conference on Collective Preferences and Global Governance: What Future for the Multilateral Trading System?* (European Commission, Brussels) 15 September 2004, 3 and 5, available at: [http://ec.europa.eu/archives/commission\\_1999\\_2004/lamy/speeches\\_articles/spla242\\_en.htm](http://ec.europa.eu/archives/commission_1999_2004/lamy/speeches_articles/spla242_en.htm), visited on 7 June 2008.

diseases carried by imported animals or animal products and food-safety risks from inadequate hygienic standards in the production or transportation of the exported food.<sup>6</sup> On the other hand, the measures taken by importing states to protect health in their territories against such risks, whether real or perceived, are likely to act as barriers to market access for the exporting country, thereby reducing its export earnings.

These health measures can focus on human or animal life or health (sanitary measures) or on plant life or health (phytosanitary measures). Together, they are termed sanitary and phytosanitary (SPS) measures and can take many forms. One can think of examples such as regulations setting maximum residue levels for toxins or contaminants in food,<sup>7</sup> approval procedures for additives, quarantine requirements to minimise the spread of pests and diseases, labelling requirements to notify consumers of potentially harmful foodstuffs (such as allergen-containing products), regulations imposing hygiene requirements on the process or production method whereby the product is made, inspection and certification requirements, or outright bans on hazardous products.<sup>8</sup> All these measures, when applied to imports, may restrict trade.

The exponential increase in the speed and volume of trade and in the diversity of traded products in the last fifty years, and the accompanying proliferation of health risks and SPS measures, has meant that the international trade regime, currently embodied in the rules of the World Trade Organisation (WTO), has had to find new ways of mediating the conflict between free trade and health protection. Acting on the interface of globalised trade and globalised health risks, is the WTO's *Agreement on the Application of Sanitary and Phytosanitary Measures*<sup>9</sup> (*SPS Agreement*). It reflects a negotiated balance between the competing goals of the liberalisation of trade in the food and agricultural sector and the protection of health by national governments.<sup>10</sup>

Developing-country Members of the WTO have a significant interest in the way in which these two competing societal aims are balanced in the *SPS Agreement*. On one side, as agricultural products often form an important part of the merchandise export trade of several developing-country Members,<sup>11</sup> they are concerned with gaining market access

---

<sup>6</sup> A less obvious example is the outbreak of the Ebola virus and hemorrhagic fever due to international trade in wild primates captured for scientific research, as recounted in David P. Fidler, 'Return of the Fourth Horseman: Emerging Infectious Diseases and International Law', *Minnesota Law Review* 81, 1997, 771-868, note 138.

<sup>7</sup> The EC's maximum residue levels for aflatoxins are an example of such an SPS measure.

<sup>8</sup> For example, many countries banned beef imports from the European Union in response to the outbreak of foot-and-mouth disease in 2001.

<sup>9</sup> 'Agreement on the Application of Sanitary and Phytosanitary Measures', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 69-84.

<sup>10</sup> It is important to recognise that the *SPS Agreement*, like other WTO agreements, is not simply a set of rules promoting free markets in accordance with economic principles. Instead, it reflects particular policy choices about the way in which economic globalisation should be harnessed to balance free trade with other societal objectives. As stated by Joel Paul: 'The WTO is more than a mechanical application of principles of market rationality. The WTO has inscribed a wide range of policy choices onto its member states, even in ways that distort market forces. ... [International trade] institutions should acknowledge their political character and accept responsibility for the human consequences of globalization.' Joel R. Paul, 'Do International Trade Institutions Contribute to Economic Growth and Development?' *Virginia Journal of International Law* 44 (1), 2003, 284-340, 339-340. It is on the basis of such recognition that this book examines the consequences of the political balance struck in the *SPS Agreement* for developing countries.

<sup>11</sup> A 2003 study at the initiative of the Danish Association for International Cooperation indicates that developing countries are often heavily dependent on income from agricultural exports. This amounts to 16% of export

in this sector in order to earn the foreign revenue necessary to meet their development needs.<sup>12</sup> It is important not to lose sight of the consequences in human terms of lost revenue due to market barriers in this sector.<sup>13</sup> The agricultural sector provides a livelihood for the majority of the population in many developing countries, particularly the poorer and less powerful population groups in society.<sup>14</sup> Access to foreign markets for

---

income (excluding oil) for least-developed countries in general and 50%-90% for 15 countries among them. Also, these exports are often limited to a few products, making developing countries particularly vulnerable to barriers to market access for the products of export interest to them. Over 90% of Africa's agricultural export revenue comes from only cocoa, coffee, cotton, tobacco, sugar, tea, palm oil, rubber, bananas and groundnuts. The remaining 10% derives from special products important for particular countries such as cashew nuts in Tanzania and Mozambique, vanilla in Madagascar, sisal in Madagascar and Tanzania etc. See Christian Friis Bach *et al.*, *Free Trade Is Not Enough: A New Vision for the World's Poorest Farmers* (Mellemfolkeligt Samvirke, Copenhagen, Denmark), October 2003, 7. The significance of the agricultural sector for exports differs across income levels of countries. According to the *World Development Indicators* of 2008, the share of agricultural exports in total exports of goods and services in 2008 is 18% in low-income countries; 15.1% in lower-middle-income countries; 12.7% in upper-middle-income countries; and 2% in high income countries. The importance of agricultural exports also varies across countries and regions. The countries of Sub-Saharan Africa and South Asia have the highest share of world agricultural exports at 27 and 21 percent, respectively. Roumeen Islam and Gianni Zanini, *World Trade Indicators 2008: Benchmarking Policy and Performance* (World Bank, Washington D.C.), 2008, xxiii, available at: <http://info.worldbank.org/etools/wti2008/docs/mainpaper.pdf>, visited on 7 June 2008.

<sup>12</sup> The United Nations General Assembly has adopted a resolution calling on the Secretary-General of UNCTAD to designate a group of eminent persons to examine and report on commodity issues, including the impact of volatile commodity prices and declining terms of trade on the development efforts of developing countries (General Assembly Resolution 57/236 of 20 December 2002, para. 11). The report of this meeting of eminent persons indicates that they attach the highest priority to enhanced, equitable and predictable market access for commodities of key importance for developing countries and emphasises the need for urgent progress on issues such as the removal of barriers to market access for these products and problems relating to sanitary and phytosanitary measures. See General Assembly, *Report of the Meeting of Eminent Persons on Commodity Issues: Note by the Secretary General*, A/58/402 (United Nations, 2 October 2003, paras 5-6, available at: [www.un.org/ga/58/documentation/list4.html](http://www.un.org/ga/58/documentation/list4.html), visited on 25 June 2008). A subsequent UNCTAD report on commodity dependence in Africa notes that although Africa has witnessed a growth in trade relative to GDP in the past decade, its share in world exports has declined. According to this report, '[t]his phenomenon has as much to do with the structure of international trade as with the composition of Africa's merchandise trade, the trade policies applied on the continent in the past 20 years, market access and agricultural policies in industrial countries.' In examining recent developments on commodity markets, the report notes that, '... the determining factor in market entry is the capacity to upgrade and produce according to specific requirements relating to quality, health and environmental standards as well as consumer preferences and tastes. The major challenges are how to identify market opportunities and meet the specific requirements for each market... [T]echnical assistance may be required if African countries are to meet quality and health requirements, particularly in consonance with the WTO Agreement on Sanitary and Phytosanitary Measures.' United Nations Conference on Trade and Development, *Economic Development in Africa: Trade Performance and Commodity Dependence*, UNCTAD/GDS/AFRICA/2003/1 (United Nations, Geneva), 2003, 1 and 28, available at: [http://www.unctad.org/en/docs/gdsafrica20031\\_en.pdf](http://www.unctad.org/en/docs/gdsafrica20031_en.pdf), visited on 20 June 2008. In addition, the UN Special Rapporteur on the Right to Food has, in a recent report, expressed his concerns regarding the impact of protectionism in developed country agricultural markets on food security in developing countries and stated 'Today, agricultural trade is far from being free, and even further from being fair.' See Jean Ziegler, *Report Submitted by the Special Rapporteur on the Right to Food*, E/CN.4/2004/10 (United Nations Commission on Human Rights, Geneva), 9 February 2004, 7, available at: [www.unhcr.ch/huridocda/huridocda.nsf/\(symbol\)/E.CN.4.2004.10.En?opendocument](http://www.unhcr.ch/huridocda/huridocda.nsf/(symbol)/E.CN.4.2004.10.En?opendocument), visited on 6 June 2008.

<sup>13</sup> In his opening statement at a recent conference in Kampala, Ugandan president Yoweri Museveni pointed to the link between hunger and malnourishment in Africa and market barriers to African agricultural exports. See Maria Gutiérrez *et al.*, *Summary Report of the Conference on Assuring Food and Nutrition Security in Africa by 2020: 1-3 April 2004*, circulated on 5 April 2004.

<sup>14</sup> The *World Development Report* of 2008 notes that 3 of every 4 poor people in developing countries live in

their agricultural products can contribute to higher income levels and improved standards of living for these people.<sup>15</sup> However, hard-won achievements in liberalising trade in agricultural products<sup>16</sup> can easily be undermined by the misuse of SPS measures for protectionist purposes.<sup>17</sup> Developing-country Members thus depend on effective disciplines in international trade rules to limit the trade-restrictive effect of SPS measures on their export markets and to prevent them being used as disguised means to protect agricultural and food industries in the importing countries.

On the other side, one should not forget the fact that developing-country Members are also important importers of food and agricultural products,<sup>18</sup> and face sanitary and phytosanitary risks from imported products. In this respect, they have an interest in being allowed sufficient flexibility by international trade rules to enact SPS regulations appropriate to their needs and capabilities. It is therefore important to recognise that the interests balanced in the *SPS Agreement* are those of conflicting societal goals of importance to both developed and developing-country Members, rather than competing developed and developing country interests.<sup>19</sup> Nevertheless, the mechanisms used to achieve this balance

---

rural areas, and most of these depend on agriculture for their livelihoods. World Bank, *World Development Report 2008: Agriculture for Development* (World Bank, Washington D.C.), 2008, 1, available at: [http://siteresources.worldbank.org/INTWDR2008/Resources/WDR\\_00\\_book.pdf](http://siteresources.worldbank.org/INTWDR2008/Resources/WDR_00_book.pdf), visited on 27 June 2008. For this reason, the abovementioned Danish study has noted that development and growth in the agricultural sector 'can become the dynamo to create economic growth and development throughout the entire society.' See Christian Friis Bach *et al.*, *Free Trade Is Not Enough: A New Vision for the World's Poorest Farmers* (Mellempfolkeligt Samvirke, Copenhagen, Denmark), October 2003, 6.

<sup>15</sup> The other side of the coin should not be forgotten: developing countries may also benefit from reducing their own barriers to trade in the food and agricultural sector, as this can contribute to food security. Murphy notes: 'Experience shows that securing food from international markets offers important benefits to countries, including the possibility of cheaper, more varied food and an effective way to stabilize supplies in times of domestic shortfall. Bangladesh, for example, was able to use private imports of rice to make up a shortfall caused by floods that destroyed about 10 per cent of the annual rice crop in 1998. These imports were only possible because the government had liberalized its trade policies shortly before, creating the opportunity for the private sector to import and meet demand. There are all too many examples of countries whose governments have let their people starve behind closed borders, including Mengistu's Ethiopia and successive governments in North Korea, to give two extreme examples.' See Sophia Murphy, *Securing Enough to Eat* (International Institute for Sustainable Development, Winnipeg), January 2005, 11, available at: [http://www.iisd.org/pdf/2005/trade\\_securing\\_enough\\_to\\_eat.pdf](http://www.iisd.org/pdf/2005/trade_securing_enough_to_eat.pdf).

<sup>16</sup> These achievements are reflected in the *Agreement on Agriculture*, one of the products of the Uruguay Round of trade negotiations. 'Agreement on Agriculture', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 39-68.

<sup>17</sup> UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 216-217, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008. See also WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007.

<sup>18</sup> In fact, developing countries as a group have shifted from being net exporters of food and agricultural products in the 1960s to being net importers of these products in the 1990s and early 2000s. See Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 14, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>.

<sup>19</sup> Sometimes the mistaken impression is created that developing country interests in the *SPS Agreement* lie only with gaining market access for their agricultural and food exports, whereas developed countries' only concern is with maintaining sufficient flexibility in the disciplines of the *SPS Agreement* to allow them to impose high standards for imports in their SPS regulations. Instead, both groups of countries have an interest in both market access and health protection. It is the relative weight of these interests in domestic policy and

in the *SPS Agreement* may have a disparate impact on Members at different levels of development.

This book explores the balance between free trade and health protection reflected in the *SPS Agreement*, with a particular focus on its development dimension. More specifically, it addresses the question whether the *SPS Agreement* improves the opportunities of Members at lower levels of development to gain market access for their food and agricultural exports by means of effective disciplines<sup>20</sup> on the use of trade-restrictive SPS measures, while at the same time sufficiently respects the right of these, and all, WTO Members to protect health in their territories in a way that takes account of varying regulatory and institutional capacity and policy choices at different levels of development. It is in this sense that the core question addressed in this book, namely whether the *SPS Agreement* achieves an ‘appropriate’ balance between liberalising trade in the food and agricultural sector and allowing sufficient scope for health protection measures, should be understood.

## **2. The development dimension of the SPS Agreement: policy spaces and special treatment<sup>21</sup>**

The central question examined in this book, as set out in Section 1 above, is the appropriateness of the trade/health balance achieved by the *SPS Agreement* for Members at different levels of development. This question addresses what can be called the ‘development dimension’ of the balancing act conducted by the *SPS Agreement*. The ‘development dimension’ of this Agreement can be seen as composed of two distinct, but interrelated elements, which are determinative for the impact of the *SPS Agreement* on the trade and health interests of Members at different levels of development. When examining the balance achieved by the *SPS Agreement* in this book, therefore, these two complementary elements are dealt with, namely: (1) the limits of policy space; and (2) special treatment for developing-country Members.

The issue of the limits of policy space refers to the manner in which the general rights and obligations of *SPS Agreement* discipline Members’ ability to regulate to give effect

---

the capacity to use certain mechanisms to achieve a balance between these competing interests that varies between developed and developing countries.

<sup>20</sup> In this book, the term ‘disciplines’ is often used to refer to WTO rules. Although every effort has been made to avoid WTO jargon in this work, this particular instance of ‘GATT-ese’ is retained due to its aptness for describing the impact of the rules discussed on government action. Alternative terms such as ‘rules’ or ‘obligations’ do not capture the essence of the *SPS Agreement* provisions – which allow but *discipline* government health regulation – as fittingly.

<sup>21</sup> This title has been adapted from the title given to a proposal by Venezuela in the preparations for the Seattle Ministerial Conference. In that proposal, however, the ‘spaces for policies’ element referred to the recognition in WTO rules of the legitimacy of the use of market-oriented supply-policy instruments by developing countries to meet development objectives. General Council, *Preparations for the 1999 Ministerial Conference. Special and Differential Treatment and the Spaces for Policies in WTO: Two Elements of the Development Dimension in the Multilateral Trading System*, WT/GC/W/279, circulated on 29 July 1999. Here, however, a different type of policy is at issue, namely health policy, and the policy spaces refer to the limits of the scope to enact SPS measures to protect health within the rules of the *SPS Agreement*. It is in these limits that the balance between the protection of health and the liberalisation of trade in the *SPS Agreement* can be found.

to their SPS policies. These rights and obligations give effect to the underlying balance which is the objective of the Agreement. The question is whether the balance achieved is equally appropriate for Members at different levels of development. Therefore, the examination of the impact of the *SPS Agreement* in this book focuses on the way the balance is struck and the tools or mechanisms used to achieve this balance. In other words, if the *SPS Agreement* is seen as a scale on which the two competing interests are balanced, the question is whether the scale is an effective and workable instrument for *all* Members.

The balance reflected in the disciplines on policy space in the *SPS Agreement* cannot be divorced from the question of special treatment for developing-country Members. Even if an appropriate balance between trade and health is achieved in the disciplines of the *SPS Agreement*, the reality of the great disparity in the situations of Members at different levels of development necessitates special rules to address this. The issue of special treatment for developing countries thus refers to the special rules in favour of developing-country Members in the *SPS Agreement*, contained in its provisions on special and differential treatment and its rules on technical assistance. These two categories of provisions aim to address developing-country Members' capacity constraints. If the *SPS Agreement* is to be an effective balancing instrument also for the less-developed Members, it is essential to assist these Members to comply with the rules of the *SPS Agreement* and with the sanitary and phytosanitary requirements of their trading partners and to enforce their rights under this Agreement.<sup>22</sup> The question arises whether the current provisions are effective and whether there is a need for differentiation between developing-country Members in the implementation of these provisions. If effective and operational rules on special treatment of developing-country Members are included in the *SPS Agreement*, it can be ensured that these Members can use this Agreement to obtain access to markets for their food and agricultural products without paying an inordinate price through the diversion of their scarce resources to upgrading their SPS regimes. However, this objective has to be balanced against the need to ensure that it does not come at the cost of health protection in importing Members.

These two interrelated elements of the central research question form the basis of the analysis of the 'development dimension' of the provisions of the *SPS Agreement* conducted in this book.

---

<sup>22</sup> This need for assistance has been recognised in authoritative reports. In its report on how to achieve the Millennium Development Goals, the UN Millennium Project points to the problem of market access barriers in the form of 'ever more and ever higher OECD standards' and states that two things are essential for developing countries in this regard: (1) Assistance to make effective use of the *SPS* (and *TBT*) *Agreement* to ensure that standards are not abused for protectionist purposes; and (2) Assistance in creating the infrastructure and institutions necessary to comply with legitimate standards. In addition, the need for assistance to ensure substantive involvement in standard-setting activities is mentioned. UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 217, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008. Further, the Report of the Eminent Persons on Commodity Issues notes that, in order to drastically reduce poverty, and achieve diversification in productive capacity, access to markets is a necessary condition but not a sufficient one. Supply-side capacity must be developed in order for developing countries to be able to take advantage of increased market access, which necessitates financial and technical assistance. General Assembly, *Report of the Meeting of Eminent Persons on Commodity Issues: Note by the Secretary General, A/58/402* (United Nations, Geneva), 2 October 2003, para. 27, available at: [www.un.org/ga/58/documentation/list4.html](http://www.un.org/ga/58/documentation/list4.html), visited on 25 June 2008.

### 3. Structure of the discussion

The first component of the research question examined in this book is whether the disciplines on Members' ability to regulate in the areas of human, animal and plant life and health contained in the *SPS Agreement*, as interpreted by panels and the Appellate Body, strike an 'appropriate balance' between the need for increased market access and the protection of health.

This question is best understood against the factual background of two parallel processes of globalisation, namely the globalisation of trade and the globalisation of health. It is on the interface of these processes that the *SPS Agreement* is situated. Consequently, Part I of this book sketches this factual background. In particular, in Chapter 1 it looks at the historical development in the international trading system from a 'gentlemen's club' arrangement between a small group of countries to an almost global system encompassing practically all the world's trading nations. Associated to this development was the gradual realisation of the need to address the special position of developing countries in the rules of the international trade regime. The progressive steps towards the integration of developing countries into the world trading system are set out to establish the background for the examination of the 'development dimension' of the *SPS Agreement*. This background is set against the normative framework provided by the emergent recognition of the existence of a 'right to development'.

The second element of the factual background described in Part I is the process of the globalisation of health, addressed in Chapter 2. This refers to the increasing realisation of the inability of national governments acting alone to prevent health risks on their territories, due to the growth in cross-border movements of food products, plants and animals. The historical developments that have led to increasing international cooperation to deal with health risks from traded products and then later to a partial 're-nationalisation' of strategies to address these risks are examined. This description aims to create an understanding of the factual background of the complex multi-level systems of health governance against which the *SPS Agreement* operates.

The delicate position of the *SPS Agreement* on the border of the interaction between these twin aspects of the globalisation process is established in Chapter 3 of Part I. This Chapter examines the importance of trade in agricultural and food products for many developing-country Members of the WTO, and the potential of trade liberalisation in this sector to contribute to economic growth and poverty reduction. This potential is set against the trade restrictive effect of the proliferation of SPS measures and standards in developed-country Members and its consequences for developing-country exporters. This discussion aims to establish the need for effective disciplines to distinguish legitimate health protection from disguised protectionism. It is in this respect that the role of *SPS Agreement* is of crucial importance.

Part II of this book turns to examine the regulatory context within which the *SPS Agreement* operates. In order to understand the practical implications of the balance struck between trade and health in the *SPS Agreement* it is necessary to examine national and international regimes for the protection of health, and their trade implications.

Chapter 1 of Part II discusses national SPS regulation against the normative context of the duty of governments to protect life, ensure adequate food and protect public health in their territories. This normative analysis informs the later discussion on the limitations on regulatory autonomy in this area in the form of the disciplines of the *SPS Agreement*. This Chapter continues by looking at national SPS regulation from a law-and-economics perspective. This clarifies the role of private-interest influence in determining regulatory choices of government and the need for international disciplines in order to guard against this. Further this analysis elucidates the wide differences in the costs and benefits of SPS regulation for Members at different levels of development. This serves the purpose of establishing an understanding of the reasons for the different regulatory choices of Members situated at different places along the development spectrum.

The heterogeneity of WTO Members has important implications for the disparate impact of the rules of the *SPS Agreement* on Members at different levels of development. This impact does not vary only between developed- and developing-country Members, but also within the highly divergent group of ‘developing-country Members’. The range of different policy priorities and SPS regulatory regimes cannot be understood in the abstract. Consequently, in Chapter 2 of Part II four WTO Members, selected across different income levels and geographical regions, are used as illustrative examples. Thereby, this Chapter aims to afford some insight into the different ways in which Members, at different levels of development, regulate for the protection of health and thus to provide the context against which the subject matter of the disciplines of the *SPS Agreement* can be understood.

Also of importance to understanding the context of the *SPS Agreement* is an examination of international systems for the elaboration of SPS standards, discussed in Chapter 3 of Part II. These international standard-setting systems aim to facilitate trade by reducing the divergence in national SPS regulation, while promoting a minimum level of SPS protection reflected in their science-based standards. Chapter 3 starts by briefly examining the reasons for international harmonisation initiatives and the problems inherent in the standard setting process. Against this background it turns to a concrete examination of the main international bodies responsible for setting standards in the areas of human, plant and animal health and scrutinizes their objectives, membership, institutional structure and decision-making processes. Particular attention is given to the role played by developing-country Members within these standard-setting bodies. The aim of this discussion is to provide the background for understanding the implications of those disciplines of the *SPS Agreement* that encourage harmonisation of SPS measures on the basis of the SPS standards set by these international bodies.

Subsequently, in Parts III to V, the focus of this book is on the *SPS Agreement* itself and the effect of its rules on Members at different levels of development. The analysis of the *SPS Agreement* is not limited to the provisions in the *SPS Agreement* themselves, but it also examines the way in which panels and the Appellate Body have interpreted these provisions.<sup>23</sup> In each of these Parts, working through the *SPS Agreement*

---

<sup>23</sup> In the context of the negotiations regarding the reform of the *Dispute Settlement Understanding* (DSU) the Least Developed Country (LDC) group has stated: ‘A careful reading of the accumulated jurisprudence of the DS system thus far reveals that the interests and perspectives of developing countries have not been

provision-by-provision, two questions are addressed. First, do the disciplines of the *SPS Agreement* leave sufficient ‘policy space’ within which Members at different levels of development can pursue their legitimate SPS policies? Second, do these disciplines effectively enable Members at different levels of development to gain access to export markets by creating workable limits on policy space so as to prevent disguised protectionist measures? Throughout this analysis the importance of the trade/health balance which is the objective of the *SPS Agreement* is emphasised. Disturbing this balance cannot be of benefit to Members, whatever their level of development. Instead, the purpose of the analysis is to examine whether the tools used to achieve this balance in the *SPS Agreement* are useful instruments in the hands of developing-country Members.

Part III starts in Chapter 1 by setting the scene. It looks into the historical background to the *SPS Agreement*, by examining the trade rules in place before its coming into force and its negotiation history. This Chapter aims to clarify why the particular disciplines found in the *SPS Agreement* take the form that they do. Chapter 2 subsequently examines the scope of application of the *SPS Agreement* in order to demarcate from the outset the limited range of situations to which the Agreement applies, and the strong presence of the trade/health conflict in these situations. Particular attention is paid to the problem of private-sector SPS standards in this discussion.

Chapters 3 to 5 of Part III analyse those substantive rules of the *SPS Agreement* that set the limits of the policy space available to Members for SPS regulation. They examine the way in which these rules incorporate and elaborate upon the relevant rules of the *General Agreement on Tariffs and Trade* (GATT) 1947, and supplement them with new disciplines, namely, the promotion of harmonisation of SPS measures around international standards and the new science-based rules. The discussion deals, in particular, with the differences in the way in which these disciplines address two distinct stages of the regulatory process: risk assessment and risk management. While strict scientific obligations are in place to discipline the risk assessment stage, the policy choices of Members that characterise the risk management stage of regulation are left largely untouched. This analysis is useful in delimiting the policy space left to Members by the relevant substantive disciplines of the *SPS Agreement* in their efforts to distinguish health protection from trade protectionism.

---

adequately taken into account. The panels and the Appellate Body have displayed an excessively sanitized concern with legalisms, often to the detriment of the evolution of a development-friendly jurisprudence. ...’ Dispute Settlement Body Special Session, *Negotiations on the Dispute Settlement Understanding. Proposal by the LDC Group*, TN/DS/W/17, circulated on 9 October 2002, para. 5. Similarly, the African Group has stated: ‘In their interpretation and application of the provisions, the panels and the Appellate Body have in several instances exceeded their mandate and fundamentally prejudiced the interests and rights of developing-country Members as enshrined in the WTO Agreement; The panel and Appellate Body composition and operation have not been conducive to ensuring the achievement of the development objectives of the WTO and of equity in geographical distribution;...’ Dispute Settlement Body Special Session, *Negotiations on the Dispute Settlement Understanding. Proposal by the African Group*, TN/DS/W/15, circulated on 25 September 2002, para. 2. In this regard Qureshi points out that these claims made in the context of the Doha negotiations on the reform of the DSU are made on a political level and have not been accompanied by sufficient evidence substantiating these sweeping statements. However, he notes that this does not necessarily mean the claims are without merit, and argues that perceptions as to whether WTO jurisprudence facilitates the development objective are as important as the actual record. Asif H. Qureshi, ‘Interpreting World Trade Organization Agreements for the Development Objective’, *Journal of World Trade* 37 (5), 2003, 847-882, 864.

Part IV continues by looking at the institutional and procedural arrangements in place under the *SPS Agreement*. The institutional and procedural provisions contained in the *SPS Agreement* and those developed by the SPS Committee to operationalise certain substantive obligations in the Agreement have an important impact on the effectiveness of the *SPS Agreement* in achieving its goals. They aim to reduce as much as possible the trade restrictive effect of legitimate SPS measures, while not diminishing the right of Members to decide for themselves the level of SPS protection they deem appropriate in their own territories. As such, while often underestimated, these institutions and procedures have the potential to achieve much in the way of trade liberalisation, while not threatening the protection of health by Members. The examination of these provisions aims to determine the extent to which they are effective tools for exporting Members at lower levels of development to gain market access without endangering the ability of importing Members to protect health in their territories.

As noted in Section 1 above, the second aspect of the development dimension of the *SPS Agreement* relates to the special rules in place to address the particular constraints faced by developing country Members. It has been noted that '[o]ne size does not fit all',<sup>24</sup> both with regard to disciplines in *SPS Agreement* that require substantial investments for implementation (such as infrastructure for transparency) and with regard to disciplines on national regulatory measures (risk assessment etc). Therefore the provisions of the *SPS Agreement* that aim to address the special position of developing-country Members receive attention in Part V of this book. First, in Chapter 1, the special and differential treatment (SDT) provisions of the *SPS Agreement* providing additional flexibility for developing-country Members are examined. This flexibility relates to both the regulatory disciplines of the *SPS Agreement* and to compliance with the SPS requirements of their trading partners. The aim of this Chapter is to determine whether this additional 'elbow room' for developing countries sufficiently takes account of their resource constraints and

---

<sup>24</sup> The fact that 'one size does not fit all' with regard to special and differential treatment of developing countries is emphasised in Bernard Hoekman *et al.*, *More Favorable Differential Treatment of Developing Countries: Towards a New Approach in the WTO*, World Bank Policy Research Working Paper 3107 (World Bank, Washington D.C.), August 2003, 6-7, available at: [www.econ.worldbank.org/files/28991\\_wps3107.pdf](http://www.econ.worldbank.org/files/28991_wps3107.pdf), visited on 11 November 2004. A recent study under the auspices of the Danish Association for International Cooperation proposing a new vision for agricultural development of the world's poorest countries, points out that improved market access is not sufficient but must go hand-in-hand with the development of institutions, including those for monitoring and implementing SPS standards, but emphasises the fact that 'this is not a case where one size fits all' as institutions need to be adapted to the surroundings and the development of the country. See Christian Friis Bach *et al.*, *Free Trade Is Not Enough: A New Vision for the World's Poorest Farmers* (Mellemfolkeligt Samvirke, Copenhagen, Denmark), October 2003, 19. Similarly, the report of the Group of Eminent Persons convened by UNCTAD to study commodity issues noted that as problems with regard to commodity trade differ between countries due to differences in size and institutional capacity, 'there were no solutions that would fit all cases.' General Assembly, *Report of the Meeting of Eminent Persons on Commodity Issues: Note by the Secretary General, A/58/402* (United Nations, 2 October 2003, para. 45, available at: [www.un.org/ga/58/documentation/list4.html](http://www.un.org/ga/58/documentation/list4.html), visited on 25 June 2008. Finally, a recent paper published by the Institute for Global Dialogue notes that, with regard to WTO agreements with domestic regulatory content (including the *SPS Agreement*), there are limits to the one-size-fits-all approach which 'ignores the fact that policies and institutions differ according to differences in circumstance, not least comparative costs which vary with levels of development'. See Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, IGD Occasional Paper No. 36 (Institute for Global Dialogue, Braamfontein, January 2003, 26, available at: [www.idgd.org.za/pub/OP/OP36.rtf](http://www.idgd.org.za/pub/OP/OP36.rtf), visited on 6 November 2003.

thereby avoids unreasonable limitations to their policy space in the area of health regulation. The possibilities to operationalise SDT provisions in the *SPS Agreement* through effective treaty interpretation by panels and the Appellate Body and through ongoing work in the SPS Committee to improve the implementation of SDT are discussed. The limits of these possibilities are examined.

In Chapter 2 of Part V, the provisions of the *SPS Agreement* that deal with technical assistance to developing-country Members are addressed, as is their operation in practice. It is important to recognise that barriers to market access in the form of unjustified SPS measures are not the only constraints that developing countries face with regard to their exports of food and agricultural products. Another major constraint is the lack of supply-side capacity, including the inability to meet strict, but legitimate, SPS requirements and the high costs faced by firms in developing countries due to the lack of the necessary infrastructure for compliance.<sup>25</sup> Technical and financial assistance can play a useful role in building institutional and trade capacity.<sup>26</sup> For this reason, a brief examination of selected technical assistance initiatives, both at bilateral and at multilateral level, is undertaken to determine whether enough is being done to address developing country needs in this regard.

In examining both the rules on SDT and the provision of SPS-related technical assistance, an overarching question is whether there is a need for differentiation between developing-country Members, in line with the current discussion on this issue with regard to WTO rules in general.<sup>27</sup> In accordance with the basic premise in this book that any serious effort to address the needs of developing-country Members must take account of the reality of

---

<sup>25</sup> In its report regarding the types of problems that producers face in accessing the EU market, the Secretariat of the Common Market for Southern Africa noted that, 'These problems can be placed into two main categories, these being capacity constraints (such as lack of market information, lack of laboratory equipment and technical staff, lack of infrastructure, etc) and market access constraints. There is sometimes no clear defining line between the two...' See COMESA Secretariat, *Market Access Constraints* (Common Market for Southern Africa, Lusaka), 2003, para. 32, available at: [www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en](http://www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en), visited on 10 January 2008.

<sup>26</sup> In the context of the WTO Work Programme on Small Economies, a group of landlocked developing countries submitted a series of proposals, including that technical assistance be given to small economies to obtain the knowledge and technical infrastructure necessary to comply with SPS requirements on their export markets. See Committee on Trade and Development, *Proposals Submitted by the Landlocked Developing Countries - Work Programme on Small Economies: Communication by Paraguay on Behalf of the Delegations of Bolivia, Mongolia, and Paraguay*, WT/COMTD/SE/W/10, circulated on 27 April 2004, para. 4. Similarly, recently, the trade ministers of the least-developed countries, meeting in Dakar, adopted the Dakar Declaration regarding their position on the Doha Round of multilateral trade negotiations, in which they call for WTO Members to exercise restraint in applying SPS measures to products from LDCs and for technical and financial assistance to be provided to assist these countries in developing facilities and systems for compliance with SPS export requirements. See Third LDC Trade Ministers' Meeting, *Dakar Declaration*, (Dakar, Senegal), 4-5 May 2004, para. 6(b), available at: [www.enda.sn/english/dakardec.htm](http://www.enda.sn/english/dakardec.htm), visited on 25 June 2007.

<sup>27</sup> In a post-Cancun analysis of the implications of the failure of the Ministerial Conference, Hoekman suggests that the concept of SDT must be revisited, requiring, at a minimum, greater differentiation between countries in determining the scope and content of SDT. Hoekman believes that a new framework for SDT 'could do much to move the market access agenda forward, and could also facilitate movement on domestic regulatory policies where members agree cooperation is beneficial'. See Bernard Hoekman, *Cancun: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 4, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>, visited on 5 December 2003.

the wide divergence within the heterogeneous group of developing-country Members, the question arises whether this reality must be given effect through differentiated rules. This issue is touched upon in Part V.

Finally, this book draws upon the discussions in Parts I to V to reach conclusions regarding the development dimension of the *SPS Agreement*. In its Conclusion it evaluates whether the disciplines on policy space contained in the relevant substantive rules of the *SPS Agreement* together with the procedural arrangements under the Agreement achieve a balance between trade and health that is workable for Members at different levels of development. The balance achieved is evaluated in the light of the previous discussion of the differences in national SPS regimes, and in participation in international standard setting, of Members at different levels of development. On the basis of this evaluation, the question is addressed whether changes are necessary to reflect developing-country Members' constraints and priorities in the rules of the *SPS Agreement* and in their interpretation by panels and the Appellate Body. Further, the Conclusion examines whether the difficulties faced by developing-country Members in fully benefiting from the *SPS Agreement* should rather be redressed through its special provisions for developing-country Members, in the form of SDT and technical assistance. Finally, suggestions are made with regard to the need for strengthening and operationalising the technical assistance provisions in the *SPS Agreement* in order to make the trade/health balance achieved in the Agreement workable for developing-country Members. In this respect, the need for further research in this area is identified.

## Part I

---

**Background to the SPS Agreement:  
On the interface between  
globalised trade and globalised health**

---

## Introduction to Part I

Part I of this book provides the background necessary for a full understanding of the research problem, and the development focus adopted therein. In particular, it examines the parallel processes of globalisation<sup>1</sup> in the area of trade and in the area of health, in order to situate the *SPS Agreement* in this context.

It does so firstly by examining, in Chapter 1, the role of developing countries in the world trading system to determine why an examination of the development dimension of international trade rules, and more specifically on the *SPS Agreement*, is urgently needed. The progressive integration of developing countries into the trading system is referred to as the *globalisation of trade* for purposes of this book.

Secondly, Chapter 2 sketches the historical developments relating to the recognition of the *globalisation of health* in the face of transboundary health risks and the initiatives for international cooperation in this regard. It examines the role of scientific developments in this process, and the impact thereof on developing countries.

These dual aspects of the process of globalisation are brought together, and related to the core theme of this research, in Chapter 3 by means of an examination of the importance of regulations and standards imposed to address globalised health risks for developing country trade.

The Conclusion to Part I situates the *SPS Agreement* on the interface between globalised trade and globalised health.

---

<sup>1</sup> For purposes of this book, the term ‘globalisation’ will be used to refer to the process by which national borders become less important due to global forces (such as trade liberalisation and cross-border movement of unsafe food, pests and diseases), and national governments’ ability to exercise their sovereignty consequently diminishes.

## CHAPTER 1

### The globalisation of trade: Developing countries in the world trading system

Since the end of the colonial period and the accompanying emergence of new sovereign nations, the development of these nations and their integration into the international economy has been the focus of increasing international attention.<sup>1</sup> In examining the development dimension of the *SPS Agreement*, both the evolving understanding of what ‘development’ entails and the changing manner in which the world trading system has addressed the need to integrate developing countries deserve attention.

The concept of development has been subject to different interpretations in different periods. Zalaquette identifies these as ranging from the notion, in the 50s, that development means mere economic growth through the idea, in the 70s, that development requires a ‘New International Economic Order’, self-reliance, or the satisfaction of basic needs, to the current understanding that development entails the realisation of all human rights.<sup>2</sup> It is within this current understanding of development that the discussion of the impact of the rules of the international trade regime on development takes place. Therefore, this Chapter starts by examining the normative framework created by the emergent right to development and its relevance for the world trading system.

Any attempt to provide suggestions for reform of world trade rules to make them more supportive of development occurs against the background of previous such initiatives. It should therefore be based on an understanding of the effect of previous attempts to give special treatment to developing countries in trade rules on their position in the world trading system.

The position of and role played by developing countries in the international trading system has evolved over time. This Chapter traces this development in order to demonstrate the increasing significance of world trade rules for developing countries and the changing role played by these countries in the creation and implementation of these rules. It is in this evolving context that the process of globalisation of trade must be understood to elucidate the disparate effects of this process on developed and developing countries.<sup>3</sup> This highlights the fact that globalisation of trade implies neither equally effective participation in trade nor equal costs and benefits of trade across the globe. In fact, recent studies

---

<sup>1</sup> Although the term development only became widely used during decolonisation, the idea that international cooperation for development was needed was already present in the Charter of the United Nations, where members undertook to promote ‘higher standards of living, full employment and conditions of economic and social progress and development’. Charter of the United Nations, 26 June 1945, Article 55(a).

<sup>2</sup> José Zalaquette, ‘The Relationship between Development and Human Rights’, in *Food and Human Rights*, Asbjorn Eide, *et al.* (eds.) (The United Nations University, Tokyo), 1984, 141-151, 145.

<sup>3</sup> A 2003 IMF working paper has shown, using an econometric model of economic analysis, that although the GATT and later the WTO have had a powerful and positive impact on trade, this impact has been uneven. The increase in trade has been mostly in developed countries and has had little impact on sectors subject to high protection on developed countries, such as agriculture and textiles. Arvind Subramanian and Wei Shang-Jin, *The WTO Promotes Trade, Strongly but Unevenly*, WP/03/185 (International Monetary Fund), September 2003, 20-21, available at: [www.imf.org/external/pubs/cat/longres.cfm?sk=16822.0](http://www.imf.org/external/pubs/cat/longres.cfm?sk=16822.0), visited on 26 November 2003.

show that, with the exception of East Asian and Central American countries, developing countries' share in world exports of goods has hardly increased in the last 20 years.<sup>4</sup> South American, African and Central and Eastern European countries now actually have smaller shares in total world exports of goods than they had in 1960.<sup>5</sup>

Previous attempts to address these uneven effects by means of providing special and differential treatment (SDT)<sup>6</sup> to developing countries must be examined in order to learn from the successes and mistakes of the past. This discussion establishes the background for this study and makes clear why the position of developing countries merits special attention in the context of the *SPS Agreement*. It aims to provide the framework for evaluating the current rules with regard to their development dimension.

The following discussion attempts to sketch this context in broad lines, focusing on the main developments both under the GATT 1947 regime and under the WTO, that have had an impact on the role of developing countries in the world trading system. It does not pretend to offer an exhaustive analysis of this topic (something that has been extensively and very ably done by others),<sup>7</sup> but limits itself to providing the basic understanding necessary for purposes of the thesis developed in this book.

### 1.1 The normative framework: The right to development and its relevance for the world trading system

The law of the international trading system is not an isolated system, but is part of public international law.<sup>8</sup> There is widespread recognition of the need to ensure coherence

---

<sup>4</sup> In the period 1980-2002, developing countries' exports of goods grew by 7.6%. However, in that same period, their share of world exports of goods increased by only 2.3%. United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, 49, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008.

<sup>5</sup> The share in world merchandise exports of African countries decreased from 7.6% in 1960 to 5.4% in 2002, that of South American countries from 5.6% to 2.1% and that of Central European countries from 10.6% to 4.9%. *Ibid.*, 51.

<sup>6</sup> Special and differential treatment for developing countries encompasses preferential market access, non-reciprocity in trade negotiations and greater freedom to use trade policies than would otherwise be allowed under world trade rules. Bernard Hoekman *et al.*, *More Favorable Differential Treatment of Developing Countries: Towards a New Approach in the WTO*, World Bank Policy Research Working Paper 3107 (World Bank, Washington D.C.), August 2003, available at: [www.econ.worldbank.org/files/28991\\_wps3107.pdf](http://www.econ.worldbank.org/files/28991_wps3107.pdf), visited on 11 November 2004.

<sup>7</sup> See for example: E.A. Aghatise, *GATT and Developing Countries: The Tokyo Round and After*, (Benin, 1980) (manuscript on file with author); Muchkund Dubey, *An Unequal Treaty - World Trading Order after GATT* (New Age International, India), 1996; Sidney Golt, *Developing Countries in the GATT System* (Trade Policy Research Centre, London), 1978; Robert E. Hudec, *Developing Countries in the GATT Legal System* (Gower, London), 1987; Sheila Page *et al.*, *The GATT Uruguay Round: Effects on Developing Countries*, 2 ed. (Chameleon Press, London), 1992; Chakravarthi Raghavan, *Recolonization - GATT, the Uruguay Round and the Third World* (Third World Network, Penang), 1990; T.N. Srinivasan, *Developing Countries and the Multilateral Trading System - from GATT to the Uruguay Round and the Future* (Westview, Boulder, Colorado), 1998; Diana Tussie, *The Less Developed Countries and the World Trading System - a Challenge to the GATT* (Pinter, London), 1987.

<sup>8</sup> As noted by Joost Pauwelyn, 'WTO law is not a secluded island but part of the territorial domain of international law. The WTO, important as it may be, must thus be put in perspective. For public international law at

between the various functional areas of international law.<sup>9</sup> This is also true for the relationship between international trade law and international human rights law.<sup>10</sup> Consequently, a discussion of the impact of the rules of the international trading system on development necessarily occurs in the normative framework created by human rights law, and in particular the emerging recognition of a ‘right to development’. As Ernst-Ulrich Petersmann aptly states:

Even though WTO law nowhere explicitly refers to human rights, it serves manifold “human rights functions” across frontiers. Given the widespread bias among human rights lawyers vis-à-vis economics and WTO law, and the agnostic attitude of many trade specialists vis-à-vis human rights, it is an important task of academics to promote more dialogue and a better understanding among these different communities of trade specialists and human rights lawyers so as to render both human rights law and WTO law more effective in dealing with worldwide poverty, health and human rights problems.<sup>11</sup>

Discussion regarding the concept of a ‘right to development’ started in the 70s.<sup>12</sup> This right was later explicitly recognised in the United Nations *Declaration on the Right to*

large, this approach pleads for the unity of international law, not its fragmentation.’ Joost Pauwelyn, *Conflict of Norms in Public International Law: The Example of the World Trade Organization: Internal Hierarchy and How WTO Law Relates to Other Rules of International Law*, Doctoral Thesis, Faculté de Droit (Université de Neuchâtel, Neuchâtel), 2001, 2. The fact that WTO agreements should not be read ‘in clinical isolation from public international law’ was recognised in Appellate Body Report, *US – Gasoline*, 16.

<sup>9</sup> This recognition gave rise to the initiative of the International Law Commission in 2000 to address in its work programme the issue of the risks ensuing from the fragmentation of international law. In 2002, it created a Study Group on this issue, which prepared the following report: International Law Commission, *Fragmentation of International Law: Difficulties Arising from the Diversification and Expansion of International Law. Report of the Study Group of the International Law Commission*, A/CN.4/L.682 (United Nations General Assembly, Geneva), 13 April 2006. On the issue of fragmentation of international law, and the possibility of using cross-regime linkages to address this problem, see Oren Perez, ‘Multiple Regimes, Issue Linkage, and International Cooperation: Exploring the Role of the WTO’, *University of Pennsylvania Journal of International Economic Law* 26 (4), 2005, 735-778.

<sup>10</sup> Ernst-Ulrich Petersmann argues that: ‘the universal recognition of human rights as part of *general international law* requires a human rights framework for *all areas* of international law and international organisations so as to render human rights more effective and promote better coherence of national and international law and policies. The state centred tradition of treating individuals as mere objects of international law, and the contradictory behaviour of governments paying lip service to human rights in UN bodies but advocating “realpolitik” without regard to human rights in “specialized” international organizations, are inconsistent with the legal primacy and constitutional functions of human rights.’ Ernest-Ulrich Petersmann, ‘Time for a United Nations’ “Global Compact” For Integrating Human Rights into the Law of Worldwide Organizations: Lessons from European Integration Law for Global Integration Law’, in *Trade and Human Health and Safety*, George A. Bermann and Petros C. Mavroidis (eds.), Columbia Studies in WTO Law and Policy (Cambridge University Press, Cambridge), 2006, 271-326, 275. Pauwelyn argues that human rights norms have an ‘integral’ character and ‘have a standing that is, in many respects, higher than norms establishing mere reciprocal or concessionary obligations’ such as those of the international trade regime. Joost Pauwelyn, *Conflict of Norms in Public International Law: The Example of the World Trade Organization: Internal Hierarchy and How WTO Law Relates to Other Rules of International Law*, Doctoral Thesis, Faculté de Droit (Université de Neuchâtel, Neuchâtel), 2001, 16.

<sup>11</sup> Ernest-Ulrich Petersmann, ‘Time for a United Nations’ “Global Compact” For Integrating Human Rights into the Law of Worldwide Organizations: Lessons from European Integration Law for Global Integration Law’, in *Trade and Human Health and Safety*, George A. Bermann and Petros C. Mavroidis (eds.), Columbia Studies in WTO Law and Policy (Cambridge University Press, Cambridge), 2006, 271-326, 313.

<sup>12</sup> This was seen as a third generation right, a category referring to ‘solidarity rights’ belonging to peoples

*Development* in 1986,<sup>13</sup> which stated that the right to development is ‘an inalienable human right by virtue of which every human person and all peoples are entitled to participate in, contribute to, and enjoy economic, social, cultural and political development, in which all human rights and fundamental freedoms can be fully realised.’<sup>14</sup> An emerging international consensus<sup>15</sup> on the existence of a right to development was evinced in the *Vienna Declaration and Programme of Action* of the Second World Conference on Human Rights in 1993, which ‘reaffirm[ed] the right to development, as established in the *Declaration on the Right to Development*, as a universal and inalienable right and an integral part of fundamental human rights.’<sup>16</sup> In addition, the UN High Commissioner for Human Rights has been expressly mandated to play an important role in the realisation of the right to development,<sup>17</sup> and both an open-ended working group and an independent expert on the right to development have been appointed.<sup>18</sup>

The right to development is understood to entail the progressive realisation of all civil, political, economic, social and cultural rights. The right to development encompasses the right of persons to *both* the improved realisation of the various human rights (i.e. an out-

and covering global concerns. Stephen Marks, ‘The Human Right to Development: Between Rhetoric and Reality’, *Harvard Human Rights Journal* 17, 2004, 137-168, 138, available at: <http://www.law.harvard.edu/students/orgs/hrj/current/marks.shtml#Heading160>, visited on 3 June 2005. Solidarity rights have a plurality of beneficiaries and subjects of the right (interview with Koen de Feyter, Maastricht University, 2 December 2003).

<sup>13</sup> This Declaration was adopted by a UN General Assembly resolution and is thus not legally binding, as is confirmed by the hortatory language in its provisions. See General Assembly, *Declaration on the Right to Development*, G.A. Resolution 41/128 U.N. GAOR, 41st Sess., Supp. No. 53, at 186, U.N. Doc. A/41/53 (United Nations, Geneva), 4 December 1986, available at: [www.unhcr.ch/html/menu3/b/74.htm](http://www.unhcr.ch/html/menu3/b/74.htm), visited on 25 June 2007. It was adopted by a majority of 146 countries in favour, with the US voting against and 8 countries abstaining (Australia, Austria, Belgium, Ireland, Japan, Norway and the UK).

<sup>14</sup> *Ibid.*, Article 1.1.

<sup>15</sup> For an interesting analysis on the US position in relation to this emerging consensus, see Stephen Marks, ‘The Human Right to Development: Between Rhetoric and Reality’, *Harvard Human Rights Journal* 17, 2004, 137-168, available at: <http://www.law.harvard.edu/students/orgs/hrj/current/marks.shtml#Heading160>, visited on 3 June 2005. Marks discusses various reasons for the US opposition to most instruments recognising the right to development as an international human right, including where such instruments acknowledge economic, social and cultural rights and duties, where they propose regulation of state behaviour, or where they challenge the neoliberal approach of the US. However, Marks notes that US practice in development assistance, while refraining from reference to the right to development, does reflect some principles of this right. *Ibid.* 151-152.

<sup>16</sup> World Conference on Human Rights, *Vienna Declaration and Programme of Action*, UN Doc. A/CONF.157/23, Vienna), 25 June 1993, para. 10. This Declaration and Programme of Action was adopted unanimously by international consensus of the representatives of 171 countries, indicating that the US had dropped its opposition to the emergence of a right to development. It was endorsed by the UN General Assembly in Resolution 48/141 of 1993. See G.A. Res. 48/141, U.N. GAOR, 48th Sess., Supp. No. 49, at 261, U.N. Doc. A/48/141 (1993).

<sup>17</sup> UN General Assembly Resolution 48/141, U.N. GAOR, 48<sup>th</sup> Sess., Supp. No. 49, at 261, UN Doc. A/48/141 (1993).

<sup>18</sup> UN Commission on Human Rights, Resolution 72 U.N. ESCOR, 44<sup>th</sup> Sess., Supp. No. 3, at 229, UN Doc. E/CN.4/1998/177 (1998). This resolution recommended that the Economic and Social Council establish these two organs. The Open-Ended Working Group on the right to development is intended to monitor and review the progress of the Independent Expert and to report back to the Commission on Human Rights. The Independent Expert was mandated to present a study on the state of progress in the implementation of the right to development to each session of the Open-Ended Working Group, as a basis for focused discussion. Dr Arjun Sengupta was appointed as the Independent Expert and wrote 6 reports on the right to development.

come) and to the *process* of realising this outcome.<sup>19</sup> The role of international cooperation in promoting development<sup>20</sup> and the responsibility of states for the creation of favourable international conditions for the realization of the right to development<sup>21</sup> are recognised. It is, however, generally accepted that the primary responsibility for promoting development within its territory lies with the developing state itself.<sup>22</sup>

The status of the right to development is not yet definitively established, and its content has not yet fully crystallised. It is thus not possible to derive from it a binding obligation on states or international organisations to contribute to development in specific ways.<sup>23</sup>

<sup>19</sup> Arjun Sengupta, *Review of Progress and Obstacles in the Promotion, Implementation, Operationalization, and Enjoyment of the Right to Development. Consideration of the Sixth Report of the Independent Expert on the Right to Development: Implementing the Right to Development in the Current Global Context*, UN Doc. E/CN.4/2004/WG.18/2 (UN Commission on Human Rights, Geneva), 17 February 2004, para. 3. This report clarifies that both the ends and the means of the process are to be treated as a right.

<sup>20</sup> The role of the international community in promoting development has been recognised in several key documents. The *Declaration on the Right to Development* notes, in Article 4.1 that ‘States have the duty to take steps, individually and collectively, to formulate international development policies with a view to facilitating the full realisation of the right to development’ and in Article 4.2 that ‘[a]s a complement to the efforts of developing countries, effective international co-operation is essential in providing these countries with appropriate means and facilities to foster their comprehensive development.’ General Assembly, *Declaration on the Right to Development*, G.A. Resolution 41/128 U.N. GAOR, 41st Sess., Supp. No. 53, at 186, U.N. Doc. A/41/53 (United Nations, Geneva), 4 December 1986, Article 4, available at: [www.unhcr.ch/html/menu3/b/74.htm](http://www.unhcr.ch/html/menu3/b/74.htm), visited 15 June 2007. The Vienna Declaration of the World Conference on Human Rights provides that ‘... The international community should promote an effective international cooperation for the realisation of the right to development and the elimination of obstacles to development.’ World Conference on Human Rights, *Vienna Declaration and Programme of Action*, UN Doc. A/CONF.157/23, Vienna, 25 June 1993, para.10. The *Agenda for Development*, presented by the then UN Secretary-General Boutros-Gali in 1994, which seeks to set out a vision of development for the central UN bodies and organs, also refers to the role of the ‘international climate’ for the realisation of development. Boutros Boutros-Ghali, *An Agenda for Development*, UN Doc. A/48/935 (United Nations, 6 May 1994, para. 46, available at: [www.un.org/Docs/SG/agdev.html](http://www.un.org/Docs/SG/agdev.html), visited 25 June 2007. The Independent Expert on the Right to Development noted in 2004 that while the primary responsibility for translating the potential of the market to contribute to the realisation of the right to development lies with the state, ‘there is a definite and significant role for international development cooperation.’ Arjun Sengupta, *Review of Progress and Obstacles in the Promotion, Implementation, Operationalization, and Enjoyment of the Right to Development. Consideration of the Sixth Report of the Independent Expert on the Right to Development: Implementing the Right to Development in the Current Global Context*, UN Doc. E/CN.4/2004/WG.18/2 (UN Commission on Human Rights, Geneva), 17 February 2004, 2.

<sup>21</sup> Article 3.1 of the Declaration provides for the responsibility of states for the creation of ‘international conditions favourable to the realization of the right to development’ General Assembly, *Declaration on the Right to Development*, G.A. Resolution 41/128 U.N. GAOR, 41st Sess., Supp. No. 53, at 186, U.N. Doc. A/41/53 (United Nations, Geneva), 4 December 1986, Article 3.1, available at: [www.unhcr.ch/html/menu3/b/74.htm](http://www.unhcr.ch/html/menu3/b/74.htm), visited 25 June 2007. This Article also refers to the responsibility for the creation of such conditions on national level. The Vienna Declaration of the World Conference on Human Rights notes that ‘[l]asting progress towards the implementation of the right to development requires... equitable economic relations and a favourable economic environment at the international level.’ World Conference on Human Rights, *Vienna Declaration and Programme of Action*, UN Doc. A/CONF.157/23, Vienna, 25 June 1993, para.10.

<sup>22</sup> The *Declaration on the Right to Development* provides in Article 2.3 that ‘States have the right and duty to formulate appropriate national development policies...’ and in Article 8.1 that ‘States should undertake, at the national level, all necessary measures for the realisation of the right to development...’ and gives a non-exhaustive list of what this entails. General Assembly, *Declaration on the Right to Development*, G.A. Resolution 41/128 U.N. GAOR, 41st Sess., Supp. No. 53, at 186, U.N. Doc. A/41/53 (United Nations, Geneva), 4 December 1986, Articles 2.3 and 8.1, available at: [www.unhcr.ch/html/menu3/b/74.htm](http://www.unhcr.ch/html/menu3/b/74.htm), visited 25 June 2007. See also Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 23 and 26.

<sup>23</sup> In 2003, the UN Commission on Human Rights requested the Sub-Commission on the Promotion and

The value of the *Declaration on the Right to Development* lies, instead, with the establishment of a link between development and human rights.<sup>24</sup> The subsequent *Vienna Declaration and Programme of Action* builds upon this recognition. The alleviation of poverty was therein, for the first time, recognised as a human rights goal,<sup>25</sup> and the fact that development and respect for human rights are interdependent and mutually reinforcing was expressly acknowledged.<sup>26</sup> Development can no longer be seen purely from an economic growth perspective, but must take into account the impact of development strategies, including in the area of trade liberalisation, on human rights.<sup>27</sup> With regard to the link between trade liberalisation, development and human rights, the then UN High Commissioner for Human Rights, Mary Robinson noted:

Despite the lack of data, the links between trade, development, and human rights are increasingly plain to see - from the impact of open markets on jobs in developed countries to the implementation of labour and environmental standards in developing countries, from the question of trade-restrictive barriers to protect public health to barriers to full participation by developing countries in the international economic system. These are just some difficult issues that must be addressed if we are to ensure that the global economy contributes to the realization of all human rights for all people... It should be recognized that human rights norms and standards are as relevant to the fields of international trade, finance and investment as to any other area of human activity. The pursuit of equitable development and fair trade are legitimate human rights concerns.<sup>28</sup>

---

Protection of Human Rights to prepare a draft document with options for the implementation of the right to development, including a binding international standard. This resolution was adopted with 47 countries in favour, 3 against (the US, Australia and Japan) and three abstentions (Canada, Korea and Sweden). Commission on Human Rights, Resolution 2003/83, UN Doc. E/CN.4/RES/2003/83 (2003). The Sub-Commission on the Promotion and Protection of Human Rights delegated the task of preparing a working paper on this issue to one of its members, who submitted this paper in 2005. This report states: 'It can be argued that the right to development is inextricably linked to both civil and political rights and economic, social and cultural rights and requires national implementation of those legally binding obligations that are already set out in the two International Covenants on Human Rights.' However, it notes that there are 'strong differences of opinion among legal luminaries as to whether the right to development can be placed within a legally binding framework.' United Nations Commission on Human Rights, *Concept Document on the Right to Development. Working Paper Submitted by Florizelle O'Connor*, E/CN.4/Sub.2/2005/23 (Sub-Commission on the Promotion and Protection of Human Rights, Geneva), 24 June 2005, paras 13 and 14.

<sup>24</sup> Interview with Koen de Feyter, 2 December 2003.

<sup>25</sup> World Conference on Human Rights, *Vienna Declaration and Programme of Action*, UN Doc. A/CONF.157/23, Vienna), 25 June 1993, paras 14 and 25. See also Manfred Nowak, *Introduction to the International Human Rights Regime*, vol. 14 (Martinus Nijhoff Publishers, Leiden/Boston), 2003, 150.

<sup>26</sup> World Conference on Human Rights, *Vienna Declaration and Programme of Action*, UN Doc. A/CONF.157/23, Vienna), 25 June 1993, para. 74. This paragraph states in relevant part: '...Actors in the field of development cooperation should bear in mind the mutually reinforcing interrelationship between development, democracy and human rights...'

<sup>27</sup> As stated by Florizelle O'Connor: 'There is a tendency to focus on things that are easier to measure, like economic growth statistics. This type of measurement can be very misleading from a human rights perspective. There is a need to find genuine, effective indicators of true development progress from a human rights perspective.' United Nations Commission on Human Rights, *Concept Document on the Right to Development. Working Paper Submitted by Florizelle O'Connor*, E/CN.4/Sub.2/2005/23 (Sub-Commission on the Promotion and Protection of Human Rights, Geneva), 24 June 2005, para. 33.

<sup>28</sup> M. Robinson, 'Making the Global Economy Work for Human Rights', in Gary P. Sampson, ed., *The Role of the WTO in Global Governance* (United Nations University Press, 2001).

The relevance of the right to development for the world trading system therefore lies in the fact that a state or an organisation whose activities have an impact on development must take full account of the human rights implications of its actions.<sup>29</sup> This is also true for the states and organisations that form part of the international trading system.<sup>30</sup> For this reason, while the economic growth achievements of international rules on trade liberalisation are important to promote development, they cannot come at the cost of other rights, such as human life, health and access to safe food.<sup>31</sup> Instead, mechanisms must be found to appropriately balance these competing goals. The *SPS Agreement* may be seen as an attempt to achieve such a balance.

It is important to bear in mind that the goals of trade liberalisation and health are not always competing, but can also be mutually reinforcing. In his book *Development as Freedom*, Amartya Sen, Nobel laureate for economics, emphasised the link between development and various rights or freedoms and the interaction between social and economic freedoms as follows:

Development requires the removal of major sources of unfreedom: poverty as well as tyranny, poor economic opportunities as well as systematic social deprivation, neglect of public facilities as well as intolerance or overactivity of repressive states. Despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers--perhaps the majority--of people. . . Freedoms are not only the primary ends of development, they are also among its principal means. In addition to acknowledging, foundationally, the evaluative importance of freedom, we also have to understand the remarkable empirical connection that links freedoms of different kinds with one another. Political freedoms (in the form of free speech and elections) help to promote economic security. Social opportunities (in the form of education and health facilities) facilitate economic participation. *Economic facilities (in the form of opportunities for participation in trade and production) can help generate personal abundance as well as public resources for social facilities.* Freedoms of different kinds can strengthen one another.<sup>32</sup>

Economic growth has been called the ‘engine of development as a whole’ in the *Agenda for Development* presented in 1994 by the then UN Secretary-General Boutros Boutros-

---

<sup>29</sup> Nowak notes that the new awareness of the correlation between poverty, development and human rights, as reflected in the results of the second World Conference on Human Rights and the first World Social Summit in Copenhagen on 6-12 March 1995, led the World Bank and the International Monetary Fund to introduce their ‘poverty reduction strategy papers’, which make poverty reduction and debt relief the main focus of their new and comprehensive development framework. Manfred Nowak, *Introduction to the International Human Rights Regime*, vol. 14 (Martinus Nijhoff Publishers, Leiden/Boston), 2003, 151.

<sup>30</sup> Fox states: ‘A world trade organization of the twenty-first century must be sufficiently copious or porous to take account of the values on which it treads – or on which critical masses believe it treads. Isolation of trade from its impacts is not an appropriate option for the world.’ Eleanor M. Fox, ‘The Prospective Role of Economic and Social Human Rights in the Law of International Trade Liberalization and Economic Integration: Globalization and Human Rights: Looking out for the Welfare of the Worst Off’, *NYU Journal of International Law and Politics* 35, 2002, 201-220, 210.

<sup>31</sup> The right to health and the right to food are discussed below, Part II, Section 1.1.

<sup>32</sup> Amartya Sen, *Development as Freedom*, 1st ed. (Knopf, New York), 1999, 3-4, 10-11 (emphasis added).

Ghali.<sup>33</sup> Further, he expressly recognised that the ‘expansion of international trade is essential to economic growth and is an integral part of the economic dimension of development.’<sup>34</sup> This is a generally accepted proposition.<sup>35</sup> In order for developing countries to secure the resources necessary for their development needs, they need access to the markets of their trading partners.<sup>36</sup> Opening up their own markets to imports can also promote growth in developing countries,<sup>37</sup> providing access to cheaper products and attracting foreign investment. Thus, free trade is not an end in itself, but an instrument for the attainment of economic growth and development.<sup>38</sup> As noted by Martin Wolf:

<sup>33</sup> Boutros Boutros-Ghali, *An Agenda for Development*, UN Doc. A/48/935 (United Nations, 6 May 1994, 41, available at: [www.un.org/Docs/SG/agdev.html](http://www.un.org/Docs/SG/agdev.html), visited 25 June 2007).

<sup>34</sup> *Ibid.*, 53.

<sup>35</sup> In a background note for UNCTAD XI, the UNCTAD Secretariat states, ‘International trade is recognized as an important engine of growth in the world economy...Increasing and predictable earnings from trade can substantially relieve foreign exchange constraints facing developing countries, reduce dependence on foreign aid, and lessen external debt burdens. Improved trade performance can contribute to higher levels of domestic and foreign investment, strengthening and diversifying the economic base and enhancing efficiency in resource allocation through greater competition...By increasing productive employment, trade can create new opportunities for the poor and expand the prospects for more beneficial participation by women in economic activities. Trade can ensure access for the poor to food, essential medicines and basic social services.’ United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, para. 1, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited 21 June 2008.

<sup>36</sup> Fox argues that if WTO Members were to adopt only one human welfare measure, it should be the elimination of artificial barriers to the trade of developing countries (which according to Oxfam reports, cost developing countries over US\$100 billion per year). This would help the poor to help themselves. See Eleanor M. Fox, ‘The Prospective Role of Economic and Social Human Rights in the Law of International Trade Liberalization and Economic Integration: Globalization and Human Rights: Looking out for the Welfare of the Worst Off’, *NYU Journal of International Law and Politics* 35, 2002, 201-220, 211. The UNCTAD 2004 Least Developed Countries report notes, ‘International trade can play a powerful role in poverty reduction in the LDCs. It is important because exports and imports facilitate a process of sustained economic growth, the development of productive capacities and expansion of employment opportunities and sustainable livelihoods. For most LDCs, the primary sector, particularly agriculture, dominates production and employment in the economy, and productive capacities are weakly developed. In this situation, exports enable the acquisition, through importation, of goods which are necessary for economic growth and poverty reduction, but which are not produced domestically. These include food, manufactured consumer goods, fuel and raw materials, machinery and equipment and means of transport, and intermediate inputs and spare parts. Through exports it is possible to transform underutilized natural resources and surplus labour into imports which support economic growth.’ United Nations Conference on Trade and Development, *The Least Developed Countries Report 2004: Linking International Trade with Poverty Reduction*, UNCTAD/LDC/2004 (UNCTAD, Geneva), 27 May 2004, 4-5, available at: [http://www.unctad.org/en/docs/ldc2004\\_en.pdf](http://www.unctad.org/en/docs/ldc2004_en.pdf), visited on 7 June 2008.

<sup>37</sup> Although this proposition holds true in perfect market conditions, it is disputed whether in reality, where these conditions are usually not present, trade liberalisation actually benefits developing countries. Empirical studies examining to what extent developing countries have shared in the economic benefits of free trade, show conflicting results. Some show increased inequality in growth between developed and developing countries, whereas others, on the contrary, indicate a narrowing of the income gap. Much of the disparity in results can be ascribed to choices made in the methodology for measuring inequality, which choices embody value judgements about distributive justice. This issue is discussed in an enlightening paper by Ravallion, a World Bank economist. See Martin Ravallion, *Competing Concepts of Inequality in the Globalization Debate*, Working Paper 3243 (World Bank, Washington D.C.), March 2004. Generally, on the different methodologies for measurement of inequality, see Joel R. Paul, ‘Do International Trade Institutions Contribute to Economic Growth and Development?’ *Virginia Journal of International Law* 44 (1), 2003, 284-340, 308-313.

<sup>38</sup> Free trade is a tool for reaching important objectives in the area of economic development, which are mentioned in the preamble to the WTO Agreement, such as raising standards of living, ensuring full employment and an increasing volume of real income and effective demand, allowing for the optimal use of the

Globalisation does not make countries poor; it helps make them rich. ... But one thing, above all, is clear: if the world is to become less unequal through raising the bottom, rather than collapsing the top, and still more if mass poverty is to be eliminated, it can only be via successful integration, not its opposite.<sup>39</sup>

Nevertheless, it should be emphasised that although free trade is a necessary requirement for economic growth and thus for development<sup>40</sup> it is not sufficient by itself to reduce poverty<sup>41</sup> or to achieve full development.<sup>42</sup> It must go hand in hand with appropriate domestic policies and international assistance to address the costs and fairly distribute the gains of trade liberalisation and to enable developing countries to take advantage of increased market access by addressing supply-side constraints.<sup>43</sup> As noted by Florizelle O'Connor, member of the Sub-Commission on the Promotion and Protection of Human Rights:

---

world's resources in accordance with the objective of sustainable development, etc. 'Marrakesh Agreement Establishing the World Trade Organization', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 6-18, 1st recital.

<sup>39</sup> Martin Wolf, 'Growth Makes the Poor Richer', *Financial Times*, 24 January 2001.

<sup>40</sup> One of the five dimensions of development, identified by Boutros-Ghali in his *Agenda for Development*, is economic growth. However, although it is considered necessary for development, economic growth is not regarded as sufficient in itself to achieve development. Boutros Boutros-Ghali, *An Agenda for Development*, UN Doc. A/48/935 (United Nations, 6 May 1994, 41-43, available at: [www.un.org/Docs/SG/agdev.html](http://www.un.org/Docs/SG/agdev.html), visited 25 June 2007). The other four dimensions of development identified in this document are peace, the environment, social justice and democracy.

<sup>41</sup> Ravallion discusses the issue of 'pro-poor growth', examining different definitions of this concept and suggesting factors that make growth more pro-poor. He argues that growth is typically pro-poor in the sense that poor people benefit in absolute terms (absolute poverty measures fall with growth), since studies have shown that growth tends to be 'distribution neutral' on average. He notes, however, that the same rate of growth can bring very different rates of poverty reduction in different countries. This is due to two main factors. First, the differences in initial inequality (for example with regard to access to private assets and public goods) within the populations of different countries affect the extent to which growth benefits the poor. Second, differences between countries with regard to changing income distribution (for example through changes to the trade regime, tax reforms and welfare-policy reforms) affect the pro-poor impact of growth. Ravallion points to the concentration of poor people in certain regions or sectors, such as rural areas and the agricultural sector, and notes that high growth in several developing countries has not been accompanied by growth in poor areas but has rather led to widening inequalities. Therefore it is important that public policies address distributional aspects to ensure that economic growth benefits the poor. See Martin Ravallion, *Pro-Poor Growth: A Primer*, Working Paper 2342 (World Bank, Washington D.C.), March 2004.

<sup>42</sup> The report regarding how to meet the Millennium Development Goals, issued in 2005 by the UN Millennium Project (an advisory body to UN Secretary-General Kofi Annan) emphasises that while trade liberalisation is indispensable for economic development and thus poverty reduction, it is not a 'magic bullet'. Instead, trade liberalisation must go hand-in-hand with complementary national and international development policies. It notes that international trade policy should focus on two issues: improving market access and terms of trade for the poorest countries; and improving supply-side competitiveness of poor countries' exports by means of investments in infrastructure. See UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 211, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008. See also Sally, who points out that careful qualification is needed 'in order not to oversell the case for external liberalisation and convey the impression that it is a panacea.' Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 10, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

<sup>43</sup> The Havana Programme of Action, adopted by the G-77 and China at the first South Summit on 12-14 April 2000 and circulated as a document of the UN Millennium Summit, expressly calls for: '[w]ork to ensure for the effective integration of all countries into the international trading system including improving supply-side capabilities of developing countries especially the least developed among them...' General Assembly,

Concrete funding commitments from rich donor countries and international organizations are absolutely essential for meaningful progress to be achieved in the right to development. Admittedly, this is a controversial topic ... We must avoid duplication of work, but constructive ways must be explored of bringing the entire international family of Governments and organizations together to promote the right to development for all peoples. This is not somebody else's problem - this is everyone's problem - more so in the context of a globalized world.<sup>44</sup>

Equally importantly, free trade must be achieved by disciplines that are appropriate to the particular situation of developing countries and are thus supportive of development.<sup>45</sup> This necessitates the recognition of the special position developing countries occupy in the world trading system.<sup>46</sup>

The special position of developing countries is already recognised in the preamble to the *WTO Agreement*.<sup>47</sup> It has come to the forefront of attention with the launching of the

*Fifty-Fifth Session of the General Assembly. Letter Dated 5 May 2000 from the Permanent Representative of Nigeria to the United Nations Addressed to the President of the General Assembly, A/55/74* (United Nations, New York), 12 May 2000, Annex II para. V(1) 12th bullet point available at: [www.G77.org/main/docs/summitfinaldocs\\_english.pdf](http://www.G77.org/main/docs/summitfinaldocs_english.pdf), visited on 28 January 2008. Similarly, it is noted in the UNCTAD LDC Report 2004 that international assistance to address supply-side constraints (together with better national development strategies and improvements to the international trade regime) is essential if international trade is to become a more effective instrument of poverty reduction. See United Nations Conference on Trade and Development, *The Least Developed Countries Report 2004: Linking International Trade with Poverty Reduction*, UNCTAD/LDC/2004 (UNCTAD, Geneva), 27 May 2004, 21, available at: [http://www.unctad.org/en/docs/ldc2004\\_en.pdf](http://www.unctad.org/en/docs/ldc2004_en.pdf), visited on 7 June 2008.

<sup>44</sup> United Nations Commission on Human Rights, *Concept Document on the Right to Development. Working Paper Submitted by Florizelle O'Connor*, E/CN.4/Sub.2/2005/23 (Sub-Commission on the Promotion and Protection of Human Rights, Geneva), 24 June 2005, para. 49.

<sup>45</sup> It is important to move away from the idea that prevailed in the 70s that economic growth is synonymous with development. Instead, development should be seen as a multidimensional concept, and progress made in one dimension, for example economic growth through trade liberalisation, should not be at the expense of another dimension. See Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 16. In this regard, it is interesting to note that the report of the Consultative Board on *The Future of the WTO* states that if the poorest Members of the WTO do not receive real benefits from membership, 'the moral case for the WTO as a source of good is diminished.' See Peter Sutherland *et al.*, *The Future of the WTO: Addressing Institutional Challenges in the New Millennium. Report by the Consultative Board to the Director-General Supachai Panitchpakdi* (World Trade Organization, Geneva), 2004, para.48, available at: [http://www.wto.org/english/thewto\\_e/10anniv\\_e/future\\_wto\\_e.pdf](http://www.wto.org/english/thewto_e/10anniv_e/future_wto_e.pdf), visited on 25 June 2008.

<sup>46</sup> The Declaration of the South Summit of the G-77 and China, adopted on 14 April 2000 and circulated as a document of the UN Millennium Summit, underlines the 'urgent need to redress the imbalances in the present WTO Agreements, and in particular, with regard to the right of developing countries to promote their exports...' and calls for, *inter alia*, negotiation with the objective of incorporating the agricultural sector within normal WTO rules. General Assembly, *Fifty-Fifth Session of the General Assembly. Letter Dated 5 May 2000 from the Permanent Representative of Nigeria to the United Nations Addressed to the President of the General Assembly, A/55/74* (United Nations, New York), 12 May 2000, Annex I para. 20, available at: [www.G77.org/main/docs/summitfinaldocs\\_english.pdf](http://www.G77.org/main/docs/summitfinaldocs_english.pdf), visited on 28 January 2008.

<sup>47</sup> The Preamble recognizes 'that there is need for positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development.' 'Marrakesh Agreement Establishing the World Trade Organization', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 6-18, 2nd recital.

Doha Round of trade negotiations in November 2001. The explicit commitment in the Ministerial Declaration setting the agenda for negotiations in the Doha Round, known as the Doha Development Agenda, to ‘seek to place developing country needs and interests at the heart of the Work Programme adopted in [that] Declaration’,<sup>48</sup> reflects a new-found international consensus regarding the urgency of the need to integrate developing countries into the world trading system. It is important that this commitment not remain at the level of rhetoric, but be given content in the negotiations themselves. It is here that research can contribute. As pointed out by World Bank economists Finger and Schuler:

In upcoming trade negotiations, more imaginative thinking will be needed to examine reforms in the WTO in ways that make sense from a development perspective....Trade ministers at Doha (implicitly) called attention to the need for such thinking; the research community should interpret this as a challenge to provide it.<sup>49</sup>

## 1.2 The definition of ‘developing countries’

It is first necessary to establish what is meant by ‘developing countries’ for purposes of the world trading system. Initially, the GATT 1947 did not contain special provisions for developing countries and thus there was no need to determine which countries could be considered as developing. With time, provisions were added to take into account the special position of developing countries. First, in an early review of the GATT 1947 (discussed below), the application of certain parts of Article XVIII, regarding the protection of infant industries and additional flexibility for balance-of-payments restrictions, was limited to ‘a contracting party the economy of which can only support low standards of living and is in the early stages of development’.<sup>50</sup> Later, provisions were added to the GATT 1947 that distinguished between ‘developed’ and ‘less-developed’ countries. However, no definitions of these two terms existed under the GATT 1947. Instead, a system of self-selection applied, meaning that GATT Contracting Parties were free to decide for themselves whether they were developed or less-developed countries.

Currently the WTO agreements contain numerous provisions in favour of ‘developing countries’,<sup>51</sup> and ‘least-developed countries’. The system of self-selection still applies in

<sup>48</sup> Ministerial Conference, *Doha Ministerial Declaration*. Adopted on 14 November 2001, WT/MIN(01)/DEC/1, circulated on 20 November 2001, para. 2.

<sup>49</sup> J. Michael Finger and Philip Schuler, ‘Implementation of WTO Commitments. The Development Challenge’, in *Development, Trade and the WTO: A Handbook*, Philip English, et al. (eds.) (World Bank), 2002, 493-503, 501, available at: [http://publications.worldbank.org/catalog/product-detail?product\\_id=1525978&](http://publications.worldbank.org/catalog/product-detail?product_id=1525978&), visited on 5 June 2003.

<sup>50</sup> Article XVIII:4(a) of the GATT 1947. The terms ‘can only support low standards of living’ and ‘in the early stages of development’ are clarified in an interpretative note to Article XVIII. According to this interpretative note, the determination of whether an economy ‘can only support low standards of living’ must take into account the normal position of that economy and not be based on exceptional circumstances such as temporarily favourable conditions for the staple exports of the relevant country. The term ‘in the early stages of development’ is broadly defined to include not only countries that have just started their economic development, but also those undergoing industrialisation to correct an excessive dependence on primary production.

<sup>51</sup> Although the GATT 1947 used the term ‘less-developed countries’ to refer to this group of countries, the new WTO Agreements negotiated in the Uruguay Round use the term ‘developing countries’. However, the term

the WTO regime with regard to the category of 'developing countries'.<sup>52</sup> However, the decision of a WTO Member to make use of the special provisions in WTO Agreements available only to developing countries can be challenged by other Members.<sup>53</sup> In contrast, least-developed countries (LDCs) are defined for WTO purposes according to the UN classification.<sup>54</sup>

It is important to remember that developing countries are not a homogenous group.<sup>55</sup> There are significant differences between these countries, *inter alia*, with regard to gross domestic product (GDP), share in world trade, level of industrialisation, export diversification, infrastructure and participation in international negotiations on trade issues.<sup>56</sup>

---

'less-developed countries' is still used in the GATT 1994, as it incorporates by reference the provisions of the GATT 1947. In this book, the term 'developing countries' will be used throughout.

<sup>52</sup> It is interesting to note that it is possible for a Member to be a 'developing-country Member' for purposes of one WTO agreement while not being so for purposes of another. China is an example of this.

<sup>53</sup> This happens mainly in diplomatic or political exchanges, often outside the context of formal meetings.

<sup>54</sup> The UN currently classifies a group of 49 countries (originally 24) as least developed countries (LDCs). These are: Afghanistan, Angola, Bangladesh, Benin, Bhutan, Burkina Faso, Burundi, Cambodia, the Central African Republic, Chad, the Comoros, the Democratic Republic of the Congo, Djibouti, Equatorial Guinea, Eritrea, Ethiopia, Gambia, Guinea, Guinea-Bissau, Haiti, Kiribati, the Lao People's Democratic Republic, Lesotho, Liberia, Madagascar, Malawi, Maldives, Mali, Mauritania, Mozambique, Myanmar, Nepal, Niger, Rwanda, Samoa, Sao Tome and Principe, Senegal, Sierra Leone, Solomon Islands, Somalia, Sudan, Timor-Leste (as of December 2003), Togo, Tuvalu, Uganda, the United Republic of Tanzania, Vanuatu, Yemen and Zambia. United Nations Conference on Trade and Development, *The Least Developed Countries Report 2007: Knowledge, Technological Learning and Innovation for Development*, UNCTAD/LDC/2007 (UNCTAD, Geneva), 2007, available at: [http://www.unctad.org/en/docs/ldc2007\\_en.pdf](http://www.unctad.org/en/docs/ldc2007_en.pdf), visited on 7 June 2008. To be classified as an LDC, countries must fall below certain thresholds established regarding income, economic diversification and social development. The current criteria are: low national income (per capita GDP under \$745 for inclusion in, and above US\$900 for graduation from, the list), weak human resources (a composite index based on health, nutrition and education indicators) and high economic vulnerability (a composite index based on indicators of instability of agricultural production and exports, inadequate diversification and economic smallness). Different thresholds are used for addition to, and graduation from, the list of LDCs. A country qualifies for addition to the list if it meets inclusion thresholds on all three criteria, and if its population does not exceed 75 million. To graduate from the list a country must reach threshold levels for graduation for at least two of the three criteria in two consecutive triennial reviews or its GNI per capita must exceed at least twice the threshold level, and there must be a high degree of likelihood that the level of GNI per capita is sustainable. On 1 June 2008, 32 of these 49 LDCs were WTO Members, namely Angola, Bangladesh, Benin, Burkina Faso, Burundi, Cambodia, Central African Republic, Chad, Democratic Republic of the Congo, Djibouti, Gambia, Guinea, Guinea Bissau, Haiti, Lesotho, Madagascar, Malawi, Maldives, Mali, Mauritania, Mozambique, Myanmar, Nepal, Niger, Rwanda, Senegal, Sierra Leone, Solomon Islands, Tanzania, Togo, Uganda and Zambia. Although Cape Verde was an LDC at the time of its accession to the WTO in December 2007, it graduated from LDC status at the end of 2007. See UN Office of the High Representative for the Least Developed Countries, Landlocked Developing Countries and Small Island Developing States, 'No more an LDC, Cape Verde looks to build on economic gains', 19 February 2008, available at: <http://www.unohrls.org/en/orphan/590/>, visited on 8 June 2008. Nine other LDCs are in the process of accession to the WTO, namely Afghanistan, Bhutan, Ethiopia, Laos, Samoa, Sao Tome & Principe, Sudan, Vanuatu and Yemen. Vanuatu has completed accession negotiations but has yet to ratify its accession protocol. This list of least-developed-country WTO Members and accession candidates is available at: [http://www.wto.org/english/thewto\\_e/whatis\\_e/tif\\_e/org7\\_e.htm](http://www.wto.org/english/thewto_e/whatis_e/tif_e/org7_e.htm), visited on 1 June 2008.

<sup>55</sup> Patrick Low notes that despite the misleading assumption by some authors on developing country matters in the WTO context that developing countries are a homogenous group, the diversity of interests and priorities among developing-country Members is increasingly obvious. Patrick Low, 'Is the WTO Doing Enough for Developing Countries?' in *WTO Law and Developing Countries*, George A. Bermann and Petros C. Mavroidis (eds.) (Cambridge University Press, Cambridge), 2007, 324-358, 324.

<sup>56</sup> Further, within many large countries (such as Russia and China) there are also often large internal differences in level of development. In this regard, Picker proposes that, for purposes of special treatment of developing

There are also considerable differences with regard to levels of human development, including poverty incidence and health status. Despite these distinctions, there is no differentiation within the WTO system between different groups of developing countries, aside from the category of least-developed countries. Even in the context of the various work programmes of the WTO Committee on Trade and Development,<sup>57</sup> for example the work programme on ‘small economies’ and on ‘small island developing states’ under the Doha Development Round mandate,<sup>58</sup> it is expressly stated that the aim of this work is *not* to create sub-categories of WTO Members, but ‘to frame responses to the trade-related issues identified for the fuller integration of small, vulnerable economies into the multi-lateral trading system.’<sup>59</sup>

Outside the WTO context, various efforts have been made to sub-divide the category of developing countries.<sup>60</sup> Aside from the group of least-developed countries, the UN has recognised the categories of landlocked developing countries,<sup>61</sup> small island develop-

---

countries under WTO rules, geographic differentiation within a country between less- and more-developed regions be made. In this way, special treatment could be limited to developing regions rather than whole countries. See Colin B. Picker, ‘Neither Here nor There - Countries That Are Neither Developing nor Developed in the WTO: Geographic Differentiation as Applied to Russia and the WTO’, *George Washington International Law Review* 36, 2004, 147-171. However, the practical difficulty of implementing such a proposal should not be underestimated.

<sup>57</sup> The mandate for work in this area was delegated by the General Council to dedicated sessions of the Committee on Trade and Development at its meeting on 1 March 2002. See World Trade Organization.

<sup>58</sup> Ministerial Conference, *Doha Ministerial Declaration. Adopted on 14 November 2001*, WT/MIN(01)/DEC/1, circulated on 20 November 2001, para. 35.

<sup>59</sup> *Ibid.*

<sup>60</sup> For example, in the Second Joint WTO/OECD Report on Trade-Related Technical Assistance and Capacity Building (TRTA/CB), developing countries are categorised as follows: Least Developed Countries; Other Low Income Countries, include all non-LDC with per capita GNI below US\$ 760 in 1998 (World Bank Atlas basis); Lower Middle Income Countries, include all countries with per capita GNI between US\$ 761 and US\$ 3030 in 1998; Upper Middle Income Countries, include all countries with per capita GNI between US\$ 3031 and US\$ 9360 in 1998; High Income Countries, include developing countries with per capita GNI above US\$ 9360 in 1998; Central and Eastern European Countries / New Independent States (of the former Soviet Union) excluding those considered as developing countries; and More Advanced Developing Countries and Territories.

<sup>61</sup> Landlocked developing countries are defined in the UN Convention on the Law of the Sea as a country that has no sea coast. There are 31 such countries, 16 of which are also least developed countries. In its 2004 Report on Development and Globalization, UNCTAD notes that such countries face many development constraints, such as small domestic markets, great vulnerability to economic shocks and natural disasters and little human resources. In addition, their remoteness from world markets and fact that they export mainly low-value bulk commodities make transport costs particularly burdensome and diminish the possibilities for export-led growth. See United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, 4, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008.

ing states<sup>62</sup> and African countries,<sup>63</sup> based on the common problems and constraints of countries within those groups. The World Bank and the International Monetary Fund differentiate between categories of developing countries on the basis of per capita income, for purposes of determining eligibility for financial assistance.<sup>64</sup> The United Nations Development Programme (UNDP) distinguishes between countries with high, medium and low human development, as reflected in its Human Development Index.<sup>65</sup> In addition, UNCTAD uses a system of classification of countries into 'main economic areas'.<sup>66</sup> Some of these divisions are based purely on economic criteria such as GNP or per capita income; whereas others take into account other factors such as geographic conditions or human development criteria. While the appropriate sub-division is open to debate,<sup>67</sup> it is

<sup>62</sup> No official criteria have been established by the UN for inclusion in the category of small island developing states. Instead, reference is usually had to membership in the Alliance of Small Island States. UNCTAD undertakes extensive studies on the impact of trade liberalisation on small island developing states. The World Bank Group has a small island exception in its eligibility policy regarding international development association concessionary treatment. In the WTO work programme on small economies, some proposals have been made with regard to small island developing countries. Small island developing countries, as noted by UNCTAD, face greater risks of marginalisation from the world economy due to their remoteness from large markets, high transport costs, small size, high environmental vulnerability and exposure to natural disasters. See United Nations Conference on Trade and Development, *The Least Developed Countries Report 2004: Linking International Trade with Poverty Reduction*, UNCTAD/LDC/2004 (UNCTAD, Geneva), 27 May 2004, 6, available at: [http://www.unctad.org/en/docs/lcd2004\\_en.pdf](http://www.unctad.org/en/docs/lcd2004_en.pdf), visited on 7 June 2008.

<sup>63</sup> African countries can be divided into North Africa and Sub-Saharan Africa. These countries evince slow and erratic economic growth and an average decline in real per capita GDP in the 1990s. They are heavily dependent on commodity trade, but face declining market share in this sector. UNCTAD has conducted studies on Africa's economic performance. This information is provided in *Ibid.*, 8.

<sup>64</sup> The International Development Association (IDA) is the part of the World Bank that lends money to the low-income countries on concessional terms (i.e. interest free and with repayments over 35-40 years). Eligibility for IDA loans is principally based on a country's relative poverty, defined as GNI per capita below a certain threshold (in fiscal year 2008 this is US\$1,065). Middle-income countries (defined as having a per capita income of between US\$1,066 and US\$10,000) and low-income countries that are creditworthy are eligible to lend money from the International Bank for Reconstruction and Development (IBRD). This information is taken from the website of the World Bank, available at: <http://go.worldbank.org/YX2261GMX0>, visited on 8 June 2008. Eligibility for funding from the International Monetary Fund's Poverty Reduction and Growth Facility is also mainly based on a country's per capita income as well as its eligibility under the IDA of the World Bank. This information is taken from the website of the IMF, available at: <http://www.imf.org/external/np/sec/nb/2000/nb0081.htm>, visited on 8 June 2008.

<sup>65</sup> The criteria used as the basis for this index are discussed in below, Part II, Section 2.2.

<sup>66</sup> UNCTAD's country classification (developed for purposes of statistical convenience) according to main economic areas is as follows: Developed market economy countries: Australia, Canada, the European Union (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, the Netherlands, Portugal, Spain, Sweden and the UK), Faeroe Islands, Gibraltar, Iceland, Israel, Japan, New Zealand, Norway, South Africa, Switzerland and the United States. Countries in Eastern Europe: Albania, Belarus, Bulgaria, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, the Republic of Moldova, Romania, the Russian Federation, Slovakia and Ukraine. Developing countries and territories: All other countries, territories and areas in Africa, Asia, America, Europe and Oceania not specified above. United Nations Conference on Trade and Development, *The Least Developed Countries Report 2002: Escaping the Poverty Trap*, UNCTAD/LDC/2002 (UNCTAD, Geneva), 18 June 2002, available at: [http://www.unctad.org/en/docs/lcd2002\\_en.pdf](http://www.unctad.org/en/docs/lcd2002_en.pdf), visited on 7 June 2008.

<sup>67</sup> Picker goes even further and argues that the division should not be between countries but within countries. He points to the problem that some countries are difficult to classify as developed or developing, due to huge economic disparities *within* these countries. He mentions the examples of China, Russia and India. He notes that these countries are too large and their impact on world trade is too great for WTO Members to be willing to grant them developing country status when deciding on preferential regimes and in the conduct of accession negotiations (as the examples of WTO accession negotiations with China and currently Russia illustrate).

indubitable that the differences between developing countries have a significant impact on their ability to participate in the negotiation of world trade rules, to implement these rules and to benefit fully from them. This is particularly the case for rules that have implications for behind-the-border regulatory systems and require substantial investments for their implementation,<sup>68</sup> such as those in the *SPS Agreement*.

There is clearly a need to take such differences into account in WTO rules, in particular in those rules that make provision for SDT and technical assistance for developing countries. Such recognition may also increase the willingness of developed countries to agree to more meaningful SDT provisions and implement such rules.<sup>69</sup> Currently, many SDT provisions are only ‘best-endeavour’ obligations and are poorly implemented, reflecting a reluctance of Members to undertake binding obligations to provide special treatment to all self-declared developing-country Members, including those more-developed developing countries that are effective competitors on the world market. However, there has been strong opposition from developing countries themselves, especially the more developed among them, to any suggestion of differentiation between developing countries (other than for least-developed countries) in the WTO context.<sup>70</sup>

### 1.3 Developing countries in the early years of the GATT 1947

Despite the fact that 11 of the 23 countries that negotiated the GATT 1947<sup>71</sup> were countries that are now regarded as developing,<sup>72</sup> the GATT, in its original form, did not make

---

Nevertheless, regions within these countries, especially in rural areas, are characterised by abject poverty. See Colin B. Picker, ‘Neither Here nor There - Countries That Are Neither Developing nor Developed in the WTO: Geographic Differentiation as Applied to Russia and the WTO’, *George Washington International Law Review* 36, 2004, 147-171.

<sup>68</sup> As Hoekman *et al.* aptly put it, ‘One size does not fit all’ when it comes to WTO rules on domestic regulation or that require substantial investments to be implemented.’ Bernard Hoekman *et al.*, *More Favorable Differential Treatment of Developing Countries: Towards a New Approach in the WTO*, World Bank Policy Research Working Paper 3107 (World Bank, Washington D.C.), August 2003, 3, available at: [www.econ.worldbank.org/files/28991\\_wps3107.pdf](http://www.econ.worldbank.org/files/28991_wps3107.pdf), visited on 11 November 2004.

<sup>69</sup> *A New Approach to Special and Differential Treatment*, IPC position paper (International Food and Agricultural Trade Policy Council, Washington D.C.), 15 September 2004, 2, available at: [www.agritrade.org/Publications/Position%20Papers/13%20SND.pdf](http://www.agritrade.org/Publications/Position%20Papers/13%20SND.pdf), visited on 25 June 2007.

<sup>70</sup> Low argues that the refusal of developing-country Members to engage in any discussion on differentiation or graduation is due to an ‘analytical deficit’ in SDT proposals. He notes that developing countries have tended to view SDT ‘as a political right rather than a development imperative.’ He notes that this analysis-free thinking has facilitated the dismissal by developed Members of the underlying case for SDT. Patrick Low, ‘Is the WTO Doing Enough for Developing Countries?’ in *WTO Law and Developing Countries*, George A. Bermann and Petros C. Mavroidis (eds.) (Cambridge University Press, Cambridge), 2007, 324-358, 334.

<sup>71</sup> The negotiation of the GATT 1947 was concluded in October 1947, but it was intended to go hand-in-hand with the establishment of an International Trade Organization (ITO). As the negotiations towards the ITO were intended to be completed only in 1948 and there was some urgency in bringing the negotiated GATT disciplines into effect, the GATT provisions came into force provisionally through the Protocol of Provisional Application (PPA) (55 UNTS 308 (1947)), pending the completion of negotiations on the ITO. It was understood that the GATT 1947 would be submitted to national legislatures for definitive application together with the ITO Charter. As the ITO never came into existence, the GATT 1947 itself never came into force but its provisions continued to apply through the PPA. See John H. Jackson, *The World Trading System: Law and Policy of International Economic Relations*, Second ed. (MIT Press, Cambridge), 1997, 39-40.

<sup>72</sup> These 11 developing countries were Brazil, Burma (Myanmar), China, Ceylon (Sri Lanka), Chile, Cuba,

special provision for developing countries. This can be explained by the historical context of the GATT negotiations. The relations between the developed and developing regions of the world were largely governed by colonialism and there was not yet a significant break between developed and developing countries.<sup>73</sup>

The GATT 1947 emphasised the fundamental principle of non-discrimination.<sup>74</sup> Article I of the GATT embodies the principle of most-favoured-nation (MFN) treatment, which requires that any benefit or advantage accorded by a GATT Contracting Party to the products originating in or destined for any other country must be immediately and unconditionally granted to the like product originating in or destined for all other GATT Contracting Parties. As a result, no preferential treatment could be granted to products from any developing country, as the same preference would have to be immediately granted to all GATT Contracting Parties. The underlying idea was that discrimination in favour of a particular country was welfare-decreasing and resulted in a misallocation of the scarce resources of the world. The drafters of the GATT believed that all countries stood to benefit from the trade liberalisation rules contained therein, by adopting outward oriented policies and exploiting their comparative advantage.

As a result of its non-discrimination focus, the GATT disciplines, as negotiated in 1947, applied uniformly to all its Contracting Parties. Article XII of the GATT, which provided an exception to the general prohibition on quantitative restrictions to trade for restrictions to safeguard balance of payments,<sup>75</sup> was equally available to all Contracting Parties. However, some of its requirements were thought to be too restrictive to take into account the fact that developing countries often tend to face chronic balance of payments problems. Even the addition, by means of an amendment in 1948, of Article XVIII entitled ‘Government Assistance to Economic Development and Reconstruction’<sup>76</sup> which made provision for the CONTRACTING PARTIES<sup>77</sup> to give permission for a Contracting Party to

---

India, Lebanon, Pakistan, Southern Rhodesia (Zimbabwe) and Syria.

<sup>73</sup> Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 71.

<sup>74</sup> The Preamble to the GATT 1947 indicated in its third recital that its objectives would be achieved by ‘entering into reciprocal and mutually advantageous arrangements directed to the substantial reduction of tariffs and other barriers to trade and to the elimination of discriminatory treatment in international commerce’.

<sup>75</sup> This exception was agreed upon by the United States and Britain as early as 1943. It aimed to take into account the fact that post-war reconstruction, domestic employment or social policies could result in an increased demand for imports, thus threatening the balance of payments in countries. See John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 678.

<sup>76</sup> This provision was negotiated as Article 13 of the ITO Charter, which was intended to establish the ‘International Trade Organization’ (ITO), the organisation under which the GATT 1947 would operate. The ITO Charter was not approved by the US Congress and as a result the ITO never came into being since countries did not want to be part of an international trade organisation which did not include the US. Certain provisions of the ITO Charter were subsequently, *mutatis mutandis*, carried over into the GATT 1947 by amendment. See *Havana Charter for an International Trade Organization*, UN Doc. E/Conf.2/78, United Nations Conference on Trade and Employment, 28 March 1948.

<sup>77</sup> As the GATT 1947 was intended to be a treaty on the reduction of tariffs and other trade barriers, not a treaty establishing an international organisation, multilateral decisions taken there under were taken by the Contracting Parties, acting jointly, rather than by any organ or body. The designation ‘CONTRACTING PARTIES’ is therefore, according to Article XXV of the GATT, a reference to the Contracting Parties acting jointly, in other words the collective decision-making forum under the GATT 1947. Later, a large number of subordinate bodies such as committees, working parties and panels were established to carry out the tasks under the GATT,

use protective measures that would otherwise be in conflict with GATT disciplines in order to promote the establishment, development or reconstruction of a particular industry or branch of agriculture, applied equally to developing and developed countries. It was aimed at post-World War II reconstruction in developed countries rather than at the promotion of development.<sup>78</sup> Developing countries raised concerns regarding the focus on the development of a particular industry and the requirement of prior permission in this article.<sup>79</sup>

The above illustrates the fact that although the negotiated rules were equally applicable to all Contracting Parties, this does not mean that they had the same impact on developed and developing countries.<sup>80</sup> Instead, loopholes and flexibilities in the trade rules were negotiated in areas most useful to developed countries.<sup>81</sup> As noted by John Jackson:

The issues at Geneva in 1947 did not, viewed from the perspective of the present day, seem to be free trade versus protectionism, or internationalism versus national sovereignty. Each of the groups in the debate desired international control of some things and not of others. Both sides desired to use certain types of trade protective measures but wanted to limit or restrict others. The controversy seemed to be over *which* trade restrictions would be subjected to international control and which not. From the point of view of the less-developed country, the wealthy countries wanted freedom to use those restrictions that only they were most able to use effectively while banning those restrictions that less-developed countries felt they were most able to use.<sup>82</sup>

---

and the meetings of the CONTRACTING PARTIES were reduced to yearly sessions of a few days each. See John H. Jackson, *The World Trading System: Law and Policy of International Economic Relations*, Second ed. (MIT Press, Cambridge), 1997, 38 and 63.

<sup>78</sup> De Feyter points out that the main priority after World War II was reconstruction, not development. Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 71.

<sup>79</sup> John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 687.

<sup>80</sup> In examining whether GATT 1947 rules, in practice, discriminated against developing countries Jackson points to the distinction made in GATT between primary and industrial products. For example, he notes the exemption of primary products from the disciplines on antidumping and countervailing duties in Article VI:7, the exception in Article XI:2(c) from the prohibition on quantitative restrictions for quotas on any agricultural or fisheries product in certain circumstances, and the exclusion of primary products from the prohibition on export subsidies in Article XVI:4. In addition Jackson notes the argument that GATT applies more stringent disciplines on those types of trade barriers commonly used by developing countries, namely quantitative restrictions, than those used by developed countries, such as subsidies. *Ibid.*, 665.

<sup>81</sup> This point was recently made in the report of the UN Millennium Project, which notes, 'Developing countries, sometimes by their own decision and other times by explicit exclusion dictated by richer countries, have not been influential in the [trading ] system's design. Moreover, most of today's multilateral rules have emulated to a great extent the policies, the practices, and most important, the laws and regulations of only a few developed countries.' UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 212, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008.

<sup>82</sup> John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 637-638. Jackson goes on to point out, however, that in practice developing countries were usually able to make use of the balance-of-payments exceptions in the GATT in order to apply quantitative restrictions to trade with much freedom.

Due to the relative strength of the positions of the negotiating countries, developed and developing, developed country interests came to be reflected in the negotiated rules.

The GATT 1947 was reviewed in 1954-1955<sup>83</sup> and on the insistence of developing country Contracting Parties, this Review Session recognised for the first time the need for additional flexibility in GATT disciplines for developing countries, thus introducing the concept of differential treatment of developing countries into the GATT. This 'differential treatment' took the form of exempting developing countries from certain GATT disciplines. In the Review Session, Article XVIII (discussed above) was amended, limiting the application of parts A, B and C thereof to 'a contracting party the economy of which can only support low standards of living and is in the early stages of development'.<sup>84</sup> Thus, developed countries were excluded from making use of the exemption provided in these paragraphs of Article XVIII.<sup>85</sup> Parts A, C and D of Article XVIII allow for the protection of infant industries in order to raise the standard of living or promote economic development by means of measures that deviate from GATT rules, for example by imposing tariffs above the bound level<sup>86</sup> or applying quotas or other non-tariff measures.<sup>87</sup> The new Article XVIII: B recognises the structural nature of developing countries' balance-of-payments problems and thus allows the countries falling within its scope of application

---

<sup>83</sup> As it had become apparent by the 1950s that no ITO would be established and that the GATT was developing into the main international organisation for trade, the Contracting Parties saw the necessity of reviewing and amending the GATT. Thus the 9<sup>th</sup> regular session of the CONTRACTING PARTIES was designated a 'review session' and resulted in protocols to amend the GATT. See John H. Jackson, *The World Trading System: Law and Policy of International Economic Relations*, Second ed. (MIT Press, Cambridge), 1997, 42.

<sup>84</sup> Article XVIII:4(a) of the GATT 1947. The terms 'can only support low standards of living' and 'in the early stages of development' are clarified in an interpretative note to Article VIII. According to this interpretative note, the determination of whether an economy 'can only support low standards of living' must take into account the normal position of that economy and not be based on exceptional circumstances such as temporarily favourable conditions for the staple exports of the relevant country. The term 'in the early stages of development' is broadly defined to include not only countries that have just started their economic development, but also those undergoing industrialisation to correct an excessive dependence on primary production.

<sup>85</sup> However, Article XVIII:4(b) does allow recourse to Section D of this article by 'a contracting party, the economy of which is in the process of development' but which does not fall within the scope of Subparagraph (a). This is generally accepted to mean countries whose economies can support a high standard of living but are dependent on exports of primary commodities. See John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 656.

<sup>86</sup> The amended Article XVIII:A allows those countries falling within its scope of application to protect infant industries by raising their tariffs on those products they want to produce and thus renegotiating the tariff bindings to which they have agreed in their schedules of concessions. This gives developing countries an additional avenue for the renegotiation of schedules, over that provided in Article XXVIII of the GATT.

<sup>87</sup> Article XVIII:C allows a country falling within its scope of application to use a measure which deviates from other GATT articles, except Articles I, II and XIII, which is necessary to promote the establishment of a particular industry, with a view to raising the standard of living of its people. In the amended version, the requirement of prior approval was relaxed to some extent. The new Article XVIII:D provides the possibility for a country with an economy in the process of development but whose economy does not fall within the category of those that 'can only support low standards of living', to apply to the CONTRACTING PARTIES for permission to deviate from GATT rules, except Articles I, II and XIII, in order to promote the establishment of a particular industry, in the interest of the development of its economy.

more flexibility in using restrictions on the quantity or value of imports<sup>88</sup> to address balance of payments problems than apply to other Contracting Parties under Article XII.<sup>89</sup>

The Review Session also introduced the new Article XXVIII(*bis*), which made provision for periodic rounds of multilateral tariff negotiations. Paragraph 3(b) of this article provided that these negotiations shall take into account the needs of less-developed countries for a more flexible use of tariff protection to assist their economic development as well as their special needs to maintain tariffs for revenue purposes.

Finally, the Review Session amended Article XVI of the GATT to add Paragraphs 2-5 as Part B,<sup>90</sup> imposing stricter disciplines on export subsidies. Paragraph 3 of this article provides that Contracting Parties 'should seek to avoid' export subsidies on primary products, while Paragraph 4 contains a prohibition on export subsidies on non-primary products.<sup>91</sup> Many developing countries objected to the different treatment of primary and manufactured products in the amended Article XVI and consequently did not accept the new Paragraph 4 resulting from this amendment.<sup>92</sup> Consequently, these disciplines did not apply to them.

Despite these developments, many developing countries remained dissatisfied with GATT rules and refrained from becoming Contracting Parties to the GATT 1947 for

<sup>88</sup> This seems to imply that only quantitative restrictions may be taken to address balance of payments problems. However, in the Tokyo Round, the CONTRACTING PARTIES adopted a Declaration regarding articles XII and XVIII:B noting that restrictive import measures other than quantitative restrictions can be used for balance-of-payment purposes and agreeing that the procedures of Articles XII and XVIII shall apply to all restrictive import measures taken for this purpose. See *Declaration on Trade Measures Taken for Balance-of-Payment Purposes*, BISD 26S/205 (1980), L/4904, Decision of the GATT CONTRACTING PARTIES, 28 November 1979, para. 1. One of the outcomes of the Uruguay Round, the *Understanding on Balance-of-Payments Provisions of the GATT 1994*, now clarifies the issue of which measures may be taken for balance-of-payments problems. It provides that Members will give preference to price-based measures, which may be applied in excess of a Member's tariff bindings in its schedule of commitments, in derogation of Article II. Only if price-based measures are not feasible due to a critical balance-of-payments situation, a Member may apply quantitative restrictions but must provide a justification as to the reasons why priced-based measures are not an adequate instrument to deal with the situation. This Understanding is an integral part of the GATT 1994, in terms of Paragraph 1(c)(iii) of the language incorporating the GATT 1994 into the *WTO Agreement*.

<sup>89</sup> In the amendment of Article XVIII, the obligation on developing countries maintaining balance-of-payments restrictions to hold annual consultations was reduced to once in two years (See Article XVIII:12(b)). In addition, the conditions for introducing measures for balance-of-payments problems were more relaxed than those that applied under Article XII.

<sup>90</sup> The drafting of the new Part B in the Review Session drew upon Articles 26-28 of the ITO Charter.

<sup>91</sup> An interpretative note to this article defines primary products as products of farm, forest or fishery.

<sup>92</sup> The new Paragraph 4 of Article XVI does not itself specify a date of entry into force, but provides that 'as from 1 January 1958 or the earliest practicable date thereafter,' Contracting Parties have certain obligations with regard to export subsidies on non-primary products. It contains a standstill provision prohibiting the extension of export subsidies beyond 1955 levels until 31 December 1957, by which time it was expected that Contracting Parties would have reached agreement on the prohibition of all export subsidies in non-primary products. As this deadline was not met, the standstill provision was extended by declarations annually until 1960. In 1960, the Contracting Parties were able to reach agreement on the *Declaration Giving Effect to the Provisions of Article XVI:4*, 19 November 1960, BISD 9S/32 (1961). In terms of this declaration, Article XVI:4 entered into force on 14 November 1962 for those seventeen countries that accepted the declaration. These were all developed countries except for Southern Rhodesia (Zimbabwe). John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 372-374. See also Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 87.

several years. Further, few of those developing countries that were GATT Contracting Parties had permanent representatives in Geneva to deal with GATT matters both as a consequence of their limited resources and the fact that active participation in the GATT system was not seen as a priority by these countries. The tide began to turn in the 60s, with the political independence of several developing countries in Asia and Africa and their accession to the GATT 1947.<sup>93</sup> According to Article XXVI:5(c), newly independent countries could become Contracting Parties to the GATT through the ‘sponsorship’ of the previous colonial power, if that colonial power was a GATT Contracting Party and had applied the GATT to its dependent territory.<sup>94</sup> The ‘sponsorship’ entailed that the colonial power made a declaration that the territory had acquired full autonomy in the conduct of their external commercial relations and other matters covered by the GATT.<sup>95</sup> The usual requirements<sup>96</sup> of negotiation of terms of accession, which in practice entailed negotiated tariff commitments recorded in a schedule of concessions, and of a two-thirds majority vote in favour of the accession by the GATT CONTRACTING PARTIES, did not apply in such a case. Instead, if the colonial power had previously negotiated a tariff schedule on behalf of the relevant territory, it became the schedule of the newly independent country.<sup>97</sup> Often these schedules contained very few commitments and in some cases there were no tariff schedules at all, which meant that these countries had no tariff commitments under the GATT.<sup>98</sup> Sixty-three developing countries became GATT Contracting Parties in this way,<sup>99</sup> thirty-two of which in the 50s and 60s. Even those developing countries

<sup>93</sup> During the 1960s, approximately 35 developing countries became Contracting Parties to the GATT 1947.

<sup>94</sup> A simplified procedure for the acquisition of Contracting Party status under Article XXVI:5(c) was adopted by the GATT Council in 1963, providing for certification by the GATT Executive Secretary that the conditions under this article had been met and advising that the relevant country had become a Contracting Party to the GATT (see C/M/15, 7).

<sup>95</sup> John H. Jackson *et al.*, *Legal Problems of International Economic Relations: Cases, Materials and Text on the National and International Regulation of Transnational Economic Relations*, Fourth ed., American Casebook Series (West Group, St. Paul), 2002, 232; Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 79.

<sup>96</sup> These requirements for accession to the GATT 1947 are laid down in Article XXXIII. This article has now been replaced by the rules for accession to the WTO, provided for in Article XII of the *WTO Agreement*.

<sup>97</sup> Where a schedule of concessions existed for the relevant territory, a new schedule for the newly independent country comprising these concessions was established by means of the procedure of certification of changes to the GATT. Under para. 5 of the Decision on Procedures for Modification and Rectification of Schedules of Tariff Concessions of 26 March 1980, the certification procedure under that decision could be applied for establishing schedules under Article XXVI:5(c) where all changes were modifications or rectifications of a purely formal character (See *Decision on Procedures for Modification and Rectification of Schedules of Tariff Concessions* L/4962, 26 March 1980, BISD 27S/26, 26).

<sup>98</sup> John H. Jackson *et al.*, *Legal Problems of International Economic Relations: Cases, Materials and Text on the National and International Regulation of Transnational Economic Relations*, Fourth ed., American Casebook Series (West Group, St. Paul), 2002, 233.

<sup>99</sup> Indonesia was the first country to become a Contracting Party in this way in 1950, followed by Ghana and Malaysia (1957); Nigeria (1960); Sierra Leone and Tanzania (1961); Trinidad and Tobago and Uganda (1962); Benin, Burkina Faso, Cameroon, Central African Republic, Chad, Congo, Côte d’Ivoire, Cyprus, Gabon, Jamaica, Kuwait, Madagascar, Mauritania, Niger and Senegal (1963); Kenya, Malawi, Malta and Togo (1964); Burundi and Gambia (1965); Guyana and Rwanda (1966); Barbados (1967); Mauritius (1970); Singapore (1973); Suriname (1978); Zambia (1982); Belize and Maldives (1983); Hong Kong (1986); Antigua and Barbuda and Botswana (1987); Lesotho (1988); Macau (1991); Mozambique and Namibia (1992); Dominica, Mali, Swaziland, St. Lucia, St. Vincent and the Grenadines, Fiji, Brunei, Darussalam and Bahrain (1993); and Angola, Djibouti, Grenada, Guinea-Bissau, Republic of Guinea, Lichtenstein, Papua New Guinea, Qatar, St. Christopher and Nevis, Solomon Islands, United Arab Emirates (1994). See *Analytical Index: Guide to GATT*

which acceded to the GATT 1947 by means of the usual accession procedure and had to record tariff concessions in their schedules of commitments, usually made insignificant concessions on a limited range of products. Developed countries did not have strong interests in developing country markets at that time and therefore did not push for drastic tariff reductions as a condition for accession. As a result, the hurdle to becoming a GATT Contracting Party was low and several developing countries made use of the opportunity to join the GATT regime.

The rapid increase in developing country Contracting Parties in this period affected the balance of power in the trading system.<sup>100</sup> These developing countries were aware of the importance of moving away from economies based on the production of primary products,<sup>101</sup> towards industrialised economies. They expected to achieve this aim by using GATT rules to gain market access and earn the foreign revenue necessary for their development needs, including the diversification of their economies.<sup>102</sup> At the same time, they were reluctant to reduce their own trade barriers, believing the prevailing economic wisdom of the time, which urged developing countries to protect their domestic markets from competition from imported products and pursue import substitution policies as the best path to speedy industrialisation.<sup>103</sup> Developing countries believed that GATT rules had been largely drafted by developed countries in their own interests and contained disciplines that made it impossible for developing countries to diversify their economies. They thus called for differential treatment for developing countries by means of exemptions from GATT rules.<sup>104</sup>

In response to developing country concerns with the existing trade rules, in 1957 the Ministerial Session of GATT CONTRACTING PARTIES established a panel of experts, headed by Professor Gottfried Haberler, to examine the effect of world trade rules on developing countries and, in particular, ‘the failure of the trade of less-developed countries to develop as rapidly as that of industrialised countries, excessive short-term fluctuations in prices of primary products, and widespread resort to agricultural protectionism.’<sup>105</sup> The expert panel issued its report, commonly known as the *Haberler Report*, in 1958, in

---

*Law and Practice* Vol. 2 Appendix D (Geneva: WTO, 1995) 1145.

<sup>100</sup> Edwini Kwame Kessie, ‘Developing Countries and the World Trade Organization: What Has Changed?’ *World Competition* 22 (2), 1999, 83-110, 88.

<sup>101</sup> This was due to the fact that the market for primary products is notoriously unstable and the prices of primary products are very low compared to those of manufactured products.

<sup>102</sup> Edwini Kwame Kessie, ‘Developing Countries and the World Trade Organization: What Has Changed?’ *World Competition* 22 (2), 1999, 83-110, 86.

<sup>103</sup> *Ibid.* Kessie points out that many prominent development economists were proponents of this approach and that the economic literature in those days emphasised ‘elasticity pessimism’, in other words the concern that developing countries’ export surpluses would result in lower prices and worsening terms of trade for their products. Thus developing countries were encouraged to divert resources from export sectors and insulate their domestic markets.

<sup>104</sup> De Feyter notes that the effect of decolonisation was to shift the focus of international economic and social cooperation from reconstruction to development. He points out that developing countries in this period challenged free market principles, believing that they contributed to inequality and that market forces needed to be regulated to restore equilibrium in the world economy. Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 80.

<sup>105</sup> For a detailed discussion of the background to the Haberler Report and a summary of its conclusions, see John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 640-643.

which it concluded that ‘there is some substance in the feeling of disquiet among primary producing countries that the present rules and conventions about commercial policies are relatively unfavourable to them.’<sup>106</sup> On the basis of this report, the Thirteenth Session of the GATT CONTRACTING PARTIES in 1958 established an Action Program<sup>107</sup> to address the possibility of further tariff reductions, the problems of non-tariff barriers and income support in the agricultural sector, and other obstacles to the expansion of trade with particular reference to developing countries.

The GATT Ministerial Meeting of 1963 recognised the need for an ‘adequate legal and institutional framework to enable the CONTRACTING PARTIES to discharge their responsibilities in connexion with the work of expanding the trade of less-developed countries’<sup>108</sup> and authorised the establishment of a working group to examine proposals on preferential treatment for developing country exports.<sup>109</sup> The Committee on the Legal and Institutional Framework of GATT in Relation to Less-Developed Countries was established to address this need.<sup>110</sup>

Attention to developing country concerns in the multilateral trade regime increased further following the establishment of the United Nations Conference on Trade and Development (UNCTAD) in 1964.<sup>111</sup> UNCTAD was perceived as an alternative international forum for pursuing trade interests,<sup>112</sup> and one that focused on developing country concerns.<sup>113</sup> During the late 60s and the 70s, developing countries devoted their attention to UNCTAD rather than the GATT as the main instrument through which to further their trade interests.<sup>114</sup> In order to secure developing countries’ participation in the GATT system, thereby

<sup>106</sup> GATT, *Trends in International Trade*, (Geneva: 1958), Sales No. GATT/1958-3.

<sup>107</sup> BISD 7S/28 (1959).

<sup>108</sup> BISD 12S/45 (1964).

<sup>109</sup> At this Ministerial Meeting it was also agreed that, ‘in the trade negotiations every effort shall be made to reduce barriers to exports of the less-developed countries, but that the developed countries cannot expect to receive reciprocity from the less-developed countries.’ Reported in WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 13, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbdoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbdoc_e.doc), visited on 25 June 2007.

<sup>110</sup> In 1964 this Committee drafted a chapter on Trade and Development, for inclusion in the GATT (discussed in Part I, Section 1.4). John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 644-645.

<sup>111</sup> The creation of UNCTAD followed from the launching of the first UN Trade and Development Decade in 1961.

<sup>112</sup> UNCTAD was created as a forum to discuss international trade from a development perspective, not as a body where countries could negotiate binding obligations. As such, it did not offer a true alternative to the GATT system for developing countries. It did however promote coalition building between developing countries and the Group of 77 had its origins in the UNCTAD system. In addition, several significant initiatives for developing countries originated in UNCTAD and were transformed into legal obligations in other fora, for example the establishment of the Generalised System of Preferences, the recognition of the need for special treatment of least-developed countries and the creation of commodity agreements. See Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 85.

<sup>113</sup> Edwini Kwame Kessie, ‘Developing Countries and the World Trade Organization: What Has Changed?’ *World Competition* 22 (2), 1999, 83-110, 88. Kessie points out that UNCTAD’s strategy was to challenge the multilateral trade regime under the GATT 1947 and to push for a new framework that would take developing country interests into account and would equitably distribute the world’s resources and opportunities among countries.

<sup>114</sup> Constantine Michalopolous, ‘The Developing Countries in the WTO’, *The World Economy* 22, 1999, 117-143, 117.

protecting its position as the main international organisation for trade, developed countries were forced to comply with the demands of developing countries for special treatment.<sup>115</sup> These demands were based on the contention that equal treatment of unequal trading partners is inherently unfair. The tendency of developing countries to act collectively at that time<sup>116</sup> together with the rivalry from UNCTAD<sup>117</sup> meant that developed Contracting Parties could not afford to ignore the demands of developing countries.<sup>118</sup>

#### 1.4 The 1965 Protocol Adding Part IV to the GATT 1947

Developing countries in the 60s began to realise that the special and differential treatment in the form of derogations from GATT rules allowing them, under certain conditions, to use trade barriers to protect their markets from competition was not sufficient to secure the economic growth they needed for their development aims.<sup>119</sup> Instead, they pushed for explicit recognition in the GATT of their special situation and of the need for *positive* measures by developed countries to increase their market access.<sup>120</sup> These positive measures were seen to include preferential treatment of developing country exports, non-reciprocity in trade negotiations and the provision of technical and financial

---

<sup>115</sup> Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 88.

<sup>116</sup> At the end of first session of UNCTAD, on 15 June 1964, an important coalition of developing countries was formed, known as the Group of 77 (G-77), by means of the *Joint Declaration of the Seventy-Seven Countries*. The G-77 originated in the merging of List A (African and Asian developing countries and Yugoslavia) and List C (Latin American developing countries) of UNCTAD's Trade and Development Board. This group has been active also outside the context of UNCTAD. See Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 97.

<sup>117</sup> Jackson notes that developments with regard to the establishment of UNCTAD 'are generally conceded to have had a psychological impact on national representatives to GATT, particularly the delegates from industrialized nations. Perhaps it was realized that developing countries had some moral force behind their position, even though they had little economic force.' John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 645.

<sup>118</sup> Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 88. The response of the GATT contacting parties to the emergence of UNCTAD in the form of the addition of Part IV of the GATT (discussed below, Part I, Section 1.4), is noted in Third World Network, *The Multilateral Trading System: A Development Perspective* (United Nations Development Programme, New York), December 2001, 27.

<sup>119</sup> Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 88. Raoul Prebisch and Hans Singer established the theoretical foundation for special and differential treatment, pointing out that developing countries' exports were mainly commodities with volatile prices and declining terms of trade. They argued for import-substitution policies, protection of infant industries and preferential market access for developing country products. World Bank, *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda*, 0-8213-5582-1 (World Bank, Washington D.C.), 2003, 207, available at: <http://www.worldbank.org/prospects/gep2004/full.pdf>, visited on 30 June 2008.

<sup>120</sup> De Feyter points to the fact that in the 60s and 70s pleas were heard for a 'duality of norms' applying to developed and developing countries, including the concepts of preferential treatment and non-reciprocity as well as assistance from developed states. He also notes the existence of a more radical view, calling for disengagement from the world trading system and the organisation of a form of collective autonomy by developing states (something which never materialized despite ongoing efforts at South-South co-operation). See Koen De Feyter, 'Contracting for Human Development: International Law and Development Revisited', *Asia Pacific Law Review* 10 (1), 2002, 49-74, 54.

assistance to developing countries.<sup>121</sup> As a result of developing country initiatives,<sup>122</sup> a chapter entitled ‘Trade and Development’ was drafted by the Committee on Legal and Institutional Framework of GATT in Relation to Less Developed Countries, and finalised in a Special Session of the CONTRACTING PARTIES which took place from 17 November 1964 to 8 February 1965. This chapter was added by an amending protocol as Part IV of the GATT,<sup>123</sup> consisting of Articles XXXVI, XXXVII and XXXVIII. It represented an evolution in the concept of special and differential treatment of developing countries, away from the idea that additional flexibility in GATT rules for trade restrictive measures by developing countries was sufficient, towards recognition of the need for developed countries to play an *active* part by granting preferential treatment to developing country exports. However, Part IV is mostly hortatory, setting out principles and objectives and best-endeavour commitments.

The new Part IV recognizes, *inter alia*, that ‘the export earnings of less-developed contracting parties can play a vital part in their economic development’.<sup>124</sup> Thus, the Contracting Parties agree on various necessary steps including the ‘need for a rapid and sustained expansion of the export earnings of the less-developed contracting parties’<sup>125</sup> and ‘the need for positive efforts designed to ensure that less-developed contracting parties secure a share in the growth in international trade commensurate with the needs of their economic development.’<sup>126</sup> To achieve this, a number of best-endeavour commitments are laid down for developed countries, to which they must give effect ‘to the fullest extent possible’.<sup>127</sup> These include according high priority to the reduction and elimination of barriers to products currently or potentially of particular interest to developing countries<sup>128</sup> and refraining from introducing or increasing tariffs or non-tariff barriers to trade in these products.<sup>129</sup> In addition, developed countries must ‘give active consideration’ to

<sup>121</sup> De Feyter draws attention to the fact that the UN set a non-binding target for official development assistance (ODA), namely 0.7% of the GNP of developed countries. See UN General Assembly Resolution 2626 (XXV), 24 December 1970. He notes that the call for the recognition of entitlements to aid for developing countries was based either on the recognition of a duty to contribute to international solidarity or on the need for reparation for past injustices committed by developed countries during colonialism. *Ibid.*

<sup>122</sup> John H. Jackson *et al.*, *Legal Problems of International Economic Relations: Cases, Materials and Text on the National and International Regulation of Transnational Economic Relations*, Fourth ed., American Casebook Series (West Group, St. Paul), 2002, 1170.

<sup>123</sup> BISD 13S/1 (1965). The addition of Part IV was the last amendment ever made to the GATT. Part IV came into effect, *de facto*, on 8 February 1965 and finally on 27 June 1966 for those countries that had accepted it. WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 13, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbadoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbadoc_e.doc), visited on 25 June 2007; John H. Jackson, *World Trade and the Law of GATT: A Legal Analysis of the General Agreement on Tariffs and Trade* (Bobbs Merrill, Indianapolis), 1969, 646.

<sup>124</sup> Part IV, Article XXXVI:1(b) of the GATT 1947.

<sup>125</sup> Part IV, Article XXXVI:2 of the GATT 1947.

<sup>126</sup> Part IV, Article XXXVI:3 of the GATT 1947.

<sup>127</sup> According to Article XXXVII:1, this means ‘except when compelling reasons, which may include legal reasons, make it impossible’. Other qualifying phrases soften Paragraph 3 of Article XXXVII:3, which obliges developed Contracting Parties to ‘make every effort’, ‘give active consideration’, and ‘have special regard’ rather than to actually do something.

<sup>128</sup> This explicitly includes barriers that unreasonably differentiate between primary and processed products.

<sup>129</sup> Part IV, Article XXXVII:1(a) and (b) of the GATT 1947. Article XXXVII:2 makes provision for reporting non-compliance with Paragraph 1 of this Article to the CONTRACTING PARTIES, which should consult with the interested Contracting Parties with respect to the matter with a view to reaching a solution satisfactory to all

developing measures to increase the scope for the development of imports from developing countries.<sup>130</sup> However, all these commitments are couched in non-mandatory language and thus do not create binding or enforceable obligations for developed countries.

The Contracting Parties are also obliged to collaborate to further the objectives of Part IV, as appropriate.<sup>131</sup> In particular, joint action by the CONTRACTING PARTIES is envisaged, *inter alia*, through international agreements to improve market access for primary products of particular interest to developing countries and to devise measures to stabilise and improve conditions on world markets for such products.<sup>132</sup> Further, the CONTRACTING PARTIES are obliged to establish institutional arrangements necessary to further the objectives of Part IV. In terms of this provision, the Committee on Trade and Development was established in 1964,<sup>133</sup> with the mandate to review the application of Part IV of the GATT, formulate proposals to further its provisions and consider changes or additions to Part IV. In addition, it had the task of considering any question regarding the eligibility of a GATT Contracting Party to be considered as less developed. In the same year, the International Trade Centre<sup>134</sup> was created with the objective of promoting developing country trade.

In addition, and perhaps most significantly, Part IV provides a GATT legal basis for the concept of non-reciprocity in trade negotiations between developed and developing countries,<sup>135</sup> a concept that was already recognised in practice since 1963.<sup>136</sup> According to an interpretative note to this provision, it meant that, in the course of trade negotiations, developing countries should not be expected to make contributions inconsistent with their individual development, financial and trade needs.<sup>137</sup> The actions of developing countries

---

Contracting Parties concerned.

<sup>130</sup> An interpretative note provides that these other measures ‘might include steps to promote domestic structural changes, to encourage the consumption of particular products, or to introduce measures of trade promotion.’

<sup>131</sup> Article XXXVIII:1 of the GATT 1947.

<sup>132</sup> Article XXXVIII:2(a) of the GATT 1947.

<sup>133</sup> BISD 13S/75 (1965).

<sup>134</sup> BISD 12S/138 (1964). The International Trade Centre (ITC) was established under the GATT in 1964 and became a joint agency of the GATT and UNCTAD in 1968. The ITC works with developing countries and economies in transition to set up effective trade promotion programmes for expanding their exports and improving their import operations. It is an executing agency of the UNDP and implements UNDP-financed projects relating to trade promotion in developing countries and economies in transition. See WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 14, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbadoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbadoc_e.doc), visited on 25 June 2007. For more information on the ITC, see its website available at: <http://www.intracem.org/index.htm>, visited on 30 June 2007.

<sup>135</sup> Part IV, Article XXXVI:8 of the GATT. This Paragraph provides, ‘The developed contracting parties do not expect reciprocity for commitments made by them in trade negotiations to reduce or remove tariffs and other barriers to the trade of less-developed contracting parties.’

<sup>136</sup> WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 13, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbadoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbadoc_e.doc), visited on 25 June 2007.

<sup>137</sup> This provision was further interpreted in the Kennedy Round as follows: ‘There will, therefore, be no balancing of concessions granted on products of interest to developing countries by developed participants on the one hand and the contribution which developing participants would make to the objective of trade liberalization on the other and which it is agreed should be considered in the light of the development, financial and trade needs of developing countries themselves. It is, therefore, recognized that the developing countries themselves must decide what contributions they can make’ (See COM.TD/W/37, 9, as reported in *Ibid.*, 13).

in subsequent trade negotiations were guided by this concept, particularly in the Tokyo Round.<sup>138</sup> Developing countries therefore did not actively engage in the negotiations, as they saw no need to offer concessions but were content to simply benefit from the concessions negotiated between developed countries, which would be extended to them on an MFN basis under GATT rules. This, however, also meant that developing countries could not direct negotiations to areas of importance to them or seek meaningful tariff reductions from their trading partners for products of interest to them, since it is in the nature of negotiations that in order to gain significant concessions, countries have to offer concessions in return.

Despite these developments, no fundamental changes to GATT rules were achieved. At the same time, the first two sessions of UNCTAD<sup>139</sup> achieved international recognition of the need for a generalized system of non-reciprocal trade preferences for developing countries, resulting in the establishment of the Generalized System of Preferences in 1968.<sup>140</sup> Further, the Committee on Trade and Development drafted a report, adopted by the CONTRACTING PARTIES in 1966, recognising the important contribution that the establishment of preferences between developing countries can make to the attainment of the GATT objectives. However, no agreement could be reached between GATT Contracting Parties regarding whether the new Part IV of the GATT 1947 allowed the introduction of such preferences. Consequently, preferential schemes introduced by developed countries under the Generalized System of Preferences and preferential agreements between developing countries had to be authorised for purposes of the GATT regime by means of waivers from the MFN obligation.<sup>141</sup> Part IV of the GATT continued to be viewed as simply a set of guidelines that did not change the rights and obligations under GATT.<sup>142</sup>

### 1.5 The Tokyo Round: The Enabling Clause and the Codes

As mentioned above, the 1970s saw calls for the establishment of a New International Economic Order (NIEO), reflecting social justice in international economic relations. In addition, demands for special treatment of developing countries in international econom-

---

<sup>138</sup> Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 98. The Tokyo Round negotiations are discussed in Part I, Section 1.5, below.

<sup>139</sup> In 1964 and 1968.

<sup>140</sup> The adoption of UNCTAD Resolution 21 (II) embodied 'unanimous agreement in favour of the early establishment of a mutually acceptable system of generalized, non-reciprocal and non-discriminatory preferences which would be beneficial to the developing countries.'

<sup>141</sup> Article XXV:5 of the GATT 1947 made provision for the granting of waivers. The GATT waiver for the Generalized System of Preferences (GSP) was adopted on 25 June 1971 and expired on 25 June 1981 (BISD 18S/24 (1972)). It was not renewed in view of the fact that the 1979 *Enabling Clause*, discussed below, authorised preferential tariff treatment by developed countries to developing country products in accordance with the GSP. The waiver for the Protocol Relating to Trade Negotiations among Developing Countries was adopted on 26 November 1971 without a specified time limit (BISD 18S/26). It is currently applied in terms of Paragraph 2(c) of the *Enabling Clause*. See BISD 27S/172.

<sup>142</sup> De Feyter notes that Part IV of the GATT was only raised 4 times in disputes and never successfully. Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 83.

ic relations increased, focussing on the need for trade preferences for developing country exports and non-reciprocity in trade negotiations.

These developments formed the background for the launch of a new Round of multi-lateral trade negotiations in Tokyo in 1973, which was aimed at disciplining the use of non-tariff barriers to trade, building on the attempts made in this area in the Kennedy Round. The special position of developing countries was recognised in the Tokyo Round negotiations. The Declaration launching the Tokyo Round stated, with regard to developing countries:

The Ministers recognize the need for special measures to be taken in the negotiations to assist the developing countries in their efforts to increase their export earnings and promote their economic development and, where appropriate, for priority attention to be given to products or areas of interest to developing countries. They also recognize the importance of maintaining and improving the Generalized System of Preferences. They further recognize the importance of the application of differential measures to developing countries in ways which will provide special and more favourable treatment for them in areas of the negotiation where this is feasible and appropriate.<sup>143</sup>

It also indicated that the negotiations must aim to:

...secure additional benefits for the international trade of developing countries so as to achieve a substantial increase in their foreign exchange earnings, the diversification of their exports, the acceleration of the rate of growth of their trade, taking into account their development needs, an improvement in the possibilities for these countries to participate in the expansion of world trade and a better balance as between developed and developing countries in the sharing of the advantages resulting from this expansion, through, in the largest possible measure, a substantial improvement in the conditions of access for the products of interest to the developing countries...<sup>144</sup>

Sixty-eight developing countries participated in the Tokyo Round of trade negotiations.<sup>145</sup> One of the results of this Round,<sup>146</sup> concluded in 1979, was the *Decision on Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*,<sup>147</sup> commonly known as the ‘*Enabling Clause*’. This clause went further than

<sup>143</sup> *Ministerial Meeting*, 20S/19 (1974), MIN(73)1, Declaration of Ministers approved at Tokyo, 14 September 1974, para.5.

<sup>144</sup> *Ibid.*, para. 2.

<sup>145</sup> WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 5, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbadoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbadoc_e.doc), visited on 25 June 2007.

<sup>146</sup> The principal aim of the Tokyo Round was to create disciplines on the use of non-tariff barriers to trade and it resulted, *inter alia*, in the first *Agreement on Technical Barriers to Trade*, commonly known as the Standards Code. See *Agreement on Technical Barriers to Trade*, 26S/154, 1186 UNTS 276, LT/TR/A/5, 12 April 1979.

<sup>147</sup> *Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD 26S/203 (1980), L/4903, LT/TR/D/1, Decision of the GATT CONTRACTING PARTIES, 28 November 1979. The legal nature of the *Enabling Clause* under the GATT 1947 is rather murky. It was not based on Article

Part IV of the GATT by formalising the concepts of SDT<sup>148</sup> for developing countries and non-reciprocity in trade negotiations and by establishing them as an integral part of the multilateral trading system. Recently, the Appellate Body in *EC – Tariff Preferences* clarified the reasons behind the *Enabling Clause* as follows:

...between the entry into force of the GATT and the adoption of the Enabling Clause, the Contracting Parties determined that the MFN obligation failed to secure adequate market access for developing countries so as to stimulate their economic development. Overcoming this required recognition by the multilateral trading system that certain obligations, applied to all Contracting Parties, could impede rather than facilitate the objective of ensuring that developing countries secure a share in the growth of world trade. This recognition came through an authorization for GSP schemes in the 1971 Waiver Decision and then in the broader authorization for preferential treatment for developing countries in the Enabling Clause.<sup>149</sup>

One of the most important elements of the *Enabling Clause* is the express provision for deviation from the principle of Most-Favoured-Nation treatment in Article I of the GATT, in order to allow for preferential treatment of developing countries. It provides:

Notwithstanding the provisions of Article I of the General Agreement, contracting parties may accord differential and more favourable treatment to developing countries, without according such treatment to other contracting parties.<sup>150</sup>

According to the Appellate Body in *EC – Tariff Preferences*, the *Enabling Clause* constitutes an exception to Article I: 1 of the GATT 1994.<sup>151</sup> However, due to its fundamental role in the WTO system as a means of stimulating economic growth and development,<sup>152</sup> the Appellate Body held that it is not a typical exception, which normally the responding party is responsible for raising as a defence against a claim of violation.<sup>153</sup> As a result, it is not sufficient for a complainant challenging a measure taken under the *Enabling*

XXV:5 of the GATT 1947, which made provision for *time-limited* waivers of GATT obligations. Neither was it explicitly based on Article XXX which allowed for amendments to the GATT 1947. It would seem to embody a tacit amendment of Article I of the GATT 1947, which contains the obligation of Most-Favoured-Nation treatment. Whatever its legal nature under the GATT 1947, it is now part of the GATT 1994 within the meaning of Article 1(b)(iv) of the language of Annex 1A incorporating the GATT 1994 into the *WTO Agreement*, which provides that the GATT 1994 shall consist of, *inter alia*, ‘other decisions of the CONTRACTING PARTIES to the GATT 1947’. The fact that the *Enabling Clause* is now an integral part of the GATT 1994 was recently confirmed by the Appellate Body. See Appellate Body Report, *EC - Tariff Preferences*, para. 90.

<sup>148</sup> At the time, the term used was ‘differential and more favourable treatment’. Later the term ‘special and differential treatment’ became common usage to describe the same concept. In this book, the term ‘special and differential treatment’ will be used.

<sup>149</sup> Appellate Body Report, *EC – Tariff Preferences*, para. 109.

<sup>150</sup> *Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD 26S/203 (1980), L/4903, LT/TR/D/1, Decision of the GATT CONTRACTING PARTIES, 28 November 1979, para. 1 (footnote omitted).

<sup>151</sup> Appellate Body Report, *EC – Tariff Preferences*, para. 99.

<sup>152</sup> After examining the history and objective of the *Enabling Clause*, the Appellate Body held that, unlike the case with other exceptions in WTO law, ‘Members are *encouraged* to deviate from Article I in the pursuit of “differential and more favourable treatment” for developing countries.’ *Ibid.*, para. 111.

<sup>153</sup> *Ibid.*, para. 106.

*Clause* to merely claim a violation of Article I: 1. Instead it must also identify the specific provisions of the *Enabling Clause* that the preference scheme of the responding Member allegedly violates.<sup>154</sup> However, the burden of establishing the facts necessary to prove inconsistency with the relevant provisions of the *Enabling Clause* does not lie with the complainant, but rather the respondent bears the burden of proof to show that the relevant provisions are complied with.<sup>155</sup> This rather awkward construction may be seen as reflecting the recognition by the Appellate Body of the importance of giving effect to the purpose of the *Enabling Clause*, namely the promotion of more favourable treatment of developing countries.

In the *Enabling Clause*, a list is provided of the types of differential and more favourable treatment envisaged there under. These are preferential tariffs accorded by developed countries to developing country products, in accordance with the Generalized System of Preferences;<sup>156</sup> differential and more favourable treatment regarding GATT rules on non-tariff measures; regional or global arrangements among developing countries with regard to the elimination or reduction of tariffs or non-tariff measures on products from one another; and special treatment of least-developed countries.<sup>157</sup>

Interestingly, the *Enabling Clause* seems to make some provision for the ‘graduation’ of developing countries.<sup>158</sup> It provides in Paragraph 3(c) that SDT under the *Enabling Clause* ‘shall in the case of such treatment accorded by developed contracting parties to developing countries be designed and, if necessary, modified, to respond positively to the development, financial and trade needs of developing countries.’ Further, the *Enabling Clause* provides in Paragraph 7 that as the economies of developing countries progressively develop and their trade situation improves, they would ‘expect that their capacity to make contributions or negotiated concessions or take other mutually agreed action under the General Agreement would improve’ and ‘would accordingly expect to participate more fully in the framework of rights and obligations’ under the GATT.<sup>159</sup> During the review of the *Enabling Clause* conducted at the fifty-eighth session of the Committee on Trade and Development, one delegate noted that the *Enabling Clause* provided a useful mechanism

<sup>154</sup> *Ibid.*, para. 113. This is in order to avoid subjecting preference schemes to open-ended challenges, which, according to the Appellate Body, ‘would be inconsistent ... with the intention of Members, as reflected in the Enabling Clause, to “encourage” the adoption of preferential treatment for developing countries and to provide a practical means for doing so within the legal framework of the covered agreements.’ Appellate Body Report, *EC – Tariff Preferences*, para. 114.

<sup>155</sup> Appellate Body Report, *EC – Tariff Preferences*, para. 115.

<sup>156</sup> As noted above, previously the GSP was authorised in terms of a 10-year waiver, granted in 1971 under Article XXV:5 of the GATT, from the most favoured nation obligation in Article I of the GATT (BISD 18S/24 (1972)). When this waiver expired in 1981, it was not necessary to extend it as preferential treatment under the GSP was then possible under the *Enabling Clause*.

<sup>157</sup> *Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD 26S/203 (1980), L/4903, LT/TR/D/1, Decision of the GATT CONTRACTING PARTIES, 28 November 1979, para. 2.

<sup>158</sup> This issue should be distinguished from the issue of differentiation between developing countries on the basis of considerations *other* than their stage of development. The latter type of differentiation was at issue in *EC – Tariff Preferences*, where the EC’s preference scheme provided for special preferences under arrangements to combat drug production and trafficking in 12 predetermined countries.

<sup>159</sup> *Differential and More Favourable Treatment, Reciprocity and Fuller Participation of Developing Countries*, BISD 26S/203 (1980), L/4903, LT/TR/D/1, Decision of the GATT CONTRACTING PARTIES, 28 November 1979, para. 7.

for permitting temporary deviation from the MFN principle but that SDT there under must be gradually phased out under the guidelines in Paragraph 3(c). This delegate further pointed out that Paragraph 7 requires differentiation between developing countries, beyond that envisaged for the least developed countries, with regard to SDT and the degree of reciprocity required in negotiations.<sup>160</sup> Several other delegates disagreed, noting that Paragraph 7 does not provide a basis for differentiation among developing countries and that the decision to participate more fully in the GATT system was an autonomous decision to be taken by a developing country in terms of its own judgement of its development, financial and trade needs.<sup>161</sup>

In *EC – Tariff Preferences*, the Panel addressed the question whether the *Enabling Clause* permits differentiation between beneficiaries.<sup>162</sup> It found:

...that the requirement of non-discrimination, as a general principle formally set out in [UNCTAD] Resolution 21 (II) and later carried over into the 1971 Waiver Decision and then into the Enabling Clause, obliges preference giving countries to provide the SP benefits to *all* developing countries without differentiation, except for the implementation of a priori limitations in GSP schemes.<sup>163</sup>

The Panel found that explicit authorisation is necessary for preferential treatment granted to ‘less than all developing countries’, which authorisation is only provided for the benefit of least-developed countries in Paragraph 2(d) of the *Enabling Clause* and for the implementation of a priori limitations as set out in the Agreed Conclusions.<sup>164</sup> On appeal, the Appellate Body reversed this finding of the Panel and held that:

...the participants in this case agree that developing countries may have “development, financial and trade needs” that are subject to change and that certain development needs may be common to only a certain number of developing countries. We see no reason to disagree. Indeed, paragraph 3(c) contemplates that “differential and more favourable treatment” accorded by developed to developing countries may need to be “modified” in order to “respond positively” to the needs of developing countries. Paragraph 7 of the Enabling Clause supports this view by recording the expectation of “less-developed contracting parties” that their capacity to make contributions or concessions under the

<sup>160</sup> Committee on Trade and Development, *Report Presented to the CONTRACTING PARTIES*, BISD 32S/21 L/5913, circulated on 28 November 1985, para. 34.

<sup>161</sup> *Ibid.*, para. 36.

<sup>162</sup> The issue in this case was not the graduation of developing countries from the EC’s GSP scheme due to improvements in their degree of development, but rather the granting of special preferences to 12 specific designated countries by the EC to combat drug production and trafficking. However, to the extent that the case deals with the issue of the permissibility of differentiation between developing countries with regard to preferences under the *Enabling Clause*, it is relevant to the issue of graduation. Further, several references were made by the Appellate Body to the effect of differences in *development* needs.

<sup>163</sup> Panel Report, *EC – Tariff Preferences*, para. 7.144.

<sup>164</sup> *Ibid.*, para. 7.151. The Agreed Conclusions of 26 March 1968 are the result of negotiations in the Special Committee on Preferences, established by Resolution 21(II) of the Second Session of UNCTAD with the mandate to develop agreed detailed arrangements for the GSP. The Agreed Conclusions permit a priori limitations, which are exceptional measures setting import ceilings so as to exclude certain imports from individual developing countries, where the products at issue reach a certain competitive level in the market of the preference-giving country.

GATT will “improve with the progressive development of their economies and improvement in their trade situation”. Moreover, the very purpose of the special and differential treatment permitted under the Enabling Clause is to foster economic development of developing countries. It is simply unrealistic to assume that such development will be in a lockstep for all developing countries at once, now and for the future.<sup>165</sup>

The Appellate Body also pointed out that the Preamble to the *WTO Agreement*, which informs all the covered agreements, recognizes the ‘need for positive efforts designed to ensure that developing countries, and especially the least-developed among them, secure a share in the growth in international trade *commensurate* with the needs of their economic development.’ According to the Appellate Body, the word ‘commensurate’ leaves open the possibility that ‘developing countries may have different needs according to their levels of development and particular circumstances.’<sup>166</sup> Thus, the Appellate Body held that a GSP scheme might be ‘non-discriminatory’ even if identical tariff preferences are not granted to all GSP beneficiaries.<sup>167</sup> However, an objective standard must be applied in assessing the existence of ‘development, financial and trade needs’ under Paragraph 3(c) and the relevant tariff preferences must be made available to all beneficiaries that share that need.<sup>168</sup> While this ruling seems to leave open the door for differentiation, on an objective basis, between developing countries with regard to preference schemes, the issue of graduation of developing countries from special and differential treatment schemes remains a difficult and controversial one.

Special and differential treatment of developing countries was further embodied in the results of the Tokyo Round by means of specific provisions in the various Codes negotiated to address particular non-tariff barriers to trade and trade remedies.<sup>169</sup> These Codes established disciplines beyond those of the GATT, limiting the regulatory freedom of those Contracting Parties that were signatories thereof in several areas. For example, Codes were agreed to dealing with government procurement,<sup>170</sup> import licensing,<sup>171</sup> customs valuation,<sup>172</sup> anti-dumping measures,<sup>173</sup> subsidies and countervailing measures<sup>174</sup>

<sup>165</sup> Appellate Body Report, *EC – Tariff Preferences*, para. 160 (footnotes omitted).

<sup>166</sup> *Ibid.*, 161. The Appellate Body further noted that the Preamble to the *WTO Agreement* recognizes that Members’ ‘respective needs and concerns at different levels of development’ may differ according to the different stages of development of different Members.

<sup>167</sup> *Ibid.*, 165.

<sup>168</sup> *Ibid.*, 163 and 165.

<sup>169</sup> One of these Codes, that dealing with antidumping measures, built upon work already done in the preceding Kennedy Round (1964-1967) in this regard.

<sup>170</sup> *Agreement on Government Procurement*, LT/TR/PLURI/2, dated 12 April 1979, BISD 26S/33.

<sup>171</sup> *Agreement on Import Licensing Procedures*, LT/TR/A/4, dated 12 April 1979, BISD 26S/154.

<sup>172</sup> *Agreement on Implementation of Article VII of the General Agreement on Tariffs and Trade*, LT/TR/A/2, dated 12 April 1979, BISD 26S/116.

<sup>173</sup> *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade*, LT/TR/A/1, dated 12 April 1979, BISD 26S/171. This agreement replaces the 1967 *Agreement on Implementation of Article VI of the General Agreement* (BISD 15S/24), which was negotiated in the Kennedy Round of multilateral trade negotiations and entered into force on 1 July 1968.

<sup>174</sup> *Agreement on Interpretation and Application of Articles VI, XVI and XXIII of the General Agreement on Tariffs and Trade*, LT/TR/A/3, dated 12 April 1979, BISD 26S/56.

and, most relevant for this study, technical barriers to trade.<sup>175</sup> Participation in the various Tokyo Round Codes was voluntary, and their provisions therefore only bound those Contracting Parties that decided to become signatories of the particular Code.<sup>176</sup>

Developing countries' participation in the negotiation of the Tokyo Round Codes was limited to the last stages, where they demanded the inclusion of special and differential treatment provisions in their favour.<sup>177</sup> Thus the general disciplines in the Codes themselves do not reflect developing country concerns. Instead, the special constraints faced by developing countries in complying with these new rules were to some extent recognized by means of the special and differential treatment provisions in these Codes. However, the nature of these provisions varies from Code to Code, some providing clear exemptions from their obligations for developing countries, and others being limited to hortatory provisions.<sup>178</sup> In spite of these provisions, the far-reaching commitments entailed by the new agreements prompted many developing countries to opt not to become signatories of the various Tokyo Round Codes. For example, only 24 developing countries became signatories of the Tokyo Round *Agreement on Technical Barriers to Trade*.<sup>179</sup> In addition, developing countries were able to negotiate decisions in the Tokyo Round relaxing the rules applicable to developing countries with regard to balance of payments restrictions and the protection and promotion of infant industries.<sup>180</sup>

In 1982, UNCTAD conducted an assessment of the results of the Tokyo Round, which concluded that they were 'modest and wanting in many specific respects.' In particular, the assessment criticised the fact that developing country proposals for concrete application of the concepts of differential and more favourable treatment were not fully realised. It found that although general provisions on differential treatment had been included in some Tokyo Round instruments, specific measures for their application were either lacking, or vague and inadequate. Further, it noted that the institutionalisation of the concepts of conditionality and graduation have far-reaching consequences for developing countries and could lead to arbitrary discrimination.<sup>181</sup>

---

<sup>175</sup> *Agreement on Technical Barriers to Trade*, 26S/154, 1186 UNTS 276, LT/TR/A/5, 12 April 1979. This *Standards Code* is discussed further below, Part III, Sections 1.1.2 and 1.1.3.

<sup>176</sup> The relationship between the Tokyo Round Codes and the GATT 1947 was addressed in a decision by the GATT CONTRACTING PARTIES at the conclusion of the Tokyo Round. It stated: 'The CONTRACTING PARTIES also note that existing rights and benefits under the GATT of contracting parties not being parties to these Agreements, including those derived from Article I, are not affected by these Agreements...' *Action by the CONTRACTING PARTIES, on the Multilateral Trade Negotiations. Decision of 28 November 1979, L/4905*, circulated on 3 December 1979. It was thus possible for GATT Contracting Parties to choose whether or not to become signatories to the agreements which were negotiated in the Tokyo Round to supplement the GATT disciplines. It was only in the Uruguay Round that all WTO Members undertook to be bound to all the multilateral Agreements as part of a 'single undertaking'.

<sup>181</sup> Report by the Secretary-General of UNCTAD, *Assessment of the Results of the Multilateral Trade*

## 1.6 The Uruguay Round negotiations

The Uruguay Round of trade negotiations, which lasted from 1986 to 1994, saw a marked change in the attitude of developing countries. This can be partly attributed to the end of the Cold War and the fall of communism during the course of the Round. Demands for a New International Economic Order faded and state intervention in the national economy was no longer seen as the best way to achieve development. As a result, developing countries evinced a new readiness to engage in trade liberalisation.<sup>182</sup> A record number of 76 developing countries participated in the Uruguay Round,<sup>183</sup> and some of these countries played an active role in the negotiations.<sup>184</sup> A new resolve to become effective participants in the multilateral trade regime<sup>185</sup> was evident in their willingness to make reciprocal concessions and undertake to comply with the negotiated disciplines.

Continuing the work initiated in the two previous rounds,<sup>186</sup> the Uruguay Round involved not only the negotiation of tariff reductions but also new substantive disciplines on non-tariff barriers to trade, involving behind-the-border policy areas.<sup>187</sup> For the first time, such new disciplines formed part of a ‘single undertaking’ that all countries wishing to be WTO Members had to sign on to.<sup>188</sup> Therefore, the new involvement of developing coun-

Negotiations, UNCTAD Doc. T/B/778/Rev.1 (1982) 29, as quoted in John H. Jackson *et al.*, *Legal Problems of International Economic Relations: Cases, Materials and Text on the National and International Regulation of Transnational Economic Relations*, Fourth ed., American Casebook Series (West Group, St. Paul), 2002, 1172.

<sup>182</sup> De Feyter notes that ‘[t]oday, ‘developing countries’ wear the emperor’s clothes of ‘emerging markets’.’ Koen De Feyter, ‘Contracting for Human Development: International Law and Development Revisited’, *Asia Pacific Law Review* 10 (1), 2002, 49-74, 49.

<sup>183</sup> WTO Development Division, *Developing Countries and the Multilateral Trading System: Past and Present. Background Document for the High Level Symposium on Trade and Development* (World Trade Organization, Geneva), 17-18 March 1999, 5, available at: [http://www.wto.org/english/tratop\\_e/devel\\_e/tr\\_dvbadoc\\_e.doc](http://www.wto.org/english/tratop_e/devel_e/tr_dvbadoc_e.doc), visited on 25 June 2007.

<sup>184</sup> This more active role of developing countries has been ascribed by Ostry to the transformation in the economic policy paradigm following the debt crisis of the 1980s, and thus the increased role of the IMF and World Bank, and the fall of the Berlin wall. Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 286.

<sup>185</sup> Edwini Kwame Kessie, ‘Developing Countries and the World Trade Organization: What Has Changed?’ *World Competition* 22 (2), 1999, 83-110, 84. Kessie notes that developing countries hoped that by undertaking extensive commitments, they would ‘send a positive signal to the international community that they were serious about economic reform.’

<sup>186</sup> Attention to non-tariff barriers to trade began during the Kennedy Round. The Tokyo Round codes went further in addressing non-tariff barriers to trade. However, unlike in the Uruguay Round where the single undertaking approach was followed, the Tokyo Round codes were only binding on those countries that accepted them. Most developing countries, therefore, did not incur obligations thereunder.

<sup>187</sup> United Nations Conference on Trade and Development, *Assuring Development Gains from the International Trading System and Trade Negotiations. Background Note by the UNCTAD Secretariat for the 11th Session, 13-18 June 2004*, TD/397 (United Nations, São Paulo), 4 May 2004, para. 5.

<sup>188</sup> The Punta Del Este Declaration launching the Uruguay Round negotiations stated: ‘The launching, the conduct and the implementation of the outcome of the negotiations shall be treated as parts of a single undertaking.’ Special Session of the GATT CONTRACTING PARTIES, *Ministerial Declaration on the Uruguay Round of 20 September 1986*, GATT MIN.DEC, BISD 33S/19, circulated on 25 September 1986, Pat I:B(ii). As noted by Marceau and Trachtman, this embodies two separate concepts, the single political undertaking, which means that in the negotiations the approach was that ‘nothing is agreed until everything is agreed’ and the single legal undertaking, which means that the outcome of the negotiations would be a single package to be

tries meant that they took on extensive obligations,<sup>189</sup> not only to reduce tariffs but also to limit non-tariff barriers to trade, including in the area of domestic regulation,<sup>190</sup> and to reform trade procedures.<sup>191</sup>

The new commitment to the integration of developing countries in the world economy was reflected in the rhetoric of the results of the Uruguay Round negotiations. The preamble to the *Marrakesh Agreement Establishing the World Trade Organization*<sup>192</sup> (*WTO Agreement*), the agreement that together with its Annexes embodies the results of the Uruguay Round negotiations, recognises:

...that there is need for positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth in international trade commensurate with the needs of their economic development.<sup>193</sup>

While this preambular language does not create binding obligations on Members, it is not without significance.<sup>194</sup> The relevance of the preamble to the *WTO Agreement* was clarified by the Appellate Body in *US – Shrimp*, where it stated:<sup>195</sup>

...As this preambular language reflects the intentions of negotiators of the *WTO Agreement*, we believe it must add colour, texture and shading to our interpretation of the agreements annexed to the *WTO Agreement*...<sup>196</sup>

Nevertheless, despite the good intentions reflected in the preamble, it appears that the gains for developing countries from the results of the Uruguay Round have been meagre. It has been argued that both the agreements themselves and their interpretation by the dispute settlement organs of the WTO have evinced little understanding for developing countries' constraints and capacities and have, as such, not sufficiently led to the attain-

implemented as a single treaty. Gabrielle Marceau and Joel P. Trachtman, 'GATT, TBT and SPS: A Map of WTO Law of Domestic Regulation of Goods', in *The WTO Dispute Settlement System 1995-2003*, F. Ortino and Ernst-Ulrich Petersmann (eds.) (Kluwer Law International, Deventer), 2004, 275-340, footnote 5.

<sup>189</sup> Ostry notes, with respect to the Uruguay Round results: 'The degree of intrusiveness into domestic sovereignty bears little resemblance to the shallow integration of the GATT model of *negative* regulation – what governments must not do – to positive regulations, or what governments must do.' Sylvia Ostry, 'The Uruguay Round North South Grand Bargain: Implications for Future Negotiations,' presented at the *Conference on the Political Economy of International Trade Law*, Minneapolis, University of Minnesota Law School, 15-16 September 2000, 6.

<sup>190</sup> Examples are technical regulations and standards, sanitary and phytosanitary measures, and intellectual property protection.

<sup>191</sup> For example, import licensing procedures and customs valuation.

<sup>192</sup> 'Marrakesh Agreement Establishing the World Trade Organization', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 6-18.

<sup>193</sup> *Ibid.*, 2nd recital. This recognition was absent from the preamble of the GATT 1947.

<sup>194</sup> In fact, the Appellate Body in *EC-Tariff Preferences* referred to this particular recital of the Preamble when establishing the object and purpose of the *WTO Agreement* and the *Enabling Clause*, in order to determine whether the *Enabling Clause* was intended to operate as an exception to Article I:1 of the GATT 1994. See Appellate Body Report, *EC – Tariff Preferences*, paras 91-92.

<sup>195</sup> In this case, the Appellate Body was dealing with the preambular recital that refers to the optimal use of the world's resources in accordance with the objective of sustainable development. However, its finding on the role of preambular language applies more generally to all recitals in the preamble of the *WTO Agreement*.

<sup>196</sup> Appellate Body Report, *US – Shrimp*, para. 153.

ment of the objective of integration of developing countries into the world economy by securing them a share in the growth of international trade commensurate with their development needs.<sup>197</sup>

The ‘single undertaking’ approach followed in the Uruguay Round meant that countries were obliged to sign on to all the multilateral agreements resulting from the round, or not at all. They could not pick and choose among them, as had been the practice in previous rounds.<sup>198</sup> As aptly put by Sylvia Ostry with regard to the single undertaking:

The deal was pretty much take it or leave it for the Southern countries. So they took it but, it is safe to say, without a full comprehension of the profoundly transformative implication of this new trading system.<sup>199</sup>

The Uruguay Round resulted in high costs for developing countries. Those developing countries that had no schedules of tariff concessions were obliged to negotiate such schedules in order to become original WTO Members.<sup>200</sup> Due to the increased willingness of developing countries to engage actively in the Uruguay Round negotiations and to make reciprocal concessions in order to gain market access concessions in areas of interest to them, this has led to considerable tariff reductions in these countries,<sup>201</sup> as compared

<sup>197</sup> Asif Qureshi notes that the development dimension ‘has hitherto neither been sufficiently articulated nor coherently structured in the architecture of international trade agreements.’ He also reports the dissatisfaction of developing-country Members with the record of WTO jurisprudence in interpreting WTO agreements in a way that advances the development objective. In this respect, Qureshi refers to three submissions of developing-country Members in the context of the negotiations on the reform of the WTO dispute settlement system, namely those contained in TN/DS/W/15 (Kenya, on behalf of the African Group), TN/DS/W/17 (Zambia, on behalf of the LDC Group) and TN/DS/W/18 (India, on behalf of Cuba, Honduras, India, Malaysia, Pakistan, Sri Lanka, Tanzania and Zimbabwe). Asif H. Qureshi, ‘Interpreting World Trade Organization Agreements for the Development Objective’, *Journal of World Trade* 37 (5), 2003, 847-882, 848. Similarly, Mary Footer notes the concern of developing-country Members that they are ‘witnessing a trend towards stricter interpretation’ of SDT provisions in WTO agreements. In this respect Footer refers to a communication by Egypt to the General Council and the Committee on Trade and Development on SDT, contained in WT/GC/W/109 and WT/COMTD/W/49. Mary E. Footer, ‘Developing Country Practice in the Matter of WTO Dispute Settlement’, *Journal of World Trade* 35 (1), 2001, 55-98, 84.

<sup>198</sup> There were only four plurilateral agreements that did not form part of the ‘single undertaking’, namely those on civil aircraft, government procurement, dairy and bovine meat.

<sup>199</sup> Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 287. Finger, an economist (previously with the World Bank) who is renowned for his work on trade and development issues, agrees with this evaluation. See J. Michael Finger, ‘The Uruguay Round North-South Bargain: Will the WTO Get over It?’ in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 301-310, 308.

<sup>200</sup> Article XI of the *WTO Agreement* provides that Contracting Parties to the GATT 1947 that accept the WTO Agreement and the Multilateral Trade Agreements, and for which schedules of concessions and commitments are annexed to the GATT and the GATS, shall become original Members of the WTO. Special provision is made in para. 2 of this Article for LDCs, which are only ‘required to undertake commitments and concessions to the extent consistent with their individual development, financial and trade needs or their administrative and institutional capabilities.’ Countries that accede to the WTO in terms of Article XII of the *WTO Agreement* are obliged to accede to the WTO Agreement and all the multilateral trade agreements and to negotiate terms of accession that include schedules of tariff commitments.

<sup>201</sup> Finger has pointed out that developing country tariff reductions in the Uruguay Round covered as large a share of their imports as did those of developed countries (30%), while their tariff cuts (measured according

to the negligible tariff concessions made by developing countries in previous rounds. As tariffs form a significant source of revenue for many developing countries, this has meant a reduction in the resources available for their development needs. In exchange, developing countries pushed for the opening of markets, especially in OECD countries, for agricultural products and labour-intensive manufactured products, particularly textiles and clothing. However, while implementation of tariff reduction commitments by developing countries has been timely,<sup>202</sup> the expected opening by developed countries of their agricultural and textile markets has occurred at a slower pace or more limited extent than envisaged by developing countries.<sup>203</sup>

Although, for the first time, agriculture took centre stage in the negotiations, the resulting *Agreement on Agriculture*<sup>204</sup> made only limited progress in liberalising the agricultural sector, with the commitment to continue liberalisation in 2000.<sup>205</sup> With regard to textiles and clothing, transitional arrangements were put into place for a 10-year period ending in 2005, after which the Multi-Fibre Agreements were terminated and the textiles and clothing sector fully integrated into the GATT.<sup>206</sup> However, Members held out until the last minute to make the necessary reforms in their textiles and clothing sectors. With regard to tariff reductions, significant tariff peaks remain with regard to manufactured or processed goods from developing countries, making it difficult for them to diversify their economies away from a reliance on the export of primary products. The results of the Uruguay

---

to how they will affect importers' costs) were actually deeper than those of developed countries. J. Michael Finger, 'The Uruguay Round North-South Bargain: Will the WTO Get over It?' in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 301-310, 302.

<sup>202</sup> Finger notes that there was full implementation of tariff commitments by developing countries by the January 2000 deadline despite the fact that developing countries made substantial commitments in this regard, and there was no problem with implementation of the GATS. J. Michael Finger, *The Doha Agenda and Development: A View from the Uruguay Round* (Asian Development Bank, Manila), August 2002, 9-10, available at: [http://www.adb.org/Economics/pdf/doha/J\\_Michael\\_Finger.pdf](http://www.adb.org/Economics/pdf/doha/J_Michael_Finger.pdf), visited on 29 June 2008.

<sup>203</sup> As noted by Finger and Nogués, the wording of the Uruguay Round *Agreement on Textiles and Clothing*, which requires the integration of all textile and clothing products into the GATT regime in 4 stages, allowed developed countries to delay much of the liberalisation of this sector until 2005. The authors report that although the first two phases should notionally lead to the liberalisation of 33% of textile and clothing imports, Members tended to 'liberalise' those clothing imports that were not subject to restraints to begin with. As a result, the US had by the end of the second stage eliminated only 1% of its restrictions under the Multi-Fibre Agreements, the EC only 7% and Canada only 14%. The liberalisation of the agricultural sector has been even more problematic. While Members were obliged to replace their non-tariff barriers to trade with tariffs (known as tariffication), many developed-country Members applied tariffs that only slightly reduced, or in some cases increased, the level of protection. In addition, reductions of export subsidies and domestic support in the agricultural sector were limited. J. Michael Finger and Julio J. Nogués, *The Unbalanced Uruguay Round Outcome: The New Areas in Future WTO Negotiations*, December 2001, 3-4.

<sup>204</sup> 'Agreement on Agriculture', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 39-68.

<sup>205</sup> Article 20 of the *Agreement on Agriculture*.

<sup>206</sup> Article 9 of the *Agreement on Textiles and Clothing*. See 'Agreement on Textiles and Clothing', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 85-137.

Round have thus, not without reason, been called a ‘lopsided bargain’.<sup>207</sup> Developing countries have lost more than they gained in real economic terms.<sup>208</sup>

Further, the implementation of the obligations contained in the Uruguay Round agreements has been costly for developing countries.<sup>209</sup> The new agreements encompass disciplines to tackle a broad range of behind-the-border regulatory measures, going beyond the non-discrimination requirements of the GATT<sup>210</sup> and laying down substantive disciplines for regulatory barriers to trade.<sup>211</sup> This requires new or reformed laws and regulations and the institutional capacity to administer new regulatory systems.<sup>212</sup> While developing countries, just as developed countries, potentially benefit from the increased market access that these new disciplines bring, they bear much higher costs in the implementation of the new rules. The new rules can be said to embody the ‘best practice’ in respect of regulatory regimes in developed countries and, as such, compliance requires significant technical, financial and administrative resources from developing countries.<sup>213</sup> These

<sup>207</sup> Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 288.

<sup>208</sup> Finger evaluates the North-South bargain of the Uruguay Round as follows: ‘...the North’s mercantilist sacrifice on tariffs and quotas is, in real economics, a *gain* for them...The South’s concessions, however, involve real costs to the South – significant costs to implement the policy changes, negative impacts in many cases of the changes themselves...North concessions...did not equal those by the developing countries. As for South concessions in the WTO New Areas – as mercantilism they are unrequited, as real economics they are overly costly.’ J. Michael Finger, ‘The Uruguay Round North-South Bargain: Will the WTO Get over It?’ in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 301-310, 304.

<sup>209</sup> A World Bank study in 2000 found that, ‘the costs of implementing WTO agreements can easily exceed the entire development budget of a least-developed country’ and noted that, ‘It is not at all clear from a development perspective that the resources required for implementation of some WTO agreements, whatever the amount might be, would not be better used to build schools or improve infrastructure.’ Rajesh Chadha *et al.*, ‘Developing Countries and the Next Round of WTO Negotiations’, *The World Economy* 23 (4), 2000, 431-436, 433.

<sup>210</sup> Article III:4 of the GATT lays down the National Treatment obligation with regard to regulatory treatment of like domestic and imported products, prohibiting less favourable treatment of imports. Likewise, the requirement of Most-Favoured-Nation treatment in Article I of the GATT extends also to domestic regulation, prohibiting discrimination between imported products from different countries. Any advantage or privilege granted by a Contracting Party (now a WTO Member) to any product from another country must be accorded to the like product from all other Contracting Parties.

<sup>211</sup> As noted by the UNCTAD Secretariat, ‘the creation of the WTO in 1995 marked a paradigm shift by encompassing ‘within-the-borders’ policy issues in the context of a single undertaking.’ United Nations Conference on Trade and Development, *UNCTAD XI - the Spirit of Sao Paulo*, TD/L.382 (United Nations, Sao Paulo), 17 June 2004, 5, available at: [www.unctad.org/en/docs/TDL382\\_en/pdf](http://www.unctad.org/en/docs/TDL382_en/pdf), visited on 1 June 2005.

<sup>212</sup> J. Michael Finger, ‘The Uruguay Round North-South Bargain: Will the WTO Get over It?’ in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 301-310, 304. See further on this point below, Part I, Section 1.7.

<sup>213</sup> The intrusion of WTO rules into regulatory areas has been criticised by Jagdish Bhagwati as ‘backdoor *intrusionism*, an attempt to iron out the asymmetries in other countries’ domestic institutions and raise their costs out of line with comparative advantages.’ See Jagdish Bhagwati, *Free Trade Today*, (Princeton NJ: Princeton University Press, 2002): 67 as referred to by Sally. Sally points out that comparative advantage is undermined by what he calls ‘standards harmonisation’ as it ‘ignores the fact that policies and institutions differ according to differences in circumstance, not least comparative costs which vary with levels of development.’ Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 25-26, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

costs are particularly high for developing countries whose domestic regulatory systems are still rudimentary in many areas. Implementation of these rules may divert resources from areas of higher priority for their development objectives, such as the provision of food, water and basic sanitation.

Unlike in past negotiating rounds, developing countries did not insist on special and differential treatment in the form of broad exemptions from negotiated disciplines but agreed to comply with these rules, in exchange for increased market access in areas of importance for them, such as agriculture. Calls for special and differential treatment were limited to longer timeframes for implementation of their obligations, consideration for their special position and improved technical assistance, instead of demands for developing country cut-outs from negotiated rules.<sup>214</sup> However, expectations with regard to special and differential treatment and technical assistance have not been met.<sup>215</sup> As noted by Finger and Schuler:

[T]he developing countries have taken on bound commitments to implement in exchange for unbound commitments of assistance.<sup>216</sup>

The lack of implementation of provisions on special treatment of developing countries has been a factor limiting the benefits that developing countries might have reaped from the market access gains resulting from the Uruguay Round, due to the fact that developing countries face supply-side constraints. These constraints mean that developing countries cannot take full advantage of increases in market access opportunities as they lack the capacity to respond to these opportunities.<sup>217</sup> For this reason, increased market access does not necessarily translate into increased exports from developing countries. In order for trade liberalisation to result in real economic growth for developing countries, increased market access must therefore go hand-in-hand with technical assistance and capacity building to ensure that developing countries have the means to take advantage of market access gains.<sup>218</sup> However, the references to technical assistance in the Uruguay

<sup>214</sup> Edwini Kwame Kessie, 'Developing Countries and the World Trade Organization: What Has Changed?' *World Competition* 22 (2), 1999, 83-110, 84.

<sup>215</sup> As stated by the UNCTAD Secretariat, 'Since the integration into the [international trading system] of developing countries has increasingly involved aligning their policies and standards with those of developed countries, there a number of expectations have been implicit in the participation of developing countries in the ITS: (a) that their development, financial and trade needs and circumstances would be fully 'integrated' into the framework of rights and obligations; (b) that adequate international support and assistance, technical and financial, would be readily available, as structural and adjustment support; (c) that their own liberalization and structural adjustment would be reciprocated, especially by developed-country partners; (d) that international markets would be less imperfect and distorted and would allow developing-country enterprises to compete fairly and make best use of efficiencies generated by economic reform; (e) that enhanced and stable preferential market access in areas of developing countries' inherent and emerging comparative advantage in commodities, manufactures and services would be realized in their major markets; and (f) that their vulnerabilities and inadequacy of bargaining power would be redressed.' United Nations Conference on Trade and Development, *UNCTAD XI - the Spirit of Sao Paulo*, TD/L.382 (United Nations, Sao Paulo), 17 June 2004, para. 6, available at: [www.unctad.org/en/docs/TDL382\\_en/pdf](http://www.unctad.org/en/docs/TDL382_en/pdf), visited on 1 June 2005.

<sup>216</sup> Michael J. Finger and Philip Schuler, 'Implementation of Uruguay Round Commitments: The Development Challenge', *The World Economy* 23 (4), 2000, 511-525, 514.

<sup>217</sup> De Feyter points out that sub-Saharan African countries 'struggle with the inadequate domestic supply response to existing market opportunities'. Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 97.

<sup>218</sup> The UNCTAD Secretariat, in its background note to UNCTAD XI, notes, 'In the context of limited resources,

Round agreements are couched in hortatory terms and have fallen short of addressing supply-side constraints.<sup>219</sup>

That is not to say that developing countries have not benefited at all from the results of the Uruguay Round. Most significantly, the creation of the World Trade Organization and its dispute settlement system through the Uruguay Round negotiations, holds important benefits for developing countries. The increased judicial nature of the world trading system has increased the certainty and predictability of the trading environment.<sup>220</sup> The creation of a strong system of enforcement of its rules through a quasi-judicial dispute settlement system means that developing countries are no longer at the mercy of more powerful trading partners.<sup>221</sup>

### 1.7 From the Uruguay Round to the Seattle Ministerial Conference

Since the coming into existence of the WTO, a large number of developing countries, and two least-developed countries,<sup>222</sup> have negotiated membership in this organisation. Developing countries currently represent four-fifths of WTO Members. This, together with the increasing assertiveness of developing country Members, has led to a change in the dynamics of the organisation.

On the basis of their experience with the results of the Uruguay Round and the implementation problems arising from those agreements, developing countries raised concerns regarding the asymmetry of the benefits and costs of the world trading system.<sup>223</sup> There

---

developing countries have difficulty giving priority to the resources required for trade success when some pressing development priorities (e.g. combating widespread poverty, illiteracy, hunger and malnutrition and pandemics) legitimately claim a large part of their institutional attention and budgetary allocation. Unless adequate support and phase in are provided for integration into the [international trading system], the costs of integration may far outweigh the benefits.' United Nations Conference on Trade and Development, *Assuring Development Gains from the International Trading System and Trade Negotiations. Background Note by the UNCTAD Secretariat for the 11th Session, 13-18 June 2004*, TD/397 (United Nations, São Paulo), 4 May 2004, para. 22.

<sup>219</sup> In his recommendations for the Doha Round negotiations on the basis of the Uruguay Round experience with technical assistance, Finger advises, 'Do not trust trade ministers when they talk about money, they do not have any.' He refers to the fact that trade ministers and ministries do not have authority or even influence within their governments to dispose of the necessary sums of money for technical assistance. J. Michael Finger, *The Doha Agenda and Development: A View from the Uruguay Round* (Asian Development Bank, Manila), August 2002, 38, available at: [http://www.adb.org/Economics/pdf/doha/J\\_Michael\\_Finger.pdf](http://www.adb.org/Economics/pdf/doha/J_Michael_Finger.pdf), visited on 29 June 2008.

<sup>220</sup> Low notes that even if developing countries cannot influence the behaviour of their trading partners through participation in the WTO, they nevertheless benefit from membership in the WTO. He points to the inherent benefit in the fact that their trading partners are required to subscribe to a set of rules that increase certainty and reduce the arbitrariness of their trade policy behaviour. Patrick Low, 'Is the WTO Doing Enough for Developing Countries?' in *WTO Law and Developing Countries*, George A. Bermann and Petros C. Mavroidis (eds.) (Cambridge University Press, Cambridge), 2007, 324-358, 327.

<sup>221</sup> The WTO dispute settlement system is briefly described below, Part IV, Section 2.2.1.

<sup>222</sup> Nepal was the first LDC to accede to the WTO, in April 2004, followed by Cambodia in October of the same year.

<sup>223</sup> The UNCTAD Secretariat has noted, 'Significant gains were anticipated and promised, including from the 'grand bargain' that was struck from the most ambitious round of multilateral trade negotiations, the Uruguay Round, which led to the creation of the WTO. ... From the perspective of developing countries, which constitute the majority of the WTO membership, the unfinished business of the Uruguay Round needs to

were calls for the ‘rebalancing’ of the Uruguay Round results before any new negotiations could be launched.<sup>224</sup> In addition, developing countries strongly opposed the negotiation of new WTO rules requiring the development or reform of national regulatory regimes, such as rules on competition and investment, the so-called ‘new issues’ in the run up to the Seattle Session of the Ministerial Conference. They also opposed increased recognition of societal concerns such as labour standards, environment and health in WTO rules by means of additional flexibility for trade restrictions in these areas.<sup>225</sup> This can be ascribed to their concern with benefiting fully from trade liberalisation and limiting the costs of membership in the WTO.<sup>226</sup>

In the run-up to the Seattle Session of the Ministerial Conference, the proactive role of developing countries was striking. A positive agenda was put forward by these countries, and they submitted more than half of the 250 specific proposals for the Ministerial Conference.<sup>227</sup> These proposals demonstrated the heterogeneity of developing countries, with larger developing countries and agricultural exporting nations focusing on market access issues while smaller developing countries and LDCs prioritised implementation issues and the need for effective technical assistance and special and differential treatment.<sup>228</sup> A notable factor that contributed to the new proactive stance of developing countries was the growing awareness of the importance of trade issues among the business community and non-governmental organisations in developing countries. These new actors in the policy arena have contributed to the development of positive negotiating positions in developing countries. In addition, UNCTAD played a role in assisting developing countries to formulate their own agenda and become *demandeurs* in the negotiations.<sup>229</sup>

These developments led to an emphasis on implementation issues as an attempt to ‘rebalance’ the Uruguay Round results.<sup>230</sup> Although the idea of implementation issues originally

be completed, the Agreements fully implemented, and its gains to materialize. Many developing countries have drawn attention to the urgent need to address specific development provisions and mandates of the Doha Declaration, and to correct the asymmetries in the MTS.’ United Nations Conference on Trade and Development, *UNCTAD XI - the Spirit of Sao Paulo*, TD/L.382 (United Nations, Sao Paulo), 17 June 2004, para.7, available at: [www.unctad.org/en/docs/TDL382\\_en/pdf](http://www.unctad.org/en/docs/TDL382_en/pdf), visited on 1 June 2005.

<sup>224</sup> Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 289.

<sup>225</sup> Allowing a wide margin of flexibility for trade restrictions to protect health, environment and labour standards in WTO rules forces developing countries to implement the social standards maintained by developed countries and erodes the comparative advantage that developing countries have in certain areas due to their lower production costs resulting from lower social standards.

<sup>226</sup> Koen De Feyter, *World Development Law: Sharing Responsibility for Development* (Intersentia, Antwerp), 2001, 99.

<sup>227</sup> See WTO Secretariat, *Preparations for the 1999 Ministerial Conference. Compilation of Proposals Submitted in Phase 2 of the Preparatory Process. Informal Note by the Secretariat. Revision*, JOB(99)/4797/Rev.3, circulated on 18 November 1999.

<sup>228</sup> Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 289.

<sup>229</sup> Ostry notes that the Secretary-General of UNCTAD, Rubens Ricupero, stated that the role of UNCTAD is to assist developing countries to develop a positive agenda. *Ibid.*, 292.

<sup>230</sup> *Ibid.* Finger notes that the implementation debate at the WTO does not reflect a movement towards the appropriate economics. Developed countries argue that ‘a deal is a deal’ with regard to developing country obligations in the new areas covered by the Uruguay Round agreements. Developing countries’ response is

referred to problems of compliance with negotiated obligations, in the preparatory process for the Seattle Session of the Ministerial Conference this idea was used to refer more broadly to imbalances in the Uruguay Round results.<sup>231</sup> In other words, implementation issues covered not only actual non-implementation of the legally-binding obligations in the Uruguay Round agreements, but also the fact that, due to flexibilities in certain provisions in the agreements<sup>232</sup> and the interpretation of these provisions by some countries in a way that runs counter to the interests of developing countries, the expected benefits for developing countries had failed to materialise. At the Geneva Session of the Ministerial Conference in 1998, it was agreed that implementation issues were an important part of the future work of the WTO. The Ministerial Declaration provided:

Full and faithful implementation of the WTO Agreement and Ministerial Decisions is imperative for the credibility of the multilateral trading system and indispensable for maintaining the momentum for expanding global trade, fostering job creation and raising standards of living in all parts of the world. When we meet at the Third Session we shall further pursue our evaluation of the implementation of individual agreements and the realization of their objectives. Such evaluation would cover, inter alia, the problems encountered in implementation and the consequent impact on the trade and development prospects of Members. We reaffirm our commitment to respect the existing schedules for reviews, negotiations and other work to which we have already agreed.

... we decide that a process will be established under the direction of the General Council to ensure full and faithful implementation of existing agreements, and to prepare for the Third Session of the Ministerial Conference. This process shall enable the General Council to submit recommendations regarding the WTO's

---

equally traditional, making suggestions based on the mercantilist concept of SDT, namely that developing countries be exempted from some obligations and be granted longer implementation periods. Finger claims that legitimate questions can be raised about the economic rationality of some countries implementing certain of their Uruguay Round obligations. J. Michael Finger, 'The Uruguay Round North-South Bargain: Will the WTO Get over It?' in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 301-310, 306-307.

<sup>231</sup> *Doha Round Briefing Series. Cancun Update: Implementation-Related Issues and Concerns*, Vol. 2 No. 1 (The International Centre for Trade and Sustainable Development and the International Institute for Sustainable Development, Geneva), August 2003. See also Patrick Low, 'Is the WTO Doing Enough for Developing Countries?' in *WTO Law and Developing Countries*, George A. Bermann and Petros C. Mavroidis (eds.) (Cambridge University Press, Cambridge), 2007, 324-358, 333.

<sup>232</sup> For example, some of the provisions at issue are hortatory, such as Article 10.2 of the *SPS Agreement*, which provides that longer time-frames for compliance *should* be granted on products of interest to developing countries, where the appropriate level of SPS protection allows. Other provisions at issue are quite flexible in allowing for different interpretations, such as Article 4.1 of the *SPS Agreement* which obliges Members to accept the SPS measures of other Members as equivalent, if they are objectively demonstrated to meet the appropriate level of protection of the importing Member and Article 15 of the *Antidumping Agreement* which obliges developed countries to have 'special regard' for the situation of developing countries when considering the imposition of anti-dumping measures. Although it would be difficult to prove that these provisions have been violated, developing countries believe that they have not been faithfully implemented according to the spirit of the agreements, and thus that a asymmetry has resulted in the results of the Uruguay Round for developed and developing countries.

work programme, including further liberalization sufficiently broad-based to respond to the range of interests and concerns of all Members, within the WTO framework, that will enable us to take decisions at the Third Session of the Ministerial Conference. ...<sup>233</sup>

Implementation was probably the most discussed issue in the period leading up to the Seattle Ministerial Conference. Over 150 implementation concerns were identified by developing countries and presented to the General Council before the Seattle Ministerial meeting.<sup>234</sup> As is common knowledge, the Seattle Ministerial Conference ended in failure, with disagreement between the United States (US) and European Communities (EC)<sup>235</sup> on crucial issues, the walkout of most non-OECD countries, amidst non-governmental organisation protests and street riots. As noted by Sylvia Ostry after the failed Seattle Ministerial Conference:

The bicycle theory of trade liberalisation – combat protectionist pressures by means of regular negotiations – is a metaphor based on the past. The cyclist was the US and, perhaps, a bicycle built for two could accommodate the EU on the back seat. The WTO today is like a crowded bus full of noisy passengers who cannot (or will not) agree on the instructions for the poor, beleaguered driver. Yet... it would not be impossible to arrange for a reasoned discussion on the road to take to reach an agreed destination.<sup>236</sup>

Following the fiasco in Seattle, there was a new realisation among developed countries of the need to take developing country concerns seriously in order to get the international consensus necessary to relaunch the negotiating round. Developing countries gained in confidence and continued to push for recognition of the need to address the problems of the existing Uruguay Round agreements, particularly with regard to implementation, before new negotiations could be started. In April 2000, the Group of 77 and China<sup>237</sup> adopted the *Havana Programme of Action*<sup>238</sup> at the South Summit, in which they committed themselves, *inter alia*, to:

<sup>233</sup> Ministerial Conference, Second Session, *Ministerial Declaration*, WT/MIN(98)/DEC/1, (Geneva: World Trade Organization, adopted 20 May 1998): paras 8-9.

<sup>234</sup> These issues were divided into two categories (i) issues to be decided before the Seattle Ministerial Conference and (ii) issues to be agreed within one year thereof.

<sup>235</sup> The European Communities, not the European Community or the European Union, is a Member of the WTO. Its membership is provided for in Article XI of the *WTO Agreement*. Hereafter in this book the abbreviation 'EC' will be used to refer to the European Communities, unless otherwise indicated.

<sup>236</sup> Sylvia Ostry, 'The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations', in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 300.

<sup>237</sup> See note 116. The G-77 currently has 135 members but the original name has been kept due to its historic significance. When China acts together with this group, it is known as the Group of 77 and China (G-77 + China).

<sup>238</sup> The *Havana Programme of Action* was intended to further the objectives of the *Declaration of the South Summit*, which noted with concern that developing countries '...have not been able to share in the benefits of globalization on an equal footing with developed countries...', and that: '[a]symmetries and imbalances have intensified in international economic relations...'. See the text of this document, contained in: General Assembly, *Fifty-Fifth Session of the General Assembly. Letter Dated 5 May 2000 from the Permanent Representative of Nigeria to the United Nations Addressed to the President of the General Assembly*, A/55/74 (United Nations, New York), 12 May 2000, Annex I para. 11, available at: [www.G77.org/main/docs/](http://www.G77.org/main/docs/)

Intensify efforts to review and reform the WTO regime with a view to promoting a multilateral trading system that is fair, equitable and rule-based, and that operates in a non-discriminatory, inclusive and transparent manner, in a way which provides benefits for all countries, especially developing countries. This will involve among other things, improving market access for goods and services of particular interest to developing countries, resolving issues relating to the implementation of WTO Agreements, fully implementing special and differential treatment, facilitating access to the WTO, and providing technical assistance.<sup>239</sup>

The Declaration of the South Summit also called upon developed countries to fully implement SDT for developing countries and stated that future multilateral trade negotiations should be based on a positive agenda and should take full consideration of the development dimension of trade and of the specific needs and concerns of developing countries.<sup>240</sup>

### 1.8 The Doha Development Agenda

In order to address the problems leading to the failure of the Seattle Session of the Ministerial Conference, a new surge in efforts to integrate developing countries interests into future trade negotiations emerged in the run-up to the Doha Session of the Ministerial Conference. Confidence-building initiatives to encourage developing countries to agree to launch new round of negotiations abounded.<sup>241</sup> More funding was made available for trade-related technical assistance and capacity building.<sup>242</sup>

In addition, discussions were held on the implementation concerns of developing countries. As already mentioned, these implementation concerns relate, on the one hand, to the difficulties encountered by developing countries in implementing their obligations under the Uruguay Round agreements,<sup>243</sup> and on the other, to the failure of developed countries to fully and faithfully implement the Uruguay Round agreements, including those provisions on special and differential treatment for developing countries. The implementation discussion continued to centre on the ‘rebalancing’ of the Uruguay Round agreements,

<sup>239</sup> *Ibid.*, Annex II para. V(1) 2nd bullet point.

<sup>240</sup> *Ibid.*, Annex I para. 21.

<sup>241</sup> One delegate relabelled these initiatives as ‘confidence shattering’, due to their limited nature. Sylvia Ostry, ‘The Uruguay Round North-South Grand Bargain: Implications for Future Negotiations’, in *The Political Economy of International Trade Law. Essays in Honor of Robert E. Hudec*, Daniel L. M. Kennedy and James D. Southwick (eds.) (Cambridge University Press, Cambridge), 2002, 285-310, 295.

<sup>242</sup> For example, the Integrated Framework for Trade Related Technical Assistance to Least-Developed Countries was established by means of cooperation between the WTO, World Bank, IMF, ITC, UNCTAD and UNDP. Sub-Committee on Least-Developed Countries, *Report on the Seminar by the Integrated Framework Core Agencies*, WT/LDC/SWG/IF/15/Rev.1, circulated on 17 April 2001.

<sup>243</sup> Finger notes that most implementation problems, in this sense, relate to agreements creating disciplines for national regulatory systems, such as the *SPS Agreement*, the *TBT Agreement*, and TRIPS. Developing countries, in contrast, implemented their significant tariff reduction commitments within the negotiated deadline of January 2000, and there were no problems with the implementation of the GATS. J. Michael Finger, *The Doha Agenda and Development: A View from the Uruguay Round* (Asian Development Bank, Manila), August 2002, 9-10, available at: [http://www.adb.org/Economics/pdf/doha/J\\_Michael\\_Finger.pdf](http://www.adb.org/Economics/pdf/doha/J_Michael_Finger.pdf), visited on 29 June 2008.

to address the asymmetry in the results obtained. Shortly before the Doha Ministerial Conference in 2001, the Group of 77 (G-77) and China adopted a Declaration<sup>244</sup> noting that:

...the benefits of the existing multilateral trading system continue to elude developing countries. Progress towards full liberalisation in sectors of particular interest to them is lagging behind, and significant imbalances between rights and obligations exist in multilateral trade agreements (MTAs), as well as in conditions of market access. ... Addressing these asymmetries and the development deficit should receive primacy in all future work programmes in the WTO...<sup>245</sup>

Developing countries raised 104 implementation concerns in the course of the new implementation discussions. They argued that these concerns should be addressed *before* the launching of a new negotiating round, as they should not have to 'pay' again, by means of trade-offs in other areas during a new round of negotiations, for proper implementation of the Uruguay Round results.<sup>246</sup> In May 2000, the General Council established an Implementation Review Mechanism, consisting of Special Sessions of the General Council to address implementation issues.<sup>247</sup> In December 2000, a decision was taken by the General Council in which seven minor implementation issues were resolved and the objective expressed to complete the process no later than the Fourth WTO Ministerial Conference, to be held in Doha in November 2001.<sup>248</sup> However, many developing countries were dissatisfied with the progress made in the preparatory phase of the Doha Session of the Ministerial Conference. The abovementioned Declaration of the G-77 and China expressed:

...deep disappointment on the lack of any meaningful progress on implementation issues, despite a clear consensual decision in May and December 2000 by

<sup>244</sup> Group of 77 and China, *Declaration by the Group of 77 and China on the Fourth WTO Ministerial Conference at Doha, Qatar*, 22 October 2001.

<sup>245</sup> *Ibid.*, para. 4.

<sup>246</sup> *Doha Round Briefing Series. Developments since the Fourth WTO Ministerial Conference: Implementation-Related Issues and Concerns*, Vol. 1 No.1 (The International Centre for Trade and Sustainable Development and the International Institute for Sustainable Growth, Geneva), February 2003, 1, available at: [www.ictsd.org/pubs/dohabriefings/doha1-implement.pdf](http://www.ictsd.org/pubs/dohabriefings/doha1-implement.pdf), visited 25 June 2007. Developed country Members, by contrast, are of the opinion that strengthening the provisions of the WTO agreements with which there are implementation concerns amounts to changing the rights and obligations negotiated in the Uruguay Round, and that trade-offs should therefore be made.

<sup>247</sup> At the first Special Session on Implementation of the General Council on 22 June – 3 July 2000, a work programme on implementation issues was agreed upon. The Special Session held on 18 October 2000 referred certain implementation issues to the relevant WTO bodies dealing with these areas. General Council Special Session on Implementation, *Minutes of Meeting - Held in the Centre William Rappard on 18 October 2000*, WT/GC/M/59, circulated on 13 November 2000. Special Sessions of the General Council met again on implementation issues on 15 December 2000 and on 27 April and 3 October 2001.

<sup>248</sup> Taking into account the reports from the WTO bodies to which implementation issues were referred, the Third Special Session of the General Council, on 15 December 2000, took a series of modest decisions on seven implementation issues which mostly dealt with clarifications regarding subsidies rules. It was further decided that the General Council would address the outstanding implementation issues with a view to completing the process no later than the Fourth Session of the Ministerial Conference. General Council, *Implementation-Related Issues and Concerns - Decision of 15 December 2000*, WT/L/384, circulated on 19 December 2000, para. 7.

the WTO General Council to address and adopt decisions no later than the 4<sup>th</sup> Ministerial Meeting.<sup>249</sup>

The discussions on implementation issues in Special Sessions of the General Council continued and finally resulted in the drafting of the *Decision on Implementation Related Issues and Concerns* (the *Implementation Decision*), which was adopted at the Doha Ministerial Conference on 14 November 2001.<sup>250</sup> This decision has been described as the *quid pro quo* for developing countries agreement to the launching of a new round of trade negotiations at the Doha Ministerial Conference. It aims to meet developing countries' demands that their implementation concerns regarding the Uruguay Round agreements be addressed before they could agree to new negotiations. However, the achievements of the *Implementation Decision* are limited. Although it embodies decisions on over 50 implementation issues under various agreements for immediate delivery, these decisions mainly reaffirm existing provisions or their accepted interpretation,<sup>251</sup> urge Members to implement them fully,<sup>252</sup> approve recommendations developed in other bodies<sup>253</sup> or direct certain WTO bodies to undertake work in particular areas.<sup>254</sup> In fact, it has been argued

<sup>249</sup> Group of 77 and China, *Declaration by the Group of 77 and China on the Fourth WTO Ministerial Conference at Doha, Qatar, 22 October 2001*, para. 5.

<sup>250</sup> Ministerial Conference, *Implementation-Related Issues and Concerns. Decision of 14 November 2001*, WT/MIN(01)/17, circulated on 20 November 2001.

<sup>251</sup> For example, *inter alia*, it is reaffirmed: that Article XVIII of the GATT 1994 is a SDT provision for developing countries and that recourse to it should be less onerous than to Article XII of the GATT 1994; that least-developed country members are exempt from the prohibition on export subsidies in Article 3.1(a) of the *Agreement on Subsidies and Countervailing Measures*; that the provisions of Article 66.2 of the TRIPS Agreement are mandatory; and that preferences granted to developing countries pursuant to the *Enabling Clause* should be generalised, non-reciprocal and non-discriminatory. See *Ibid.*, paras 10.15, 11.12, and 12.12 respectively.

<sup>252</sup> For example, *inter alia*, Members are urged to fully implement the provisions on technical assistance in the *SPS Agreement* and the *TBT Agreement*; and it is agreed that the provisions of the *Agreement on Textiles and Clothing* relating to the early integration of products and the elimination of quota restrictions should be effectively utilised. See *Ibid.*, paras 3.6, 5.4 and 4.1 respectively.

<sup>253</sup> For example, *inter alia*: (1) the report of the Committee on Agriculture on the implementation of the *Decision on Measures Concerning the Possible Negative Effects of the Reform Programme on Least-Developed and Net Food-Importing Developing Countries*, on the implementation of Article 10.2 of the Agreement on Agriculture, as well as on the administration of tariff rate quotas and the submission by Members of addenda to their notifications is noted and the recommendations or decisions of this Committee are approved; (2) the SPS Committee's *Decision on Equivalence* is noted; and (3) the approach to technical assistance developed by the TBT Committee reflecting the results of the triennial review is confirmed. See *Ibid.*, paras 2.2, 2.3, 2.4, 3.3 and 5.1 respectively.

<sup>254</sup> For example, *inter alia*: (1) the Council for Trade in Goods is directed to examine proposals with regard to the calculation of quotas under the *Agreement on Textiles and Clothing* and make recommendations to the General Council; (2) the Director-General is urged to continue cooperative efforts with international standard-setting organisations under the *SPS* and *TBT Agreements* to ensure the effective participation of developing, and in particular least-developed countries; (3) the SPS Committee is instructed to expeditiously develop a specific programme for the implementation of Article 4 of the *SPS Agreement*; (4) the Committee on Anti-dumping practices is directed to study the issue of time-frames in establishing the volume of dumped imports and to make recommendations in this regard; (5) the TRIPS Council is directed to continue its examination of the scope and modalities for complaints of the types provided for under Subparagraphs 1(b) and 1(c) of Article XXIII of GATT 1994 and make recommendations; and (6) the Committee on Trade and Development is instructed to identify the SDT provisions that are mandatory and those that are not, to consider the implications of making the latter mandatory and to examine additional ways to make SDT provisions more effective. *Ibid.*, paras 4.4, 4.5, 3.5, 5.3, 3.3, 7.2, 11.11 and 12.11 respectively.

that only five ‘mandatory and concrete’ decisions are embodied in the *Implementation Decision*.<sup>255</sup> With regard to outstanding implementation issues, the *Implementation Decision* refers to paragraph 12 of the Doha Ministerial Declaration, which notes the utmost importance of these issues and sets out a two-track work programme for addressing them.<sup>256</sup> On some issues, a negotiating mandate was agreed, whereas on others the issue was referred to the appropriate WTO body, which was obliged to take it up as a matter of priority and report to the Trade Negotiations Committee by the end of 2002 for appropriate action. Also subject to the same deadline, a separate declaration, the *Doha Declaration on TRIPS and Public Health*, adopted at the Doha Ministerial Conference, instructs the Council for TRIPS to find an expeditious solution to the problem of access to essential medicines created by requirements set by the *TRIPS Agreement* provision allowing compulsory licensing of patents.<sup>257</sup> However, continuing lack of consensus meant that this deadline was missed in both cases.

Concern with the integration of developing countries into the multilateral trading system is also reflected in the Ministerial Declaration on the launching of a new round of trade negotiations, adopted by the Ministerial Conference in Doha on 14 November 2001. Establishing what has become known as the ‘Doha Development Agenda’ for trade negotiations, the Doha Ministerial Declaration provides:

International trade can play a major role in the promotion of economic development and the alleviation of poverty. We recognize the need for all our peoples to benefit from the increased opportunities and welfare gains that the multilateral trading system generates. The majority of WTO members are developing countries. We seek to *place their needs at the heart of the Work Programme* adopted in this declaration. Recalling the Preamble to the Marrakesh Agreement, we shall continue to make positive efforts designed to ensure that developing countries, and especially the least developed among them, secure a share in the growth of world trade commensurate with the needs of their economic development. In this context, *enhanced market access, balanced rules, and well-targeted, sustainably*

---

<sup>255</sup> *Doha Round Briefing Series. Developments since the Fourth WTO Ministerial Conference: Implementation-Related Issues and Concerns*, Vol. 1 No.1 (The International Centre for Trade and Sustainable Development and the International Institute for Sustainable Growth, Geneva), February 2003, 3, available at: [www.ictsd.org/pubs/dohabriefings/doha1-implement.pdf](http://www.ictsd.org/pubs/dohabriefings/doha1-implement.pdf), visited 25 June 2007. These are the decisions specifying the longer time frames for compliance with SPS measures by developing countries under the *SPS Agreement* as normally not less than six months; specifying the reasonable interval for adaptation to new SPS and TBT measures under the *SPS* and *TBT Agreements* as normally not less than six months; and decisions under the *Agreement on Subsidies and Countervailing Measures* with regard to the extension of transition periods for subsidy programs under Article 27.4. Ministerial Conference, *Implementation-Related Issues and Concerns. Decision of 14 November 2001*, WT/MIN(01)/17, circulated on 20 November 2001, paras 3.1, 3.2, 5.2, 10.11 and 10.14 respectively.

<sup>256</sup> Ministerial Conference, *Doha Ministerial Declaration. Adopted on 14 November 2001*, WT/MIN(01)/DEC/1, circulated on 20 November 2001, para. 12(a) and (b).

<sup>257</sup> Article 31 of the *TRIPS Agreement* allows the granting of compulsory licences to patented medicines in cases of national emergency or extreme urgency. However, this right is limited by the requirement, in paragraph (f), that the compulsory licences be granted ‘predominantly for the supply of the domestic market’. Members that lack sufficient manufacturing capacity in pharmaceuticals therefore could not make use of this provision. This was a serious problem for many developing-country Members and they successfully pushed for the inclusion of this issue in the Doha Round negotiations.

*financed technical assistance and capacity building programmes have important roles to play.*<sup>258</sup> (Emphasis added)

A development round of the kind envisaged in the Doha Development Agenda would be in line with the Monterrey Consensus, unanimously adopted in 2002 at the UN-hosted International Conference on Financing for Development.<sup>259</sup> The Monterrey Consensus, while acknowledging the primary responsibility each state has for its own development, emphasises the need for domestic efforts to be supported by an ‘enabling international economic environment’. As a result, the heads of state and government at Monterrey committed themselves, *inter alia*, to ‘promoting international trade as an engine for development’ and ‘increasing international financial and technical cooperation for development’.<sup>260</sup> The UN World Economic and Social Survey 2003 suggests that the Doha Ministerial Conference and the Monterrey International Conference on Financing for Development, together with the World Summit on Sustainable Development,<sup>261</sup> ‘collectively defined a new global partnership for development between developed and developing countries’ the overriding objective of which is ‘to accelerate development through shared responsibilities and mutual commitment’.<sup>262</sup>

In addition to its focus on market access and balanced rules for developing countries, the Doha Declaration recognises the importance of SDT provisions, noting that they are ‘an integral part of the WTO Agreements’ and mandating a review of these provisions with a view to ‘strengthening them and making them more precise, effective and operational’.<sup>263</sup> According to the Doha Declaration, modalities for further commitments, including SDT provisions, had to be established by 31 March 2003.<sup>264</sup>

The UNCTAD Secretariat notes that a key element of development-oriented SDT is ‘adequate flexibility and space for developing countries regarding within-the-borders issues and resource-intensive agreements...’<sup>265</sup> In other words, the issue of adequate policy space for developing countries forms an integral part of discussions on SDT.<sup>266</sup> However,

the negotiations on SDT provisions in the period leading up to the Cancun Session of the Ministerial Conference in 2003 only led to tentative agreement on 28 proposals, none of which are regarded as being of much value.

The Cancun Ministerial Conference, held on 10-14 September 2003, aimed to provide a mid-term review of the progress of the Doha Round negotiations, and to allow for certain decisions to be made necessary to the further progress of the negotiating round. However, the fact that most of the deadlines for decisions set out in the Doha Ministerial Declaration had not been met meant that the agenda for the Cancun Ministerial Conference was overloaded.

In the weeks leading up to the Cancun Ministerial Conference, a new alliance of developing countries, dubbed the Group of 20 (G-20),<sup>267</sup> emerged.<sup>268</sup> It took a strong stance in favour of agricultural liberalisation and against the launching of negotiations on the so-called Singapore issues of competition, investment, trade facilitation and transparency in government procurement.<sup>269</sup> The G-20 negotiated as a bloc, putting forward its own positive negotiating positions. This was in marked contrast to the role of previous

Centre for Trade and Sustainable Development and International Institute for Sustainable Development, Geneva), February 2003, available at: [www.ictsd.org/pubs/dohabriefings/doha13-s-and-d.pdf](http://www.ictsd.org/pubs/dohabriefings/doha13-s-and-d.pdf), visited on 25 June 2007; *Doha Round Briefing Series. Cancun Update: Special and Differential Treatment*, Vol. 2 No. 13 (The International Centre for Trade and Sustainable Development and the International Institute for Sustainable Development, Geneva), August 2003.

<sup>267</sup> This moniker resulted from the fact that the number of members of the coalition before Cancun was initially 20 (the coalition brought together Argentina, Bolivia, Brazil, Chile, China, Colombia, Costa Rica, Cuba, Ecuador, El Salvador, Guatemala, India, Mexico, Pakistan, Paraguay, Peru, the Philippines, South Africa, Thailand and Venezuela, and was led by Brazil and India). Its membership changed several times during and after the Cancun Ministerial Conference, resulting in it sometimes being referred to as the G-20+. In Cancun, Egypt, Indonesia and Nigeria joined whereas El Salvador withdrew. With China on board, the coalition represents approximately 51% of the world's population, 63% of the world's farmers and 20% of agricultural production. After the Cancun Ministerial, the G-20 has lost more members namely, Colombia, Costa Rica, Guatemala, Ecuador, Peru and Thailand. Some of these countries decided to pursue bilateral or regional trade agreements with the US. For slightly differing listings of the varying compositions of the G-20 alliance, see International Development Committee - House of Commons, *Trade and Development at the WTO: Learning the Lessons of Cancun to Revive a Genuine Development Round. First Report of Session 2003-04*, HC92-I (House of Commons, London), 4 December 2003, 48, available at: [www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf](http://www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf), visited on 10 June 2008; Bernard Hoekman, *Cancun: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, note 2, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>, visited on 5 December 2003.

<sup>268</sup> The then-EU Trade Commissioner Pascal Lamy repeatedly voiced the opinion that the G-20 had 'an agricultural mother and a geopolitical father'. In other words, he claimed that this alliance arose due to, on the one hand, concerns by its members regarding limited agricultural liberalisation by developed countries and, on the other hand, the desire of its members to show that they can stand up to rich and powerful countries and play a stronger role in the world arena. Pascal Lamy, 'The EU, Cancun and the Future of the Doha Development Agenda', presented at the *Annual Lecture of the Journal for Common Market Studies*, (London) 28 October 2003, available at: [http://europa.eu.int/comm/commissioners/lamy/speeches\\_articles/spla195\\_en.htm](http://europa.eu.int/comm/commissioners/lamy/speeches_articles/spla195_en.htm), visited on 6 December 2008; Pascal Lamy, 'Result of the WTO Ministerial Conference in Cancun', presented at the *Plenary Session of the European Parliament*, (Strasbourg) 24 September 2003, available at: [http://europa.eu.int/comm/commissioners/lamy/speeches\\_articles/spla192\\_en.htm](http://europa.eu.int/comm/commissioners/lamy/speeches_articles/spla192_en.htm).

<sup>269</sup> Hoekman notes that there were active efforts to divide the G-20 group through specific offers targeted at individual countries. Bernard Hoekman, *Cancun: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 2, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>, visited on 5 December 2003.

developing country coalitions in WTO negotiations, which was mostly limited to agenda setting or blocking consensus.<sup>270</sup> Another developing country grouping active at the Cancun Ministerial was the Group of 90 (G-90), which brought together the members of the African Union, the African, Caribbean and Pacific countries and the least-developed countries.<sup>271</sup> This coalition also opposed negotiations on the Singapore issues and advocated the protection of preferential access for its members to developed country markets. In addition, four West-African countries<sup>272</sup> formed an alliance around a proposal for the abolition of subsidies for cotton producers in the EU, US and China. This initiative represented the first time African countries came forward with a specific demand in WTO negotiations.<sup>273</sup> These developing country coalitions were particularly active in the negotiations on agriculture, pushing for increased market access and removal of trade-distorting measures.<sup>274</sup> In addition, they succeeded in obtaining agreement, in principle, on 28 agreement-specific proposals regarding the strengthening of SDT provisions in various WTO agreements.<sup>275</sup>

The Cancun Session of the Ministerial Conference failed, as developed and developing countries could not reach agreement on the key issues of agricultural reform and the launching of negotiations on the Singapore issues.<sup>276</sup> A contributing factor to the

<sup>274</sup> For a good synopsis of the ongoing agriculture negotiations and the positions of developing country coalitions therein, see the quarterly reports of the International Centre for Trade and Sustainable Development on Agriculture Negotiations at the WTO, available at: <http://www.agradepolicy.org/page/ictsd/resource.htm#reports>, visited on 25 June 2007.

<sup>275</sup> These agreed provisions were circulated as Annex C of document JOB(03)/150/Rev.2. However, due to the failure of the Cancun Session of the Ministerial Conference, they were never finally adopted.

<sup>276</sup> The talks on the final day of the Ministerial Conference deadlocked on the question whether to launch negotiations on the Singapore issues. During the 'green room' consultations on the Singapore issues, the EC offered to drop investment, competition and, according to some sources, transparency in government procurement from the negotiations. Participants were then given just one hour to consult with the countries they represented. Thereafter, the G-90, represented by Botswana, indicated that it could not agree to a deal which included any of the Singapore issues, whereas Korea supported by Japan stated that they could not agree to a deal that excluded any of the four Singapore issues. The Chairperson, Mr Derbez, reported back to the Heads of Delegation and at 18.00 he declared that there was no prospect of reaching consensus and the Ministerial Meeting was therefore closed. Many delegations regarded this closure as unexpected and premature, since Ministerial Conferences are often extended to allow for last-minute agreement to be reached. On the evening of 14 September at Cancun, a trade minister of one of the leading G-20 members said to Patricia Hewitt, UK Secretary of State for Trade and Industry, that if there had just been six hours of serious discussions on agriculture, it would have been possible to reach agreement on a framework of negotiations to move things forward. Reported in International Development Committee - House of Commons, *Trade and Development at the WTO: Learning the Lessons of Cancun to Revive a Genuine Development Round. First Report of Session 2003-04*, HC92-1 (House of Commons, London), 4 December 2003, paras 8, 13 and 19, available at: [www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf](http://www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf), visited on 10 June 2008.

failure of the negotiations was the overloaded negotiating agenda. As noted by the Directorate-General for Trade of the European Commission:

...the sheer volume and substantive importance of the mass of issues on the agenda made it difficult for any, except the largest and best organised of the delegations, to analyse and position themselves as the situation changed over the last few hours.<sup>277</sup>

The only outcome of this meeting was a Ministerial Statement reaffirming commitment to the implementation of the Doha Declarations and Decisions and calling for a General Council meeting at Senior Official level to be convened no later than 15 December 2003, to take the action necessary to enable Members to move towards a timely and successful conclusion of the negotiations.<sup>278</sup>

There have been diverging views regarding whether the failure of the Ministerial Conference in Cancun was good or bad for developing countries. Some developing countries and non-governmental organisations have asserted that the failure of this Ministerial Conference session was to the advantage of developing countries as it demonstrated to developed countries that developing country concerns need to be taken seriously. The proponents of this view are of the opinion that no deal is better than a bad deal.<sup>279</sup> On the contrary, others including the EC and the WTO Director-General saw the collapse of the negotiations at Cancun as bad news for developing countries, representing a missed opportunity.<sup>280</sup> A recent report by the International Development Committee of the United Kingdom House of Commons correctly points out that what the breakdown of talks at Cancun will mean for developing countries depends to a large extent on 'what happens next'.<sup>281</sup> This report states:

<sup>277</sup> European Commission Directorate-General for Trade, *The Doha Development Agenda after Cancun* (European Union, Brussels), 25 September 2003, 7, available at: <http://www.ictsd.org/ministerial/cancun/docs/COMMISSION-Cancun-and-Beyond-Sept-03.pdf>, visited on 3 December 2003.

<sup>278</sup> Ministerial Conference Fifth Session, *Ministerial Statement. Adopted on 14 September 2003*, WT/MIN(03)/20, circulated on 23 September 2003, paras 4 and 6.

<sup>279</sup> International Development Committee - House of Commons, *Trade and Development at the WTO: Learning the Lessons of Cancun to Revive a Genuine Development Round. First Report of Session 2003-04*, HC92-I (House of Commons, London), 4 December 2003, para. 12, available at: [www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf](http://www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf), visited on 10 June 2008. See also Sheila Page, 'Making Doha a Better Deal for Poor Countries', *Financial Times*, 26 July 2004. Page, a research fellow at the Overseas Development Institute, points out that while gains to the G-90 countries from the Doha Round are difficult to identify (as most of these countries already have preferential market access to the EU and US and regional trade agreements with neighbouring countries), but some face clear losses from preference erosion and additional rules.

<sup>280</sup> International Development Committee - House of Commons, *Trade and Development at the WTO: Learning the Lessons of Cancun to Revive a Genuine Development Round. First Report of Session 2003-04*, HC92-I (House of Commons, London), 4 December 2003, para. 12, available at: [www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf](http://www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf), visited on 10 June 2008.

<sup>281</sup> In a similar vein, Hoekman states, 'The question confronting the international community is whether Cancun represents a crisis that will derail multilateral cooperation on trade for some time to come, or whether it represents an opportunity for policymakers to identify a more balanced negotiating set that is feasible to pursue.' Bernard Hoekman, *Cancun: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 1, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>, visited on 5 December 2003.

If there is a shift to prioritise bilateral trade negotiations...and if the promise of a 'Development Round' evaporates, then the collapse of Cancún will have been a disaster. What happens next depends on how well the lessons of Cancún are learned; this in turn depends on how well the reasons for the collapse of Cancún are understood.<sup>282</sup>

After the breakdown of talks in Cancun, the major trading nations initially refused to take the lead in reviving the stalled negotiations.<sup>283</sup> Instead, their attitude towards the demands of developing countries, and particularly the G-20 nations, hardened.<sup>284</sup> The developing countries repeatedly called for renewed attempts to get the negotiations back on track, and softened their stance on many issues in an effort to prevent the disengagement of developed countries.<sup>285</sup> At the meeting of the G-20 on 11-12 December 2003, these

<sup>282</sup> International Development Committee - House of Commons, *Trade and Development at the WTO: Learning the Lessons of Cancún to Revive a Genuine Development Round. First Report of Session 2003-04*, HC92-1 (House of Commons, London), 4 December 2003, para. 14, available at: [www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf](http://www.publications.parliament.uk/pa/cm200304/cmselect/cmintdev/92/92.pdf), visited on 10 June 2008.

<sup>283</sup> The US indicated that it would focus on bilateral trade agreements with what it regards as the 'will-do' or 'can-do' countries, and the EU said that it was in 'listening mode' or 'reflection mode'. After a period of reflection and consultation, the European Commission released a Communication setting out its proposed strategy for reviving the Doha Round negotiations. See Commission of the European Communities, *Communication from the Commission to the Council, to the European Parliament, and to the Economic and Social Committee: Reviving the DDA Negotiations - the EU Perspective* (European Union, Brussels), 26 November 2003, available at: <http://trade-info.cec.eu.int/doclib/html/114259.htm>; Robert Zoelink, 'America Will Not Wait', in *Where Next for the WTO? After Cancún: Views, Ideas and Proposals by Trade Ministers* (Federal Trust for Education and Research and Commonwealth Business Council, London), 2003, 47-48.

<sup>284</sup> Gaur reports that Malaysian Prime Minister Dr. Mahathir expressed his apprehension of a backlash by developed countries against those developing countries blamed for the collapse of the trade negotiations at Cancun. Gaur notes the comment of US Senator Grassley, Chairman of the Senate Finance Committee that approves US trade agreements, pointing out that he would take note of those nations that played a constructive role in Cancun and those that did not and questioning whether certain G-20 members had sufficient commitment to free trade to be rewarded with special access to the US market. See Sema Gaur, *Politics of Cancun Failure: US Stance Hardens Towards G-20+ Nations* (Institute of South East Asian Studies, Singapore), 6 October 2003, available at: [ww.iseas.edu.sg/viewpoint/sg6Oct03.pdf](http://www.iseas.edu.sg/viewpoint/sg6Oct03.pdf).

<sup>285</sup> For example, on 13-14 November 2003, a meeting of trade ministers and representatives from Benin, Botswana, Burkina Faso, Chad, Kenya, Lesotho, Mali, Mauritius, Nigeria, Senegal, South Africa and Egypt as well as the Director-General of the WTO and the Trade Commissioner of the Economic and Monetary Union of West Africa was held in Cairo. The Ministers at this meeting called on WTO Members and especially the major trading nations to return to the negotiating table as soon as possible. They noted that issues of interest to LDCs must be addressed 'in a spirit of realism' and agreed to the use of the Derbez Text as a starting point for future discussions. The G-20 met on 2 and 10 October 2003 and called for a quick relaunch of trade negotiations and adopted a more conciliatory tone than before, when it had taken a tough stance against the joint EC/US proposal on agriculture. The coalition lost some of its members which pursued bilateral trade negotiations with the US. It is reported that after the Cancun Ministerial Conference, US Senator Chuck Grassley, chair of the powerful Senate Finance Committee, warned countries that he would not support any bilateral trade agreements with G-20 members. Bridges Weekly Trade News Digest 7(33), 8 October 2003 and 7(34), 15 October 2003. In addition, the Asia Pacific Economic Cooperation (APEC) countries (which include both developed and developing countries representing 47% of world trade, namely, Australia, Brunei, Canada, Chile, China, Hong Kong, Indonesia, Japan, Malaysia, Mexico, New Zealand, Papua New Guinea, Peru, the Philippines, Russia, Singapore, South Korea, Taiwan, Thailand, the US and Vietnam) at their 15<sup>th</sup> Ministerial Meeting on 17-18 October 2003, called on all WTO Members to 'quickly re-energize the negotiation process by building on Chairman Derbez's text of 13 September 2003, recognizing that flexibility and political will from all are urgently needed.' The Joint Statement of APEC ministers is available at: [http://www.apecsec.org.sg/apec/ministerial\\_statements/annual\\_ministerial/2003\\_15th\\_apec\\_ministerial](http://www.apecsec.org.sg/apec/ministerial_statements/annual_ministerial/2003_15th_apec_ministerial).

countries discussed with the then-EU trade commissioner Pascal Lamy how to move forward with the Doha Round. A joint communiqué was issued noting the general agreement on the need to intensify negotiations in early 2004. In this communiqué, the G-20 reiterated its disposition to ‘move into a negotiation mode’ in early 2004.<sup>286</sup> WTO officials, in the period after Cancun, emphasised that developing countries stand to lose the most if talks are not resumed.<sup>287</sup>

An improvement of the relationship between developed and developing-country Members was achieved with the successful adoption, on 30 August 2003, of a decision of the General Council on the issue of access to essential medicines. This decision waives the requirement of Article 31(f) of the *TRIPS Agreement* thereby allowing Members to grant compulsory licences to produce patented medicines for export to Members with insufficient manufacturing capacity.<sup>288</sup>

Post-Cancun the positions of developing-country Members on some issues softened, but their emphasis on the need to ensure that the rules of the world trading system are supportive of development has not abated. The focus of UNCTAD XI,<sup>289</sup> held on 13-18 June 2004 in São Paulo, was on enhancing the coherence between national development strategies and global economic processes towards economic growth and development, including specific attention to the rules of the WTO.<sup>290</sup> In the resulting São Paulo Conclusions, the following elements deserve to be highlighted.

html#15AMM\_Statement, visited on 20 June 2008.

<sup>286</sup> *Joint Press Communiqué of the Meeting between the G-20 Ministers and the EU Trade Commissioner Pascal Lamy*, Brasília, 12 December 2003, available at: [http://europa.eu.int/comm/trade/issues/newround/doha\\_da/jpc121203\\_en.htm](http://europa.eu.int/comm/trade/issues/newround/doha_da/jpc121203_en.htm), visited on 30 June 2008.

<sup>287</sup> As pointed out by the then-WTO Deputy Director-General Dr. Kipkorir Aly Azad Rana to the Second East African Business Summit, held in Nanyuki, Kenya on 18-21 September 2003: ‘Experience tells us that on a bilateral basis, your negotiation leverage dwindles and you will find it much harder to advance the issues of real concern to your countries than in a multilateral environment.’ With respect to the impression created by some commentators that the failure of the Cancun meeting was good news for developing countries, he noted: ‘I find this attitude very wrong-headed, betraying a lack of understanding of what the multilateral trading system does and how it works. Stalemate in the field of international trade relations simply translates into foregone opportunities – opportunities to create a more vibrant and relevant trading system at the service of all nations. For us in Africa, this means fewer development opportunities.’ See WTO Press release of 19 September 2003, available at: [http://www.wto.org/english/news\\_e/news03\\_e/speech\\_rana\\_19sep03\\_e.htm](http://www.wto.org/english/news_e/news03_e/speech_rana_19sep03_e.htm), visited on 25 June 2007. WTO Director-General Supachai Panitchpakdi, in an article in the *International Herald Tribune*, pointed out along similar lines: ‘Sadly, those that will suffer the most for their inability to compromise are the poorest countries among us. A more open and equitable trading system would provide them with an important tool in alleviating poverty and raising their levels of economic development.’ See *International Herald Tribune*, 18 September 2003.

<sup>288</sup> General Council, *Implementation of Paragraph 6 of the Doha Declaration on the TRIPS Agreement and Public Health. Decision of the General Council of 30 August 2003*, WT/L/540 and Corr.1, circulated on 1 September 2003. As all waiver decisions under Article IX of the WTO Agreement, this waiver is temporary in nature. On 6 December 2005, the General Council adopted a decision to amend the TRIPS Agreement to resolve this matter permanently. When the amendment decision comes into force (upon ratification by two-thirds of WTO Members) a new Article 31bis and a new Annex will be added to the TRIPS Agreement, incorporating the content of the waiver decision. General Council, *Amendment of the TRIPS Agreement. Decision of the General Council of 6 December 2005*, WT/L/641, circulated on 8 December 2005.

<sup>289</sup> UNCTAD XI is the 11<sup>th</sup> of the four-yearly UNCTAD ministerial conferences where priorities and guidelines are set and debates are held on key economic and development issues.

<sup>290</sup> See the preparatory document TD(XI)/PC/1. The substantive agenda item for UNCTAD XI mentioned specifically: (i) development strategies in a globalising world economy; (ii) building productive capacity and

First, the São Paulo Consensus stresses the importance of agriculture in the Doha negotiations and the need to ensure that these negotiations ‘deliver an outcome that is consistent with the ambition set out in the Doha mandate.’<sup>291</sup> While this refers to the disciplines under the *Agreement on Agriculture* regarding market access, export subsidies and domestic support, rather than to the disciplines of the *SPS Agreement*, it does reflect the centrality of agriculture to the development focus of the Doha negotiations. It should be remembered that gains in liberalising the agricultural sector could be undermined by trade barriers in the form of SPS measures.<sup>292</sup> Thus, it is argued here that it is necessary to address developing country concerns with regard to the *SPS Agreement* in order to ensure that the expected gains from agricultural liberalisation are reaped.

Second, the São Paulo Consensus refers expressly to the need to ensure that the limits placed by trade rules on national ‘policy space’ are not counter to the development needs of developing countries.<sup>293</sup> One lesson that could be fruitfully learnt from Cancun, as identified by Hoekman, is that a successful negotiation necessitates an agenda that is seen to contain potential benefits for all Members.<sup>294</sup> Negotiations on new regulatory disciplines on behind-the-border issues that limit spaces for regulatory policies, such as competition and investment, do not meet this requirement as they entail significant implementation costs for developing countries and hold few benefits in terms of increased market access in key sectors. This was evinced by the experience with Uruguay Round agreements on regulatory areas, such as the *SPS Agreement*. Instead, of negotiating new

---

international competitiveness; (iii) assuring development gains from the international trading system and trade negotiations; and (iv) partnership for development. See UNCTAD website for the 11<sup>th</sup> ministerial meeting, available at [http://www.unctadxi.org/templates/Page\\_145.aspx](http://www.unctadxi.org/templates/Page_145.aspx), visited 4 April 2004.

<sup>291</sup> United Nations Conference on Trade and Development, *Eleventh Session, 13-18 June 2004. Draft São Paulo Consensus*, TD/L.380 (United Nations, Sao Paulo), 16 June 2004, para. 75, available at: [www.unctad.org/en/docs/tld380\\_en.pdf](http://www.unctad.org/en/docs/tld380_en.pdf), visited 21 June 200.

<sup>292</sup> This point is made in Section 1 of the Introduction, above. It has been explicitly recognized in the report of the UN Millennium Project in 2005, which warns against erosion of hard-won gains in the area of market access by other policies, including SPS requirements. It calls for assistance for developing countries to make effective use of the *SPS* (and *TBT*) *Agreement* to ensure that standards are not abused for protectionist purposes; assistance for developing countries to develop the infrastructure and institutional frameworks necessary to meet legitimate standards; and assistance for developing countries to participate fully in international standard-setting processes. UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 216-217, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008.

<sup>293</sup> United Nations Conference on Trade and Development, *Eleventh Session, 13-18 June 2004. Draft São Paulo Consensus*, TD/L.380 (United Nations, Sao Paulo), 16 June 2004, para. 8, available at: [www.unctad.org/en/docs/tld380\\_en.pdf](http://www.unctad.org/en/docs/tld380_en.pdf), visited on 21 June 2007. This Consensus refers to the limitations on space for national economic policy resulting from rules-based regimes for international economic relations. It notes the importance for developing countries ‘that all countries take into account the need for appropriate balance between national policy space and international disciplines and commitments.’ While specific reference was made only to economic policies in the areas of trade, investment and industrial development, similar considerations apply in the area of health policies. Similarly, *The Spirit of São Paulo*, also adopted at UNCTAD XI, specifically states that, ‘countries should use the ability to explore options and maintain the necessary space for policy in order to arrive at the best possible balance between different approaches in their national development strategies’. United Nations Conference on Trade and Development, *UNCTAD XI - the Spirit of Sao Paulo*, TD/L.382 (United Nations, Sao Paulo), 17 June 2004, para. 11, available at: [www.unctad.org/en/docs/TDL382\\_en/pdf](http://www.unctad.org/en/docs/TDL382_en/pdf), visited on 1 June 2005.

<sup>294</sup> Bernard Hoekman, *Cancun: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 3, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>, visited on 5 December 2003.

such agreements, real efforts must be made to address the outstanding implementation issues under existing agreements,<sup>295</sup> including by means of ‘rebalancing’ the existing rules in order to ensure that developing countries get a fair share of the benefits of trade liberalisation. With regard to the *SPS Agreement*, this means that it is necessary to examine whether its rules are workable for developing countries, taking account of their special constraints. Not only should the rules make it possible for developing countries to challenge effectively protectionist measures in the guise of SPS regulations, but they should also leave sufficient policy space for developing countries to adopt SPS regulations suited to their needs.

Third, the São Paulo Consensus emphasises the need to review the SDT provisions to make them ‘more precise, effective and operational.’<sup>296</sup> It is important that the *new* concept of SDT be strengthened, rather than that there be a return to the old reliance on SDT in the form of exemptions for developing countries.<sup>297</sup> In order to secure benefits from the outcome of negotiations, developing countries have to continue to be prepared to put offers on the table and engage in reciprocal bargaining, rather than insist of exemptions from the rules. However, this willingness to engage must be met by a corresponding willingness on the part of developed countries to undertake real and binding commitments to respond in a constructive way to the special position of developing countries. In particular, it must be acknowledged that trade rules, especially those dealing with behind-the-border regulatory issues such as the *SPS Agreement*, carry progressively heavier implementation costs, the less developed a Member is.<sup>298</sup>

In this regard, the development of criteria for differentiation between developing-country Members for purposes of SDT may be useful.<sup>299</sup> This would decrease the reluctance of developed country Members to agree to binding obligations in the area of SDT and

---

<sup>295</sup> The São Paulo Consensus also makes explicit reference to the ‘utmost importance’ of addressing the outstanding implementation issues in a manner consistent with the Doha Work Programme. United Nations Conference on Trade and Development, *Eleventh Session, 13-18 June 2004. Draft São Paulo Consensus*, TD/L.380 (United Nations, Sao Paulo), 16 June 2004, para. 81, available at: [www.unctad.org/en/docs/tld380\\_en.pdf](http://www.unctad.org/en/docs/tld380_en.pdf), visited on 21 June 2007.

<sup>296</sup> *Ibid.*, para. 82.

<sup>297</sup> Bernard Hoekman, *Cancún: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 4, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>. See also UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 219, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008. The latter report notes that there ‘is no compelling case for exemption for rules on traditional trade policies’ but calls for cost-benefit analysis of the effect of rules on domestic regulations requiring investment of resources in order to determine what types of SDT should be granted and to which countries.

<sup>298</sup> Bernard Hoekman, *Cancún: Crisis or Catharsis?* (World Bank, Washington D.C.), 20 September 2003, 4, available at: <http://siteresources.worldbank.org/INTRANETTRADE/Resources/Hoekman-CancunCatharsis-092003.pdf>.

<sup>299</sup> A different but related proposal, made by Page, is that a compensation fund be created for those countries that actually lose out due to trade liberalisation (for example due to preference erosion), with enforceable guarantees of compensation built into the WTO agreements. She refers to the IMF’s suggestion of a calculation method for establishing losses from liberalisation (developed for purposes of granting loans), in order to establish which countries would be eligible for compensation. This proposal would allow for differentiation between developing countries for purposes of financial assistance, but is limited to addressing the costs of the results of the new Round. See Sheila Page, ‘Making Doha a Better Deal for Poor Countries’, *Financial Times*, 26 July 2004.

may be a step towards operationalising these provisions. In fact, some developed country Members have expressed the opinion that the absence of a mechanism to differentiate between more and less advanced non-LDC developing countries is the main obstacle to strengthening the SDT provisions.<sup>300</sup> However, the issue of differentiation is an important point of contention in the review of SDT provisions.<sup>301</sup>

Wording that might have left room for differentiation between developing-country Members originally in the framework text for a revised Doha Work Programme adopted by the General Council on 1 August 2004, was removed at the insistence of larger, more advanced developing country Members.<sup>302</sup> The framework text, often referred to as the

<sup>300</sup> 'Work on Development Sees Limited Progress at WTO', *Bridges Weekly Trade News Digest*, 3 August 2004. See also on this point Patrick Low, 'Is the WTO Doing Enough for Developing Countries?' in *WTO Law and Developing Countries*, George A. Bermann and Petros C. Mavroidis (eds.) (Cambridge University Press, Cambridge), 2007, 324-358, 334.

<sup>301</sup> This is illustrated by the discussion on the proposal for a mechanism to implement and monitor SDT introduced by the African Group in 2000 (TN/CTD/W/3/Rev2 and TN/CTD/W/23). Disagreement arose when subsequent submissions by the EC and Switzerland (TN/CTD/W/13, 20 and 26 and TN/CTD/W/14) proposed the use of such a mechanism to determine when a developing country could graduate from eligibility for SDT. Several middle-income developing country Members thereafter refused to discuss the monitoring mechanism due to the perception that it was tied to differentiation and graduation, which they strongly oppose. It took three years before developing-country Members stated that they were once again open to discussions on proposals for a monitoring mechanism for SDT. 'WTO Members "Open" to Talks on S&D Monitoring Mechanism' *Bridges Weekly Trade News Digest*, 12 April 2006.

<sup>302</sup> It is interesting to note that the draft framework text circulated by the WTO Director General and the Chair of the General Council in July 2004 provided that, 'The specific concerns of preference dependent, commodity dependent countries and net food-importing developing countries shall be appropriately addressed, in the context of the multilateral liberalization commitments undertaken in the Doha Round. In addition, the concerns of small, vulnerable developing economies shall be taken into account...' However, the provision was explicitly added that this would be 'without creating a sub-category of Members.' Supachai Panitchpakdi and Shotaro Oshima, *Doha Work Programme. Draft General Council Decision of [...] July 2004*, JOB(04)/96, circulated on 16 July 2004, para. 1(d). Despite the added proviso, there was strong opposition to the text by certain larger developing countries (particularly advanced Latin American and East Asian developing countries), on the grounds that a differentiation between developing countries would result. They feared the institutionalization of preferential market access. A compromise was worked out by Brazil, Colombia, Costa Rica, India, Jamaica, Kenya, Nigeria, Thailand and Uruguay. The revised draft of the framework text, issued on 30 July 2004, simply referred to the trade and development related needs of developing countries, including capacity constraints, and stated, 'These particular concerns of developing countries, including relating to food security, rural development, livelihood, preferences, commodities and net food imports, as well as prior unilateral liberalisation, should be taken into consideration, as appropriate, in the course of the Agriculture and NAMA negotiations. The trade-related issues identified for the fuller integration of small, vulnerable economies into the multilateral trading system, should also be addressed, without creating a sub-category of Members, as part of a work programme, as mandated in Paragraph 35 of the Doha Ministerial Declaration.' See Supachai Panitchpakdi and Shotaro Oshima, *Doha Work Programme. Draft General Council Decision of [...] July 2004. Revision*, JOB(04)/96/Rev.1, circulated on 30 July 2004, para. 1(d). This revised wording was kept in the final text adopted by the General Council on 1 August 2004. General Council, *Doha Work Programme. Decision Adopted by the General Council on 1 August 2004*, WT/L/579, circulated on 2 August 2004, para. 1(d). This formulation is much weaker, replacing the mandatory instructions that developing country concerns 'shall be appropriately addressed' and 'shall be taken into account' with the hortatory words 'should be taken into consideration, as appropriate' and 'should also be addressed'. In addition, instead of being applicable to all 'multilateral liberalization commitments undertaken in the Doha Round' this attention for developing country concerns has been limited to only 'the Agriculture and NAMA negotiations'. Furthermore, to avoid any indication of differentiation between developing countries, the reference to preference dependent, commodity dependent countries and net food-importing countries has been omitted from the revised draft. Instead preferences, commodities and net food imports have been added to the list of particular concerns of developing countries. Also, language was added to the beginning of this section referring

‘July Package’, aimed to breathe new life into the stalled Doha Round negotiations. It called on Members to ‘redouble their efforts towards the conclusion of a balanced overall outcome of the Doha Development Agenda’.<sup>303</sup> The July Package focused on pushing ahead the talks in five areas, namely agriculture, non-agricultural market access (NAMA), development issues, trade facilitation and services.<sup>304</sup> In other areas of the Doha mandate, the July Package affirmed the ongoing negotiations. The main breakthrough of the July Package was the adoption of a framework for future agriculture negotiations, included as a separate Annex to the Decision.<sup>305</sup> With regard to development issues, in the July Package the General Council ‘rededicates and recommits Members to fulfilling the development dimension of the Doha Development Agenda’.<sup>306</sup> WTO bodies entrusted with work on SDT are instructed to ‘expeditiously complete’ this work and report to the General Council with clear recommendations for a decision no later than July 2005.<sup>307</sup> While recognising the progress made since the Doha Ministerial Conference in expanding trade related technical assistance (TRTA) to developing countries, the decision states that: ‘such countries, and in particular least-developed countries, should be provided with enhanced TRTA and capacity building, to increase their effective participation in the negotiations, to facilitate their implementation of WTO rules, and to enable them to adjust and diversify their economies.’<sup>308</sup> Further WTO bodies dealing with implementation issues are instructed ‘to redouble their efforts to find appropriate solutions as a priority.’<sup>309</sup>

Discussions in the Special Session of the Committee on Trade and Development under the Doha mandate regarding how to make SDT more precise, effective and operational have not made much progress. Negotiations deadlocked around the issue whether to focus on the 88 agreement-specific proposals on SDT (an approach favoured by developing countries, led by the Africa group), or to first address cross-cutting issues, such as the principles and objectives of SDT, differentiation between developing-country Members and graduation from eligibility for SDT (the approach supported by certain developed countries including the US). As a compromise to move negotiations forward on both tracks simultaneously, Chair Faizel Ismail proposed, in February 2005, that negotiators cluster agreement-specific proposals on the basis of the underlying principles involved.<sup>310</sup>

---

explicitly to ‘the fundamental principles of the WTO and the relevant provisions of GATT 1994’ in order to ensure that the WTO principle of most favoured nation treatment qualifies the special attention to developing country concerns in the negotiations mandated by this Paragraph. See ‘Work on Development Sees Limited Progress at WTO’, *Bridges Weekly Trade News Digest*, 3 August 2004.

<sup>303</sup> General Council, *Doha Work Programme. Decision Adopted by the General Council on 1 August 2004*, WT/L/579, circulated on 2 August 2004, para. 3. This decision extends the negotiations beyond the time frame set at the Doha Ministerial Conference, to continue in the period leading up to the Sixth Session of the Ministerial Conference in Hong Kong in 2005.

<sup>304</sup> An important aspect of the July Package is the agreement not to start negotiations on three of the ‘Singapore issues’ (investment, competition, transparency in government procurement and trade facilitation). The remaining Singapore issue, trade facilitation, formed part of the new work programme set out in the July Package.

<sup>305</sup> General Council, *Doha Work Programme. Decision Adopted by the General Council on 1 August 2004*, WT/L/579, circulated on 2 August 2004, Annex A.

<sup>306</sup> *Ibid.*, para. 1(d).

<sup>307</sup> *Ibid.*

<sup>308</sup> *Ibid.*

<sup>309</sup> *Ibid.*

<sup>310</sup> This approach was termed the ‘situational flexibility’ methodology and aims to allow developing countries to benefit from enhanced flexibilities in WTO rules to respond to their development needs, while continuing

These he identified as being effective market access, enhanced flexibility in WTO rules, consistency with a multilateral rules-based system and enhanced capacity-building programmes.<sup>311</sup>

Members agreed to treat the Chair's approach as a reference point for the negotiations, although concerns were raised by larger developing countries that this approach would introduce differentiation between developing countries. At the Special Session of the Committee on Trade and Development on 6 April 2005, the Chair developed his approach further by classifying proposals regarding both agreement-specific issues and cross-cutting issues into two categories: flexibility and capacity building. He suggested that the remainder of the two-day meeting be spent on flexibility proposals, the first day on agreement-specific proposals in this category and the second on cross-cutting proposals. This meeting deadlocked, however, due to concerns by several developing countries that this approach would shift the focus towards cross-cutting rather than agreement-specific issues.<sup>312</sup>

Members have made 88 proposals with regard to agreement-specific SDT issues. These have informally been divided into three categories: Category I is composed of those proposals on which agreement is likely in the short-term, including those 28 proposals which were agreed upon in principle before the Cancun Ministerial; Category II consists of those 38 proposals that were forwarded to those WTO bodies that deal with the specific agreements involved for further work; and Category III refers to the most controversial proposals on which negotiations have not yet been conducted. Five proposals have been made containing 12 specific recommendations that relate to the provisions on SDT and technical assistance of the *SPS Agreement*.<sup>313</sup> Work on specific issue areas, including SPS issues, continues to take place in the relevant WTO bodies and in Special Sessions of the Committee on Trade and Development.<sup>314</sup>

In the run-up to the Hong Kong Ministerial Conference in 2005, a mini-Ministerial meeting was held in China, in which SDT received more attention than has been the case in this type of meeting to date. After this meeting, on 19-27 July 2005, intensive negotiations in the Special Session of the Committee on Trade and Development were initiated by its Chairperson. Reportedly, a strong sense prevailed among delegations that there was a need to reach agreement on five SDT proposals of least-developed-country Members in order to demonstrate a commitment to resolving the concerns of the WTO's poorest

---

to act consistently with the fundamental principles of the multilateral trade regime. 'WTO Members Move Forward on S&D Negotiations', Bridges Weekly Trade News Digest, 9 February 2005.

<sup>311</sup> The Chair said he would circulate a text detailing his proposed approach, which is expected to call for the clustering of proposals around the four principles he identified, and to possibly suggest working groups on each thematic cluster. *Ibid.*

<sup>312</sup> These countries noted that the July Package (WT/L/579) required concrete recommendations on agreement-specific proposals by the July 2005 deadline, whereas only a report to the General Council at an unspecified date regarding crosscutting issues was mandated. Thus they proposed that the Special Sessions of the Committee on Trade and Development should focus on agreement-specific issues. Several developed countries, on the contrary, argued that crosscutting issues are central to the negotiations and must be addressed before or simultaneously to agreement-specific issues. 'S&D Talk Adjourn Early Amidst Disagreement', Bridges Weekly Trade News Digest, 13 April 2004.

<sup>313</sup> These proposals are discussed below in Part V, Section 1.7.

<sup>314</sup> 'WTO Members Move Forward on S&D Negotiations', Bridges Weekly Trade News Digest, 9 February 2005.

Members.<sup>315</sup> However, on 27 July the Chairperson reported that ‘several issues remain unresolved’ on SDT, making it ‘impossible... to make specific recommendations’ to the General Council meeting at the end of that week. This lack of progress reflected both the divergence in positions on SDT and the stalled negotiations in other key areas.

At the Hong Kong Session of the Ministerial Conference in December 2005, however, agreement was reached on the five SDT proposals of least-developed-country Members.<sup>316</sup> The Hong Kong Ministerial Declaration instructs the Committee on Trade and Development and the relevant WTO bodies to expeditiously complete their work on the remaining agreement-specific proposals and to report back to the General Council by December 2006.<sup>317</sup> In addition the Committee on Trade and Development is mandated to ‘resume work on all other outstanding issues, including on the cross-cutting issues, the monitoring mechanism, and the incorporation of S&D into the architecture of WTO rules, and report on a regular basis to the General Council.’<sup>318</sup> An important achievement was made with regard to agricultural trade in the Hong Kong Ministerial Declaration, namely the agreement on the progressive elimination of all agricultural export subsidies by 2013.<sup>319</sup> A new deadline was set for other issues on the agenda, namely July 2006.

This deadline was not met, and due to the wide gaps remaining between Members and the absence of significant movement in negotiators’ positions, the WTO Director-General decided to suspend the whole round of negotiations to provide a period for ‘serious and sober reflection’ by participants.<sup>320</sup> Negotiations were relaunched in February 2007, following the ‘increasing level of political engagement and clear signals of renewed commitment to a successful conclusion of the Round’.<sup>321</sup> By July 2008, the momentum had increased and the Director-General reported to an informal meeting of the Trade Negotiations Committee on 27 June 2008 that there was a ‘clear political determination to conclude the Round by the end of 2008.’<sup>322</sup> The intensified negotiations have focused on obtaining agreement on modalities for the commitments on agriculture and non-agricultural market access. The G-20 has criticised the diminished ambition of the revised draft modalities circulated by the Chairperson of the Special Session of the Committee on Trade in Agriculture, particularly in the areas of domestic support and market access. Emphasising the development dimension of the Doha Round negotiations and the importance of agriculture to developing-country Members’ economies, the G-20 called for

a better balance between the ambitious level of commitments sought in the area of non agricultural market access and the watered-down commitments on agricultural liberalisation. It remains to be seen if this call will be heard.

## 1.9 Conclusion

The relevance of the examination of the ‘development dimension’ of the *SPS Agreement* can best be understood against the background of increasing developing country participation in the international trading system, and the implications of this increased participation for the rules of the system.

This background cannot be divorced from the normative framework established by international human rights law, and in particular the emerging recognition of the right to development. While not yet fully crystallised as creating particular obligations on states, the right to development is important in that it emphasises the interdependence between development and human rights. It is no longer possible to see development purely from an economic growth perspective. Instead, development strategies, also in the form of trade liberalisation must take account of their impact on human rights, including the rights to life, health and safe food. The WTO, as an organisation whose activities have an impact on development, must ensure that the economic growth achieved by its rules does not come at the cost of the protection of human rights. Therefore, in respect of the *SPS Agreement*, this means that the objective of liberalisation of trade in food and agricultural products must be balanced against that of health protection. In addition, while the importance of trade as an engine for growth and poverty alleviation is crucial to development, in order to be truly supportive of development trade liberalisation must be achieved by rules that are appropriate to the special position of developing countries. This requires not only flexibilities, where possible, in recognition of developing country constraints, but also provision for assistance from the international community to build capacity in developing countries. Against this background, an examination of the historical developments towards the integration of developing countries in the international trading system reveals significant problems but also some progress. In particular, the changing approach to the recognition of developing country constraints is instructive.

While the initial approach of the GATT 1947 was to emphasise the fundamental principle of non-discrimination and thus apply its rules equally to developed and developing Contracting Parties, it is clear that the impact of these rules was not the same for all Contracting Parties. The flexibilities negotiated into the rules, while available to all, were in areas most useful to developed countries. The change initiated in the Review Session of 1954-1955, with the introduction of the concept of differential treatment of developing countries, and the calls for broad derogations from GATT rules for these countries, was insufficient to secure the gains in economic growth needed by developing countries. The recognition by developing countries of the need for *positive* action by developed countries to increase their market access led to the introduction of a new Part IV on ‘Trade and Development’ into the GATT setting out a number of actions for developed countries to ensure that a self-selected group of less-developed Contracting Parties secured a share in the growth of trade commensurate with their development needs. However, these actions

were expressed in purely hortatory terms or as best-endeavour commitments. The concept of 'special and differential treatment' was formalised in the Tokyo Round *Enabling Clause*, formally allowing deviation from the principle of most-favoured-nation treatment to accord preferential treatment to developing countries. In addition SDT provisions were included in the Tokyo Round Codes, which addressed various types of non-tariff barriers to trade. These SDT provisions were criticised as insufficient due to the vague wording of SDT provisions, lacking specification of measures necessary for their application. This despite the fact that these Codes entailed far-reaching commitments with regard to behind-the-border areas of regulatory policy. As a result, most developing countries chose not to become parties to the Codes.

It is elucidating to bear in mind the new approach of developing countries in the Uruguay Round negotiations that led, *inter alia*, to the adoption of the *SPS Agreement*. In these negotiations developing countries evinced a new willingness to engage actively in the negotiations and make reciprocal concessions in order to gain concessions in areas of particular interest to them, including agriculture and textiles. Developing countries undertook to bind themselves, as part of a 'single undertaking' to broad-ranging disciplines, encompassing rules not only on traditional trade barriers but also on non-tariff barriers to trade in the form of regulatory measures, an example of which are SPS measures. The implementation of these new disciplines entails progressively higher compliance costs, in the form of legislative reform and the creation of the necessary institutional infrastructure, the less developed a country is. Instead of negotiating exemptions from these rules, developing countries called for a new form of SDT, in the form of longer transition periods, consideration for their special position and the provision of technical assistance. These provisions can be found in the *SPS Agreement*. However, in the *SPS Agreement* as in the other Uruguay Round agreements, the SDT provisions are either non-binding or are framed in such open terms as to be practically unenforceable. Developing-country Members regard SDT as the *quid pro quo* for the extensive obligations they undertook in the Uruguay Round, and therefore regard the inadequate implementation thereof as cause for concern. Consequently, the lack of implementation of SDT provisions by developed-country Members and the high compliance costs for developing-country Members of implementing the disciplines of these agreements led to growing dissatisfaction with the asymmetrical costs and benefits of the multilateral trading system as reflected in the outcome of the Uruguay Round.

These implementation concerns were the focus of attention in the run-up to the Seattle Ministerial Conference, which was supposed to launch a new 'Millennium Round' of trade negotiations. The failure of this Ministerial Conference led to a realisation of the need to take seriously the concerns of developing-country Members. This is reflected in the renewed focus on developing country concerns at the Doha Ministerial Conference in 2001. The *Implementation Decision* adopted at this Ministerial Conference contains decisions (of rather limited impact) on certain implementation issues, and, more importantly, sets out a work programme on SDT. The Doha Ministerial Conference also successfully launched the 'Doha Development Round' of trade negotiations, which seeks to place developing country needs at the heart of its work programme. The Doha Ministerial Declaration, adopted at the same time as the *Implementation Decision*, recognises that SDT provisions are an integral part of the WTO agreements and mandates the review of

SDT provisions in order to strengthen and operationalise them. However, negotiations on this issue have become mired in disagreement and have borne little fruit thus far. The polarisation in the discussion reflects the unrealistic and rigid positions taken on both sides.

It is clear that progress on resolving the implementation concerns of developing countries, both with regard to the high compliance costs they face in implementing new regulatory disciplines and with regard to the lack of faithful implementation of the special provisions negotiated to take account of their constraints, is urgently needed. It seems that an agreement-specific focus contains more prospects for success than a cross-cutting approach. Implementation problems are agreement-specific and addressing them in this way allows the discussion to move from the political level to a concrete technical level where the solutions are most likely to be found. However, both developed and developing-country Members will have to show a willingness to move from their current rigid positions and to look for constructive solutions. To facilitate this movement, in-depth research is needed to identify where the problems lie in each agreement, and what the possibilities are for improvement.

## CHAPTER 2

### The globalisation of health: Addressing transboundary health risks

Hand-in-hand with the globalisation of trade, and the progressive integration of developing countries into the world trading system, there has been a development towards the globalisation of health. The impetus for this development lies in the growth in the movement of food, plants and animals across borders and the SPS risks this entails. Consequently, countries became aware of the need for international cooperation to address these risks.

However, this process has not been a smooth one. Instead, it is characterised by changes and even reversals that reflect the widely held view that the protection of health is a national issue and choices in this regard are the prerogative of sovereign governments. The developments in this area are closely linked to advances in science and its ability to provide a commonly accepted framework for regulatory decisions. This Chapter aims to sketch the process of the globalisation of health concerns in broad strokes.

#### 2.1 The origins of international attention to the tension between trade and health in the mid-nineteenth century

As mentioned above,<sup>1</sup> from its earliest beginnings, international trade has had an impact on national health and, conversely, national health measures have affected trade between states. However, national sanitary measures only became an international issue in the mid-nineteenth century. Two principal factors contributed to this development. First, the outbreak of cholera epidemics in Europe between 1830 and 1847 led to a realisation that current national responses to health threats from other countries, which mainly took the form of quarantine measures, were insufficient to address the growing risks from imported infectious diseases due to the increase in both the volume and speed of travel and trade.<sup>2</sup> Second, due to the growing share of trade earnings in their GDP, developed countries became increasingly concerned about the trade-restrictive effects of health measures, such as quarantine requirements, on their export markets and serious trade conflicts arose.

Consequently, states (mostly European) began international efforts to coordinate their sanitary measures, and the first International Sanitary Conference was held in 1851.<sup>3</sup> A series of sixteen international sanitary conferences and thirteen international sanitary conventions followed between 1851 and 1944.<sup>4</sup> As noted by Brigit Toebes, '[t]he major purpose of the conferences was not to improve global health, but rather to protect the European States against alien diseases...'<sup>5</sup> In addition, some international health

<sup>1</sup> See above, Part I, Section 1.1.

<sup>2</sup> David P. Fidler, 'Microbialpolitik: Infectious Diseases and International Relations', *American University International Law Review* 14, 1998, 1-52, 18-19. Fidler's analysis is limited to the area of sanitary measures imposed in response to threats from infectious diseases, but similar considerations apply to sanitary and phytosanitary threats in general.

<sup>3</sup> *Ibid.*, 18.

<sup>4</sup> David P. Fidler, 'Return of the Fourth Horseman: Emerging Infectious Diseases and International Law', *Minnesota Law Review* 81, 1997, 771-868, 834.

<sup>5</sup> Brigit Toebes, *The Right to Health as a Human Right in International Law* (Intersentia-Hart, Groningen),

organisations were created to administer these international and regional sanitary rules.<sup>6</sup> Despite this new attention to threats to human health on international level, the international regime with regard to the control of the spread of infectious diseases was haphazard and incomplete. The early sanitary conventions were products of political compromise and irrational fears, lacking a scientific basis. The manifold of sanitary conventions sometimes overlapped, important trading nations were not party to some or all the conventions, and the treaty-making process was too cumbersome to allow the rules to adapt to developments in scientific knowledge.<sup>7</sup>

Developments were made in the late nineteenth century in the scientific understanding of the causes of diseases and the discovery of more effective methods to address these risks. These initially facilitated international efforts towards cooperation in this area.

## 2.2 The science paradigm in the globalisation of health

The great advances made in scientific knowledge and research techniques in the late nineteenth century,<sup>8</sup> were instrumental in facilitating the international cooperation in the area of health protection mentioned above. Previously, the lack of a common understanding of the causes of health risks and the most effective ways to deal with them was an obstacle to the efforts to coordinate national responses to international risks. As science and scientific techniques developed, it became possible to detect toxins or contaminants in food, identify plant and animal diseases and evaluate the risks arising from them. The new scientific understanding of the causes of infections and other diseases created a more objective basis for regulatory decisions in the area of health and enabled trading nations to reach agreement on ways to coordinate their health measures internationally in order to minimise their trade-restrictive effects. Science replaced politics and narrow self-interest as the basis for agreement on international health issues.<sup>9</sup>

This emerging scientific consensus on health issues also made it possible to establish international harmonised standards for food safety and plant and animal health. These standards were not only driven by health concerns but were also often linked to trade facilitation initiatives. For example, in 1903, the International Dairy Federation developed international standards for milk and milk products, in order to diminish the

---

1999, 12.

<sup>6</sup> For example, the Office International d'Hygiène Publique (1907), the League of Nations Health Organisation (1945) and the Health Division of the UN Relief and Rehabilitation Administration on international level, and the Pan American Sanitary Bureau and the Egyptian Sanitary Maritime and Quarantine Board. See 'Forum Interview with Szeming Sze, WHO: From Small Beginnings,' *World Health Forum* 9 (1988) 29-43 at 30.

<sup>7</sup> David P. Fidler, 'Return of the Fourth Horseman: Emerging Infectious Diseases and International Law', *Minnesota Law Review* 81, 1997, 771-868, 835.

<sup>8</sup> Fidler notes that the absence of proper scientific understanding of microbes constituted an important obstacle to international cooperation through much of the second half of the nineteenth century. He mentions the scientific validation of the 'germ theory' as instrumental in enabling international cooperative efforts to achieve concrete results, in the form of treaties and international health bodies. David P. Fidler, 'Microbialpolitik: Infectious Diseases and International Relations', *American University International Law Review* 14, 1998, 1-52, 19.

<sup>9</sup> This is reflected in the fact that increasingly negotiations regarding international health issues were carried out by health experts rather than ambassadors and other political representatives.

trade-restrictive effects of diverse national regulations with respect to dairy products. Similarly, other commodity groups lobbied for international harmonisation of health regulations that affected their sector.<sup>10</sup> The idea that science provided a neutral, universally accepted foundation for health measures made agreement on these harmonised standards possible. Thus, science was the scale on which the competing interests of health and trade were balanced.

However, the benefits of scientific advances and international cooperation on health issues did not extend to developing regions of the world, where infectious diseases remained prevalent. Lack of resources, adequate health infrastructure and know-how meant that the advent of scientific tools in the area of health, such as antimicrobial drugs, had a limited impact on health in developing countries.<sup>11</sup> Further, developing countries played a very limited role, if any, in international negotiations on health issues, due to lack of human and financial resources and inadequate scientific capacity. As a result, the international strategies developed to break the grip of infectious diseases on developing countries were often inappropriate and misguided.

### **2.3 The re-nationalisation of health issues in developed countries in the first half of the twentieth century**

Paradoxically, developments in science eventually led to the re-nationalisation of health issues in developed countries in the first half of the twentieth century.<sup>12</sup>

As domestic health infrastructure improved and powerful drugs and treatments were developed to deal with bacteria, parasites and viruses, countries grew more confident of their abilities to address imported health risks by means of national measures.<sup>13</sup> Many infectious diseases and parasites were practically eradicated in much of the developed world. With the establishment of good sanitation systems, science-based food safety regulations and accurate control and testing procedures, the frequency and costs of disease outbreaks were greatly reduced.

<sup>10</sup> Peter W.B. Phillips, 'Food Safety, Trade Policy and International Institutions', in *Governing Food: Science, Safety and Trade*, Peter W.B Phillips and Robert Wolfe (eds.) (McGill-Queen's University Press, Montreal), 2001, 27-48, 29.

<sup>11</sup> David P. Fidler, 'Return of the Fourth Horseman: Emerging Infectious Diseases and International Law', *Minnesota Law Review* 81, 1997, 771-868. Fidler points to the fact that the misuse of international availability of antimicrobial drugs in developing countries has led to antimicrobial resistance in diseases such as malaria and tuberculosis.

<sup>12</sup> Fidler points to advances in epidemiology and antimicrobial pharmaceuticals as the cause of the re-nationalisation of public health in the developed world. See David P. Fidler, 'The Globalization of Public Health: Emerging Infectious Diseases and International Relations', *Indiana Journal of Global Legal Studies* 5 (2), 1997, 27, available at: <http://www.law.indiana.edu/glsj/vol5/no1/fidler.html>, visited on 25 June 2007.

<sup>13</sup> As noted by Fidler, in 1969 the advances made in the fight against infectious diseases, including through the use of vaccines and antibiotics, prompted the United States' Surgeon General to report to the US Congress that it was time to 'close the book' on infectious diseases.' David P. Fidler *et al.*, 'Emerging and Re-Emerging Infectious Diseases: Challenges for International, National, and State Law', *The International Lawyer* 31, 1997, 773-813, 773.

Health experts claimed that developed countries had passed through the ‘health transition,’ from a situation where infectious diseases were the leading cause of death to a situation where chronic or non-communicable illnesses such as heart disease, obesity, cancer and respiratory problems, were the greatest health problem.<sup>14</sup> Developed countries thus no longer had a strong national interest in promoting international cooperation in the area of health and international initiatives lost impetus.

As discussed above, international efforts in the late nineteenth century had failed to bring about a health transition in the developing world. The continued prevalence of pests and infectious diseases in the developing world was, however, not perceived as a threat by developed countries, but was seen as a problem for developing countries only.<sup>15</sup> Science was regarded as providing effective tools to deal with any imported health risks on national level. As a result, international cooperation was no longer seen as essential as developed countries ‘regained sovereign control over public health.’<sup>16</sup>

## 2.4 Return to the international approach: The globalisation of health

The unprecedented increase in the speed, volume and scope of trade in the second half of the twentieth century prompted a rethinking of the complacent attitude that had developed with regard to health risks from imported products. A significant new factor that played a role in the re-evaluation of countries’ ability to deal with health risks on a purely national level was the rapid expansion of trade between developed and developing countries, following the decolonisation process after World War II.<sup>17</sup> As noted above, there was a rapid increase in the number of developing countries that joined the international trade regime in the 50s and 60s. For the first time, trade was truly global in reach.

In addition, the international trade rules imposed strict disciplines on countries’ ability to adopt trade-restrictive measures for the protection of health.<sup>18</sup> Thus, increasingly, developed countries were exposed to threats from imported products sourced in countries where parasites, pests and microbiological contaminants were endemic.<sup>19</sup> National strategies to deal with these risks were no longer sufficient as the volume of trade made effective screening of imports an impossible task. This can be referred to as the phenomenon

---

<sup>14</sup> David P. Fidler, ‘Symposium on Globalization at the Margins: Perspectives on Globalization from Developing States: Neither Science nor Shamans: Globalization of Markets and Health in the Developing World’, *Indiana Journal of Global Legal Studies* 7, 1999, 191-224, 194.

<sup>15</sup> David P. Fidler, ‘The Globalization of Public Health: Emerging Infectious Diseases and International Relations’, *Indiana Journal of Global Legal Studies* 5 (2), 1997, 29, available at: <http://www.law.indiana.edu/glsj/vol5/no1/fidler.html>, visited on 25 June 2007.

<sup>16</sup> *Ibid.*

<sup>17</sup> *Ibid.*, 31.

<sup>18</sup> The provisions of the GATT 1947 prohibited discriminatory regulatory treatment of domestic and imported products (Article III:4) and quantitative restrictions, including bans (Article XI:1), but contained a limited exception to these rules for measures necessary for the protection of human, animal or plant life or health (Article XX(b)). Contracting Parties to the GATT 1947 had to comply with strict requirements in order for their health measures to pass scrutiny under this agreement. These GATT rules are discussed below, Part III, Section 1.1.1.

<sup>19</sup> Fidler notes the example of the outbreak of cyclospora parasite in the U.S. in 1996, which was believed to have originated in Latin American strawberries or raspberries.

of the globalisation of health, meaning the situation where states are losing the ability to protect health in their territories by means of purely national measures.<sup>20</sup>

The impetus for renewed attention to international health cooperation therefore came from developed countries, due to concerns regarding exposure to health threats from the developing world. It differed from the efforts at international cooperation undertaken in the mid-nineteenth century in that it relied greatly on science as a tool to achieve agreement on a common approach to global health risks. It attempted to combine the early efforts at harmonisation of national health measures in response to global health risks, with the development of international institutions and rules to promote common action.

Some of the global initiatives to foster international cooperation against sanitary and phytosanitary risks are the creation of the International Office for Epizootics in 1921, to prevent the spread of diseases in animals and animal products through international trade; the establishment of the Codex Alimentarius Commission in 1961 to administer the Joint FAO/WHO Food Standards Programme; and the adoption by the FAO of the *International Plant Protection Convention* (IPPC) in 1951 to formalise international cooperation in the area of plant protection. These initiatives were based on cooperative efforts, at the level of experts, to elaborate voluntary guidelines to minimise SPS risks, while causing as little disruption as possible to the flow of international trade.<sup>21</sup>

In 1948, the World Health Organisation (WHO) was established,<sup>22</sup> with the objective of ensuring the ‘attainment by all peoples of the highest possible level of health.’<sup>23</sup> The WHO’s constitution defines health as ‘a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity.’<sup>24</sup> Its mandate thus goes beyond the control of infectious diseases to the promotion of health in general.

Under the auspices of the WHO,<sup>25</sup> the International Sanitary Regulations were adopted in 1951. These were revised and renamed the International Health Regulations<sup>26</sup> (IHR)

<sup>20</sup> This term is adapted from the concept of the ‘globalization of public health’, referred to by Fidler in connection with the loss of states’ ability to protect their publics against threats from diseases. This concept can be extended to all health threats, not only those to human beings from infectious diseases and thus the term ‘globalisation of health’ would be more appropriate in this context. See David P. Fidler, ‘Symposium on Globalization at the Margins: Perspectives on Globalization from Developing States: Neither Science nor Shamans: Globalization of Markets and Health in the Developing World’, *Indiana Journal of Global Legal Studies* 7, 1999, 191-224, 196-197. See further on the challenges for health protection caused by cross-border movement of food, F.K. Kaferstein *et al.*, ‘Foodborne Disease Control: A Transnational Challenge’, *Emerging Infectious Diseases* 3 (4), 1997, 503-510.

<sup>21</sup> For a detailed discussion of these three initiatives, see Part II, Sections 3.2.1-3.2.3.

<sup>22</sup> The WHO was the first specialised agency of the UN. Article 55 of the UN Charter provides that one of the tasks of the UN shall be to promote solutions to international health problems (David P. Fidler, ‘Return of the Fourth Horseman: Emerging Infectious Diseases and International Law’, *Minnesota Law Review* 81, 1997, 771-868, 836 and note 320).

<sup>23</sup> Article 1 of the *Constitution of the World Health Organization* as adopted by the International Health Conference, New York, 19-22 June, 1946; signed on 22 July 1946 by the representatives of 61 States (Official Records of the World Health Organization, no. 2, p. 100) and entered into force on 7 April 1948.

<sup>24</sup> Preamble to the *Constitution of the World Health Organization*.

<sup>25</sup> Fidler points out that Article 21 of the WHO Constitution provided the authority for the WHO to adopt binding sanitary and quarantine regulations and other procedures to prevent the international spread of disease. See David P. Fidler, ‘Return of the Fourth Horseman: Emerging Infectious Diseases and International Law’, *Minnesota Law Review* 81, 1997, 771-868, 835.

<sup>26</sup> World Health Organization, *International Health Regulations*, adopted by the 22<sup>nd</sup> World Health Assembly

in 1969.<sup>27</sup> The objective of the IHR is ‘to ensure the maximum security against the international spread of diseases with a minimum interference with world traffic.’<sup>28</sup> The IHR aim to achieve this dual objective by, on the one hand, creating an international system of notification and surveillance of specified diseases,<sup>29</sup> requiring certain health facilities at ports and harbours, setting out particular obligations with regard to notifiable diseases and, on the other hand, by establishing the maximum measures applicable to international traffic that member countries may take to protect their territories from diseases subject to the IHR.<sup>30</sup> Member countries were obliged to notify the WHO of all measures they apply to imports from infected areas and could not require additional health documentation beyond that provided for in the IHR.<sup>31</sup> It therefore appears that, once again, international efforts to deal with increasingly globalised risks to health attempted to balance health protection with trade concerns.

However, despite its binding disciplines, the IHR failed to achieve their dual objective. The IHR were ineffective in preventing the international spread of the notifiable infectious diseases, such as cholera, and limited member countries’ ability to respond to other equally important diseases not covered by its provisions. In addition, the IHR did not succeed in achieving ‘minimum interference with world traffic’ as member countries largely ignored the prohibition on measures more restrictive than those provided for in the IHR.<sup>32</sup>

In 1983, a WHO/FAO Joint Expert Committee on Food Safety found that food contamination, both by microbes<sup>33</sup> and by chemicals and toxins,<sup>34</sup> was a considerable and widespread health problem in the world and had an important economic impact.<sup>35</sup> Similarly,

---

(1969) and amended in 1973 and 1981 (3<sup>rd</sup> annotated ed.) Geneva 1983, available at, [http://policy.who.int/cgi-bin/om\\_isapi.dll?infobase=Ihreg&software=Browse\\_Frame\\_Pg42](http://policy.who.int/cgi-bin/om_isapi.dll?infobase=Ihreg&software=Browse_Frame_Pg42), visited on 25 June 2007.

<sup>27</sup> The IHR are binding on WHO member countries, but opt outs and reservations are possible.

<sup>28</sup> Foreword to the IHR.

<sup>29</sup> The initial objective of the IHR was to monitor and control the spread of six infectious diseases, namely cholera, plague, yellow fever, smallpox, relapsing fever and typhus. However, under the IHR of 1969, only cholera, plague and yellow fever were notifiable diseases. See the website on of the World Health Organization, the information on the International Health Regulations, available at: <http://www.who.int/csr/ihr/en/>, visited on 5 September 2005.

<sup>30</sup> Article 23 IHR, which prohibits countries from imposing stricter health measures than those laid down in the IHR.

<sup>31</sup> See David P. Fidler, ‘Return of the Fourth Horseman: Emerging Infectious Diseases and International Law’, *Minnesota Law Review* 81, 1997, 771-868, 843-847. The IHR are currently in the process of revision in order to make them more effective and responsive to contemporary threats from emerging infectious diseases.

<sup>32</sup> *Ibid.* As discussed below, in Part I, Section 2.5, the IHR have been recently revised in order to make them more effective and responsive to contemporary threats.

<sup>33</sup> Microbes or parasites in food can cause acute illness, for example diarrhoeal diseases, botulism, cholera (typhoid), salmonellosis, or hepatitis A; or chronic illnesses, such as tuberculosis, trichinosis or tapeworm.

<sup>34</sup> These chemicals or toxins may take the form of pesticide or herbicide residues, drugs and hormones administered in animal husbandry, toxins naturally occurring in plants, marine biotoxins and mycotoxins. They can cause cancer, antibiotic resistance, ergotism, alimentary toxic aleukia, and haemolytic anaemia, among other diseases. Joint FAO/WHO Expert Committee on Food Safety, *The Role of Food Safety in Health and Development*, WHO Technical Report Series 705, (Geneva: World Health Organization, 1984) at 18-20.

<sup>35</sup> Joint FAO/WHO Expert Committee on Food Safety, *The Role of Food Safety in Health and Development*, WHO Technical Report Series 705, (Geneva: World Health Organization, 1984) at 12-21. The magnitude of the health problem and its accompanying economic impact was found to be difficult to establish accurately, due to the poor records kept by countries in this regard. *Ibid* at 13 and 21.

the spread of animal and plant pests and diseases continued to form a significant threat to agricultural production across the world.

## 2.5 The new approach to globalised health risks at the turn of the century: International and national strategies

One response to the failure of international efforts to check the spread of SPS risks in an increasingly globalised world was to strengthen international regulation. In fact, the impact of rapidly increasing trade on health was one of the factors<sup>36</sup> that led to the process of revision of the WHO's International Health Regulations, from 1995 to 2005. The revision,<sup>37</sup> referred to as the International Health Regulations 2005<sup>38</sup> (IHR 2005) has expanded the scope of parties' obligations to assess and notify a public health event to include not only specified infectious diseases (as was previously the case) but also all 'events potentially constituting a public health emergency of international concern.'<sup>39</sup> The 'decision instrument' provided to assist governments in determining whether such an event exists lists, as one of the indicative factors,<sup>40</sup> 'a significant risk of international travel or trade restrictions'.<sup>41</sup>

The IHR 2005 oblige States Parties to develop and maintain certain minimum core capacities for surveillance of and response to public health events,<sup>42</sup> including the capacity to provide specialised staff, laboratory analysis of samples (on national level or through collaborating centres), and logistical assistance; and the capacity to establish and implement a response plan to events that may constitute a public health emergency of international concern.<sup>43</sup> Further, minimum requirements apply with regard to designated ports, airports and ground border crossings, such as the provision of trained inspectors; the application of measures, when appropriate, to disinfect, decontaminate, eliminate rats or insects, or otherwise treat cargo and goods.<sup>44</sup>

---

<sup>36</sup> Other relevant factors were emerging infections diseases, such as the SARS outbreak in 2003; interspecies transfer of animal diseases, such as BSE and avian influenza, to humans; the threat of bioterrorism; and increased movement of people across borders. See Gerald S. Schatz, *International Health Regulations: New Mandate for Scientific Cooperation*, circulated on 2 August 2005.

<sup>37</sup> The revision was adopted on 23 May 2005 and came into force two years from that date as binding on those States Parties that had not rejected them or tried to make impermissible reservations by that time. See *Revision of the International Health Regulations*, WHA58.3, Fifty-Eighth World Health Assembly, 23 May 2005, Article 59.

<sup>38</sup> *Ibid.*, Preamble, recital 1.

<sup>39</sup> *Ibid.*, Article 6.1.

<sup>40</sup> All four factors listed are: (1) that the public health event is serious; (2) that the public health event is unusual or unexpected; (3) that there is a risk of international spread; and (4) that there is a significant risk of international travel or trade restrictions. If at least two of the four factors is present, the event must be notified to the WHO.

<sup>41</sup> *Revision of the International Health Regulations*, WHA58.3, Fifty-Eighth World Health Assembly, 23 May 2005, Annex 2.

<sup>42</sup> States Parties have five years from the entry into force of the IHR 2005 to develop the required capabilities. See *Ibid.*, Articles 5 and 13.

<sup>43</sup> *Ibid.*, Annex 1A para. 6.

<sup>44</sup> *Ibid.*, Annex 1B.

Many countries do not have the required capacities and lack the resources to develop them. The IHR 2005 do not establish a funding mechanism to assist States Parties in this regard, but oblige the WHO to collaborate with them to mobilise funding to support developing countries in building and maintaining these capacities.<sup>45</sup> Further, the IHR 2005 oblige States Parties to collaborate with each other, to the extent possible, in detecting, assessing and responding to public health events covered by it; providing or facilitating technical and logistical assistance in developing and maintaining the required core capacities; and drafting implementing legislation and procedures.<sup>46</sup> It remains to be seen to what extent the necessary assistance will be provided.

In order to avoid unnecessary interference with international traffic and trade,<sup>47</sup> the IHR 2005 impose limits on the ability of States Parties to take health measures. If the Director General of the WHO determines that a public health emergency of international concern exists,<sup>48</sup> he or she must issue temporary recommendations of appropriate measures.<sup>49</sup> With regard to ongoing public health risks, standing recommendations may be issued to prevent or reduce the international spread of disease and avoid unnecessary interference with international traffic and trade.<sup>50</sup> Temporary and standing recommendations may be seen as attempts to harmonise responses to public health events around internationally established standards.<sup>51</sup> Deviation from recommended measures is subject to a list of requirements. Members may apply health measures that achieve the same or a higher level of protection than the WHO recommendations, provided that such measures are not more restrictive of international traffic than reasonably available alternatives that achieve the appropriate level of health protection. Further, States Parties must base their decisions to take other measures than those recommended on scientific principles; available scientific evidence of risk, or if such evidence is insufficient, on available information including from the WHO and other relevant international bodies; and any available specific guidance or advice from the WHO.<sup>52</sup> If such measures significantly interfere with international traffic, the State Party implementing the measure must notify the WHO and submit to it the public health rationale for the measure and supporting scientific information.<sup>53</sup> The WHO circulates this information to other States Parties and may ask the relevant State Party to reconsider the measure. States Parties affected by the measure may request consultations with the implementing party to clarify the scientific information and public health rationale for the measure and try to find a mutually acceptable solution.

---

<sup>45</sup> *Ibid.*, Article 44.

<sup>46</sup> *Ibid.*, Article 44.

<sup>47</sup> As mentioned above, the IHR have a dual objective, namely to prevent the international spread of disease and avoid unnecessary interference with international traffic and trade. This dual objective is maintained in the IHR 2005. See *Ibid.*, Article 2.

<sup>48</sup> This determination is made according to the rules laid down in the IHR 2005. *Ibid.*, Article 12.

<sup>49</sup> *Ibid.*, Article 15.

<sup>50</sup> *Ibid.*, Article 16.

<sup>51</sup> Recommendations must take into account scientific principles and available scientific evidence, relevant international standards, activities of other intergovernmental organisations and international bodies, the advice of the Emergency Committee or Review Committee (committees of experts established under the IHR 2005), the views of the States Parties involved and other appropriate information. *Ibid.*, Article 17.

<sup>52</sup> Such measures must also be reviewed within 3 months on the basis of the same three criteria. *Ibid.*, Article 43.

<sup>53</sup> Significant interference is defined as the refusal of entry or departure of *inter alia* cargo or goods, or their delay for more than 24 hours. *Ibid.*

Despite these efforts to strengthen the international regulatory approach, the inability of such an approach to deal with differences in national health conditions and implementation capacities has led to a rethinking of the strategy needed to address the threat to health from the globalisation process. This rethinking has further been spurred by recognition of the weak commitment of the 'international society' to comply with their commitments in the area of disease control.<sup>54</sup> A new strategy has developed, which can be captured in the phrase: 'think globally, act locally'.<sup>55</sup> It reflects the awareness that international cooperation is a necessary, but not sufficient, response to the global spread of health risks.

In particular, current thinking acknowledges the danger in dealing with the globalisation of health risks by means of 'one-size-fits-all' harmonised measures. Instead, it is important to allow for policy choices to be made on the basis of national circumstances and institutional capacity.<sup>56</sup> London School of Economics economist Razeen Sally disagrees with the view of Mark Malloch Brown, administrator of the UNDP, that the nation state is in retreat thus necessitating global solutions to provide global public goods.<sup>57</sup> While Sally does not deny the importance of international cooperation where national level action is inadequate, he points out that national governance co-exists with international economic integration and that globalisation continues to depend on law-governed nation-states.<sup>58</sup>

The current approach to coping with the challenges that globalisation poses for health is a multifaceted one. It continues to rely on international cooperation, based on scientific

<sup>54</sup> Fidler notes that unlike the participants at the international sanitary conferences in the late nineteenth century, today we are aware of the inability of international harmonisation of quarantine measures to deal with the international movement of microbes. Further, unlike the 'dedicated servants in the halcyon days of international health organizations' today we recognise the limits of reliance on notions of the international society. David P. Fidler, 'Microbialpolitik: Infectious Diseases and International Relations', *American University International Law Review* 14, 1998, 1-52, 40.

<sup>55</sup> David P. Fidler *et al.*, 'Emerging and Re-Emerging Infectious Diseases: Challenges for International, National, and State Law', *The International Lawyer* 31, 1997, 773-813, 778.

<sup>56</sup> This point is made by Dani Roderik, a reputable Harvard economist and referred to by Razeen Sally. Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 6, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

<sup>57</sup> Malloch-Brown argues that certain issues 'simply cannot be handled on a national level' but 'require a global response'. He advocates a 'real paradigm shift' entailing a 'much more vigorous vision of how to manage the global economy and global society'. As, in his view, national governments are unable to deal with global problems, including health issues, he proposes global solutions. Global governance, in his opinion, should take the form of 'the right kinds of partnerships between different levels of government in the world', and 'partnerships with non-government players, both the private sector, civil society, and others.' Mark Malloch-Brown, 'Human Security and Human Development in the 21st Century: A Post-September 11 Agenda', presented at the *London School of Economics, Centre for the Study of Global Governance*, London) 25 October 2001, available at: [www.lse.ac.uk/collections/globalDimensions/lectures/humanSecurityAndHumanDevelopment/](http://www.lse.ac.uk/collections/globalDimensions/lectures/humanSecurityAndHumanDevelopment/), visited on 5 November 2001. Sally adopts a classical liberal critique of Malloch-Brown's vision, arguing that: '...this is a profoundly illiberal vision, whose distrust of markets and faith in government intervention (now at the global level) would, if put into practice, undermine the freedom of contract and restrict competition. Needless to say, this has implications for economic efficiency, but one should not forget that these prescriptions erode the freedom of choice: they threaten individual liberty itself.' Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 6 (footnote omitted) available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

<sup>58</sup> Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 12, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

research and the sharing of information by experts and technocrats, to develop harmonised standards and guidelines for the management of risks. However, these standards are voluntary, and it is up to states to adopt them in national regulations, according to their own needs and capacities. The emphasis is therefore on national sovereignty in policy decisions regarding protection from SPS risks, within a framework of cooperative efforts at international level, involving the sharing of information and best practices regarding minimum levels of health protection, to limit the trade restrictive effect of national measures.

A further development has occurred in governance of health risks in the past decade. This is development away from central government regulation, towards local, transnational and private governance structures in the area of SPS protection. Increasingly local governments, transnational networks of regulators and private entities such as retail conglomerates are active in addressing SPS risks. These new governance structures have emerged due to the crisis of confidence in the ability of central governments to effectively protect their citizens from health risks, in the aftermath of health scares such as avian influenza and bovine spongiform encephalopathy (BSE).

This complex arrangement of multi-level governance currently defines the strategy for dealing with globalised health risks.

## **2.6 Conclusion**

The impetus for international cooperation in the area of health protection in the mid-nineteenth century has its origins in developed country concerns. First, developed countries became aware of the inadequacy of national measures to address the increased exposure to sanitary and phytosanitary risks from imported food, plant and animal products in the face of growing trade. Second, the increased share of trade earnings in the GDP of developed countries spurred them to efforts to diminish the impact of national SPS measures on trade by means of harmonisation. These countries therefore turned to international cooperation to achieve their health and trade objectives.

Developments in science in the late nineteenth century facilitated international cooperation, by providing a seemingly neutral and universally valid basis for agreement on harmonised health measures. Science provided a useful tool for balancing competing trade and health objectives in developing international strategies. However, the lack of scientific capacity in developing countries meant that they were unable to play an effective part in the international negotiations leading to harmonised health standards.

By the mid-twentieth century, national capacity in developed countries to deal with health risks, including those from imported products had greatly improved due to scientific advances. This led to the re-nationalisation of strategies to deal with health risks and an attendant loss of momentum in international cooperative efforts. However, by the end of that century developed countries had rethought their complacent positions. This turnaround was brought about by the unprecedented increase in the speed, volume and scope of trade, and in particular the growing participation in trade by developing countries, where SPS risks were still wide-spread. As national SPS regimes were unable to deal

with the proliferation of risks in this new setting, international efforts redoubled, with the creation of international institutions and frameworks for common action.

The international approach failed in its objective to address globalised health risks in a manner that facilitates trade, due to its neglect of the differences in national health priorities and implementation capacities and its inability to enforce compliance. The current strategy to address SPS risks takes account of the limitations of international cooperation by adopting a multifaceted approach. This entails continuing efforts within institutional frameworks for international cooperation to set harmonised SPS standards, based on scientific research and information sharing at a technical level, in order to minimise the trade restrictive effect of SPS measures. However, the resulting standards are voluntary and countries are free to adopt them or not, depending on their national needs and capacities. In addition, more recently, particularly in developed countries, national regulation to address SPS risks is increasingly supplemented by actions at the level of decentralised government, transnational networks and private sector bodies.

This shift in thinking with regard to the manner in which to deal with the globalisation of health arising from increased trade forms an important part of the background to understanding the *SPS Agreement*. As a product of the late twentieth century, the *SPS Agreement* embodies the multifaceted approach to risk regulation prevailing at that time. As discussed in Part III of this book,<sup>59</sup> the *SPS Agreement* incorporates both the reliance on international cooperative efforts to establish science-based harmonised SPS standards in order to facilitate trade, and the recognition of the need to allow for policy choices based on national priorities and capacities. Reflecting the then-prevailing view of science as objective and universally valid, the *SPS Agreement* makes use of scientific justification as a neutral arbiter between legitimate health measures and disguised protectionist measures.<sup>60</sup>

The background sketched in this Chapter is therefore useful to bear in mind when discussing the manner in which the *SPS Agreement* tries to achieve a balance between trade and health.

<sup>60</sup> See below, Part III, Chapter 5.

## CHAPTER 3

### The interface between globalised trade and globalised health: Health regulations and standards and their impact on developing countries

The globalisation of trade, in the sense of the full integration of developing countries into the international trading system, is affected by measures to deal with globalised health risks, in the form of both national and international SPS regulations and standards. This is due to the importance of agricultural and food exports for the foreign revenue earnings of many developing countries, and the effect of the proliferation of SPS regulations and standards on such exports.

This Chapter therefore proceeds to examine the role of agri-food exports in the economies of developing countries. It then discusses the problems developing countries face with regard to trade in agri-food products. In this context, it sets out some of the reasons for the exponential increase, in recent years, of SPS measures, particularly in developed countries. The effect of such measures on developing country exports is subsequently discussed. In this way, this section aims to bring together the foregoing discussions of globalised trade and of globalised health by drawing attention to the interface between these two processes. It is on this interface that the *SPS Agreement* comes into play.

#### 3.1 The importance of the agriculture and food sector for development

Agriculture forms an important sector in the economies of many developing countries, in terms of both income generation (GDP) and employment.<sup>1</sup> The Declaration of the South Summit of the G-77 and China, adopted in April 2000, points to the fact that, for most developing countries, agriculture remains the mainstay of their economies.<sup>2</sup> This fact is reaffirmed by the WTO's *World Trade Report 2004*,<sup>3</sup> and the 2004 report of the UN Food and Agricultural Organization (FAO) entitled *The State of Agricultural Commodity Markets*.<sup>4</sup> A 2003 report by the World Bank notes that agriculture accounts for about 25 percent of GDP in low-income countries and 15 percent in middle-income countries.

<sup>1</sup> United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, para. 28, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 25 June 2007.

<sup>2</sup> General Assembly, *Fifty-Fifth Session of the General Assembly. Letter Dated 5 May 2000 from the Permanent Representative of Nigeria to the United Nations Addressed to the President of the General Assembly*, A/55/74 (United Nations, New York), 12 May 2000, Annex I para. 11, available at: [www.G77.org/main/docs/summitfinaldocs\\_english.pdf](http://www.G77.org/main/docs/summitfinaldocs_english.pdf), visited on 28 January 2008.

<sup>3</sup> This report notes: 'In recent years (1999-2001) agricultural exports accounted for more than one quarter of total merchandise exports in more than 55 countries (developed and developing). For 32 countries, agricultural exports exceeded one half of their merchandise exports' WTO Secretariat, *World Trade Report 2004: Exploring the Linkage between the Domestic Policy Environment and International Trade* (World Trade Organization, Geneva), 11 June 2004, 15, available at: [www.wto.org/english/news\\_e/pres04\\_e/press378\\_annex\\_e.pdf](http://www.wto.org/english/news_e/pres04_e/press378_annex_e.pdf), visited on 26 June 2008.

<sup>4</sup> Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 6, available at: [ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf](http://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf), visited on 27 June 2008.

Together with agro-related industries and food-related services, the share goes up to 25 to 40 percent of GDP.<sup>5</sup> This report further points out that agriculture is the largest employer in developing countries, employing 60 percent of the labour force in low-income countries and 25 percent in middle-income countries.<sup>6</sup> Further, the importance of the agricultural sector in effective poverty alleviation is emphasised in the 2008 *World Development Report* of the World Bank.<sup>7</sup>

In addition, it is widely recognised that the agricultural sector is particularly important for the livelihoods of the poorest people in developing countries. The fact that 73 percent of the poor<sup>8</sup> in developing countries live in rural areas means that improvements in the agricultural sector are significant for the alleviation of poverty.<sup>9</sup> The agricultural sector thus has a disproportionate impact on development. The pivotal importance of the agricultural sector for least-developed countries was recognised in the Programme of Action adopted at the Third UN Conference on Least Developed Countries in May 2001,<sup>10</sup> which noted that this sector underpins food security, industrial and rural development and employment generation.

Agriculture also plays an important role in the generation of export revenue for developing countries.<sup>11</sup> Agricultural exports account for over 50 percent of all exports of several

<sup>5</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 103.

<sup>6</sup> *Ibid.*

<sup>7</sup> The *World Development Report* of 2008 notes: 'Cross-country estimates show that GDP growth originating in agriculture is at least twice as effective in reducing poverty as GDP growth originating outside agriculture.' World Bank, *World Development Report 2008: Agriculture for Development* (World Bank, Washington D.C.), 2008, 6, available at: [http://siteresources.worldbank.org/INTWDR2008/Resources/WDR\\_00\\_book.pdf](http://siteresources.worldbank.org/INTWDR2008/Resources/WDR_00_book.pdf), visited on 27 June 2008.

<sup>8</sup> The generally accepted measure of poverty as living with \$1 a day or less is used here. *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 105.

<sup>9</sup> The FAO reports that 2.5 billion people in the developing world depend on agriculture for their livelihoods. See Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 6, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 27 June 2008. In addition, the Secretariat background note for UNCTAD XI notes that, both with regard to income and with regard to expenditure, there is a disproportionately high dependence of the world's poorest people on food products. Thus, 'negotiations on agriculture are closely related to poverty'. United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, para. 28, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008. Along the same lines, the 2005 Human Development Report notes, 'More than two-thirds of all people surviving on less than \$1 a day live and work in rural areas, either as smallholder farmers or as agricultural labourers. Unfair trade practices systematically undermine the livelihoods of these people, hampering progress towards the [Millennium Development Goals] in the process.' United Nations Development Programme, *Human Development Report 2005. International Cooperation at a Crossroads: Aid, Trade and Security in an Unequal World* (United Nations, New York), 2005, 129, available at: [http://hdr.undp.org/en/media/hdr05\\_complete.pdf](http://hdr.undp.org/en/media/hdr05_complete.pdf), visited on 2 January 2008.

<sup>10</sup> Third UN Conference on Least-Developed Countries, *Programme of Action for the Least-Developed Countries*, A/CONF.191/11 (United Nations, 14-20 May 2001) para. 57.

<sup>11</sup> The *World Development Report* of 2008 points out, with regard to the importance of agriculture for development and poverty reduction, referring particularly to Sub-Saharan Africa, that 'the comparative advantage in the tradeable subsectors will still lie in primary activities (agriculture and mining) and agroprocessing for many years, because of resource endowments and the difficult climate for investment for manufactures.' World Bank, *World Development Report 2008: Agriculture for Development* (World Bank, Washington D.C.), 2008, 7, available at: [http://siteresources.worldbank.org/INTWDR2008/Resources/WDR\\_00\\_book.pdf](http://siteresources.worldbank.org/INTWDR2008/Resources/WDR_00_book.pdf),

developing countries.<sup>12</sup> According to the World Bank, despite the fact that most agricultural production is absorbed by the domestic market, agricultural exports can produce faster growth than can demand on the local market. This is because the international market provides opportunities for growth without the constraint, which exists on the domestic market, that increased production would lead to sharply lower prices.<sup>13</sup> However, although developing countries have almost doubled their share of world trade in manufactured products since 1980, their share in agricultural trade has stagnated at 30 percent.<sup>14</sup> Growth in developing country agricultural trade was accounted for by 56 percent by sales to other developing countries.<sup>15</sup> Middle-income developing countries have managed to increase their share in the agricultural market by exporting to other developing countries and by diversifying to non-traditional exports such as seafood, cut flowers and processed foods.<sup>16</sup> Low-income countries have, instead, experienced a decline in their share of world agricultural trade.<sup>17</sup>

The importance of the agricultural sector for poverty reduction through trade was emphasised by the UNCTAD *LDC Report 2004*. It notes that:

...a form of economic growth in which expansion is localized within a small geographical and sectoral enclave is becoming a problem in some LDCs whose major exports are manufactures and mining. With this form of economic growth, there are weak links between the rapidly growing export enclave and the agricultural sector where the majority of the population and the majority of the poor have their livelihoods. In these circumstances, it is possible to have very high rates of export growth but no change in the incidence of poverty.<sup>18</sup>

Many opportunities for economic growth and poverty reduction through export trade exist in the agri-food sector.<sup>19</sup> Due to population increases, mainly in developing countries,

<sup>13</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 109.

<sup>14</sup> *Ibid.*, 104 and 110.

<sup>15</sup> Agricultural exports of developing countries to other developing countries increased from 31% to 43% of their total agricultural exports in the period 1990-2002. Agricultural imports of developing countries from other developing countries increased from 37% to 47% in the same period. See WTO Secretariat, *World Trade Report 2004: Exploring the Linkage between the Domestic Policy Environment and International Trade* (World Trade Organization, Geneva), 11 June 2004, 15, available at: [www.wto.org/english/news\\_e/pres04\\_e/press378\\_annex\\_e.pdf](http://www.wto.org/english/news_e/pres04_e/press378_annex_e.pdf), visited on 26 June 2008.

<sup>16</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 104. This report points out that growth in non-traditional exports has exceeded growth in traditional commodities by 3:1.

<sup>17</sup> *Ibid.*

<sup>18</sup> United Nations Conference on Trade and Development, *The Least Developed Countries Report 2004: Linking International Trade with Poverty Reduction*, UNCTAD/LDC/2004 (UNCTAD, Geneva), 27 May 2004, 19-20, available at: [http://www.unctad.org/en/docs/lcd2004\\_en.pdf](http://www.unctad.org/en/docs/lcd2004_en.pdf), visited on 7 June 2008.

<sup>19</sup> The following three factors are noted in a recent World Bank study. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 3, available at: <http://siteresources.worldbank.org/>

demand for food is increasing significantly thus fuelling trade between developing countries. In addition, the progressive liberalisation of agricultural trade achieved under the auspices of the WTO will reduce traditional trade barriers in this sector. Finally, increased affluence of consumers in developed, but also increasingly developing, countries drives demand for diverse and high-value agri-food products, such as fresh fruit and vegetables and processed foods.<sup>20</sup> Diversification of developing country exports to high-value fresh and processed products would have the advantage of reducing vulnerability to price volatility, as prices for such products are much more stable. Therefore, the agri-food sector has the potential to be a catalyst for growth in developing countries, if they can overcome the problems they face with their trade in this area.

### 3.2 Problems with developing country trade in agriculture and food products

In order to reach the Millennium Development Goals<sup>21</sup> relating to poverty reduction, it is crucial to address the problems<sup>22</sup> that many developing countries face with regard to their trade in primary commodities,<sup>23</sup> in particular agricultural products.<sup>24</sup> A report by a group of eminent persons appointed by UNCTAD to examine commodity issues found that problems regarding trade in the commodity sector impact on the development efforts of commodity-dependent developing countries, increasing their vulnerability and

---

INTRANETTRADE/Resources/Topics/Standards/ standards\_challenges\_synthesisreport.pdf, visited on 27 June 2008.

<sup>20</sup> Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 15, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 27 June 2008.

<sup>21</sup> These goals include halving the proportion of people living below the poverty level (i.e. people who live on less than 1\$ per day) and the proportion of people who suffer from hunger between 1990 and 2015. The Millennium Development Goals (MDG) were recognised by the UN General Assembly as part of the road map for the implementation of the UN Millennium Declaration (General Assembly resolution 55/2). See General Assembly, *Road Map Towards the Implementation of the United Nations Millennium Declaration*, A/56/326, (United Nations, 6 September 2001): Annex. The MDG recognise that 'in order to significantly reduce poverty and promote development, it is essential to achieve sustained and broad-based economic growth.' They thus expressly refer to 'improved market access for exports from developing countries' as one of the commitments made by developed countries in order to achieve these goals. *Ibid.*, para 80.

<sup>22</sup> The primary commodity sector is characterised by price volatility and declining terms of trade. In addition, market access for agricultural commodities is limited as this sector is traditionally subject to a large degree of protectionism.

<sup>23</sup> Primary commodities consist of both minerals and agricultural commodities. For purposes of this book, the focus will be on agricultural commodities. It is also this category of commodities that has been subject to the most dramatic decline in prices between 1980 and 2000, with the prices of coffee, cocoa, sugar and palm oil declining by nearly 70% and that of cotton and vegetable oils by nearly 50%. See Committee on Trade and Development, *Non-Paper on the Need for Urgent Action in WTO to Deal with the Crisis Situation Created by the Long-Term Trend Towards Decline in Prices of Primary Commodities to the Trade and Development of Developing Countries Which Are Heavily Dependant on Their Exports. Communication from Kenya, Uganda and Tanzania*, WT/COMTD/W/113, circulated on 19 May 2003, para. 2.

<sup>24</sup> It should however be noted that this book does not make the claim that free trade will automatically feed the hungry or eliminate poverty. Instead the claim made is much more modest, namely that increased market access for developing country exports in the food and agricultural sector can play a significant role in generating the revenue needed for developing countries to achieve their development goals, provided that measures are in place to address supply-side constraints in order to ensure that developing countries are able to take advantage of increased market access. Domestic policies must be in place to ensure that the gains from trade are used in a way that is supportive of development.

undermining their attempts to fight poverty.<sup>25</sup> The report emphasises the urgent need to give equitable and enhanced market access for primary commodities of key importance to developing countries. Agriculture and food products are such commodities.<sup>26</sup>

The Programme of Action adopted at the Third UN Conference on Least Developed Countries in May 2001,<sup>27</sup> called for, *inter alia*, increased trade liberalisation in the area of agriculture and for coherent action by the UN and other international organisations to transform trade into a powerful engine for growth and poverty eradication in LDCs.<sup>28</sup> Aggravating the vulnerability of developing countries to problems with regard to trade in agricultural commodities is the fact that many of these countries rely on a limited range of commodities for their export earnings.<sup>29</sup> It has been reported that '[o]ver the past decade, commodity export dependence and export concentration have not decreased significantly.'<sup>30</sup> Developing countries are thus particularly vulnerable to market barriers in respect of those agricultural products in which they trade.

Traditionally, such market barriers take the form of high tariffs on some agri-food products, tariff escalation with regard to high-value and processed products, domestic support for the agricultural industry and export subsidies. The World Bank report entitled *Global Economic Prospects 2004: Realising the Development Promise of the Doha Agenda*, notes that despite the disciplines negotiated with regard to agricultural trade in the Uruguay Round, reforms in industrial countries have been modest, resulting in over-production and price declines for agricultural commodities.<sup>31</sup> This has had the result

<sup>25</sup> General Assembly, *Report of the Meeting of Eminent Persons on Commodity Issues: Note by the Secretary General*, A/58/402 (United Nations, 2 October 2003, para. 31, available at: [www.un.org/ga/58/documentation/list4.html](http://www.un.org/ga/58/documentation/list4.html), visited on 25 June 2008. See also UNCTAD 'World Commodity Trends and Prospects' 10 October 2002, noting the sharp decline in primary commodity prices, including with respect to agricultural commodities, and its major impact on third world producers. At the CTD meeting of 16 and 23 October 2003, commodities of particular importance to developing countries were discussed. Kenya suggested that a special session of the CTD, also involving other relevant WTO bodies, be mandated to examine the problems of exporters of primary commodities in depth. However, this received a cool response from developed countries. See 'UN Assembly and WTO Discuss Primary Commodities' *Bridges Biores* vol. 3 no 19, 31 October 2003.

<sup>26</sup> Primary commodities are composed of food products, raw agricultural products, fuels and minerals and ores.

<sup>27</sup> Third UN Conference on Least-Developed Countries, *Programme of Action for the Least-Developed Countries*, A/CONF.191/11 (United Nations, 14-20 May 2001).

<sup>28</sup> *Ibid.*, paras 62 and 65.

<sup>29</sup> According to a recent FAO report, more than 50 developing countries, including most LDCs, depend on three or fewer commodities for more than half their exports. Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 6, available at: [ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf](http://ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf), visited on 27 June 2008. This point was also made in a non-paper by Kenya, Uganda and Tanzania circulated by the Committee on Trade and Development in 2003. See Committee on Trade and Development, *Non-Paper on the Need for Urgent Action in WTO to Deal with the Crisis Situation Created by the Long-Term Trend Towards Decline in Prices of Primary Commodities to the Trade and Development of Developing Countries Which Are Heavily Dependant on Their Exports. Communication from Kenya, Uganda and Tanzania*, WT/COMTD/W/113, circulated on 19 May 2003, para. 3.

<sup>30</sup> United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, para. 40, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008.

<sup>31</sup> The *World Development Indicators* of 2008 points to the fact that the achievements in the liberalisation of trade in goods are concentrated in the manufacturing sector. It notes: 'Less has been done in agriculture. Across all regions and income groups, agricultural imports face much higher trade restrictions than manufacturing and mining imports. Countries tend to protect domestic farmers relative to manufacturing and mining. ... [H]igh-income OECD countries are more protective than any of the other developing regions...' Roumeen

of ‘reducing opportunities for many developing countries to expand exports and penalizing the world’s poor.’<sup>32</sup> A 2004 UNCTAD report notes that a complete removal of trade barriers in the area of agriculture would, according to some estimates, result in global welfare gains of \$165 billion per year, about a quarter of which would fall to developing countries.<sup>33</sup> Negotiations on liberalising the agricultural sector form an important, and controversial, part of the WTO’s current Doha Round of trade negotiations.

Diversification of developing country food and agricultural exports from traditional agricultural commodities (such as grains, coffee, tea and cocoa) to high-value perishable products (horticultural products, meat and dairy) and processed agri-food products holds potential for great gains in trade earnings.<sup>34</sup> This is due to the fact that these products are less vulnerable to price volatility and are rapidly gaining market share.<sup>35</sup> The expanding demand for high-value and processed food goes hand-in-hand with growing incomes in developed (and now some developing) countries, year-round demand for fresh produce, and the increasing prevalence of small households and of women’s participation in the workforce.<sup>36</sup>

The importance of processed products for trade in agricultural products was confirmed by the WTO’s *World Trade Report* of 2004, which found that exports of processed agricultural products increased significantly faster than exports of unprocessed or semi-processed agricultural products in the period 1990-2002.<sup>37</sup> Currently, developed countries

Islam and Gianni Zanini, *World Trade Indicators 2008: Benchmarking Policy and Performance* (World Bank, Washington D.C.), 2008, 13, available at: <http://info.worldbank.org/etools/wti2008/docs/mainpaper.pdf>, visited on 7 June 2008.

<sup>32</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 103.

<sup>33</sup> United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, para. 29, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2007.

<sup>34</sup> Murphy notes: ‘Profits from international agricultural trade are increasingly in processed and higher value-added products. Exports from fisheries in developing to developed countries are now often worth more than the combined value of net exports of coffee, tea, cocoa, bananas and sugar.’ Sophia Murphy, *Securing Enough to Eat* (International Institute for Sustainable Development, Winnipeg), January 2005, 6, available at: [http://www.iisd.org/pdf/2005/trade\\_securing\\_enough\\_to\\_eat.pdf](http://www.iisd.org/pdf/2005/trade_securing_enough_to_eat.pdf), visited on 6 February 2005.

<sup>35</sup> A report of the Economic Research Service of the USDA notes that global trade in high-value foods (including horticultural products and processed foods) increased from 48% of world agricultural trade in 1976 to 75% in 1994. However, due to market access problems (discussed further below) this growth has slowed down, reaching only 79% of world agricultural trade in 2002. Anita Regmi *et al.*, *Market Access for High-Value Foods*, Agricultural Economic Report No. 840 (United States Department of Agriculture, Washington D.C.), February 2005, 1, available at: <http://www.ers.usda.gov/publications/aer840/aer840.pdf>, visited on 30 June 2008.

<sup>36</sup> These factors are noted in the *World Trade Report 2004*. This report also attributes the growth of trade in processed agricultural goods to the fact that processed goods have more possibilities for intra-industry trade and for product differentiation. For example, while two countries that produce cocoa beans are unlikely to trade this product between each other, if they produce chocolate bars of different types, they could trade these products to cater for different consumer tastes. WTO Secretariat, *World Trade Report 2004: Exploring the Linkage between the Domestic Policy Environment and International Trade* (World Trade Organization, Geneva), 11 June 2004, 16-17, available at: [www.wto.org/english/news\\_e/pres04\\_e/press378\\_annex\\_e.pdf](http://www.wto.org/english/news_e/pres04_e/press378_annex_e.pdf), visited on 26 June 2008.

<sup>37</sup> According to this report, processed agricultural products accounted for 42% of global agricultural trade in 1990, and 48% in 2001-2. *Ibid.*, 16.

have captured the greatest part of trade in this rapidly expanding sector.<sup>38</sup> Particularly the 14 largest agricultural exporters evinced a strong shift towards processed agricultural products.<sup>39</sup> Similarly, agricultural trade is shifting away from traditional bulk products such as dried grains and pulses towards high-value, perishable products such as fresh fruit and vegetables, meat, dairy and fish.<sup>40</sup> While most of this trade is accounted for by developed countries, the more advanced and prosperous developing countries have been able to take advantage of this trend by shifting production to these sectors.<sup>41</sup>

However, diversification of developing country agricultural exports to high-value and processed food products brings with it not only increased prosperity but also new risks.<sup>42</sup> These products face high levels of trade barriers. Traditionally, one such barrier that affects processed products is high tariffs, arising from tariff peaks and tariff escalation.<sup>43</sup> Although the average incidence of tariffs on agricultural exports from developing coun-

---

<sup>38</sup> Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 26, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 26 June 2008. This report notes that developing country shares in world exports of processed agricultural products actually decreased from 27% in 1981-1990 to 25% in 1991-2000, and for LDCs this decrease was from 0.7% to 0.3% in the same period.

<sup>39</sup> These are countries whose agricultural exports were in excess of \$6 billion in 2002, except for Brazil and Chile. However, while no overall link was found between income levels of countries and their share of processed agricultural products, the 'World Trade Report 2004' found that all countries that have a low share of processed goods are low or lower-middle income countries. These countries' share of processed goods in their agricultural exports is less than 15%. Examples are Sri Lanka, Cameroon, Pakistan and Zimbabwe. WTO Secretariat, *World Trade Report 2004: Exploring the Linkage between the Domestic Policy Environment and International Trade* (World Trade Organization, Geneva), 11 June 2004, 17, available at: [www.wto.org/english/news\\_e/pres04\\_e/press378\\_annex\\_e.pdf](http://www.wto.org/english/news_e/pres04_e/press378_annex_e.pdf), visited on 26 June 2008.

<sup>40</sup> A 2005 World Bank study notes that 50% of agri-food exports of developing countries is made up of high-value products (fresh and processed fruits and vegetables, fish, meat, nuts and spices), while traditional agri-food exports (coffee, tea, cocoa, sugar, cotton and tobacco) continue to decline. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 1, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008. See also *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 115

<sup>41</sup> The FAO notes that developing countries other than the LDCs have more than doubled the share of horticultural, meat and dairy products in their exports, while reducing reliance on tea, coffee, cocoa and raw materials from over 55% to 30% between 1960 and 2000. However, the dependence of LDCs on traditional products has actually increased from 59% to 72% in the same period. Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 11, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 26 June 2008.

<sup>42</sup> This point is made by Murphy. See Sophia Murphy, *Securing Enough to Eat* (International Institute for Sustainable Development, Winnipeg), January 2005, 6, available at: [http://www.iisd.org/pdf/2005/trade\\_securing\\_enough\\_to\\_eat.pdf](http://www.iisd.org/pdf/2005/trade_securing_enough_to_eat.pdf), visited on 6 February 2005.

<sup>43</sup> The abovementioned FAO report notes in this regard: 'Tariff escalation, in particular, constitutes a major barrier to market access for most of the processed agricultural exports of developing countries' Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 27, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 26 June 2008. A recent World Bank report notes, with reference to trade barriers in the agricultural sector: 'High-income countries have higher nontariff barriers, greater tariff escalation and dispersion, and much higher maximum tariffs than low-income countries; that is, they protect certain sectors much more than others. Many of these protected sectors and goods are of special interest to developing-country exporters.' Roumeen Islam and Gianni Zanini, *World Trade Indicators 2008: Benchmarking Policy and Performance* (World Bank, Washington D.C.), 2008, xix, available at: <http://info.worldbank.org/etools/wti2008/docs/mainpaper.pdf>, visited on 7 June 2008.

tries is low, 'tariff peaks' which are significantly higher than the average are applied to certain commodities of importance to developing countries. For example, horticultural products and poultry products (both examples of high-value perishable products) are subject to tariff peaks.<sup>44</sup> The term 'tariff escalation' refers to the levying of higher tariffs on goods at more advanced stages of processing. The tariffs applied by many countries increase greatly by level of processing of agricultural products, resulting in limited market access for processed foods.<sup>45</sup> A 2003 World Bank study notes that 'the protection rates for food processing in industrial countries are extremely high – far above those of any manufacturing subsector.'<sup>46</sup> It argues that tariff escalation with regard to semi- and fully-processed agricultural products is 'strikingly antidevelopment'<sup>47</sup> as it penalises investors in developing countries who seek to add value to production for export. This high level of protection for processed food and agricultural products is regarded as explaining many developing countries' failure to diversify their exports towards processed products and to penetrate developed country markets in this area.<sup>48</sup>

---

<sup>44</sup> Food and Agriculture Organization, *The State of Agricultural Commodity Markets* (United Nations, Rome), 2004, 22, available at: <ftp://ftp.fao.org/docrep/fao/007/y5419e/y5419e00.pdf>, visited on 26 June 2008.

<sup>45</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 104. The problem of tariff escalation as a hurdle to developing countries increasing the degree of processing of key agricultural products, has also been noted in a recent UNCTAD report. See United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, 76, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008. It is also referred to in the 2005 report of the Economic research Service of the USDA as a significant problem for agricultural trade. This report illustrates the issue of tariff escalation with reference to the example of cocoa and cocoa products. While the major importers of agricultural products (Australia, Canada, the EU, Japan and the US) have tariffs of 0-1% on cocoa beans, their tariffs on chocolate and other cocoa products is 15-57%. As a result, developing country trade shares range from 96% for cocoa beans to only 8% for chocolate. Anita Regmi *et al.*, *Market Access for High-Value Foods*, Agricultural Economic Report No. 840 (United States Department of Agriculture, Washington D.C.), February 2005, 5-9, available at: <http://www.ers.usda.gov/publications/aer840/aer840.pdf>, visited on 30 June 2008.

<sup>46</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 111.

<sup>47</sup> *Ibid.*, 123.

<sup>48</sup> United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, 76, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited on 21 June 2008. This point is also made by the Economic Research Service of the USDA. Anita Regmi *et al.*, *Market Access for High-Value Foods*, Agricultural Economic Report No. 840 (United States Department of Agriculture, Washington D.C.), February 2005, 5, available at: <http://www.ers.usda.gov/publications/aer840/aer840.pdf>, visited on 30 June 2008. This limited access to global markets for high-value and processed products is despite the fact that, for domestic consumption, the shift to processed and high-value products is reported to be broad based, across regions and among a large majority of developing countries. WTO Secretariat, *World Trade Report 2004: Exploring the Linkage between the Domestic Policy Environment and International Trade* (World Trade Organization, Geneva), 11 June 2004, 18, available at: [www.wto.org/english/news\\_e/pres04\\_e/press378\\_annex\\_e.pdf](http://www.wto.org/english/news_e/pres04_e/press378_annex_e.pdf), visited on 26 June 2008. In fact, the domestic markets for high-value agricultural products are among the fastest growing in most developing countries, led by livestock products and horticulture. World Bank, *World Development Report 2008: Agriculture for Development* (World Bank, Washington D.C.), 2008, 12, available at: [http://siteresources.worldbank.org/INTWDR2008/Resources/WDR\\_00\\_book.pdf](http://siteresources.worldbank.org/INTWDR2008/Resources/WDR_00_book.pdf).

Traditional trade barriers in the agricultural sector, including tariff escalation,<sup>49</sup> are currently being addressed in the context of the agriculture negotiations in the Doha Round.<sup>50</sup> However, another significant trade barrier affecting agri-food products, especially high-value and processed products, is SPS regulation.<sup>51</sup> In fact, a survey conducted in 2004 indicates that many developing countries consider SPS measures the most important barrier to their agricultural exports to the EU, exceeding in importance traditional market barriers such as tariffs and quantitative restrictions.<sup>52</sup> The importance of SPS measures as market barriers can be partly ascribed to the lack of resources,<sup>53</sup> both technical and financial, in many developing countries to address sanitary and phytosanitary risks, even on a basic level (such as by prevention of filth and decomposition).<sup>54</sup> These problems are even

---

<sup>49</sup> In the context of the Doha negotiations on agricultural trade, the text adopted by the General Council on 1 August 2004 (commonly referred to as the 'July Package') proposes that 'tariff escalation be addressed through a formula to be agreed.' General Council, *Doha Work Programme. Decision Adopted by the General Council on 1 August 2004*, WT/L/579, circulated on 2 August 2004, Annex A para. 36.

<sup>50</sup> The Doha Ministerial Declaration calls for 'substantial improvements in market access' for agricultural products. Ministerial Conference, *Doha Ministerial Declaration. Adopted on 14 November 2001*, WT/MIN(01)/DEC/1, circulated on 20 November 2001, para 13. The July Package reaffirms the commitment to substantial improvements by providing: 'Substantial overall tariff reductions will be achieved as a final result from negotiations.' While allowing the designation of specific sensitive products, the July Package provides that: '[t]he principle of substantial improvement' will apply to each product. General Council, *Doha Work Programme. Decision Adopted by the General Council on 1 August 2004*, WT/L/579, circulated on 2 August 2004, paras 28, 29 and 32. The latest revision of the draft modalities for agriculture circulated by the Chairperson of the Special Session of the Committee on Trade in Agriculture on 19 May 2008 contains a three-tiered formula for tariff reductions, requiring greater percentage of reductions in higher levels of tariffs, thereby aiming to reduce tariff peaks. In addition, it requires additional tariff reductions for listed 'tariff escalation products' and 'tropical and diversification products'. Committee on Trade in Agriculture, Special Session, *Revised Draft Modalities for Agriculture*, TN/AG/W/4/Rev.2, circulated on 19 May 2008, paras 3, 79-85, 134-135, and Annexes D and G.

<sup>51</sup> Murphy notes: 'Standards for the export of such perishable goods (especially seafood and horticulture) are high and one incidence of disease can lead to the whole crop being rejected. Without a strong system of support, technical advice and insurance, the shift to higher-value agricultural exports can leave farmers vulnerable to expensive failures.' See Sophia Murphy, *Securing Enough to Eat* (International Institute for Sustainable Development, Winnipeg), January 2005, 6, available at: [http://www.iisd.org/pdf/2005/trade\\_securing\\_enough\\_to\\_eat.pdf](http://www.iisd.org/pdf/2005/trade_securing_enough_to_eat.pdf), visited on 6 February 2005. The impact of SPS requirements on developing country trade is discussed further below, Part I, Section 3.4.

<sup>52</sup> This study involved a survey of all countries classified as low- and middle-income countries by the World Bank that were Members of the WTO and/or the Codex Alimentarius Commission in March 1999. The results are based on a 72% response rate. See Spencer Henson *et al.*, 'How Developing Countries View the Impact of Sanitary and Phytosanitary Measures on Agricultural Exports', in *Agriculture and the New Trade Agenda: Creating a New Global Trading Environment for Development*, M.D. Ingco and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 359-375, 361-362. Henson *et al.* report that other technical requirements (such as labelling and compositional requirements) were also regarded as important but that tariffs and quantitative restrictions were seen as less important. A possible reason for this suggested by the authors is the fact that many developing countries benefit from preferential market access to EU markets, thus decreasing the relevance of traditional market barriers.

<sup>53</sup> For example, with regard to African countries, the Blair Commission for Africa report notes, 'Health standards such as sanitary and phyto-sanitary (SPS) standards can be serious barriers to trade... It is not unwillingness to meet these standards that is the problem, nor disagreement with their rationale. The problem is that poor countries in Africa are not equipped to meet these standards.' Blair Commission for Africa, *Our Common Interest*, March 2005, 278, available at: <http://213.225.140.43/english/report/thereport/cfafullreport.pdf>, visited 30 November 2005.

<sup>54</sup> Information on US border inspections shows that the main reasons for the rejection of products from Africa, Asia, Latin America and the Caribbean are microbiological contamination, filth and decomposition. This information is referred to by Henson *et al.* who point out that only the US systematically collects this type of

greater with regard to high-value and processed agri-food products.<sup>55</sup> Processed food products destined for sale directly to consumers are subject to stricter sanitary requirements than those food exports destined for further processing.<sup>56</sup> Similarly, high-value perishable products are more strictly regulated than traditional agricultural exports, as they are more vulnerable to infection by pathogens than traditional bulk products.<sup>57</sup> Many concerns have been raised regarding the legitimacy of these strict requirements.<sup>58</sup> Those developing countries that lack the capacity to meet these stricter SPS requirements may be hindered in their diversification efforts.

Another factor aggravating the problem of compliance with SPS requirements, identified in a non-paper<sup>59</sup> by Kenya, Uganda and Tanzania on commodity issues circulated to the WTO Committee on Trade and Development in 2003, is the abolition of marketing

---

information and makes it publicly available. Spencer Henson *et al.*, 'How Developing Countries View the Impact of Sanitary and Phytosanitary Measures on Agricultural Exports', in *Agriculture and the New Trade Agenda: Creating a New Global Trading Environment for Development*, M.D. Ingco and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 359-375, 361. The WHO Regional Office for Africa reports that a large part of rejections of African exports by the U.S. are due to 'lack of basic food hygiene'. Of reasons for import detentions, microbiological contamination accounts for 41.3%, filth for 17.8% and mould for 6.3%. See WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa - Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, Table 1, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf> visited on 24 June 2008.

<sup>55</sup> The USDA Economic Research Service reports that SPS requirements are stricter with regard to high-value (including processed) products than with regard to traditional bulk products. This is ascribed to their ready-to-eat and perishable nature and the fact that they require specialised handling, packaging and shipping. For this reason, and due to the diversity in such SPS requirements, suppliers may prefer to manufacture high-value food locally rather than engage in export trade in these products, thereby affecting trade. Anita Regmi *et al.*, *Market Access for High-Value Foods*, Agricultural Economic Report No. 840 (United States Department of Agriculture, Washington D.C.), February 2005, 3, available at: <http://www.ers.usda.gov/publications/aer840/aer840.pdf>, visited on 30 June 2008.

<sup>56</sup> The UNCTAD Secretariat reports that, 'issues such as tariff escalation and sanitary and phytosanitary regulations make it difficult for developing countries to increase their export income.' United Nations Conference on Trade and Development, *Assuring Development Gains from the International Trading System and Trade Negotiations. Background Note by the UNCTAD Secretariat for the 11th Session, 13-18 June 2004*, TD/397 (United Nations, São Paulo), 4 May 2004, para. 28.

<sup>57</sup> It is interesting to note that since the entry into force of the *SPS Agreement* the largest number of notifications of SPS measures thereunder relate to live animals, meat and animal products (63%). This figure increases to 74% if notifications of measures applying to fish and seafood, dairy products and eggs are included. The next largest category of notifications relate to horticultural products, namely fresh fruit and vegetables (12%). Bulk agricultural products account for only 7% of notifications, most of which relate to restrictions on genetically modified products. Anita Regmi *et al.*, *Market Access for High-Value Foods*, Agricultural Economic Report No. 840 (United States Department of Agriculture, Washington D.C.), February 2005, 10-11, available at: <http://www.ers.usda.gov/publications/aer840/aer840.pdf>, visited on 30 June 2008.

<sup>58</sup> These SPS requirements make up by far the largest part of specific trade concerns raised before the SPS Committee to date. SPS measures affecting fully-processed products account for 50% of all trade concerns raised, measures on semi-processed products for 37% and measures on horticultural products for 11%. By contrast, measures on primary products account for a mere 2% of trade concerns raised. *Ibid.*, 12.

<sup>59</sup> Committee on Trade and Development, *Non-Paper on the Need for Urgent Action in WTO to Deal with the Crisis Situation Created by the Long-Term Trend Towards Decline in Prices of Primary Commodities to the Trade and Development of Developing Countries Which Are Heavily Dependant on Their Exports. Communication from Kenya, Uganda and Tanzania*, WT/COMTD/W/113, circulated on 19 May 2003, paras 11-12.

boards in developing countries<sup>60</sup> on the insistence of the International Monetary Fund and the World Bank under their structural adjustment programmes. These boards, while often subject to problems of corruption or maladministration, provided valuable services to farmers by undertaking quality control and assisting them to meet quality and safety standards.<sup>61</sup> Now farmers in developing countries, who often farm on a small-scale and therefore have little capital to invest, are faced with the difficult task of keeping track of SPS requirements on their export markets and taking the necessary steps to meet them. In addition, they must be able to prove compliance to the satisfaction of the importing country. Without a system of quality control in place, as was previously provided by the marketing boards, it is difficult for farmers to provide convincing assurance of compliance.

Market access problems caused by SPS requirements are exacerbated due to the *differences* in SPS requirements and regulatory regimes in countries across different levels of development.<sup>62</sup> Faced with more pressing health concerns<sup>63</sup> and other competing development priorities,<sup>64</sup> many developing countries often do not prioritise SPS regulation as an area of government spending.<sup>65</sup> Developed countries, on the other hand, tend to maintain high levels of SPS protection, in keeping with their technological and financial capabilities as well as the demands of their consumers and agricultural industries. The proliferation of SPS regulations and standards in developed countries in recent decades is a reflection of these differences.

---

<sup>60</sup> A2004 UNCTAD report refers generally to the abolition of government-supported marketing and distribution systems in many developing countries as a factor contributing to the decline in the share of developing countries in the world commodities market. This is particularly the case in Africa, whereas Asian countries that have maintained the provision of technical support to farmers have managed to promote commodity exports. See United Nations Conference on Trade and Development, *Development and Globalisation: Facts and Figures* (United Nations, Geneva and New York), 2004, 78, available at: [www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1](http://www.unctad.org/Templates/WebFlyer.asp?intItemID=3096&lang=1), visited 21 June 2008.

<sup>61</sup> Murphy, with reference to the experiences of several African countries, makes the additional point that agricultural marketing boards used to provide services to the country as a whole, including remote regions. Now farmers in remote areas find themselves unable to pay for the services they need, and unable to interest a private investor in providing the necessary funding. Sophia Murphy, *Securing Enough to Eat* (International Institute for Sustainable Development, Winnipeg), January 2005, 7, available at: [http://www.iisd.org/pdf/2005/trade\\_securing\\_enough\\_to\\_eat.pdf](http://www.iisd.org/pdf/2005/trade_securing_enough_to_eat.pdf), visited on 6 February 2005.

<sup>62</sup> These differences are illustrated by means of case studies below, Part II, Sections 2.4-2.7.

<sup>63</sup> Examples of more immediate health issues faced by many developing countries are the need for clean drinking water, good medical care, the fight against AIDS etc.

<sup>64</sup> Non-health related development priorities include, for example, education and housing.

<sup>65</sup> The WHO Regional Office for Africa has noted that many countries in Africa 'do not have adequate food security, so having effective food control systems appear not to be a priority, resulting in little or no attention to food legislation, its administration and enforcement. This has often resulted in the importation of substandard food items as well as trade rejections of food exports.' See WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa - Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 1, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf>, visited on 25 June 2007.

### 3.3 The proliferation of health regulations and standards in developed countries

The nature of trade in food and agricultural products is changing. This has led to a proliferation of health regulations and standards with which exporters have to comply in order to gain access to foreign markets. The number of SPS notifications to the WTO increased four-fold between 1995 and 2002,<sup>66</sup> and continues to rise.<sup>67</sup> This increase is concentrated in developed-country Members.<sup>68</sup> In addition, private sector SPS standards are on the increase, with supermarkets competing for consumers on the basis of high levels of safety and quality of food products.

Four main factors can be identified as creating an impetus for the rise in number of SPS requirements. First, there is an increase in the number and variety of potential risks contained in food and agricultural products. This is can be partly ascribed to changes in the *nature* of traded products. As already mentioned, there is growing demand for processed food products, and thus more possibilities for contamination at various stages of the processing chain. Risks are compounded by increasing use of new technologies in agriculture and food processing, such as pesticides, additives and genetic modification. In addition, as discussed above, trade in high-value perishable products is on the increase, and these products are more vulnerable to infection by pathogens than traditional bulk products such as dried grains and pulses.

Changes in the *sources* of traded products also play a role in the increased risk of importation of unsafe food, pests or diseases.<sup>69</sup> Consumer tastes, especially in developed countries, increasingly international so that demand for foreign food products is growing and seasonal fruits and vegetables must be provided all year round. There has consequently been growth in imports from developing countries whose domestic SPS infrastructures are often inadequate to address sanitary and phytosanitary risks. As a result of these developments, there has been a proliferation of SPS regulations and private standards to deal with the increase in volume, variety, sources and technical sophistication of food and agricultural products being traded.

---

<sup>66</sup> John S. Wilson and Tsunehiro Otsuki, *Food Safety in Food Security and Food Trade: Balancing Risk Reduction and Benefits from Trade in Setting Standards* (International Food Policy Research Institute, Washington D.C.), September 2003.

<sup>67</sup> WTO Members are required to notify new, or modifications to existing, SPS measures which are not substantially the same as international standards and may have a significant effect on international trade. The notification obligation is discussed below, Part IV, Section 1.3.2. From the entry into force of the *SPS Agreement* on 1 January 1995 until 8 October 1996, 396 notifications were submitted. This number rose to 610 in the period 1 January to 30 September 2001. In the period 1 January to 31 August 2007, 1,157 notifications of SPS measures were submitted, resulting in a total of 8,217 notifications since the entry into force of the *SPS Agreement*. Committee on Sanitary and Phytosanitary Measures, *Workshop on Transparency Held on 15 - 16 October 2007. Note by the Secretariat*, G/SPS/R/47, circulated on 8 January 2008, para. 15.

<sup>68</sup> Currently, although developed-country Members account for about a quarter of WTO Members, they are responsible for 58% of the notifications of new or revised SPS measures. The US alone has notified 1082 SPS measures, far ahead of the EC which has submitted 207 notifications.

<sup>69</sup> W.C.K. Hammer, 'Food Trade and Implementation of the SPS and TBT Agreements: Current Status of Food Trade, Including Food Quality and Safety Problems', presented at the *Conference on International Food Trade Beyond 2000: Science-Based Decisions, Harmonization, Equivalence and Mutual Recognition* (Food and Agriculture Organization of the United Nations, Melbourne Australia) 11-15 October 1999, 1, available at: [www.fao.org/docrep/meeting/X2636e.htm](http://www.fao.org/docrep/meeting/X2636e.htm), visited on 28 June 2008.

Second, regulators and economic operators in the agri-food sector have to respond to the elevation in consumer expectations and demands with regard to food standards in developed countries. Due to increased affluence in these countries, consumers are willing to pay more for a higher level of health protection. Consumer awareness of food-related risks is also on the rise, particularly in developed countries where education levels are high and consumer advocacy groups have the resources to identify and publicise health risks. Increased consumer concerns, especially in developed countries, with regard to food safety, quality, environmental impact and animal welfare have also led to progressively stricter and more comprehensive government regulation and more demanding private requirements by supermarket chains. In addition, as life expectancy has greatly increased in many developed countries, the long-term health effects of chemicals and contaminants in food are more significant, prompting higher consumer demands in this area. The emergence of precautionary approaches to risk regulation can be seen as a response by governments to elevated consumer demands.

Third, regulators are faced with pressure from the agriculture and food industry lobbies in the face of increased competition due to progress in agricultural liberalisation. The first hard-won steps towards liberalising this traditionally protected sector were taken in the Uruguay Round negotiations, resulting in the *Agreement on Agriculture*.<sup>70</sup> The subsequent ongoing agricultural trade liberalisation mandated by the *Agreement on Agriculture*,<sup>71</sup> and now the subject of torturous negotiations in the context of the Doha Round of trade negotiations,<sup>72</sup> aims to dismantle the wall of traditional protectionist measures (tariffs, export subsidies and domestic support) shielding domestic producers from competition. The agricultural industry therefore seeks to convince governments to put in place non-tariff barriers to trade in the form of SPS regulations. In many countries the domestic industry provides significant input into the regulatory process, resulting in SPS regulations that favour domestic producers or reflect their best practices.

Fourth, advances in science and technology have contributed to the creation of comprehensive regulatory systems and control mechanisms. Great strides have been made in scientific knowledge of the causes of risks, particularly with regard to microbiological contaminants in food and plant and animal pests and diseases. This has made it possible to regulate effectively against an increasing array of identified risk factors. The substantial progress made in technological capacity to test for the presence of risk-causing elements, such as bacteria, chemicals and metabolites, have made it possible to lay down extremely strict requirements and to control that these are being met through ever-stricter conformity assessment mechanisms.

---

<sup>70</sup> 'Agreement on Agriculture', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 39-68.

<sup>71</sup> *Ibid.*, Art. 20.

<sup>72</sup> Ministerial Conference, *Doha Ministerial Declaration. Adopted on 14 November 2001*, WT/MIN(01)/DEC/1, circulated on 20 November 2001, paras 13-14. The work programme set out in the Ministerial Declaration with regard to agriculture aims at substantial improvements in market access; reductions, with a view to phasing out, of export subsidies; and substantial reductions in trade-distorting domestic support.

As a result of these developments, the number and stringency of SPS regulations adopted is steadily increasing and market access for food and agricultural products is greatly reduced.<sup>73</sup>

### 3.4 Impact of health regulations and standards on health and trade in developing countries

It is clear that SPS requirements (in the form of both government regulations and private standards) impact on trade, particularly that of countries at lower levels of development. On the one hand, SPS requirements may be an important market access barrier for food and agricultural products,<sup>74</sup> thereby reducing export earnings and affecting rural livelihoods. On the other, they may create opportunities for those market operators able to meet the requirements to increase their market share and improve their competitive position.

It is important to bear in mind that SPS requirements have distributional implications. The consequences (both negative and positive) of SPS requirements may differ, even with respect to the same product, across countries and across producers within countries. In many cases, the initial conditions prevailing in a country, industry or firm will affect the distribution of costs and benefits arising from SPS requirements.<sup>75</sup>

<sup>73</sup> Extensive studies have been conducted into the impact of SPS measures and technical barriers to trade in general on trade. Some have focused on the impact on developing country exports. Although precise quantification of the effect of these measures has proved difficult due to the complexity of the impact of standards on supply and demand, econometric studies show clear indications of significant negative effects on trade flows (see for example Tsunehiro Otsuki *et al.*, 'Measuring the Effect of Food Safety Standards on African Exports to Europe', in *The Economics of Quarantine and the SPS Agreement*, Kim Anderson, *et al.* (eds.) (Centre for International Economic Studies, Adelaide), 2001; T. Ademola Oyejide *et al.*, 'Quantifying the Trade Impact of Sanitary and Phytosanitary Standards: What Is Known and Issues of Importance for Sub-Saharan Africa', presented at the *Workshop on Quantifying the Trade Effect of Standards and Regulatory Barriers: Is it possible?* (World Bank, Washington D.C.) 27 April 2000, available at: <http://www.worldbank.org/research/trade/conference/oyeyide1.pdf>, visited on 25 October 2000; John S. Wilson *et al.*, *Agriculture in the WTO - the Role of Product Attributes in the Agricultural Negotiations*, Commissioned paper no. 17 (The International Agricultural Trade Research Consortium, Washington DC), 2001, available at: [www1.worldbank.org/wbiep/trade/Standards/Product\\_Attributes.pdf](http://www1.worldbank.org/wbiep/trade/Standards/Product_Attributes.pdf), visited on 10 November 2001; Keith E. Maskus and John S. Wilson, 'Quantifying the Impact of Technical Barriers to Trade: A Review of Past Attempts and the New Policy Context', presented at the *World Bank Workshop on Quantifying the trade effect of standards and technical barriers: Is it possible?* (World Bank, Washington D.C.) 27 April 2000, available at: <http://www.worldbank.org/research/trade/conference/maskus.pdf>, visited on 25 October 2000; Spencer Henson and Rupert Loader, 'Barriers to Agricultural Exports from Developing Countries: The Role of Sanitary and Phytosanitary Requirements', *World Development* 29 (1), 2001, 85-102.

<sup>74</sup> The importance of regulatory requirements and standards for trade is reflected by the fact that the theme of the WTO's 2005 World Trade Report is the link between trade, standards and the WTO. WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007.

<sup>75</sup> This point is made in a World Bank study. This study further notes that the particular strategies and policies adopted to deal with SPS requirements will further influence the degree of impact of these requirements. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 109, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

The different market access effects of SPS requirements on countries at different levels of development are clear. The capacity of a particular country (both in terms of the necessary public infrastructure and in terms of private industry resources) to meet the relevant SPS requirements on its export markets will be determinative for its access to those markets. In addition, the reputation that an exporting country has established in respect of compliance, quality management and effective regulation, will play an important role in ensuring the confidence of the importing country in its ability to meet SPS requirements.<sup>76</sup> Thus, the initial conditions from which countries operate are crucial; the better the existing regulatory infrastructure, public certification and control systems and private industry leadership, the less additional costs in meeting SPS requirements. While certain, more affluent, developing countries have succeeded in adjusting to the SPS requirements they face, sometimes with the help of technical assistance programmes, many countries at lower levels of development have encountered serious difficulties in doing so.<sup>77</sup>

The diversity of SPS requirements across different markets aggravates this situation. When one bears in mind the vast array of SPS regulations and standards that exist in different countries, reflecting their national priorities, stage of economic development and consumer preferences, it becomes clear that the possibilities exporters have for exploiting economies of scale on the international market are greatly reduced. This is particularly so for countries at lower levels of development due to the vast differences between domestic SPS requirements and those on export markets in developed countries. The high costs of meeting the stricter health requirements means that exporters are forced to charge higher prices for their products on their export markets or are even completely excluded from these markets.<sup>78</sup>

---

<sup>76</sup> A 2008 World Bank paper notes, with regard to the effectiveness of negotiations to address SPS trade barriers, that: 'countries or industries that are known or perceived as having their "house in order" are much more effective in carrying out SPS-related diplomacy than countries/industries known for problematic systems and past deficiencies in compliance.' Luz B Diaz Rios and Steven Jaffee, *Barrier, Catalyst, or Distraction? Standards, Competitiveness, and Africa's Groundnut Exports to Europe*, Agriculture and Rural Development Discussion Paper 39 (World Bank, Washington D.C.), January 2008, 69, available at: <http://siteresources.worldbank.org/INTARD/825826-1111055015956/21663468/ARDDiscussionPaper39.pdf>, visited on 5 March 2008.

<sup>77</sup> The abovementioned 2005 World Bank study draws the 'tentative conclusion' that developing countries as a group are not suffering from the tightening of SPS requirements, yet there may be significant redistribution of welfare across countries due to differences in capacity for compliance and in approaches to deal with SPS challenges. The fragmentary nature of the evidence on this issue from developing countries and the methodological problems in attributing distributional effects to standards make it difficult to draw firm conclusions. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 112, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

<sup>78</sup> A study on the total impact of SPS standards on US exports of agricultural products in 1996, estimated that effect at US\$4.4 billion. Suzanne Thornsby, *Sanitary and Phytosanitary Issues: Where Does the WTO Go from Here?*, Working Paper (Center for International Business Education and Research, Gainesville, Florida), 2000, 10 and note 17. Thornsby refers to a USDA study conducted in 1996 with regard to measures that actually or potentially decreased US exports of agricultural products to certain markets and appeared to violate a WTO agreement. 86% of these measures seemed to violate the *SPS Agreement* and a further 5% appeared to fall under multiple WTO agreements. The total effect of the 302 measures identified was US\$4.9 billion, and those falling under the *SPS Agreement*, alone or together with other WTO agreements, accounted for 90% of this amount.

The important impact of SPS requirements on developing countries has been recognised both in the context of the WTO Doha Round negotiations on agriculture<sup>79</sup> and in other fora. For example, in a paper submitted by the World Bank and IMF to the WTO Working Group on Trade, Debt and Finance, it is reported that technical standards, including SPS requirements, have become a key concern for developing countries with regard to market access.<sup>80</sup> Similarly, in the São Paulo Conclusions of UNCTAD XI, express reference was made to the difficulties developing countries face in meeting standards and requirements on the markets of developed countries.<sup>81</sup> In the 2005 report of the Blair Commission for Africa, it was noted that the greatest concern of African countries with regard to trade is the need to meet product standards.<sup>82</sup> In addition, several World Bank studies have been conducted which show the difficulties which SPS requirements create for developing country exports to developed countries.<sup>83</sup>

There are various reasons for the particularly great impact of SPS requirements on developing country exports of food and agricultural products.<sup>84</sup> As discussed above, many

<sup>79</sup> For example, in the overview of the negotiations on agriculture provided by the Chairman of the Special Session of the Committee on Agriculture, reference is made to specific proposals relating to SPS issues, including the need for technical and financial assistance for developing countries in the area of SPS. Committee on Agriculture Special Session, *Negotiations on Agriculture. Overview*, TN/AG/6, circulated on 18 December 2002, para. 28.

<sup>80</sup> Debt and Finance Working Group on Trade, *Market Access for Developing Country Exports -Selected Issues. Paper Prepared Jointly by the Staff of the International Monetary Fund and the World Bank*, WT/WGTDF/W/14 (World Trade Organization, Geneva), 18 October 2002, para. 19. This report notes that, 'SPS and other technical requirements have been viewed by developing country trade officials as a greater constraint on their ability to export than tariffs and quantitative restrictions...'

<sup>81</sup> United Nations Conference on Trade and Development, *Eleventh Session, 13-18 June 2004. Draft São Paulo Consensus*, TD/L.380 (United Nations, Sao Paulo), 16 June 2004, para. 64, available at: [www.unctad.org/en/docs/tld380\\_en.pdf](http://www.unctad.org/en/docs/tld380_en.pdf), visited on 21 June 2007. These conclusions identified SPS measures as one of the issues of particular concern to developing countries, and called for them to be 'developed transparently and applied non-discriminatorily' and for the provision of technical assistance and capacity-building to assist developing countries to meet these standards effectively. *Ibid.*, paras 68 and 79.

<sup>82</sup> Blair Commission for Africa, *Our Common Interest*, March 2005, 268, available at: <http://213.225.140.43/english/report/thereport/cfafullreport.pdf>, visited 30 November 2005.

<sup>84</sup> This, of course, does not mean that the dollar value of the affected trade is greater in the case of developing

developing countries largely depend on the agricultural sector (and often a limited range of products) for their export revenue and are particularly vulnerable to market barriers in this area. In addition, SPS requirements are particularly burdensome for many developing countries due to their lack of technical and financial capacity and regulatory infrastructure to comply with many of these requirements.<sup>85</sup> This has important implications for developing countries' trade, and thus for their generation of export revenue as well as for the livelihoods of small domestic producers and rural populations.<sup>86</sup> Similarly, the WHO Regional Office for Africa has noted that the losses from the rejection of food exports 'not only rob countries of critical revenues but also of credibility as reliable trading partners.'<sup>87</sup> The importance of effectively dealing with this market access problem for developing countries cannot be overstated.

The societal aspects of the distributional impact of SPS requirements *within* developing countries should not be ignored. Even in those developing countries where the export sector has succeeded in maintaining its market share by complying with the relevant SPS requirements, there have often been societal costs involved related to distributional problems.<sup>88</sup> In particular, it has been the large companies that have been able to benefit from compliance with SPS requirements to exploit market possibilities. Such companies have easier access to credit facilities, better access to information, established reputations with foreign buyers and inspectors and benefit from economies of scale. They are therefore better able to bear the costs of adjusting to new SPS requirements. In addition, powerful supermarket chains, which now dominate food retailing, tend to work with incumbent 'preferred suppliers' that have the capacity to meet their requirements in terms of volume,

---

countries, but rather that the impact of the trade barriers on export revenues is greater due to the importance of agricultural exports in total trade from developing countries.

<sup>85</sup> Otsuki *et al.* point to the fact that developing countries are more vulnerable to SPS regulatory changes than developed countries due to the scarcity of public funding in the former to finance compliance with new SPS requirements. Tsunehiro Otsuki *et al.*, 'Saving Two in a Billion: Quantifying the Trade Effect of European Food Safety Standards on African Exports', *Food Policy* 26, 2001, 495-514, 503, available at: [www.elsevier.com/locate/foodpol](http://www.elsevier.com/locate/foodpol), visited on 25 June 2007.

<sup>86</sup> In March 2004, the Food and Agriculture Organization (FAO) reported that one third of global meat exports was being affected by measures to address the outbreaks of avian flu and mad cow disease. It noted that 'the impact of import bans on export-dependent countries, such as Thailand, ... will increase the income vulnerability of small producers as local prices drop sharply.' The affected volume of meat amounted to six million tons. According to the FAO, the losses in export revenue could rise to US\$10 billion in 2004 if the import bans on meat and poultry were not lifted. In that year, international trade in meat and live animals was valued at US\$33 billion (excluding intra-EU trade). See *Animal Disease Outbreaks Hit Global Meat Exports* (Food and Agriculture Organization, Rome), 2 March 2004, available at: <http://www.fao.org/newsroom/en/news/2004/37967/index.html>, visited on 25 June 2007.

<sup>87</sup> See WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa - Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 2, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf>, visited on 24 June 2008.

<sup>88</sup> A World Bank study notes that changes in SPS standards in international trade 'inevitably have distributional impacts that reflect the nature of these standards themselves and the strategies employed to achieve compliance.' Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 97, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

safety and quality of the products. They often provide technical information and assistance to these suppliers to ensure that they meet their SPS requirements. As a result, the share of small farmers in export trade may be dramatically reduced,<sup>89</sup> unless they operate in areas with adequate infrastructure, benefit from long-term relationships with buyers and have effective producer organisations.<sup>90</sup> The resulting bias towards large companies may have important implications for rural livelihoods in developing countries.<sup>91</sup>

In some cases, these negative consequences for rural populations may be offset by new employment opportunities resulting from stricter SPS requirements. For example, off-farm employment may be created in the private sector with regard to packaging, cleaning, handling, processing and SPS controls.<sup>92</sup> Public sector employment may result from the need for inspectors, veterinary officers, certification authorities and qualified laboratory staff. There may therefore be a net benefit in the long term for society as a whole. However, it should be borne in mind that these new jobs typically require skilled or semi-skilled workers who are often sourced from urban centres, rather than from the rural population. In some cases this has led to conflicts with the local inhabitants.<sup>93</sup>

A 2003 study by the World Bank mentions an illustrative example of the trade barrier effect of SPS requirements on developing countries. It describes the situation of a Mauritanian dairy processor who developed a technology to produce *pate molle* cheese from camel milk, obtained from poor nomads. In return the processor gave the nomads access to credit and vaccinated their animals to ensure a healthy supply of milk. The camel-milk cheese won a prize at a trade fair and was stocked in elite stores in Europe, such as Harrods and Fauchon. However, due to concerns regarding the spread of foot-and-mouth disease, the EU decided to ban camel-milk cheese imports from Mauritania,

---

<sup>89</sup> This point is made in the report of the Blair Commission for Africa, which notes that private supermarket standards may be more exacting than official SPS requirements and lead to the exclusion of small farmers by concentrating business in the hands of large companies. Blair Commission for Africa, *Our Common Interest*, March 2005, 266, available at: <http://213.225.140.43/english/report/thereport/cfafullreport.pdf>, visited 30 November 2005.

<sup>90</sup> The aforementioned World Bank study notes that smallholders in such situations may be able to reap benefits from participation in evolving supply chains. See Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 112, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

<sup>91</sup> See in this regard the example of the Bangladeshi shrimp industry discussed below, Part II, Section 2.7.2.1.

<sup>92</sup> Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 113, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

<sup>93</sup> Alauddin and Hamid note the conflicts that have arisen with the growth of commercial shrimp farming in Bangladesh. These displace small-scale operations as only large farmers have the resources needed to make the investments demanded by the new SPS requirements. They note that large commercial shrimp farmers are commonly 'outsiders', based in urban centres and they tend to hire labourers from outside the area, rather than absorb surplus rural labour. Mohammad Alauddin and M. Akhter Hamid, 'Shrimp Culture in Bangladesh with Emphasis on Social and Economic Aspects', in *Towards Sustainable Shrimp Culture in Thailand and the Region: Proceedings of a Workshop*, Paul Smith (ed.) (Australian Centre for International Agricultural Research, Canberra), 1999, 53-62, 59, available at: [http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/\\$file/PR90%20Chapter%202009.pdf](http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/$file/PR90%20Chapter%202009.pdf), visited 13 May 2000. See further below, Part II, Section 2.7.2.1.

despite the absence of evidence that camels can spread this disease. Later the EU replaced its ban with the requirement that mechanical methods be used to obtain the camel milk used in the cheese. This requirement was impossible to meet for the low-income nomad milk producers, who were located far away from major ports where the mechanical facilities were available. Mauritania did not bring a WTO dispute on this matter, as the significant costs involved could not be justified for exports of \$3-5 million of camel-milk cheese per year.<sup>94</sup>

Aside from studies such as the one above providing anecdotal evidence of the effects of particular SPS trade barriers,<sup>95</sup> other studies have been conducted to attempt to quantify the impact of SPS standards on developing country trade.<sup>96</sup> Quantification has proved difficult due to the paucity of available data and the difficulty in ascertaining and measuring these effects.<sup>97</sup> Nevertheless, some estimates have been made with the use of econometric models,<sup>98</sup> and have come to the conclusion that the strict SPS requirements of developed

Kithu, 'Issues on SPS and Environmental Standards for India', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD, SAARC Secretariat, New Delhi, India) 11-13 January 2001, available at: [http://R0.unctad.org/trade\\_env/test1/meetings/standards/charles.doc](http://R0.unctad.org/trade_env/test1/meetings/standards/charles.doc), visited on 27 June 2008; Tika Karki, 'Issues on SPS and Food Standards for Nepal', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD, SAARC Secretariat, New Delhi, India) 11-13 January 2001, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/nepal.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/nepal.doc), visited 28 June 2008; Anura Herath, 'Cost of Compliance of Sanitary and Phytosanitary Requirements in Beverages and Spices in Sri Lanka', presented at the *Workshop on a new WTO Round on Agriculture, SPS and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD, SAARC Secretariat, New Delhi, India) 11-13 January 2001, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/anura%20herath.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/anura%20herath.doc). Some such anecdotal information will be discussed in Part II below, with reference to the particular WTO Members used as illustrative examples in this book.

<sup>96</sup> An assessment of the various methodologies employed for the measurement of the effect of non-tariff barriers to trade in the food and agricultural sectors was conducted under the auspices of the OECD in 2001. See OECD Food Agriculture and Fisheries Directorate, *Measurement of Sanitary, Phytosanitary and Technical Barriers to Trade*, 17-18 September 2001, available at: [www.oecd.org/dataoecd/1/36/1816774.pdf](http://www.oecd.org/dataoecd/1/36/1816774.pdf), visited on 22 June 2008.

<sup>97</sup> MacLaren mentions two difficulties in economic analysis of technical barriers to trade in the agri-food sector. These are, first, that the use of these measures may lead to more, rather than less, efficient market outcomes. The second is that 'the time dimension introduced by the spread and effects of imported diseases cannot be ignored...[T]he time profiles of costs and benefits are different and ...the future stream of costs (and benefits) is uncertain and perhaps irreversible.' Donald Maclaren, *Some Issues in the Economic Analysis of Technical Barriers to International Trade in Agri-Food Products*, Research Paper Number 663 (University of Melbourne, Department of Economics, Melbourne), December 1998, 2. Similarly, in a study quantifying the effect of Japan's phytosanitary trade barrier to apple imports from the US, Calvin and Krissoff note that, 'While measuring [the technical barrier's] tariff-rate equivalents and determining the welfare impacts of removing barriers are simple concepts, the empirical application is complex and the results are highly dependent on a number of simplifying assumptions.' Linda Calvin and Barry Krissoff, 'Technical Barriers to Trade: A Case Study of Phytosanitary Barriers and U.S.-Japanese Apple Trade', *Journal of Agricultural and Resource Economics* 23 (2), 1998, 351-366, 364.

<sup>98</sup> For example, Otsuki, Wilson and Miravat have estimated the effect of European food safety requirements for exports from African countries. Tsunehiro Otsuki *et al.*, 'Measuring the Effect of Food Safety Standards on African Exports to Europe', in *The Economics of Quarantine and the SPS Agreement*, Kim Anderson, *et al.* (eds.) (Centre for International Economic Studies, Adelaide), 2001. For discussions on the quantification of the effects of standards see also Keith E. Maskus *et al.*, *Quantifying the Impact of Technical Barriers to Trade: A Framework for Analysis*, Report No. 2512 (World Bank, Washington D.C.), December 2000, available at: [http://econ.worldbank.org/files/1324\\_wps2512.pdf](http://econ.worldbank.org/files/1324_wps2512.pdf), visited on 5 April 2001. See further the following

countries have proved very costly for countries at lower levels of development. These costs are generated both by the losses suffered due to rejection of products and their subsequent destruction or diversion to less lucrative markets and by investments made to meet the relevant SPS requirements.<sup>99</sup>

When discussing the trade effects of SPS requirements on developing countries, care should be taken to avoid broad generalisations. The heterogeneity of developing countries must be remembered, as it impacts on the ability of these countries to overcome the trade-restrictive effects of SPS requirements by adapting to new requirements and securing their market share. A 2005 World Bank report notes that some developing countries have been able to meet the challenge posed by higher standards on export markets.<sup>100</sup> It points to the example of Kenya, whose food industry has responded to the food safety standards in Europe by accelerating the adoption of modern supply-management techniques and engaging in collaboration with the public sector. As a result, Kenya is able to supply fresh vegetables and salad greens to major European supermarket chains.<sup>101</sup>

Despite the potential negative trade effect of SPS requirements on developing countries, the question arises whether there might be positive secondary effects on health, in terms of both of food safety and agricultural productivity. If efforts to meet the SPS requirements of their trading partners lead to higher levels of protection of human, animal and plant health in developing countries, gains might be reaped in the area of health. It is interesting to note that the WHO Regional Office for Africa has reported that food borne diseases currently pose a significant health threat in Africa, particularly those from micro-

<sup>99</sup> Horton mentions the various costs for developing countries from rejection of products at the border. She notes that these costs are not limited to value of product but include transportation and other export costs. In addition, costs of compliance with SPS requirements are also significant for developing countries and include the costs of upgrading production systems, quality control and certification systems. See Linda R. Horton, 'Food from Developing Countries: Steps to Improve Compliance', *Food and Drug Law Journal* 53, 1998, 139-171.

<sup>100</sup> Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 86-88, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited 27 June 2008.

<sup>101</sup> *Global Economic Prospects 2004: Realizing the Development Promise of the Doha Agenda* (World Bank, Washington D.C.), 2003, 115.

bial pathogens, chemical contaminants and biotoxins.<sup>102</sup> It has pointed out that studies by international organisations in the African region have established that common problems exist with regard to food-safety legislation and its implementation, surveillance and inspection systems, and laboratory services.<sup>103</sup> Such problems are not limited to the African region, but are common to many developing countries.<sup>104</sup> In addition, similar problems exist in the area of animal and plant health in several of these countries.

Improvements in this situation would doubtless be beneficial. However, such improvements do not necessarily flow from the imposition of strict SPS requirements by importing countries. Instead, the lack of financial resources and skilled manpower to establish and maintain effective SPS systems in many developing countries are an obstacle to meeting SPS requirements. Thus, far from promoting improvements in the SPS situation in developing countries, strict SPS requirements on their export products may have the opposite effect by reducing the export revenue available to finance the necessary reforms in legislative SPS regimes and infrastructure. Where resources, either domestic or from foreign assistance projects, are available to make the SPS improvements necessary to access foreign markets, often these are limited and thus applied only to specific products destined for the export market and do not filter through to the domestic consumer.<sup>105</sup>

In this regard, also, the heterogeneity of developing countries should be borne in mind. There is a clear distinction to be made between the situation of middle-income countries and that of low-income and least developed countries. While the improving standard of living and corresponding increasing consumer demands in middle-income countries mean that improvements in food safety standards also benefit the domestic population and correspond with domestic priorities, the same cannot be said of poorer countries. Gains in the area of health from compliance with strict SPS regulations in these countries are not significant, since the main health risks facing their populations are from infectious diseases and lack of hygienic conditions, for example impure drinking water. In addition, consumers in these conditions often have a higher degree of immunity to risks

<sup>102</sup> WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa - Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 1, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf>, visited on 24 June 2008.

<sup>103</sup> *Ibid.*

<sup>104</sup> For example, the *Instituto Panamericano de Protección de Alimentos y Zoonosis* notes that one of the biggest concerns in the Americas is the lack of laboratory-based surveillance of food-borne disease and the scarcity of reliable data on disease outbreaks and food contaminants. See Instituto Panamericano De Protección De Alimentos y Zoonosis, 'International Cooperation on Food Contamination Monitoring and Foodborne Disease Surveillance. A Case Study in the Amro Region', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 66 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 1, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae196e.pdf>, visited on 26 June 2008.

<sup>105</sup> The FAO/WHO Secretariat points out that while it may be appealing to concentrate food-safety controls on the export field while neglecting the domestic market, this system of 'dual safety standards' for exported and domestically-consumed products is not desirable as it penalises national consumers. See FAO/WHO Secretariat, 'Strengthening Official Food Safety Control Services', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, GF 02/3 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 11, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/j2951e.pdf>, visited on 26 June 2008.

from contaminated food than do consumers in countries where high hygienic standards are maintained. Due to the low life expectancy in poor countries, threats from carcinogens or the long-term health effects of pesticide residues are not significant. The population is correspondingly less willing to pay for reduced risk in food. Instead, the loss of food trade impacts on these countries' ability to earn income to pay for improvements in their domestic health situation. Thus high SPS standards do not reflect the priorities of the poor.<sup>106</sup>

Aside from those SPS measures that are based on legitimate health concerns, many SPS measures exist with more questionable bases. Clearly governments, under the influence of domestic industry pressure groups, may misuse SPS measures as disguised trade barriers for protectionist purposes. There is a need for effective disciplines to draw the line between protection and protectionism in this area. It is here that the *SPS Agreement* acts.

As one of the WTO agreements negotiated in the Uruguay Round,<sup>107</sup> the *SPS Agreement* aims to discipline trade restrictive regulatory measures that could undermine the steps towards liberalisation of the agricultural sector achieved in that Round. At the same time, it reflects a new recognition, absent in GATT rules, of the *right* of governments to regulate to protect against SPS risks in traded products.<sup>108</sup> In doing so, the *SPS Agreement* attempts to achieve an appropriate *balance* between the liberalisation of agri-food trade and the protection of health.

The manner in which the *SPS Agreement* seeks to attain its balancing objective can best be understood when the historical developments leading to the globalisation of trade and the globalisation of health are considered in the light of the importance of liberalisation of agri-food trade for development.

<sup>106</sup> Michiel Keyzer and Max Merbis, 'SPS-Standards and Developing Countries: The Need for Differentiation', presented at the *Capaciteitsopbouw in Ontwikkelingslanden in verband met Niet-Tarifaire Handelsbelemmeringen (SPS)* (Dutch Ministry of Agriculture and Ministry of Foreign Affairs (DGIS), The Hague) 20 June 2001, 3.

<sup>107</sup> The negotiation history of the *SPS Agreement* is discussed below, Part III, Section 1.2.

<sup>108</sup> The recognition in the *SPS Agreement* of the right of Members to adopt the SPS measures necessary to protect human, animal or plant life or health, is discussed below, Part III, Section 3.1.

## Conclusion to Part I

Understanding the impact of the disciplines used in the *SPS Agreement* to achieve a balance between trade and health objectives on Members at different levels of development necessitates a grasp of the context within which the Agreement functions. This context encompasses the twin processes of the globalisation of trade and the globalisation of health.

The progressive integration of developing countries into the world trading system has to be seen in the normative context provided by the emerging recognition of the right to development. This serves to establish, on the one hand, the importance of trade as an engine for economic growth in the service of development and the responsibility of the international community to create favourable conditions to facilitate this growth. On the other hand, the right to development clarifies that development is more than economic growth. Instead, development entails the progressive realisation of all human rights. This means that mechanisms to promote development, including through trade liberalisation, may not come at the cost of other human rights such as the right to life, health and safe food. Consequently, the *SPS Agreement*, which plays an important role in liberalising agricultural trade, cannot achieve its trade objectives through disciplines that would undermine the ability of Members to protect life and health in their territories.

The increasing participation of developing countries in the international trade system has resulted in a new awareness of the need to take their interests into account in the shaping of the rules that govern this system. This has taken a variety of forms, ranging from broad exemptions for developing countries to purely hortatory statements encouraging consideration of their constraints. The new engagement of developing countries evinced in the Uruguay Round negotiations and their willingness to take on the full obligations of membership has meant that they both benefit from greater influence in the multilateral trading system and bear the burden of greater compliance obligations. With the negotiation of new agreements creating detailed disciplines for behind-the-border regulatory areas, such as the *SPS Agreement*, this has resulted in significant implementation costs. If the globalisation of trade, through the integration of developing countries, is to have a positive impact on their economic growth, it needs to deliver on its promise of increased market access. For countries at lower levels of development this means not only effective trade rules in areas of interest to them, including the food and agricultural sector, but also mechanisms to assist them in using these rules to their full advantage, and in making the necessary adjustments for compliance themselves. This necessitates concerted efforts to address implementation issues, including those relating to the provision of technical assistance and special and differential treatment.

This background is useful to consider when assessing the *SPS Agreement*. The approach taken in the *SPS Agreement* is characteristic of the new Uruguay Round agreements aimed at addressing non-tariff barriers to trade through disciplines on regulatory areas. Despite the high implementation costs entailed by these disciplines, the *SPS Agreement* contains weak provisions on SDT and technical assistance for developing countries.<sup>1</sup> In analysing

---

<sup>1</sup> The rules in the *SPS Agreement* to address the special position of developing-country Members are discussed in Part V of this book.

the development dimension of the *SPS Agreement* it is therefore important to assess both the appropriateness of its disciplines for Members at lower levels of development and the effectiveness of its special provisions for developing-country Members.

The globalisation of trade has brought with it the international spread of threats to human, animal and plant life and health. The evolution in the strategies to deal with this problem has been determined to some extent by developments in scientific understandings of risk. Science has formed the basis both for common understandings that support international cooperation, and for national strategies to mitigate risk. The failure of purely national approaches as well as international regulatory approaches to provide an effective strategy in the face of globalised risk, has led to a new, multifaceted approach to risk management. This involves both national and international initiatives in both public and private arenas. These complex governance structures for the protection against SPS risk form the backdrop for the operation of the *SPS Agreement*. Acknowledging the achievements made on international level in setting voluntary harmonised standards, it incorporates these standards into its rules, while allowing for deviation.<sup>2</sup> It reflects the focus on science as a neutral and universally valid benchmark for SPS regulation that prevailed at the time of its negotiation, and requires scientific justification for non-harmonised measures.<sup>3</sup>

The proliferation of SPS requirements to mitigate risks from traded products has important implications for trade in the agri-food sector, particularly for countries at lower levels of development. These countries are often primarily dependant on agricultural exports for their foreign revenue earnings. Hard-won gains in the liberalisation of agricultural trade achieved through rules on traditional trade barriers can be undermined by the trade restrictive effects of SPS measures. As these measures predominate in the areas of high-value fresh produce and processed food products, the possibilities for developing countries to diversify their exports to these lucrative markets are restricted. While many SPS measures are legitimate efforts to address health risks, they may be more trade restrictive than is necessary to achieve their objectives. In addition, the danger exists that SPS measures may be misused for protectionist purposes.

The *SPS Agreement* acts to address this problem. Situated on the interface of globalised trade and globalised health, this Agreement aims to balance the often conflicting goals of trade liberalisation and health protection. The mechanisms it uses to do so are a reflection of the historical developments outlined above.

---

<sup>2</sup> The harmonisation disciplines of the *SPS Agreement* are examined in Chapter 4 of Part III, below.

<sup>3</sup> The obligations of the *SPS Agreement* requiring that SPS measures be based on scientific principles and not be maintained without sufficient evidence, and its obligations relating to risk assessments, are discussed in Chapters 3 and 5 of Part III below.

## Part II

---

### **National and international SPS regulation and standard setting**

---

## Introduction to Part II

The *SPS Agreement* has an impact on both the market access and the policy space of WTO Members, which differs at different levels of development. In order to have a proper grasp of this impact, an understanding of both national and international systems for SPS regulation and standard setting is indispensable. It is through these national and international systems that countries give effect to their national priorities with regard to health and trade. Therefore, Part II of this book aims to sketch these two systems broadly, to provide the basic understanding needed for purposes of the subsequent analysis of the development dimension of the *SPS Agreement* in Parts III to V.

Chapter 1 of Part II examines *general* aspects of national SPS regulation and standard setting. These include the normative context for government action to protect against SPS risks and a law-and-economics analysis of the reasons why regulation is often necessary to give effect to government obligations in this regard. In order to focus the discussion on the role that the level of development of a country plays in this respect, the different benefits and costs that regulatory action in the area of SPS risks entails for countries at different levels of development is examined. A brief overview is then given of different types of SPS measures. Finally, Chapter 1 sketches the role and limits of science in the regulatory process.

The disparate impact of the *SPS Agreement* on the ability of governments, at different levels of development, to regulate in the area of SPS risks and to secure market access for their agri-food products, can best be appreciated if one looks in more detail at particular national SPS regulatory systems. Chapter 2 therefore proceeds to a more *specific* analysis of the difference in SPS regulatory systems of Members at different levels of development.

For this purpose, illustrative examples are provided of the SPS systems of four selected WTO Members at different levels of development. These are the developed-country Member Australia and the developing-country Members Mauritius, Jamaica, and Bangladesh. As will become apparent from the discussion in Parts III to V of this book,<sup>1</sup> the disciplines of the *SPS Agreement* can be seen as reflecting ‘best practice’ standards in the area of SPS regulation. The question of how appropriate and workable these disciplines are for Members at different levels of development cannot be answered in the abstract. Instead, in keeping with the recognition in this book of the fact that one cannot speak generally of ‘developing-country Members’ but must take into account that they are a diverse group, concrete examples are used in Chapter 2 to illustrate the differences in SPS systems across levels of development. These illustrative examples aim to provide the factual background needed to facilitate the understanding of the practical effect of the disciplines of the *SPS Agreement* analysed in Parts III to V of this book.

Part II of this book turns, in Chapter 3, to look at international standard-setting systems in the area of SPS risk. The globalisation of health risks, as discussed in Part I of this book,

---

<sup>1</sup> Part III of this book deals with the those substantive disciplines of the *SPS Agreement* that balance trade liberalisation and health protection, Part IV examines the procedural and institutional mechanisms under the *SPS Agreement* and Part V discusses the rules in the *SPS Agreement* that address the special position of developing countries.

has led to international SPS standard setting. The *SPS Agreement* incorporates developments in this regard by making express reference to the standards, guidelines and recommendations developed by the main international standard-setting bodies working in the field of sanitary or phytosanitary risks. Such standards, guidelines and recommendations form the basis of the rules on harmonisation of SPS measures in the *SPS Agreement*. Chapter 3 therefore starts by looking in general at the reasons behind initiatives to harmonise SPS requirements at international level and the link between such initiatives and trade liberalisation. The discussion is then directed to the benefits and pitfalls of harmonisation of SPS requirements for countries at different levels of development, thereby focusing on the role played by the development level of a country in the impact that harmonisation initiatives are likely to have on that country.

Clearly, to appreciate the way in which the *SPS Agreement's* use of these international standards in its disciplines affects Members at different levels of development, one must have a basic understanding of the way in which the relevant international bodies set standards, and the extent to which Members at different levels of development can participate effectively in international standard-setting systems. For this reason, Chapter 3 turns to an examination of these systems and the extent of participation therein of Members at different levels of development.

Finally, the Conclusion to Part II highlights the main aspects of the national and international SPS regulatory systems which are essential to keep in mind throughout the analysis of the provisions of the *SPS Agreement* in Parts III to V of this book, in order to perceive fully the disparate impact of the provisions discussed therein on Members at different levels of development.

## CHAPTER 1

### General aspects of national SPS regulation and standard setting

The disciplines of the *SPS Agreement* affect the ability of governments to adopt, maintain and apply SPS regulations. In order to appreciate fully this impact, and its differing effect on countries at different levels of development, it is necessary to have a basic understanding of national SPS regulatory systems.

It is useful to start with a general examination of national regulatory systems for dealing with SPS risks, before turning to look at specific examples in selected Members. First, this general discussion identifies the reasons why governments regulate in the area of sanitary and phytosanitary protection, both from a normative and from a law-and-economics perspective. This serves to highlight the public interest function of SPS regulation and the need to provide sufficient policy space for governments to meet the public interest goal of health protection. The role of private interests in determining regulatory outcomes is also noted in order to establish the need for disciplines on the regulatory freedom of governments in this area.

Second, Chapter 1 proceeds to a brief discussion of the various types of SPS measures that can be adopted by governments and private economic operators. This serves to establish the scope of regulatory action covered by the WTO rules addressed in this book, and to determine which SPS requirements lie outside this scope.

A third section of the general analysis in Chapter 1 sets out, in broad terms, the benefits and costs that are entailed in SPS regulation. Emphasis is placed on the effect of the level of development of a country on these costs and benefits. The extent to which governments carry out cost/benefit analyses in regulatory decision-making receives attention here.

Finally, Chapter 1 concludes this general discussion of SPS regulatory systems by examining the role of science in SPS regulation and the way in which scientific uncertainty is dealt with by scientists and regulators.

This chapter aims to create a theoretical framework within which to understand the factual descriptions of various SPS systems that are set out in Chapter 2 of Part II.

#### 1.1 Normative framework for national sanitary and phytosanitary protection

The idea that the protection of public health against sanitary and phytosanitary risks is one of the tasks of rulers and governments has been recognised throughout history. Examples mentioned in the literature include references to food labelling in Egyptian scrolls, purity control of beer and wine in ancient Athens, the Roman state food-control system for consumer protection against health risks from produce, and the quality and safety laws promulgated in several European countries in the Middle Ages with regard to eggs, sausages, bread, cheese, wine and beer.<sup>1</sup> Early examples of the application of such

---

<sup>1</sup> These examples are listed by Phillips. See Peter W.B. Phillips, 'Food Safety, Trade Policy and International Institutions', in *Governing Food: Science, Safety and Trade*, Peter W.B Phillips and Robert Wolfe (eds.)

SPS protection measures to traded products are the SPS controls applied to maritime and overland commerce by Italian city-states in the fourteenth century.<sup>2</sup> Today, all sovereign states take measures to protect against risks to human, animal and plant life or health in their territories, including those arising from imported food and agricultural products.

Such government measures have an underlying normative rationale. It is currently widely recognised in international human rights law that ensuring adequate food and human health are among the fundamental duties<sup>3</sup> of governments, and an integral part of both the right to life and the right to development. The normative framework for SPS protection provided by international human rights law informs the discussion of the limitations on regulatory autonomy in this area arising from international trade rules.<sup>4</sup> A brief look will therefore be taken at the relevant human rights and their interpretation by human rights bodies and scholars.

The right to life is enshrined in Article 3 of the *Universal Declaration on Human Rights*<sup>5</sup> and Article 6 of the *International Covenant on Civil and Political Rights (ICCPR)*<sup>6</sup> as well as in many other human rights instruments.<sup>7</sup> In its General Comment on the Right to Life,<sup>8</sup>

---

(McGill-Queen's University Press, Montreal), 2001, 27-48, 235-236.

<sup>2</sup> See above, Part I, Section 2.1. Fidler mentions the establishment of the first boards of health in Venice and Florence in 1348 and the first isolation of shipping in the Italian Adriatic colony of Ragusa in 1377, followed by the subsequent development of quarantine practices with regard to suspect maritime trade. In addition, overland commerce was subject to controls and bans in Milan and Mantua in 1374. David P. Fidler, 'Microbialpolitik: Infectious Diseases and International Relations', *American University International Law Review* 14, 1998, 1-52, 8.

<sup>3</sup> The right to food and the right to health fall within the category of economic, social and cultural rights. Governments' obligations with respect to economic, social and cultural rights have been defined by treaty bodies as well as scholars as the obligation to respect, protect and fulfil the relevant right. The obligation to respect is a negative obligation, meaning that governments must not do anything to violate that right (for example, a government may not eliminate food-safety regulations without an adequate replacement if the health risk still exists). The obligation to protect entails positive action to prevent violation of the right by others (for example a government must impose regulatory requirements on producers and importers of food products to ensure that only safe food is marketed on its territory). The obligation to fulfil means that a government must provide an enabling environment for the fulfilment of the right and, as a last resort, itself take action to fulfil the right (for example, a government may have to operate inspection facilities for imported food at points of entry). The fact that no international body exists before which these rights can be adjudicated does not detract from the fact that they create binding obligations on states parties to the relevant treaties.

<sup>4</sup> Robert Howse and Ruti Teitel have noted that: '[t]here is an absence today of a plausible, agreed normative economic framework that can inform debates about globalisation as well as related domestic reforms. This provides a window of opportunity for international human rights law to supply an alternative normative structure for such a debate.' Robert Howse and Ruti G. Teitel, *Beyond the Divide: The Covenant on Economic, Social and Cultural Rights and the World Trade Organization*, Occasional Paper No.30 (Friedrich Ebert Stiftung, Geneva), April 2007, 6, available at: <http://library.fes.de/pdf-files/iez/global/04572.pdf>, visited on 15 June 2008.

<sup>5</sup> *Universal Declaration on Human Rights*, General Assembly Resolution 217A (III), UN Doc. A/810 (1848), adopted 10 December 1948.

<sup>6</sup> *International Covenant on Civil and Political Rights*, General Assembly Resolution 2200A (XXI), UN Doc. A/6316 (1966), adopted 16 December 1966, entry into force: 23 March 1976.

<sup>7</sup> Art. 4 of the *American Convention on Human Rights*, OAS Treaty Series No. 36, adopted 22 November 1969, entry into force 18 July 1978; Art. 2 of the *Convention for the Protection of Human Rights and Fundamental Freedoms*, ETS No. 5 (Protocol 11, ETS No. 155), adopted 4 November 1950, entry into force 3 September 1953 (as amended, in force 1 November 1998); Art. 4 *African Charter on Human and People's Rights*, 1520 UNTS 363, adopted 27 June 1981, entry into force 21 October 1986.

<sup>8</sup> Human Rights Committee, *ICCPR General Comment No. 6 on Article 6 (the Right to Life)* (United

the Human Rights Committee characterised the right to life as a ‘supreme right’ without which other human rights are devoid of meaning. No derogations from this right are permitted, even in times of public emergencies that threaten the life of the nation, under Article 4 of the ICCPR. According to this General Comment, the right to life entails not only a prohibition on the deprivation of life by states,<sup>9</sup> but also a requirement that states take positive action to increase life expectancy.<sup>10</sup> The link between health, safe food and the right to life was recognised by Okechukwu Ibeanu, the UN Special Rapporteur on the Adverse Effects of the Illicit Movement and Dumping of Toxic and Dangerous Products and Wastes on the Enjoyment of Human Rights in a thematic report in 2006.<sup>11</sup> This report focuses on the human rights impact of exposure of individuals to toxic chemicals in food and everyday household goods. It affirms that toxic products constitute a serious threat to the right to life and that other human rights such as the rights to health and food can be affected.<sup>12</sup> It stresses the obligation of states to take steps to regulate in order to prevent a level of exposure to hazardous chemicals, such as pesticides, that could result in violations of these human rights.<sup>13</sup>

The rights to health and food are enshrined in the *International Covenant on Economic, Social and Cultural Rights* (ICESCR) of 1966.<sup>14</sup> The obligations of a state with regard to these rights are set out in Article 2 of the ICESCR, which obliges a state:

... to take steps, individually and through international assistance and co-operation, especially economic and technical, to the maximum of its available resources, with a view to achieving progressively the full realization of the rights recognized in the present Covenant by all appropriate means, including particularly the adoption of legislative measures.

The meaning of this obligation has received the attention of international scholars. In 1986, a group of distinguished international experts unanimously agreed on a set of principles, known as the ‘Limburg Principles’, which in their view reflected the state of international law regarding states’ obligations under the ICESCR.<sup>15</sup> The Limburg Principles state, *inter alia*, that the obligation of progressive realisation of rights in Article 2 of the ICESCR requires States to ‘move as expeditiously as possible towards the realization of

Nations, Geneva), 30 April 1982, para. 1, available at: <http://www.unhcr.org/cgi-bin/texis/vtx/refworld/rwmain?docid=45388400a>, visited on 3 January 2008.

<sup>9</sup> *Ibid.*, para. 3.

<sup>10</sup> *Ibid.*, para. 5. The General Comment refers to the duty to take measures to reduce infant mortality and to increase life expectancy, especially in adopting measures to eliminate malnutrition and epidemics. However, it seems logical that measures to prevent food safety risks would be included under this duty since they also increase life expectancy.

<sup>11</sup> Okechukwu Ibeanu, *Report of the Special Rapporteur on the Adverse Effects of the Illicit Movement and Dumping of Toxic and Dangerous Products and Wastes on the Enjoyment of Human Rights*, UN Doc. E/CN.4/2006/42 (UN Commission on Human Rights, Geneva), 20 February 2006.

<sup>12</sup> *Ibid.*, para. 17.

<sup>13</sup> *Ibid.*, para. 45.

<sup>14</sup> The right to adequate food and the right to health are recognised in Arts 11 and 12 respectively of the *International Covenant on Economic, Social and Cultural Rights* (ICESCR), UN Doc. A/6316, 1966, adopted within the UN framework. The ICESCR came into force on 3 January 1976.

<sup>15</sup> *The Limburg Principles on the Implementation of the International Covenant on Economic, Social and Cultural Rights*, UN Doc. E/CN.4/1987/17 (International Commission of Jurists, the Urban Morgan Institute on Human Rights and the Centre for Human Rights of Limburg University, Maastricht), 6 June 1986.

the rights' and that this shall not be interpreted to imply that states have the right to defer indefinitely their efforts to ensure full realisation of the rights involved.<sup>16</sup> According to the Limburg Principles, 'the obligation of progressive achievement exists independently of the increase in resources; it requires effective use of resources available.'<sup>17</sup>

These principles were elaborated on ten years later with regard to the nature and scope of violations of economic, social and cultural rights and appropriate responses and remedies, in order to reflect the evolution of international law in this area and to make more concrete the obligations entailed by these rights. This elaboration is contained in the *Maastricht Guidelines on Violations of Economic, Social and Cultural Rights* (referred to as the Maastricht Guidelines).<sup>18</sup> The Maastricht Guidelines specify that violations of economic, social and cultural rights can occur through acts of commission or omission by states, and they provide examples of such acts. Examples of violations through acts of commission include the formal removal or suspension of legislation necessary for the continued enjoyment of a right under the ICESCR that is currently enjoyed; and the active support for measures adopted by third parties which are inconsistent with ICESCR rights.<sup>19</sup> Examples of violations through an act of omission are the failure to amend or repeal legislation that is manifestly inconsistent with an obligation of the ICESCR; the failure to enforce legislation or put into effect policies to implement provisions of the ICESCR; and the failure to regulate activities of individuals or groups in order to prevent them from violating rights under the ICESCR.<sup>20</sup>

It is widely agreed that the obligation of Article 2 of the ICESCR means that states must guarantee, under any circumstances and regardless of their available resources, the 'core content' of social, economic and cultural rights and to 'progressively' realise other aspects of these rights.<sup>21</sup> There have thus been attempts to clarify what the 'core content' of each right is.<sup>22</sup> The precise substance of those rights is, however, still in the process of crystallisation.

---

<sup>16</sup> *Ibid.*, para. 21.

<sup>17</sup> *Ibid.*, para. 23.

<sup>18</sup> *The Maastricht Guidelines on Violations of Economic, Social and Cultural Rights* (International Commission of Jurists, the Urban Morgan Institute on Human Rights and the Centre for Human Rights of Maastricht University, Maastricht), 26 January 1997. The legal developments since the drafting of the Limburg Principles referred to in the Maastricht Guidelines were the emerging jurisprudence of the Committee on Economic, Social and Cultural Rights and the adoption of instruments, such as the revised *European Social Charter* of 1996 and the *Additional Protocol to the European Charter Providing for a System of Collective Complaints*, and the *San Salvador Protocol to the American Convention on Human Rights in the Area of Economic, Social and Cultural Rights* of 1988. Further, the commitments of governments in the framework of seven UN World Summits conferences (1992-1996) and the proposed *Optional Protocols* to the *International Covenant on Economic, Social and Cultural Rights* and the *Convention on the Elimination of All Forms of Discrimination Against Women* were mentioned.

<sup>19</sup> *Ibid.*, para. 14(a) and (c).

<sup>20</sup> *Ibid.*, para. 15(b), (c) and (d).

<sup>21</sup> Committee on Economic Social and Cultural Rights, *General Comment No. 3 on the Nature of States Parties' Obligations*, UN Doc. E/1991/23 (United Nations, Geneva), 14 December 1990, para. 10. More recent documents of human rights bodies have confirmed this approach, for example Office of the United Nations High Commissioner for Human Rights, *Human Rights and Poverty Reduction: A Conceptual Framework*, HR/PUB/04/1 (UN Office of the United Nations High Commissioner for Human Rights, Geneva), 2004, 26-27.

<sup>22</sup> Brigit Toebes, 'The Right to Health', in *Economic, Social and Cultural Rights: A Textbook*, Asbjorn Eide, et al. (eds.) (Martinius Nijhoff, Dordrecht, Boston, London), 2001, 169-190, 176.

The right to adequate food is part of the right to an adequate standard of living, laid down in Article 25 of the *Universal Declaration on Human Rights*. It is also provided for in Article 11 of the ICESCR.<sup>23</sup> An authoritative interpretation of the right to adequate food has been developed by the UN Committee supervising the ICESCR, namely the Committee on Economic, Social and Cultural Rights, in a General Comment.<sup>24</sup> According to this interpretation, what is 'adequate' depends on the prevailing social, economic, cultural, climatic, ecological and other conditions. The core content of this right, according to this General Comment, includes the availability of food 'free from adverse substances'.<sup>25</sup> In addition, the UN Special Rapporteur on the Right to Food, Jean Ziegler, has conducted further work on defining the right to food. He argues that: '[t]he right to food implies access to proper food, that it be healthy food, free of any harmful substance and free of harmful consequences for the development of the human body and the reproduction of its vital forces.'<sup>26</sup> Ziegler has also stated that the obligation to protect the right to food means that governments must protect their citizens against violations by other actors, for example by instituting regulations on food safety.<sup>27</sup>

In June 2002, the declaration of the World Food Summit: Five Years Later invited the Council of the Food and Agriculture Organization to establish an intergovernmental working group to develop voluntary guidelines on the progressive realisation of the right to adequate food. This working group was established in November 2002 and the voluntary guidelines it drafted were adopted by the FAO Council in November 2004.<sup>28</sup> These guidelines comprise the first attempt by governments to interpret the content of an economic, social and cultural right and give practical guidance to states for their implemen-

---

<sup>23</sup> The right to food is also reflected, to different extents (sometimes encompassed by the generic right to an adequate standard of living), in the following international instruments: Arts 11-14 of the *Convention on the Elimination of All Forms of Discrimination against Women* of 1979, 1249 UNTS 14, adopted 18 December 1979, entry into force 3 September 1981; Arts 24 and 27 of the *Convention on the Rights of the Child* of 1989, General Assembly Resolution A/RES/44/25, 1577 UNTS 44, adopted 20 November 1989, entry into force 2 September 1990; Art. 12(1) of the *Additional Protocol to the American Convention on Human Rights in the Area of Economic, Social and Cultural Rights* of 1988, AG/RES.907 (XVIII-0/88), OAS, Treaty Series No. 69, adopted 17 November 1988, entry into force 16 November 1999; Art. 4(1) of the *European Social Charter* of 1961, Strasbourg, adopted on 18 October 1961, entry into force on 26 February 1965; and *The Final Declaration of the World Food Summit: Five Years Later* of 2002, contained in the Report of the World Food Summit: Five Years Later. International Alliance Against Hunger, Rome 10-13 June 2002, Appendix.

<sup>24</sup> Committee on Economic Social and Cultural Rights, *General Comment No. 12 on the Right to Adequate Food*, UN Doc. E/2000/22 (United Nations, Geneva), 2000.

<sup>25</sup> *Ibid.*, para. 8.

<sup>26</sup> Jean Ziegler, *Report Submitted by the Special Rapporteur on the Right to Food*, UN Doc. E/CN.4/2001/53 (United Nations Commission on Human Rights, Geneva), 7 February 2001, para. 73.

<sup>27</sup> Jean Ziegler, *Report Submitted by the Special Rapporteur on the Right to Food*, UN Doc. E/CN.4/2003/54 (United Nations Commission on Human Rights, Geneva), 10 January 2003, para. 18. An interesting discussion on the right to food in international law can be found in Asbjorn Eide *et al.*, 'Food Security and the Right to Food in International Law and Development', *Transnational Law and Contemporary Problems* 1, 1991, 415-467.

<sup>28</sup> Economic and Social Council, *Voluntary Guidelines to Support the Progressive Realization of the Right to Adequate Food in the Context of National Food Security*, adopted by the 127th Session of the FAO General Council in November 2004, UN Doc. E/CN.4/2005/131 (United Nations Commission on Human Rights, Geneva), 28 February 2005. The Human Rights Council recently reaffirmed the value of these guidelines. Human Rights Council, *Mandate of the Special Rapporteur on the Right to Food*, UN Doc. A/HRCRES/6/2 (United Nations, Geneva), 27 September 2007, para.6.

tation of the progressive realisation of the right.<sup>29</sup> Guideline 9 of this document provides that ‘States should take measures to ensure that all food, whether locally produced or imported ... is safe and consistent with national food safety standards.’<sup>30</sup> Further, it provides that states should put into place comprehensive and rational food control systems, using risk analysis and supervisory mechanisms to reduce food-borne risks in the entire food chain.<sup>31</sup> Science-based food safety standards are encouraged, as are improvements in institutional and regulatory frameworks for food safety.<sup>32</sup> Where necessary, the guidelines provide that states should assist farmers and processors to follow good agricultural practices and good manufacturing practices.<sup>33</sup> The guidelines recognise that capacity constraints may limit the ability of a state to implement them. Thus, to assist developing countries, developed and more advanced developing countries are encouraged to provide technical assistance through credits, grants for capacity building, advice, or training in food safety.<sup>34</sup> The guidelines refer expressly to the *SPS Agreement* and provide that measures taken by states should be in conformity therewith.<sup>35</sup>

In 2006, the Office of the UN High Commissioner for Human Rights published the *Principles and Guidelines for Human Rights Approach to Poverty Reduction Strategies*, setting out a human-rights based approach to the poverty reduction. These principles emphasise the crucial role played by the right to adequate food in poverty reduction,<sup>36</sup> and note that adequate food encompasses, *inter alia*, food safety.<sup>37</sup> One of the strategies identified for realising the right to adequate food is the establishment of regulatory mechanisms ‘to ensure that the suppliers and distributors of food maintain minimum acceptable standards of health safety.’<sup>38</sup>

The right to health is reflected, among others, in Article 25(1) of the Universal Declaration of Human Rights and in Article 12 of the ICESCR.<sup>39</sup> The Committee on Economic, Social

<sup>29</sup> Economic and Social Council, *Voluntary Guidelines to Support the Progressive Realization of the Right to Adequate Food in the Context of National Food Security*, adopted by the 127th Session of the FAO General Council in November 2004, UN Doc. E/CN.4/2005/131 (United Nations Commission on Human Rights, Geneva), 28 February 2005, iii.

<sup>32</sup> *Ibid.*, para. 9.3.

<sup>33</sup> *Ibid.*, para. 9.5.

<sup>34</sup> *Ibid.*, para. 9.8.

<sup>35</sup> *Ibid.*, paras 9.3 and 9.7. In the former provision, reference is made to the need to take account of international standards in accordance with the *SPS Agreement* and in the latter the guidelines state that measures to protect consumers should be in conformity with the WTO agreements, in particular the *SPS Agreement* and *TBT Agreement*.

<sup>36</sup> Office of the United Nations High Commissioner for Human Rights, *Principles and Guidelines for the Human Rights Approach to Poverty Reduction Strategies*, HR/PUB/06/12 (United Nations, Geneva), 2006, para. 136.

<sup>37</sup> According to these principles: ‘[f]ood safety implies that food should be free from adverse substances, whether from adulteration, poor environmental hygiene or other causes.’ *Ibid.*, para. 136.

<sup>38</sup> *Ibid.*, para. 149.

<sup>39</sup> *Universal Declaration on Human Rights*, General Assembly Resolution 217A (III), UN Doc. A/810 (1948), adopted 10 December 1948; and *International Covenant on Economic, Social and Cultural Rights*, General Assembly Resolution 2200A (XXI), UN Doc. A/6316 (1966), adopted 16 December 1966, entry into force 3 January 1976. Various formulations of the right to health can also be found in, for example, Art. 24 of the *Convention on the Rights of the Child*, General Assembly Resolution A/RES/44/25, 1577 UNTS 44, adopted 20 November 1989, entry into force 2 September 1990; Art. 12 of the *Convention on the Elimination of All Forms of Discrimination against Women*, 1249 UNTS 14, adopted 18 December 1979, entry into force 3

and Cultural Rights interpreted the right to the highest attainable standard of health in a General Comment.<sup>40</sup> According to this authoritative interpretation, the right to health, is ‘an inclusive right extending not only to timely and appropriate health care but also to the underlying determinants of health, such as ... an adequate supply of safe food, nutrition and housing, ... and access to health-related education and information...’<sup>41</sup> According to the Committee, one of the core obligations arising from the right to health is ‘To ensure access to the minimum essential food which is nutritionally adequate and safe...’<sup>42</sup> The UN Special Rapporteur on the Right to Health, Paul Hunt, has undertaken further work in respect of elaborating the right to health.<sup>43</sup> In addition, authors have addressed the content of this right. Brigit Toebes identifies two aspects of the right to health: health care and the underlying preconditions for health. She argues that the latter includes adequate nutritious food, given the interrelationship between food and health. She notes that malnutrition results not only from the insufficient quantity but also from insufficient quality of food. In particular, she refers to the food-related diseases and disorders that arise from poor quality food.<sup>44</sup> Howse and Teitel note that in the current era of globalisation, threats to health in the form of diseases spread through trade in goods are significant. Mentioning

<sup>41</sup> Committee on Economic Social and Cultural Rights, *General Comment No. 14 on the Right to the Highest Attainable Standard of Health*, UN Doc. E/C.12/2000/4 (United Nations, Geneva), 11 August 2000, para. 11.

<sup>42</sup> *Ibid.*, para. 43(b).

<sup>43</sup> Paul Hunt, *Report Submitted by the Special Rapporteur on the Right of Everyone to the Enjoyment of the Highest Attainable Standard of Physical and Mental Health*, UN Doc. E/CN.4/2003/58 (United Nations Commission on Human Rights, Geneva), 13 February 2003. This Special Rapporteur was appointed by the Commission on Human Rights in 2002 for an initial three year term, extended by another three years in 2005. The work of the Commission of Human Rights was concluded by a resolution on the UN General Assembly in 2006 (Resolution 60/251 of 15 March 2006) and the Human Rights Council was created. The latter extended all the mandates of the former Commission on Human Rights, including that of the Special Rapporteur. It is interesting to note that the Special Rapporteur undertook a mission to the WTO in 2003 in order to address the impact of WTO agreements on the right to health. Due to constraints on the length of his report, he did not address all the relevant agreements, but noted that he hoped that the omitted agreements (including the *SPS Agreement*) would be subject, in future, to detailed analysis ‘through the prism of the right to health.’ Paul Hunt, *Report of the Special Rapporteur on the Right of Everyone to the Enjoyment of the Highest Attainable Standard of Physical and Mental Health. Mission to the World Trade Organization*, UN Doc. E/CN.4/2004/49/Add.1 (United Nations Commission on Human Rights, Geneva), 1 March 2004, para. 6.

<sup>44</sup> Brigit Toebes, *The Right to Health as a Human Right in International Law* (Intersentia-Hart, Groningen), 1999, 256. Toebes further provides an enlightening discussion of the content and status of the right to health in international law. A general discussion on the implications of the right to health for WTO law can be found in Mohammed Hussain, ‘World Trade Organisation and the Right to Health: An Overview’, *Indian Journal of International Law* 43 (2), 2003, 279-313.

the examples of avian flu and BSE, they stress that a fundamental aspect of the right to health is the duty of a state to protect against such risks.<sup>45</sup>

The right to health encompasses more than this, however. The Principles and Guidelines for Human Approach to Poverty Reduction Strategies published by Office of the UN High Commissioner for Human Rights in 2006 refer to the centrality of good health in poverty alleviation.<sup>46</sup> These principles set out key strategies for realising the right to health, including through promoting policies in other sectors that have a positive impact on the underlying determinants of health, especially for the poor, for example by ‘supporting agricultural policies that have positive health outcomes for the poor ... and by generally promoting their income-generating activities.’<sup>47</sup> In this regard one may think of the need for states with poor rural populations to take action to prevent the introduction and spread of pests and diseases that affect crops and livestock, and to provide agricultural support services to protect the livelihoods of small-holder farmers.

The right to development is also of relevance here.<sup>48</sup> The then Independent Expert on the Right to Development of the UN Commission on Human Rights, Arjun K. Sengupta, defined the right to development as the right to a *process* through which all human rights and fundamental freedoms can be fully realised. He has suggested a concrete programme for the realisation of the right to development, which focuses on the achievement of three basic rights: the rights to food, health and primary education.<sup>49</sup> An improvement in the realisation of the right to development requires the improvement in the realisation of at least some human rights, while the realisation of *no other human right deteriorates*.<sup>50</sup> This concept has been further developed in subsequent reports of the Independent Expert as well as in reports of the Open-Ended Working Group on the Right to Development, set up by the UN Economic and Social Council in 1998 as a follow-up mechanism with regard to the realisation of the right to development.<sup>51</sup> In his Sixth Report on the Right to Development in 2004, Sengupta dealt with the impact of globalisation on development.<sup>52</sup> While recognising the positive impact of openness to trade on economic growth in de-

<sup>48</sup> The right to development is discussed in more detail above, Part I, Section 1.1.

<sup>49</sup> Sengupta, however, notes that countries may choose to focus on other rights first.

<sup>50</sup> {Sengupta, 2000 #2606} Arjun Sengupta, *The Right to Development. Report of the Independent Expert on the Right to Development*, UN Doc. E/CN.4/2000/WG.18/CRP.1 (UN Commission on Human Rights, Geneva), 11 September 2000, para. 15-19, 25 and 64-66. In 2004, Sengupta became the Independent Expert on Human Rights and Extreme Poverty of the UN Commission on Human Rights (now the Human Rights Council)..

<sup>51</sup> See for example the Open-Ended Working Group on the Right to Development, *The Right to Development*, UN Doc. E/CN.4/2001/26 (United Nations Commission on Human Rights, Geneva), 20 March 2001.

<sup>52</sup> Arjun Sengupta, *Report of the Independent Expert* UN Doc. E/CN.4/2006/43 (UN Commission on Human Rights, Geneva), 2 March 2006.

veloping countries,<sup>53</sup> he noted the loss of autonomy in policy making that arises from economic globalisation and WTO obligations.<sup>54</sup> This loss of autonomy due to WTO obligations includes the disciplines on SPS regulation under the *SPS Agreement*. Sengupta stressed the need for ‘managed globalisation’ in order to deliver a desired process of development.<sup>55</sup> In this connection he noted that the process of globalisation ‘tends to favour those with better endowments and greater command over resources, and hence with favourable initial conditions, as against those that are at a disadvantage on these counts and are “latecomers” in the process of development.’<sup>56</sup> As will be seen in the following discussion, this is certainly the case with regard to agreements such as the *SPS Agreement* that require a certain level of regulatory capacity. Sengupta noted that the complexity of the international trade agreements requires countries to have specific capacities, knowledge bases and negotiating skills ‘to articulate and successfully address their concerns in the relevant international forums.’<sup>57</sup> Referring to the general recognition that developing countries often lack these capacities, he emphasised the need for technical and development assistance by the international community in this regard.<sup>58</sup> According to the Sengupta, international cooperation is as important as national policies in the realisation of the right to development.<sup>59</sup> Without such assistance, economic growth through trade liberalisation could come at the cost of effective regulation to ensure the rights to life, health and safe food.

As Allan Rosas has pointed out, the specific impact of the rights and obligations flowing from the right to development on the policies of states and international institutions has yet to crystallise.<sup>60</sup> He proposes that the right to development be seen as ‘an umbrella concept and programme rather than a specific human right.’<sup>61</sup> In that way, it serves as an indicator of the human rights dimension of programmes and policies related to development, ‘rather than function as a legal mechanism *per se*.’<sup>62</sup> The elaboration of the right to development makes clear that efforts to promote development through economic growth, including through trade liberalisation, must not be at the cost of other rights, such as the rights to life, adequate food and the highest attainable standard of health.

Not only the protection of human health, but also the prevention of risks to the agricultural sector is a concern from a human rights perspective. The UN Independent Expert on Human Rights and International Solidarity, Rudi Muhammad Rizki, in his 2005 report to the Human Rights Council addressed collective responsibilities of states in the context of globalisation.<sup>63</sup> In this context, Rizki noted the importance of preventing the spread of ag-

ricultural pests and diseases. He emphasised the fact that the spread of such pests and diseases not only poses a threat to human health in cases where the disease is transmissible to humans (for example avian influenza), but also threatens the livelihoods of millions of poor farmers and smallholders.<sup>64</sup> Rizki noted the fact that agricultural pests are one of the main causes of disruptions in the agricultural sector, which can lead to social unrest, food shortages and unemployment and threaten sustainable development.<sup>65</sup> The particular vulnerability of developing countries to these threats is noted.<sup>66</sup> According to Rizki, ‘a strategic and integrated approach encompassing policy and regulation for the analysis and management of risk’ covering food safety and animal and plant health is needed.<sup>67</sup> He proposes that states consider the need for ‘international solidarity in helping developing countries to develop an analytical capacity and the necessary scientific, administrative and infrastructure capacity in agriculture’ as well as strengthening agricultural support services.<sup>68</sup>

A human rights perspective clearly provides a normative framework for the discussion of SPS protection and, therefore, also of international rules that limit the ability of governments to regulate in this area. It determines the link between health and safe food and the right to life, a right that is supreme in nature. It further establishes why a government has an obligation to take steps, ‘to the maximum of its available resources’, to progressively realise the human rights to adequate food and the highest attainable standard of health, and to address threats to the agricultural sector in the form of pests and diseases. Further, this approach makes it clear that assistance from the international community in this regard is essential. The important role of trade as an engine for growth and development is tempered by the recognition, in the understanding of the right to development, that economic growth may not be achieved at the cost of other rights, such as the right to life, adequate food and the highest attainable standard of health. In addition, this normative framework is useful because it incorporates into the discussion considerations inherent to the human rights system, such as the importance of non-discrimination and equitable access to safe food, and the need to protect vulnerable groups such as poor rural farmers.

The relevance of the human rights approach as a normative framework for the following discussion in this book lies in insights it provides with regard to the human aspect of the international trade regime. It has been argued that in the context of increasing globalisation, not only states, but also multilateral institutions must act in accordance with international human rights, or at least not undermine the protection of human rights by states.<sup>69</sup>

<sup>68</sup> *Ibid.*, para. 40.

<sup>69</sup> Jean Ziegler, *Interim Report of the Special Rapporteur on the Right to Food. Note by the Secretary General, A/60/350* (UN General Assembly, Geneva), 12 September 2005, paras 35-53. Ziegler argues that the human rights, including the right to food, must be respected not only by states, but also by international organisations that affect domestic policy making, such as the WTO. He argues that the right to food, as part of customary international law, binds international organisations such as the IMF, the WTO and the World Bank. Despite the ‘member-driven’ character of the WTO, Ziegler notes that it operates through its own organs (for example the dispute settlement organs that interpret its agreements and the WTO Secretariat that conducts technical assistance projects) and should therefore be bound by international human rights. Similarly, Ernst-Ulrich Petersmann argues that the protection of human rights is not only the task of national and international human

It is no longer possible for a state or an organisation whose activities impact on development to ignore the human rights implications of its actions.<sup>70</sup> This is also true for the states and organisations that form part of the international trading system.<sup>71</sup> For this reason, while the economic growth achievements of international rules on trade liberalisation are important to promote development, they cannot come at the cost of other rights, such as the right to health and safe food. Instead, mechanisms must be found to appropriately balance these competing goals in a way that does not undermine human rights. It needs to be seen whether the *SPS Agreement* achieves such a balance.

The human rights perspective, as has been seen above, recognises that the obligations of states in respect of the rights to life, health and food include the obligation to take positive action, sometimes in the form of regulation, to protect these rights even if this restricts trade and thereby limits economic growth. However, in order to understand *why*, to fulfil their obligations under this normative framework, *regulation* is very often necessary when sanitary and phytosanitary risks are at stake, it is useful to turn to a law-and-economics analysis. This serves to elucidate the role of the *SPS Agreement* in disciplining SPS regulation.

## 1.2 Reasons for sanitary and phytosanitary regulation

Why is government regulation often necessary for protection from sanitary and phytosanitary risks? Left to their own devices, would suppliers of food and agricultural products not be spurred by market forces, namely the demand for products free from SPS risks and

---

rights law, and of specialised human rights bodies, but also of the law of global and regional organisations such as the WTO and the EU. He advocates a ‘Global Compact’ committing all international organisations to respect for human rights, rule of law, democracy and good governance in their ‘collective exercise of government powers’. Ernest-Ulrich Petersmann, ‘Time for a United Nations’ “Global Compact” For Integrating Human Rights into the Law of Worldwide Organizations: Lessons from European Integration Law for Global Integration Law’, in *Trade and Human Health and Safety*, George A. Bermann and Petros C. Mavroidis (eds.), Columbia Studies in WTO Law and Policy (Cambridge University Press, Cambridge), 2006, 271-326, 308-309. Robert Howse and Ruti Teitel, instead, take a narrower approach to the need for consistency between the rights in the ICESCR and WTO law. They focus on the notion that ‘one treaty regime should not undermine the existing effectiveness of the other.’ Robert Howse and Ruti G. Teitel, *Beyond the Divide: The Covenant on Economic, Social and Cultural Rights and the World Trade Organization*, Occasional Paper No.30 (Friedrich Ebert Stiftung, Geneva), April 2007, 9, available at: <http://library.fes.de/pdf-files/iez/global/04572.pdf>, visited 15 June 2008. However, they do leave open the possibility that in the long run it may be desirable to examine the way in which the WTO regime could be made to enhance the capacity of states to respect, protect and fulfil the rights under the ICESCR.

<sup>70</sup> Manfred Nowak notes that the new awareness of the correlation between poverty, development and human rights, as reflected in the results of the second World Conference on Human Rights and the first World Social Summit in Copenhagen on 6-12 March 1995, led the World Bank and the International Monetary Fund to introduce their ‘poverty reduction strategy papers’, which make poverty reduction and debt relief the main focus of their new and comprehensive development framework. Manfred Nowak, *Introduction to the International Human Rights Regime*, vol. 14 (Martinus Nijhoff Publishers, Leiden/Boston), 2003, 151.

<sup>71</sup> Eleanor Fox states: ‘A world trade organization of the twenty-first century must be sufficiently copious or porous to take account of the values on which it treads – or on which critical masses believe it treads. Isolation of trade from its impacts is not an appropriate option for the world.’ Eleanor M. Fox, ‘The Prospective Role of Economic and Social Human Rights in the Law of International Trade Liberalization and Economic Integration: Globalization and Human Rights: Looking out for the Welfare of the Worst Off’, *NYU Journal of International Law and Politics* 35, 2002, 201-220, 210.

consumers' willingness to pay a premium for such products, to take risk reduction measures? Similarly, would a liability regime which, ex post facto, holds suppliers responsible for harmful consequences arising from the products they supply not be sufficient to ensure that they take appropriate measures against SPS risks? Although there are several perspectives from which these questions can be answered,<sup>72</sup> it is beyond the scope of this book provide a comprehensive analysis of the various theories of risk regulation, something that has been skilfully done by others.<sup>73</sup> Instead, the discussion here will limit itself to sketching, in broad lines, one such approach in order to create the basic understanding necessary to follow the subsequent discussion. The law-and-economics approach provides a particularly enlightening explanation of the reasons for government regulation of risk, which can usefully be applied to the area of SPS risks.<sup>74</sup> This approach allows us to examine the costs and benefits of SPS regulation, which differ across development levels, and thus to understand the different regulatory choices made by countries across the development spectrum.

Seen from a law-and-economics perspective, risk regulation by governments can be regarded as a response to market failure.<sup>75</sup> Governments need to act to pursue collective goals where these goals are unlikely to be met by an unregulated market.<sup>76</sup> SPS regulation, like other types of social regulation, aims to correct two types of market failure, namely (1) inadequate information of consumers; and (2) spillover effects creating harm or benefits for individuals not involved in the relevant market transaction (known as negative and positive externalities, respectively).<sup>77</sup> One result of these market failures is that the collective goal of the protection of human, plant and animal health is not achieved if left to market forces.

---

<sup>72</sup> Ortwin Renn provides a classification of various approaches to risk regulation. He distinguishes the technical, economic, psychological, sociological and cultural perspectives on risk. He argues that policies with regard to risk regulation should not be solely based on technical and economic approaches but should include social science approaches. Ortwin Renn, 'Concepts of Risk: A Classification', in *Social Theories of Risk*, S. Krimsky and D. Golding (eds.) (Praeger, Westport), 1992, 412. While it is not necessary for purposes of this book to go into the debate on this issue, it is nevertheless important to be aware that a diversity of approaches to risk regulation exists, of which the economic approach is only one.

<sup>73</sup> For a detailed analysis of why governments regulate against risks, see Christopher Hood *et al.*, *The Government of Risk: Understanding Risk Regulation Regimes* (Oxford University Press, Oxford), 2001.

<sup>74</sup> The WTO's *World Trade Report* of 2005, which focuses on trade and standards, also relies on a law-and-economics perspective for its analysis of the impact of standards on trade and welfare. See WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, Part II, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007.

<sup>75</sup> For a comprehensive and eminently readable account of the economic theory of regulation, see Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994. Much of the discussion in this section is drawn from this source.

<sup>76</sup> *Ibid.*, 3. This is known as the public interest theory of regulation.

<sup>77</sup> The WTO's *World Trade Report* of 2005 identifies three types of market situations where government intervention would be desirable, namely imperfect information, negative externalities and network externalities. WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, 35-51, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007. The latter category deals with technical compatibility of products and is not relevant here. The other two categories are discussed further below, and additional attention is given to positive externalities. In this regard, see Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 4.

The two types of market failure mentioned above can be explained as follows. In a perfect world, consumers would have complete information regarding the SPS risks of the products on the market and would act rationally on the basis of this information. They would therefore be willing to pay more for safe products, and would sue for damages caused by unsafe products, providing an incentive for producers to invest in measures to reduce SPS risks in their products.<sup>78</sup> However, in reality, consumers are often not aware of the risks of certain products, since the safety level is not readily observable.<sup>79</sup> For example, they may not be aware that the milk they drink was produced by cows treated with the recombinant bovine somatotrophin (rBST) hormone,<sup>80</sup> or that the fruit they buy has a high level of pesticide residues.<sup>81</sup> Further, even when possessed of adequate information, consumers do not always make rational choices.<sup>82</sup> They tend to overvalue certain low-probability risks and undervalue other high-probability risks, even when they have been informed as to the actual probability of the risk occurring. For example, consumers may attach a high value<sup>83</sup> to the avoidance of the risk of cancer from aflatoxins in nuts and spices although the probability of the risk occurring has been shown to be one in a billion, whereas they may not attach much value to avoiding the much more probable risk of heart disease or obesity from eating fast food. Thus, when left to market forces, this 'probability neglect'<sup>84</sup>

<sup>78</sup> As pointed out by Kathleen Segerson, firms will supply safe products without the need for government regulation if the benefits to the firm (higher prices paid by consumers) plus the decrease in damages the firm would be liable for due to supplying unsafe products, outweigh the costs to the firm in ensuring safe products. Kathleen Segerson, 'Mandatory vs. Voluntary Approaches to Food Safety', *Agribusiness* 15 (1), 1999, 53-70.

<sup>79</sup> Lorraine Mitchell points out that consumers cannot know that food is contaminated before purchasing and consuming it. An additional complication is that, even if consumers become ill after eating the food, it is often difficult to trace the cause of the illness to a particular food product out of the various consumed. Lorraine Mitchell, 'Economic Theory and Conceptual Relationships between Food Safety and International Trade', in *International Trade and Food Safety: Economic Theory and Case Studies*, Jean C. Buzby (ed.), Agricultural Economic Report No. 828 (USDA Economic Research Service, Washington D.C.), 2003, 10-27, 12, available at: <http://ers.usda.gov/publications/aer828.pdf>, visited 4 January 2007.

<sup>80</sup> Recombinant bovine somatotropin (rBST) is a hormone produced by genetic engineering to increase milk production in cows. The hormone bovine somatotropin (BST) occurs naturally in cows, but the long term effects of rBST on human health are not yet known.

<sup>81</sup> In this respect, economists classify goods into three categories: search goods (whose quality can be determined by consumers before purchase), experience goods (whose quality is ascertained by use after purchase through consumption and use) and credence goods (whose quality is usually not ascertainable even after consumption). Food and agricultural products are typically experience goods. See the explanation of these concepts in WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, 43, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007. This report points out that liability legislation may be inadequate to spur producers to supply safe goods in cases where the impact of the product defect is difficult or impossible to compensate (e.g. severe illness or death). With regard to food products as 'experience' or 'credence' goods, see Spencer Henson, 'Consumer Perceptions of Food Safety: Survey Research in Economics and Social Psychology', in *Governing Food: Science, Safety and Trade*, Peter W.B Phillips and Robert Wolfe (eds.) (McGill-Queen's University Press, Montreal), 2001, 91-111, 101. See also Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 190.

<sup>82</sup> Economists thus accept that consumers act with 'bounded rationality'. Consumers' capacity to receive, store and process information is limited. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 41.

<sup>83</sup> Since the value of non-marketable assets, such as health, is difficult to measure, a 'willingness to pay' test has emerged, determining the value of such assets to be the sum which individuals would be willing to pay to avoid the risk to the asset if fully informed of the magnitude of the risk. *Ibid.*, 157.

<sup>84</sup> This term was coined by Cass Sunstein. See Cass R. Sunstein, 'Probability Neglect: Emotions, Worst Cases, and Law', *Yale Law Journal* 112, 2002, 61-107, 84 and 103. There is some disagreement about the appropriate

by consumers would result in a misallocation of resources to avoiding low-probability risks. These resources could be more efficiently spent to address more probable risks.

The second reason for market failure mentioned above, relates to externalities. The problem of negative externalities arises due to the fact that a particular transaction may cause harm to persons other than the parties to the transaction. For example, an exporter may supply tomatoes to supermarkets in a foreign country. However, these tomatoes may be infested with a pest that poses a threat to tomato producers in the importing country. If the exporter does not have to cover the costs incurred by producers in the importing country due to the introduction and spread of the pest, these costs will not be reflected in the export price of the tomatoes. In other words, the external costs have not been internalised by the exporter and the price does not reflect the true social cost of production.<sup>85</sup> Demand for these tomatoes is consequently artificially high in the importing country and there is a misallocation of resources to the production and importation of these tomatoes.<sup>86</sup> Private law instruments, such as liability rules, may be inadequate to correct negative externalities particularly when the harm is dispersed among a large group, is spread out over time, or is difficult to trace back to the causer of the harm.<sup>87</sup> In our example, a tomato producer in the importing country may not be aware that the pest destroying his crop was introduced by the relevant exporter of pest-infested tomatoes and could thus not sue the exporter for damages.<sup>88</sup>

Positive externalities may also lead to market failure. A third party may benefit from a producer's activity without having to pay for it.<sup>89</sup> This is particularly the case with re-

---

response to this phenomenon. See, for example, Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited 12 June 2006.

<sup>85</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 19.

<sup>86</sup> Ogus points out that, in theory, the misallocation of resources could be corrected through utility maximizing contracts with all third parties affected. In our example, the foreign tomato producers may offer to pay the tomato exporter to exterminate the pests before exporting tomatoes. If the price they are willing to pay exceeds the costs to the exporter of taking measures to exterminate the pests, an agreement will be reached. If not, no agreement will be reached, showing that the value to tomato producers of eliminating risks from pests in imported tomatoes is less than the costs of pest extermination. In either case, there is no misallocation of resources. However, Ogus notes that this theoretical solution rarely works in practice as the transaction costs of bargaining among large numbers are very high and the harmful effects for third parties are dispersed. *Ibid.*

<sup>87</sup> For example, with bulk imports of agricultural products from various producers it may be difficult to identify the particular producer that supplied the infested or contaminated product. Likewise, an unsafe food product may have passed through the hands of several firms in the processing chain and it may be difficult to determine at which point in the chain the contamination occurred in order to assign responsibility. See in this regard Lorraine Mitchell, 'Economic Theory and Conceptual Relationships between Food Safety and International Trade', in *International Trade and Food Safety: Economic Theory and Case Studies*, Jean C. Buzby (ed.), Agricultural Economic Report No. 828 (USDA Economic Research Service, Washington D.C.), 2003, 10-27, 13-14, available at: <http://ers.usda.gov/publications/aer828.pdf>, visited 4 January 2004.

<sup>88</sup> Similarly, in the area of food safety, Mitchell points out that consumers do not take into account the full social costs of their food purchases. This reduces incentives for producers to invest in ensuring that they supply safe food. For example, aside from the costs illness causes to a consumer of unsafe food, social costs also arise in the form of the use of health care resources, the lost working days for employers etc. These costs are not borne by consumers and are therefore not reflected in the price consumers are willing to pay for a food product. *Ibid.*, 12.

<sup>89</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 21.

spect to ‘public goods’,<sup>90</sup> which are commodities which benefit the public as a whole, or a group within it, and from which it is impossible to exclude a member of that group.<sup>91</sup> The health of humans, plants and animals could be regarded as an ‘impure’ public good.<sup>92</sup> While measures taken by suppliers to ensure that the products they place on the market do not pose SPS risks primarily benefit the consumers of those products, which benefit is reflected in the price of the product, they also benefit the public as a whole. For example, safe food ensures a healthy population and thus reduces losses in the form of diminished productivity and costs to the public health system from food-related illnesses. Similarly, measures to ensure pest- or disease-free plant or animal products often do not primarily benefit consumers of those products (since pests or diseases that affect plants or animals are only very rarely transmissible to humans) but rather benefit the agricultural sector as a whole and the environment, as the spread of these pests and diseases to farms and natural fauna and flora is thereby prevented. If left to market forces, the price that suppliers would obtain for their products would not reflect the public-good aspects thereof and thus the true social value of the product. A misallocation of resources would result and there would be underproduction of SPS risk-free products.<sup>93</sup>

Thus, governments need to act to correct these deficiencies in the market system in meeting collective goals. Governments may have to turn to regulatory instruments, such as the imposition of SPS measures, to address market failures. This would constitute the public-interest justification for regulation in the area of SPS protection.

Regulation may also serve distributional or ‘paternalistic’ goals.<sup>94</sup> For example, governments may need to regulate in the SPS area because not all consumers are able to pay a

---

<sup>90</sup> For an interesting discussion of the public goods nature of the WTO itself, see Joost Pauwelyn, ‘WTO Dispute Settlement: Of Sovereign Interests, Private Rights and Public Goods’, in *International Public Goods and Transfer of Technology under a Globalized Intellectual Property Regime*, Keith E. Maskus (ed.) (Cambridge University Press, Cambridge), 2005, 817-830. Pauwelyn notes that two types of public goods may come into conflict in the WTO, namely the public good of freer trade and the public goods of environmental protection, respect for human rights and other such societal objectives.

<sup>91</sup> Public goods are characterised by two qualities: non-excludability and non-rivalry in consumption. Simply put, this means that it is impossible or too expensive for a supplier to exclude those that do not pay for the benefit, and that consumption by one individual does not diminish the availability of the good. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 33; Peter Drahos, ‘The Regulation of Public Goods’, *Journal of International Economic Law* 7 (2), 2004, 321-339, 321.

<sup>92</sup> Gregory Shaffer notes that the ‘publicness’ of a good lies along a continuum so that goods may combine public and private attributes. Economists often refer to goods that do not fully meet the two criteria, but have significant public attributes, as ‘impure’ public goods. Gregory Shaffer, ‘Recognising Public Goods in WTO Dispute Settlement: Who Participates? Who Decides? The Case of TRIPS and Pharmaceutical Patent Protection’, *Journal of International Economic Law* 7 (2), 2004, 459-482, 461. Ogus illustrates impure public goods using the examples of education and training. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 34.

<sup>93</sup> Peter Drahos points out that although public goods could be supplied through voluntary arrangements, the importance of self-interest as a factor motivating individuals limits the extent to which voluntary arrangements can be relied upon to correct market failure in this regard. Peter Drahos, ‘The Regulation of Public Goods’, *Journal of International Economic Law* 7 (2), 2004, 321-339, 325.

<sup>94</sup> Regulators may take distributional considerations into account in conducting a cost-benefit analysis by giving a heavier weighting to the interests of more vulnerable groups (for example children or poor people). Due to the difficulty in choosing the appropriate weighting, Ogus notes that it is possible that distributional considerations may be left out of cost-benefit analysis but nevertheless be taken into account in making regulatory decisions as regulators may only want to adopt measures that correspond to their conceptions of distributional justice or that are politically acceptable from a distributional perspective. Anthony Ogus, *Regulation: Legal*

premium for safe food. If left to market forces these poorer consumers would be exposed to unsafe food. In addition, less-informed or uneducated consumers may be ill equipped to make choices in their own best interests regarding which products to buy. Such outcomes would be contrary to the obligation of governments, derived from international human rights law, to ensure access to safe food for all on a non-discriminatory basis. Further, a so-called ‘paternalistic’ argument<sup>95</sup> for regulation in the area of SPS risks can be made on the basis of the assertion that, in respect of health risks, scientific and regulatory experts may know better than the individual what serves the latter’s interests and should be allowed to make appropriate choices on behalf of the individual.<sup>96</sup> Behavioural economics has shown that even ‘highly-competent, well-functioning people’ make certain decision-making errors in particular situations.<sup>97</sup> This is, for instance, the case due to probability neglect in individual decision-making with regard to risks, as mentioned above.<sup>98</sup> The imposition of regulatory choices is thus justified on the grounds that the decision-making abilities of the individual are inadequate to make correct choices in the face of the complex scientific and factual circumstances that surround SPS risks.

The public-interest theory of regulation, described above, is not the only way to explain why governments regulate. Due to scepticism regarding the public-interest motivation of legislators and the prevalence of regulatory failure, an alternative theory has been posited, namely, the private-interest theory of regulation.<sup>99</sup> This theory had its origin in the notion of ‘regulatory capture’ that arose in the 70s, according to which regulators are vulnerable to capture or influence by interest groups affected by the relevant regulation.<sup>100</sup> This idea

---

*Form and Economic Theory* (Clarendon Press, Oxford), 1994, 160.

<sup>95</sup> Ogus mentions paternalism as one of the types of non-economic goals pursued by regulation in terms of public-interest theory. He calls this particular embodiment of paternalism anti-individualist, as opposed to the liberal idea of paternalism as the situation where individuals rationally delegate choices to others in areas where they realise they may make unwise choices. According to the liberal approach, regulation embodies that to which individuals would have consented if they had been able to perceive what was in their own best interests. *Ibid.*, 52.

<sup>96</sup> Ogus describes this argument in general terms. *Ibid.*, 53.

<sup>97</sup> Colin Camerer *et al.*, ‘Regulation for Conservatives: Behavioral Economics and the Case for ‘Asymmetric Paternalism’.’ *University of Pennsylvania Law Review* 151, 2003, 101-144, 104. In this article, Camerer *et al* discuss the arguments for paternalistic regulation in certain predictable situations where people’s bounded rationality results in them failing to act in their own best interests. According to the authors, this is to be distinguished from the situation where people make rational choices, accurately reflecting their true preferences, but based on considerations other than maximising their profits. In the latter case, there is no need for paternalistic regulation. The authors propose a new, more nuanced way of assessing the costs and benefits of regulatory options, in line with their idea of ‘asymmetric paternalism’. A regulation is defined as asymmetrically paternalistic by the authors ‘if it creates large benefits for those who make errors, while imposing little or no harm on those who are fully rational. Colin Camerer *et al.*, ‘Regulation for Conservatives: Behavioral Economics and the Case for ‘Asymmetric Paternalism’.’ *University of Pennsylvania Law Review* 151, 2003, 101-144, 102.

<sup>98</sup> See above, Part II, Section 1.2. Paul Slovic *et al* note that variation in the probability of a risk occurring is disregarded by individuals especially in cases where the affective meaning of the consequences of the risk is strong. An example of such a case is the risk of cancer. The authors point out that individuals’ concerns about nuclear power and exposure to very low levels of toxic chemicals do not decrease in the light of information regarding the extremely low probabilities of the feared consequences of these risks. Paul Slovic *et al.*, ‘Risk as Analysis and Risk as Feelings: Some Thoughts About Affect, Reason, Risk and Rationality’, presented at the *Workshop on Conceptualizing and Measuring Risk Perceptions* (National Cancer Institute, Washington D.C.) 13-14 February 2003, 15.

<sup>99</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 4.

<sup>100</sup> *Ibid.*, 57-58. Ogus mentions various ways in which a regulatory agency could be influenced by the regulated industry, namely where the information required by the regulator is available only from the regulated

led to the development of a general economic theory to explain how private interests affect public institutions, known as the ‘public-choice’ theory.<sup>101</sup>

According to public-choice theory, the political arena may be likened to the market, where ‘legislation is a product which is supplied by politicians in response to the demand of private interests.’<sup>102</sup> Demand is expressed by means of voting, both through the election of legislatures by the electorate and through decision making by legislatures on legislative proposals. In addition, private interests make themselves felt through pressure from interest groups (for example by lobbying of legislators) and through bureaucracies that help formulate legislative proposals.<sup>103</sup> Private interest groups, such as industries, engage in what is known as ‘rent-seeking behaviour’<sup>104</sup> in an effort to maximise profits, for example by pushing for regulation that protects them from competition.<sup>105</sup>

An example of rent-seeking behaviour is the following. Cut flower producers in a certain country may lobby for legislation requiring that imported cut flowers be subjected to fumigation treatment before importation in order to reduce the risk of importation of

---

industries, where the regulatory agency recruits its officers from the regulated industry due to lack of expertise in the subject-matter, and where the regulated industries threaten the regulator with costly and time-consuming appeals.

<sup>101</sup> *Ibid.*, 58-59. A critical overview of early literature on public choice theory is provided in Daniel A. Farber and Philip P. Frickey, ‘The Jurisprudence of Public Choice’, *Texas Law Review* 65 (5), 1987, 873-928. The authors note that until around the 70s, economists naively assumed that politicians were only interested in furthering the public interest. Later, economic models embodied a revised view of legislative behaviour, namely that legislators are motivated by self-interest (in re-election) and legislation is thus a product of the influence of special interest groups. They point out that this theory is most closely associated with George Stigler and other members of the Chicago school.

<sup>102</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 63. See also Michael G. Faure, ‘Environmental Regulation’, in *Encyclopedia of Law and Economics*. Vol. II: Civil Law and Economics, Boudewijn Bouckaert and Gerrit De Geest (eds.), vol. 2 (Edward Elgar, Cheltenham), 2000, 443-519, 472-474, available at: [www.allserv.rug.ac.be/~gdegeest/2300book.pdf](http://www.allserv.rug.ac.be/~gdegeest/2300book.pdf), visited on 25 June 2007. Although Faure discusses the private interest theory with respect to environmental regulation, many of the same observations can be made with regard to SPS regulation.

<sup>103</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 63.

<sup>104</sup> Ogus points out that ‘rent’ in this context means the difference between production cost and the revenue earned from the good produced. Competition eliminates rent whereas the protection from competition enables producers to acquire rents. Wealth is consequently transferred to them from consumers. *Ibid.*, 73. Faure notes that rent-seeking behaviour will be particularly successful in cases where the transaction costs of bringing together interested parties are relatively small and the information costs for the public to find out about the rent-seeking are relatively high. Michael G. Faure, ‘Environmental Regulation’, in *Encyclopedia of Law and Economics*. Vol. II: Civil Law and Economics, Boudewijn Bouckaert and Gerrit De Geest (eds.), vol. 2 (Edward Elgar, Cheltenham), 2000, 443-519, 473, available at: [www.allserv.rug.ac.be/~gdegeest/2300book.pdf](http://www.allserv.rug.ac.be/~gdegeest/2300book.pdf), visited on 25 June 2007.

<sup>105</sup> Kenneth Schepsle describes prevailing public choice theory’s characterisation of legislation as follows: ‘Interest groups and legislators enter into a relationship, the terms of which are determined by forces in the political marketplace. Interest groups demand specific sections of bills, and legislators supply them in exchange for various forms of political support (campaign contributions, endorsements...etc.)’ Kenneth A. Schepsle, ‘Congress Is A “They,” Not An “It”’: Legislative Intent as an Oxymoron’, *International Review of Law and Economics* 12 (2), 1992, 239-256, 240. Schepsle goes on to criticise this asymmetric focus on the demand-side of the legislative process and points out that, as a legislator who ‘supplies’ the legislation is not an individual but a group, complex factors play a role in determining legislative outcomes. He draws conclusions regarding the futility of a search for legislative intent in interpreting legislation. As this part of his discussion is not relevant for purposes of this book, it will not be looked at further here. Nevertheless, the fact that the ‘supply-side’ of the market for regulation is more complex than it appears from the discussion here should be borne in mind.

aphids (plant lice). Such a requirement may effectively eliminate competition from foreign producers if it is overly costly or results in damage to the flowers due to the treatment itself or the delay in getting the flowers onto the market. Such private interests can have a significant impact on regulation, to the extent that more general preferences expressed through the democratic process may be overridden,<sup>106</sup> leading to inefficient outcomes.<sup>107</sup>

Another form of private interest that influences regulatory outcomes in the SPS area is that of the politicians and bureaucracies<sup>108</sup> responsible for ensuring human, plant or animal health. The quest for increased power and prestige may motivate these actors to act swiftly and decisively to address risks, particularly those receiving extensive media attention. Since food safety is a politically sensitive issue and is highly valued by the electorate, it is in this area that SPS regulation may be most affected by this form of private interest. This may lead to over-regulation in the form of stricter requirements than are justified by public interest goals.<sup>109</sup>

When one examines the SPS regulations that are promulgated in various countries, it becomes clear that both public interest and public choice theory provide an explanatory basis for these regulations.<sup>110</sup> Governments are motivated by a wide range of factors in

<sup>106</sup> Charles K. Rowley *et al.*, eds., *The Political Economy of Rent Seeking* (Kluwer, Dordrecht), 1988, as referred to by Ogus in this regard. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 70.

<sup>107</sup> Ogus notes that legislation that results from democratic processes and thus reflects a broad range of economic interests is likely to be efficient in Kaldor-Hicks terms (i.e. although there may be some winners and some losers, the aggregate gains would exceed the aggregate losses so that those who gain could potentially fully compensate all the losers and still remain better off). However, if private interest groups frustrate the democratic process, their minority interests will prevail over the economic interests of the majority and the result will be Kaldor-Hicks inefficient. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 24 and 72-73. This issue is also dealt with by Daniel Farber and Philip Frickey, who note that: 'the activities of special interest groups undermine the democratic ethos. The successful functioning of a democracy requires voters, and sometimes government officials, to act in economically irrational ways. Because these behaviours are not reinforced by economic incentives, they depend on a somewhat fragile public adherence to a social code. Special interest groups create the impression that government is simply an arena of self interest and thus foster an atmosphere of cynicism that is incompatible with a healthy democracy.' Daniel A. Farber and Philip P. Frickey, 'The Jurisprudence of Public Choice', *Texas Law Review* 65 (5), 1987, 873-928, 889.

<sup>108</sup> Ogus discusses theories regarding the influence of bureaucracies on regulation. See Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 68-69.

<sup>109</sup> *Ibid.*, 191. Laura Loppacher and William Kerr term this phenomenon 'political precaution' and refer to it as an illegitimate reason for the imposition of SPS measures. They state that: '[p]olitical precaution arises when politicians are being pressured to "do something", or feel the need to be "seen to be doing something" in the face of strongly expressed concerns by members of civil society even where risks are very low or largely speculative. ... Politicians fearing an adverse voter reaction... are driven to imposing border measures even in the absence of any group seeking economic protection.' Loppacher and Kerr name as examples the EU ban on hormone treated beef, and restrictions with regard to genetically modified organisms. Laura J. Loppacher and William A. Kerr, 'The Efficacy of World Trade Organization Rules on Sanitary Barriers: Bovine Spongiform Encephalopathy in North America', *Journal of World Trade* 39 (3), 2005, 427-443, 434-435.

<sup>110</sup> Farber and Frickey criticise the view that legislation is purely a product of private interests, noting that this is unsupported by empirical evidence. Neither do they subscribe to the view that only public interest motivates legislators. Instead, they claim that: '[o]ur best picture of the political process, then, is a mixed model in which constituent interest, special interest groups and ideology all influence legislative conduct.' Daniel A. Farber and Philip P. Frickey, 'The Jurisprudence of Public Choice', *Texas Law Review* 65 (5), 1987, 873-928, 889 and 903. Faure, with respect to environmental regulation, also argues for a combination of the public interest and private interest approaches to understand the regulatory process. Michael G. Faure,

deciding whether to regulate and what form a regulation should take. Governments have to engage in a balancing process between different and possibly conflicting public goods, such as free trade and health.<sup>111</sup> In addition, they have to decide on the allocation of scarce public resources among competing regulatory goals. Further, not only the goal of ensuring the protection of health against SPS risks but also political considerations, including industry interests, play a role in regulatory decisions. One should therefore take care, in examining the reasons for SPS regulation, not to rely on easy generalisations. Instead, the economic approaches described above should be seen as useful tools, to be used with caution, to explain the forces at work in the regulatory process.

### 1.3 Nature of national sanitary and phytosanitary measures

A wide range of regulatory instruments is available to governments to address SPS risks. At one end of the spectrum are low-impact measures such as information requirements (for example mandatory labelling rules or certification of compliance with voluntary standards) and at the other end are high-impact measures such as outright bans and the requirement of prior approval before a product can be imported or marketed.<sup>112</sup> Between the two ends of the spectrum are the majority of regulatory instruments, which impose SPS requirements backed by criminal sanctions on suppliers.<sup>113</sup> For example, maximum residue levels may be laid down for harmful pesticides or veterinary drugs and fumigation or heat-treatment requirements may be imposed for agricultural products that are known to host pests of quarantine significance.

The wide range of SPS measures that may be taken can be classified in different ways. A brief look is taken below at the following three categorisations: product requirements versus process requirements; country-wide measures versus regionalised measures; and mandatory government regulations versus non-binding private sector standards.

Regulations to address SPS risks may lay down either product or process requirements. Product requirements relate to the characteristics of the product itself. Examples of product requirements are prohibitions on the presence of unauthorised additives or contaminants, maximum residue levels for veterinary drugs, pesticides or herbicides, and

‘Environmental Regulation’, in *Encyclopedia of Law and Economics. Vol. II: Civil Law and Economics*, Boudewijn Bouckaert and Gerrit De Geest (eds.), vol. 2 (Edward Elgar, Cheltenham), 2000, 443-519, 476, available at: [www.allserv.rug.ac.be/~gdegeest/2300book.pdf](http://www.allserv.rug.ac.be/~gdegeest/2300book.pdf), visited on 25 June 2007.

<sup>111</sup> In the context of a discussion on the *TRIPS Agreement*, Shaffer notes that both free trade and public health are impure public goods. Free trade has public good characteristics in that everyone benefits from free trade policies due to the resulting availability of a greater variety of products at lower prices. Similarly, everyone benefits from policies that eradicate risks to health. The fact that these public goods may conflict, complicates decision making by governments. Gregory Shaffer, ‘Recognising Public Goods in WTO Dispute Settlement: Who Participates? Who Decides? The Case of TRIPS and Pharmaceutical Patent Protection’, *Journal of International Economic Law* 7 (2), 2004, 459-482, 462-463.

<sup>112</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 5. Ogus calls these low and high intervention instruments, respectively, due to the level of state intervention required.

<sup>113</sup> *Ibid.* Ogus calls such requirements ‘standards’. However, the word ‘standards’ in this book is used to refer to voluntary SPS requirements in order to distinguish them from mandatory SPS requirements laid down in regulations. Thus, in this book the word ‘requirements’ will be used to refer to what Ogus calls ‘standards’, which covers both the mandatory and the voluntary variety.

labelling and packaging requirements directly related to SPS risks such as sell-by dates or pest-control requirements on wood packaging materials. Product requirements are relatively simple to police through border interventions,<sup>114</sup> and are therefore well suited to countries with limited regulatory and scientific infrastructure. They also facilitate compliance as the method of achieving conformity is left up to the producer or exporter. Process requirements, instead, relate to the process or production method by which the product was produced, packaged, transported, stored or marketed. They are increasingly applied in the area of food safety due to the fact that risks in food are often caused by pathogens or contaminants that can enter at various stages of the production process.<sup>115</sup> For example, rules may be laid down regarding hygiene requirements in meat and fish processing and packaging plants, refrigeration requirements during transportation of perishable foodstuffs and rules regarding the segregation of genetically-modified and conventional grain in storage facilities.<sup>116</sup> Process requirements are fairly rigid, as they regulate the production process and therefore do not allow for different methods to achieve the same level of risk reduction. Thus they do not take into account the different conditions prevailing in different countries of production.<sup>117</sup> A rigorous approach to process standards is embodied in the Hazard Analysis and Critical Control Point (HACCP) system. HACCP is a system used to ensure food safety by analysing potential hazards, identifying the points in the production process where they can be controlled and setting up process parameters and their critical limits to achieve this control, as well as follow-up procedures.<sup>118</sup> It aims at the

---

<sup>114</sup> Donna Roberts, David Orden and Tim Josling point out that product requirements set out observable or testable attributes of end products. Therefore the assessment of conformity of the product with the applicable SPS requirements is straight forward. Donna Roberts *et al.*, 'Sanitary and Phytosanitary Barriers to Agricultural Trade: Progress, Prospects and Implications for Developing Countries', in *Agriculture and the New Trade Agenda – Creating a Global Trading Environment for Development*, M.D. Ingo and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, 337.

<sup>115</sup> Roberts, Orden and Josling note that process standards have been established to be 'generally an inefficient means of achieving regulatory goals' in the area of environmental regulation, but that the unique nature of food hazards 'requires regulating production processes to avoid repeated, expensive tests of conformity with product standards'. *Ibid.*

<sup>116</sup> In its 2003 report identifying US barriers to trade and investment from the EU, the European Commission pointed to an example of a process requirement, namely the 'non-comminglement' requirement applied by the US in respect of meat products. According to this requirement, establishments exporting meat or meat products to the US may not handle meat or meat products from other countries that are not recognised as being free from diseases of concern to the US. Although the EU-US *Agreement on the Application of the Third Country Meat Directive* allows an establishment to handle both categories of meat provided a certain period of time elapses between handling each, the US has not been willing to apply this provision of the agreement. See European Commission, *Report on United States Barriers to Trade and Investment* (European Commission, Brussels), December 2003, 34, available at: [http://trade-info.cec.eu.int/doclib/docs/2003/december/tradoc\\_115383.pdf](http://trade-info.cec.eu.int/doclib/docs/2003/december/tradoc_115383.pdf), visited on 3 January 2004.

<sup>117</sup> Roberts, Orden and Josling provide the example of process standards in the beef industry that were introduced after the outbreaks of bovine spongiform encephalitis. They report that these process requirements increased costs for exporters in countries where BSE had never been detected, such as Brazil. Donna Roberts *et al.*, 'Sanitary and Phytosanitary Barriers to Agricultural Trade: Progress, Prospects and Implications for Developing Countries', in *Agriculture and the New Trade Agenda – Creating a Global Trading Environment for Development*, M.D. Ingo and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, 339.

<sup>118</sup> The HACCP method was first used by the US National Aeronautics and Space Administration (NASA) to ensure the safety of food taken into space. Food Safety Unit of the Programme of Food Safety and Food Aid, *HACCP: Introducing the Hazard Analysis and Critical Control Point System*, WHO/FSF/FOS/97.2 (World Health Organization, Geneva), 1997, 1.

prevention of the introduction of food-safety risks by setting up controls throughout the entire production process from primary producer to final consumer (commonly known as a ‘farm-to-fork’ approach to food safety), in contrast to the classic approach of relying on general hygiene requirements and the analysis of samples of the final product to identify food-safety risks. The HACCP system was adopted generally as a food-safety tool by the EC and the US in the 1980s, and its use subsequently spread to other developed countries with regard to high-risk food products that are particularly vulnerable to contamination, such as fish and seafood.<sup>119</sup> According to a report of the Commodities and Trade Division of the Food and Agriculture Organization, all developed countries except Japan now use HACCP based systems to ensure the safety of fish and fish products.<sup>120</sup> From the fisheries sector, the use of the HACCP system in several developed countries has been extended to the meat and dairy sectors, poultry and other food sectors.<sup>121</sup> Since they impose HACCP requirements also on imported products, this means that many developing countries have also had to implement HACCP systems.<sup>122</sup> The HACCP system requires a fundamental change in food production, involving responsible actors throughout the chain of production and documented by means of thorough records. The confidence of importers in the proper implementation of the HACCP system in the production of exported products depends on credible government assessment.<sup>123</sup> Therefore, it entails significant costs both for private operators and for government agencies.<sup>124</sup> Consequently, access to the markets

<sup>119</sup> The Commodities and Trade Division of the Food and Agriculture Organization explains the role of HACCP in the fishery sector as follows: ‘By the end of the 1980s many countries arrived at the conclusion that classic fish (and food) inspection based on the analysis of samples of the final product and on generic hygiene measures was not enough to provide the necessary level of protection to consumers. A preventive system called “Hazard Analysis and Critical Control Point” (HACCP) was adopted and governments started to shift their regulations to HACCP-based systems. If one word has to be chosen to explain HACCP, it is prevention.’ FAO Commodities and Trade Division, *Commodity Market Review 1999-2000* (Food and Agriculture Organization, Rome), 2000, Box 9.

<sup>120</sup> This FAO report states that: ‘[a]pproximately 65 percent of the total international fish trade is performed under HACCP-based regulations. The large exception is the Japanese market. Japan, which accounts for about 32 percent of the total fish market (demand) has no HACCP regulations yet.’ *Ibid.* From December 1997, all fish and fishery products produced in and imported to the US have been required to comply with HACCP requirements. See International Trade Centre, *Export Quality – an Introduction to HACCP*, Bulletin No. 71 (UNCTAD and WTO, December 2002, 11.

<sup>121</sup> For example, HACCP systems are included in the UK’s Food Safety Act of 1990 and its Food Hygiene Inspection Codes of Practice; Canada’s Food safety Enhancement Programme encourages the establishment of HACCP-based procedures in the agricultural and food processing sectors; the Australian Quarantine and Inspection Service (AQIS) has developed a new inspection system called the Food Hazard Control System, based on HACCP principles; the FDA revised its Food Code in 1993 to make it compatible with HACCP principles. In the US, HACCP requirements apply in the fishery sector, the low-acid canned food industry, the juice industry and the meat and poultry industry. The FDA is considering developing HACCP regulations in other areas of the food industry; the EU in Council Directive No. 93/43/EEC on Hygiene of Foodstuffs of 14 June 1993 requires that food business operators develop HACCP-based systems for food safety, and allows Member States to develop codes of practice for specific food sectors. The European Commission Decision 94/356/EC of 20 May 1994 includes a system of ‘own checks’ for the production and sale of fishery products which contains HACCP requirements. See *Ibid.*, 11-12.

<sup>122</sup> For illustrative examples of problems faced by two of the selected countries discussed in this Chapter with regard to the implementation of HACCP process requirements, see below, Part II, Sections 2.6.2.1 and 2.7.2.1.

<sup>123</sup> For example, the US requires importers to obtain HACCP plans from exporters and submit them to the FDA for verification. The EU requires that HACCP plans prepared by EU producers or by exporters into the EU must be verified by an authority designated by the EU. International Trade Centre, *Export Quality – an Introduction to HACCP*, Bulletin No. 71 (UNCTAD and WTO, December 2002, 11.

<sup>124</sup> The World Health Organization has written guidelines to help government agencies in this task. See for

of developed Members in sectors subject to HACCP requirements has been considerably reduced.<sup>125</sup>

Most SPS measures taken by governments with regard to imported products are applied to entire exporting countries. This despite the fact that many SPS risks, especially those from plant and animal pests and diseases, are not determined by national borders. On the one hand, the prevalence of pests and diseases can differ widely within a country, for example due to geographic and climatic variations within its borders. On the other, a pest or disease may be pervasive in an area that extends across national boundaries.<sup>126</sup> However, since regulatory responsibility is circumscribed by national borders, countries are often treated as single entities for purposes of SPS measures. This may be justified where the SPS regulatory authorities or infrastructure in a particular country are inadequate to monitor, contain or provide safeguards against SPS risks, or when significant differences exist in the risk management choices made at national level by different countries.<sup>127</sup> However, in many other cases, the application of country-wide SPS measures has no justification beyond administrative ease of implementation for the importing country. Nevertheless, SPS measures that distinguish between areas of high and low prevalence of pests or diseases are few and far between.

SPS regulations are usually accompanied by rules regarding conformity assessment procedures, which are control mechanisms to check compliance with the relevant requirements. These may take various forms, such as certification systems, random sampling and testing procedures and pre-shipment inspections. They may be imposed on products within the domestic market, for example requirements regarding veterinary inspections of cattle within the national territory, or on products crossing borders, either at the time of importation or exportation.<sup>128</sup> For example, customs officials in the importing country

---

example, Food Safety Unit of the Programme of Food Safety and Food Aid, *Guidance on Regulatory Assessment of HACCP. Report of a Joint FAO/WHO Consultation on the Role of Government Agencies in Assessing HACCP*, WHO/FSF/FOS/98.5 (World Health Organization and Food and Agriculture Organization, Geneva), 2-6 June 1998.

<sup>125</sup> For example, Roberts, Orden and Josling note that of the (then) 140 WTO Members, only 15 were permitted to export fresh, chilled or frozen poultry meat to the EC, only 2 to the US, only 1 to Canada, and none at all to Australia. Donna Roberts *et al.*, 'Sanitary and Phytosanitary Barriers to Agricultural Trade: Progress, Prospects and Implications for Developing Countries', in *Agriculture and the New Trade Agenda – Creating a Global Trading Environment for Development*, M.D. Ingco and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, 338.

<sup>126</sup> Loppacher and Kerr note that: '[i]n the science of animal disease control, international boundaries are artificial constructs – mere lines on a map that have no bearing on the dynamics of a disease in an animal population.' Laura J. Loppacher and William A. Kerr, 'The Efficacy of World Trade Organization Rules on Sanitary Barriers: Bovine Spongiform Encephalopathy in North America', *Journal of World Trade* 39 (3), 2005, 427-443, 433.

<sup>127</sup> Loppacher and Kerr state that: '...border measures, while sub-optimal from an animal management strategy, may provide the best line of defence when faced with an incompetent foreign regulatory regime.' Further, they note that in the absence of agreement between countries on the best risk management strategy, country-wide border measures are justified. However, examining the SPS measures imposed against Canada and the US in response to BSE, they argue that neither of these two justifications exists as Canadian and US veterinary services are well regarded worldwide, and the existence of a chapter on BSE management in the World Organisation for Animal Health's Code reflects international consensus in this area. See *Ibid.*, 436.

<sup>128</sup> One example of conformity assessment at the time of exportation is the requirement by the importing country of export certificates. Horton notes that export certificates serve to show that a supplier meets certain requirements and are based on the expectation that the certifying body (either a government authority or officially

may be required to detain imported fruit shipments for purposes of point-of-entry sampling and testing for levels of pesticide residues, or certification requirements may be laid down according to which competent officials in the exporting country may verify that hygiene requirements were met by the abattoirs where the exported meat was processed.

Aside from mandatory SPS regulations, laid down by central or local governmental bodies or by agencies authorised by them,<sup>129</sup> SPS requirements may be set by non-governmental bodies without regulatory authority.<sup>130</sup> Such requirements (commonly known as ‘private sector standards’) have no binding force. Nevertheless, they may have an important impact on suppliers of food and agricultural products. For example, certain SPS standards for food products may be set by supermarket chains as a precondition for the acceptability of products from suppliers.<sup>131</sup> Importers in certain sectors may establish Codes of Practice setting out standards which exporters must comply with before the importers will purchase their products.<sup>132</sup> Industry organisations may also self-regulate in

---

recognised non-governmental organisation) will conduct inspections or tests to substantiate the accuracy of the information on the certificate. Linda R. Horton, ‘Food from Developing Countries: Steps to Improve Compliance’, *Food and Drug Law Journal* 53, 1998, 139-171, 147.

<sup>129</sup> Note that while certain agencies established by governments to develop standards (e.g. national bureaus of standards, which are in some countries public bodies) may establish non-mandatory standards, when these standards relate to food safety issues or to animal or plant health, governments typically take these standards up in national legislation and make them mandatory.

<sup>130</sup> Another source of non-binding standards are those set at *international* level by the relevant international standard-setting bodies. Such standards form the subject of Chapter 3 of Part II. Here, in Chapter 2, the discussion is limited to *national* SPS regulations and standards.

<sup>131</sup> For general discussions on the effect of supermarket standards on developing country suppliers of food and agricultural products see Julio A. Berdegué *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Supermarkets and Quality and Safety Standards for Produce in Latin America* (International Food Policy Research Institute, Washington D.C.), September 2003, available at: [http://www.ifpri.org/2020/focus/focus10/focus10\\_12.pdf](http://www.ifpri.org/2020/focus/focus10/focus10_12.pdf), visited on 23 January 2008; Food and Agriculture Organization, *Rise of Supermarkets across Africa Threatens Small Farmers: Opportunities and Challenges in a Changing Market* (FAO, Rome), 8 October 2003, available at: <http://www.fao.org/english/newsroom/news/2003/23060-en.html>, visited on 23 January 2008. Catherine Dolan and John Humphrey see the relationship between large retailers in developed countries and suppliers in developing countries as a form of ‘governance’, where retailers exercise close control over the supply chain. They provide an interesting analysis of the consequences of the control exercised by UK supermarkets over trade in fresh vegetables for the inclusion or exclusion of different types of producers and exporters as well as for the long-term prospects for the fresh vegetables industry in Kenya and Zimbabwe. Catherine Dolan and John Humphrey, *Governance and Trade in Fresh Vegetables: The Impact of UK Supermarkets on the African Horticulture Industry* (World Bank, Washington DC), available at: [http://www.colorado.edu/geography/class\\_homepages/geog\\_3662\\_s06/uk.pdf](http://www.colorado.edu/geography/class_homepages/geog_3662_s06/uk.pdf), visited on 23 January 2008. A 2003 study reports that consolidation in the EU retail sector has increased the power of large retail chains over developing country suppliers. Such retailers prefer to deal with large production units in developing countries, rather than small producers, because the former can more easily undertake compliance measures. This results in the exclusion of small farmers or producers from export markets. See Technical Centre for Agricultural and Rural Cooperation ACP-EU, *Study of the Consequences of the Application of Sanitary and Phytosanitary (SPS) Measures on ACP Countries* (CTA, Wageningen), May 2003, 14-15, available at: <http://www.tcd.ie/iiis/policycoherence/index.php/iiis/content/download/371/1446/file/CTA%20Impact%20of%20SPS%20Measures%20on%20ACP%20countries.pdf>, visited on 23 January 2008. The 2005 Human Development Report of the UNDP also identifies, as one of the main problems affecting developing country trade, the role of supermarkets as ‘the main gatekeeper to developed country markets for agricultural produce.’ The same problems mentioned above are highlighted in this report. See United Nations Development Programme, *Human Development Report 2005. International Cooperation at a Crossroads: Aid, Trade and Security in an Unequal World* (United Nations, New York), 2005, 142-143, available at: [http://hdr.undp.org/en/media/hdr05\\_complete.pdf](http://hdr.undp.org/en/media/hdr05_complete.pdf), visited on 2 January 2008.

<sup>132</sup> There has been a proliferation of Codes of Practice (COPs) in various sectors in the EU, setting standards for

order to create consumer confidence in the products they supply and avoid the need for government regulation.<sup>133</sup> Voluntary safety-labelling schemes may be used by suppliers to provide a competitive advantage to their products.<sup>134</sup> In addition, systems of certification of compliance with voluntary safety standards administered by national standards bodies, whether public or private, serve to provide guarantees to buyers of certain safety levels, beyond those required by regulations.

Until the 1990s, voluntary requirements and labelling and certification schemes administered by national (public or private) standard-setting bodies were typically limited to technical and quality standards, rather than health standards. When voluntary standards set by national standards bureaus or actors in the private sector dealt with safety issues, governments often converted the standard into a regulatory requirement and took over responsibility for ensuring compliance. Voluntary, primarily private sector, SPS standards did exist in a few circumstances, particularly in countries where government regulation was inadequate to provide the level of food-safety that some consumers demanded. This was, and still is, the case in some developing countries with weak SPS regulatory regimes where private sector standards fill the gap by providing consumers with the choice to buy safer products at a price premium.<sup>135</sup> Distributional problems arise, however, as safety

---

all aspects of the food chain (such as growing, processing, transportation etc.). Although these COPs are not mandatory, importing firms will only source their imports from exporters that meet the standards of the Code of Practice. The best known COP is the EUREPGAP, which is the Good Agricultural Practices standard of the European Retailer Produce Working Group. EUREP also has a standard for Good Warehouse Practice for fruit and vegetables. Note that in September 2007, EUREPGAP was rebranded as the Global Partnership for Good Agricultural Practice (GLOBALGAP). Similarly, the British Retail Consortium has a global standard on food safety and quality, a standard for food packaging materials, and for non-genetically modified food ingredients. The Grain and Feed Association (GAFTA) has a COP for shipping and transport of grain, and over 80 standard contract forms for trade verification, examination and quality control in transit. The European Spice Association sets minimum standards for imported spices and herbs, dealing with EU requirements regarding pesticide residues, aflatoxins, trace metals and microbiological contamination. Technical Centre for Agricultural and Rural Cooperation ACP-EU, *Study of the Consequences of the Application of Sanitary and Phytosanitary (SPS) Measures on ACP Countries* (CTA, Wageningen), May 2003, 13, available at: <http://www.tcd.ie/iis/policycoherence/index.php/iis/content/download/371/1446/file/CTA%20Impact%20of%20SPS%20Measures%20on%20ACP%20countries.pdf>, visited on 23 January 2008.

<sup>133</sup> An interesting example of self-regulation by an industry group in order to build consumer confidence, is that of the 'stewardship' programmes developed and implemented by the Crop Protection Institute of Canada, a trade association representing the 'life-science' industry (i.e. the industry producing pesticides and genetically modified crops). Lorne H. Hepworth, 'Industry Stewardship as a Response to Food Safety Concerns', in *Governing Food: Science, Safety and Trade*, Peter W.B Phillips and Robert Wolfe (eds.) (McGill-Queen's University Press, Montreal), 2001, 63-74.

<sup>134</sup> Berdegué *et al.* mention the example of a safety-labelling scheme in use in Guatemala. The Agricultural and Environmental Integral Protection Program, a public-private entity with experience in meeting export standards, has created the 'Safety Certification Seal' to address local and regional certification requirements for safety labelling. Although this is a voluntary system, some producers that supply the largest supermarket chain in Guatemala are upgrading their production systems in line with this new programme. Julio A. Berdegué *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Supermarkets and Quality and Safety Standards for Produce in Latin America* (International Food Policy Research Institute, Washington D.C.), September 2003, available at: [http://www.ifpri.org/2020/focus/focus10/focus10\\_12.pdf](http://www.ifpri.org/2020/focus/focus10/focus10_12.pdf), visited on 23 January 2008.

<sup>135</sup> Elizabeth Farina *et al* discuss the example of the Argentinean milk industry where by the early 2000s, consensus was growing that public sanitary regulations were inadequate, being weaker than both international standards and the private standards of domestic processors. As a result, private industry has taken over the development of milk standards and monitoring their implementation. Elizabeth M.M.Q. Farina *et al.*, 'Private and Public Milk Standards in Argentina and Brazil', *Food Policy* 30, 2005, 302 - 315, 312-313. Similarly,

becomes the prerogative of wealthier and more educated consumers who can take advantage of the choice offered by these schemes.

The 1990s saw the introduction of private sector food-safety standards also in certain developed countries, where the concern of some consumers with food-safety risks is such that they are willing to pay more for the assurance of very high safety standards, exceeding regulatory requirements. Examples of the latter are low residue levels for pesticides and labelling and certification schemes for organic fruit and vegetables. Since their introduction in the 1990s, there has been an explosion in the number and variety of private standards in the area of food safety and good agricultural practice, for example, the Euro-Retailer Produce Working Group's Good Agricultural Practice Standards (EUREPGAP) and the Global Food Safety Initiative (GFSI).<sup>136</sup> These standards have proliferated in response to factors such as the decline in consumer confidence in national SPS regulation following food-safety scares; the increased liability of retailers for the safety of the products they sell; the growing use of food safety and quality claims by retailers for firm and product differentiation;<sup>137</sup> and growing consumer demands for food characteristics not typically addressed in regulations, such as organic production or biotech-free food.<sup>138</sup>

While, due to the impetus created by these factors, private sector standards are rapidly increasing in the area of food safety, the same cannot be said for the areas of animal and

---

Berdegúe *et al.*, on the basis of case studies in Costa Rica, Guatemala, El Salvador, Honduras and Nicaragua report that the rise of the use of private standards by Latin American supermarket chains occurs in the context of the near-absence of public food safety standards and the lack of effective implementation of such standards where they do exist. Julio A. Berdegúe *et al.*, 'Central America Supermarkets' Private Standards of Quality and Safety in Procurement of Fresh Fruits and Vegetables', *Food Policy* 30, 2005, 254 - 269, 154. In this regard, see also Spencer Henson and Thomas Reardon, 'Private Agri-Food Standards: Implications for Food Policy and the Agri-Food System', *Food Policy* 30, 2005, 241 - 253, 245.

<sup>136</sup> Digby Gascoine *et al.*, *Private Voluntary Standards within the WTO Multilateral Framework* (United Kingdom Department for International Development, London), March 2006, Annex 1, 40. The GFSI was created in 2000 at the request of Chief Executive Officers of food industries to promote continuous improvement in food safety and improve cost efficiency in the food supply chain. It also promotes convergence of food safety standards through benchmarking of private sector food standards. Committee on Sanitary and Phytosanitary Measures, *Report of the STDF Information Session on Private Standards (26 June 2008)*. Note by the Secretariat, G/SPS/50, circulated on 24 July 2008, para. 7.

<sup>137</sup> Henson explains that retail firms use private sector standards in an attempt to differentiate their products from those of other retailers to protect and increase their market share. Leading firms, to avoid the supermarket 'price wars', compete instead in the area of safety and quality standards. Henson states: 'private standards have arguably become a critical element of strategies to differentiate products and firms, that requires the consistent supply of food safety and quality attributes supported by branding and certification.' Spencer Henson, 'The Role of Public and Private Standards in Regulating International Food Markets', presented at the *IATRC Summer Symposium on Food Regulation and Trade: Institutional Framework, Concepts of Analysis and Empirical Evidence*, Bonn) May 28-30 2006, 13, available at: [http://www.ilr1.uni-bonn.de/iatrc/iatrc\\_program/Session%204/Henson.pdf](http://www.ilr1.uni-bonn.de/iatrc/iatrc_program/Session%204/Henson.pdf), visited on 27 May 2008.

<sup>138</sup> A 2005 World Bank study identifies these and other factors and refers to them as the 'carrot' and the 'stick' behind greater involvement of economic actors in the food supply chain. It notes that some of these private responses are stimulated by regulatory measures while others fill gaps in governance responding to consumer concerns. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 26, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited on 27 June 2008. See also Digby Gascoine *et al.*, *Private Voluntary Standards within the WTO Multilateral Framework* (United Kingdom Department for International Development, London), March 2006, Annex 1, 40.

plant health.<sup>139</sup> As the driving force for stricter animal or plant health requirements comes from domestic producers, rather than consumers, there is no price premium to be gained by private action in this area. Neither do the same liability issues arise for importers of products that may introduce risks for plant or animal health. Regulatory requirements thus continue to predominate in these areas as there is no incentive for private sector action.<sup>140</sup>

While private sector standards have the potential to stimulate improvements in production practices and provide a competitive advantage to producers that comply with these standards,<sup>141</sup> they can also be extremely burdensome for suppliers in less developed countries, and in particular for small-scale producers.<sup>142</sup> Despite the fact that compliance with private sector standards is voluntary, these standards have an important impact on international trade. This is due to the fact that compliance with particular private sector standards is required by large supermarket chains which control the greatest share of the market,<sup>143</sup> making the standards *de facto* mandatory for producers, especially of high-value food and agricultural products, wishing to export their products.<sup>144</sup> Thus, the distinction between mandatory SPS requirements laid down in regulations and voluntary SPS standards demanded by private parties is losing much of its relevance for economic operators in the food and agricultural industries.

<sup>139</sup> Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, 31207 (World Bank, Washington D.C.), 2005, 4-5 and 30, available at: [http://www-wds.worldbank.org/external/default/WDSContentServer/WDSP/IB/2005/01/25/000160016\\_20050125093841/Rendered/PDF/31207.pdf](http://www-wds.worldbank.org/external/default/WDSContentServer/WDSP/IB/2005/01/25/000160016_20050125093841/Rendered/PDF/31207.pdf), visited on 18 May 2008.

<sup>140</sup> An exception to this is, of course, where human health risks may flow from pests or diseases of plants or animals. In such cases, consumer demands and liability regimes do create incentives for stricter private standards. An example of this is the refusal of retailers to stock British beef in the aftermath of the BSE crisis.

<sup>141</sup> Jaffee and Masakure provide an example of the successful, though costly, adjustment of the leading suppliers in the Kenyan vegetable industry to meet stringent private sector standards. The impetus for this strategic reorientation of the relevant industry is ascribed to the realisation of Kenyan suppliers of the need to gain a competitive advantage in the face of increased competition from North and West African suppliers. The large investments undertaken in implementing a range of food safety and quality systems to achieve compliance with private sector standards have resulted in the firms involved gaining the status of preferred suppliers to European retailers. Steve Jaffee and Oliver Masakure, 'Strategic Use of Private Standards to Enhance International Competitiveness: Vegetable Exports from Kenya and Elsewhere', *Food Policy* 30, 2005, 316 - 333.

<sup>142</sup> Digby Gascoine *et al.*, *Private Voluntary Standards within the WTO Multilateral Framework* (United Kingdom Department for International Development, London), March 2006, Executive Summary para. 2. With regard to the exclusionary effect of private sector standards on small holders in OECD countries, see Linda Fulponi, *Final Report on Private Standards and the Shaping of the Agro-Food System*, AGR/CA/APM(2006)9/FINAL (Organisation for Economic Co-operation and Development, Paris), 31 July 2006, para. 76, available at: [http://www.oilis.oecd.org/olis/2006doc.nsf/43bb6130e5e86e5fc12569fa005d004c/4e3a2945ffec37eec12571bc00590ce3/\\$FILE/JT03212398.PDF](http://www.oilis.oecd.org/olis/2006doc.nsf/43bb6130e5e86e5fc12569fa005d004c/4e3a2945ffec37eec12571bc00590ce3/$FILE/JT03212398.PDF), visited on 27 May 2008.

<sup>143</sup> The high level of concentration within food retailing, so that in many industrialised countries five firms control over 50% of the food retail market, is the main driving factor for buyer-driven supply chains. These firms are often multinationals, and source their products globally, making use of vertical integration or exclusive contracts with preferred suppliers. Spencer Henson, 'The Role of Public and Private Standards in Regulating International Food Markets', presented at the *IATRC Summer Symposium on Food Regulation and Trade: Institutional Framework, Concepts of Analysis and Empirical Evidence*, (Bonn) May 28-30 2006, 10-11, available at: [http://www.ilr1.uni-bonn.de/iatrc/iatrc\\_program/Session%204/Henson.pdf](http://www.ilr1.uni-bonn.de/iatrc/iatrc_program/Session%204/Henson.pdf), visited on 27 May 2008. This situation raises concerns from a competition perspective, as such firms are able to impose their requirements on suppliers which are obliged to comply or will be excluded from the market.

<sup>144</sup> Digby Gascoine *et al.*, *Private Voluntary Standards within the WTO Multilateral Framework* (United Kingdom Department for International Development, London), March 2006, Annex 1, 40.

However, the distinction retains its importance when one bears in mind the role of the *SPS Agreement* in disciplining government, not private, action.<sup>145</sup> As the *SPS Agreement* was negotiated before private sector standards became widespread in the SPS area, it was not intended to extend to these standards. Instead, the *SPS Agreement* is based on the traditional view of the role of government regulation in the area of sanitary and phytosanitary risks, as discussed above. In this view, self-regulation, voluntary schemes and purchaser requirements can be regarded as market instruments used by economic operators to ensure that the supply of risk-free food and agricultural products meets the demand for these products in a way that maximises profits.<sup>146</sup> This is normal, and acceptable, market behaviour. However, due to market failure, operators are not induced to take into account the interests of all affected actors.<sup>147</sup> The unregulated market therefore fails to provide an optimal level of safe food and agricultural products or leads to distributional problems.<sup>148</sup> Therefore, governments step in to oblige operators on the market to act in a way that will result in an optimal safety level, equally accessible to all. The vulnerability of government regulators to private interest pressures, however, may result in sub-optimal or protectionist regulations. It is therefore government intervention in the market that needs to be disciplined. The *SPS Agreement* was negotiated to meet this need.<sup>149</sup>

---

<sup>145</sup> As discussed below, Part III, Section 2.2, the *SPS Agreement* does not apply directly to SPS requirements laid down by private operators, although Article 13 does require Members to take reasonable measures to ensure that non-governmental entities in their territories comply with the relevant rules of the *SPS Agreement*. Note that at the SPS Committee meeting of 29-30 June 2005 the issue of private sector standards was raised for the first time by St. Vincent and the Grenadines (supported by Jamaica, Peru, Ecuador and Argentina), who complained about EUREPGAP standards that are stricter than government standards. Some Members called for a clarification of Article 13 of the *SPS Agreement*. The discussion on whether private standards should be caught by the disciplines of the *SPS Agreement* is still ongoing in the SPS Committee. See further on this point below, Part III, Section 2.2, regarding the scope of application of the *SPS Agreement*.

<sup>146</sup> Although the profit motive is not the basis for voluntary standards set by non-governmental organisations, these standards usually reflect concerns such as fair trade, environmental protection and animal welfare, rather than concerns with SPS risks, and therefore fall outside the scope of this discussion.

<sup>147</sup> As noted in the WTO's *World Trade Report* of 2005: 'The distinction between public and private standards will depend not so much on whether standards are public law, but rather on whose interests are taken into account when a standard is set and enforced. In the case of public standards, it is assumed that the interests of all actors in an economy are taken into account when the standard is set. This implies that the effect on the profits of all companies and the wellbeing of all consumers has been considered. Externalities like those related to the environment or to public health are also factored into the decision-making of the government. Private standards, on the other hand, are assumed to take account only of the profits of firms. Depending on the situation, individual firms will decide if they are willing to cooperate in standard-setting activities. Private standards may implicitly take consumer interests into account, but only if these interests correspond to their own interests.' WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, 32-33, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007.

<sup>148</sup> This issue is discussed above, Part II, Section 1.2.

<sup>149</sup> Whether this approach is still appropriate in the light of the proliferation of private sector standards in the SPS area is open to question. This issue is discussed in the analysis of the personal scope of application of the *SPS Agreement*, below, Part III, Section 2.2.

## 1.4 Costs and benefits of sanitary and phytosanitary regulation

Government regulations to address SPS risks entail both costs and benefits. However, these costs and benefits vary across countries depending on their level of development.<sup>150</sup> The relative significance of SPS risks (and thus the benefit of risk regulation) for a country differs according to several factors, including the average income level, the population's diet, the importance of the food and agricultural sector for the economy, the level of industrialisation, climatic conditions, availability of health services and the prevalence of other threats to health. Similarly, the costs of regulation vary depending on the existence and adequacy of regulatory infrastructure, the capacity of producers, processors and retailers to meet regulatory requirements and climatic conditions, among other factors. These divergences in costs and benefits are reflected in the differences in regulatory decisions governments make with regard to similar health risks. Although many governments do not undertake explicit cost/benefit analysis as part of the regulatory decision-making process, these considerations often underlie the different tradeoffs governments at different levels of development make between various priorities.

### 1.4.1 Benefits of SPS regulation

The benefits from SPS regulation seem obvious. Improved food safety leads to better health of the domestic population and improved quality of life. Better health, in turn, has economic benefits due to increased productivity<sup>151</sup> and a diminished burden on public health services and the welfare system. However, in countries with poor sanitation and impure drinking water, the significance of these benefits may be decreased. In such countries, national health priorities may focus on the provision of basic services such as clean water, sanitation and primary health care. Reduction in factors causing adverse health effects in the long-term may be less important in a country where life expectancy is low.

The regulation of SPS risks not only has the benefit of reducing health risks but also has the benefit of increasing the confidence of consumers and (domestic and foreign) retailers in the safety of the food and agricultural products subject to the regulation. The more effective and rigorous the regulatory system, the more consumers and retailers will trust in the system and be willing to buy the products which meet regulatory requirements and are thus allowed on the market.<sup>152</sup> In the absence of regulation, the distrust of consum-

---

<sup>150</sup> Wilson and Otsuki emphasise the increasing importance of developing new ways to measure the costs and benefits of changes in SPS requirements so that public policy decisions can be informed by empirical evidence regarding the trade effect of different SPS requirements. John S. Wilson and Tsunehiro Otsuki, *Food Safety in Food Security and Food Trade: Balancing Risk Reduction and Benefits from Trade in Setting Standards* (International Food Policy Research Institute, Washington D.C.), September 2003.

<sup>151</sup> A 2005 UNCTAD report notes that effective implementation of consumer protection policies has an important impact on development. In particular, it notes that poor quality food not only leads to health risks for consumers but also to 'reduced and more variable (and, therefore, less reliable) labour force participation through sickness.' Philippe Brusick *et al.*, *Strengthening Institutions and Capacities in the Area of Competition and Consumer Protection Policies in Latin America: Cases of Bolivia, Costa Rica, El Salvador, Honduras, Guatemala, Nicaragua and Peru*, UNCTAD/DITC/CPL/2004/3 (United Nations Conference on Trade and Development, New York and Geneva), 2005, xv, available at: [http://www.unctad.org/en/docs/ditc-clp20043\\_en.pdf](http://www.unctad.org/en/docs/ditc-clp20043_en.pdf), visited on 7 June 2008.

<sup>152</sup> The COMESA Secretariat, in its report on market access constraints on the EU market notes that SPS measures may facilitate and enhance trade by increasing consumer confidence in imported products by reducing

ers, retailers and importing companies may lead to avoidance of certain products and distortions in consumption patterns.<sup>153</sup> Consumers and retailers are often willing to pay a premium for products certified as being of a particular safety level by an authority they trust. For example, consumers may be prepared to buy higher-priced fruit that is certified as organically grown by a reputable body. Similarly, a foreign retailer wishing to provide food free from genetic modification may source its fresh produce from countries that have a good regulatory system in place to ensure segregation of genetically-modified and conventional crops. In this way, SPS regulation may improve profits and export potential.

These benefits may, however, be more significant in countries where affluent consumers are able to pay higher prices for high-quality products (or countries able to export to such affluent markets) than in countries where such products would be financially out-of-reach for the majority of consumers. In addition, in countries with large urban populations, where the chain of supply from the farm to the table is longer and more complex, and food products are highly processed, consumers rely greatly on regulatory systems to ensure the safety of food products as they are not in a position to be able to identify and control risks themselves. In contrast, in many countries with large rural populations, consumers buy fresh food products directly from farmers or local fresh produce markets and are able to exercise more direct control due to their experience with the product and their familiarity with their regular suppliers. This reduces the benefits of SPS regulation.

Further, it has been argued that the benefits of increased confidence or reduced fear due to SPS regulation exist even when fears are ungrounded.<sup>154</sup> If fear of exposure to risk is viewed as a real social cost in the sense that it diminishes consumer welfare, then the 'reduction of even a baseless fear is a social good'.<sup>155</sup> Consumers may be willing to pay to reduce fears, even if those fears are irrational or out of proportion to the probability of a risk occurring. Often, government action in the form of informing or educating the public is not effective in eliminating groundless fears.<sup>156</sup> In such cases, SPS regulation may

---

risks of unsafe food. COMESA Secretariat, *Market Access Constraints* (Common Market for Southern Africa, Lusaka), 2003, para. 51, available at: [www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en](http://www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en), visited on 10 January 2008.

<sup>153</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 8, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006. Chang gives the example that European consumers who have concerns regarding eating hormone-treated beef may avoid eating beef altogether in the absence of regulation dealing with this risk. Although a ban on hormone-treated beef entails costs for consumers, these costs may be smaller than the costs from distortions in consumption patterns that would result from consumer anxieties in the absence of regulation.

<sup>154</sup> Robert Howse argues that: 'the utility from regulation comes not only from the reduced likelihood of an event that one disvalues, but also from the psychological security that results from one's belief about the protection one is receiving.' Robert Howse, 'Democracy, Science, and Free Trade: Risk Regulation on Trial at the World Trade Organization', *Michigan Law Review* 98, 2000, 2329-2357, 2350.

<sup>155</sup> Cass R. Sunstein, 'Probability Neglect: Emotions, Worst Cases, and Law', *Yale Law Journal* 112, 2002, 61-107, 104. Sunstein points out that there are enormous ripple effects associated with fear, as widespread fear leads to a host of additional problems, for example making people reluctant to engage in certain activities.

<sup>156</sup> Howard Chang claims that 'there may be little reason to believe that efforts to explain risk would be as effective in reducing fear as a regulatory response would be.' Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 11, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006.

create social benefits in the form of fear reduction.<sup>157</sup> How highly fear reduction with regard to SPS risks is valued in a particular country depends on many factors, including the risk-averseness of a particular society, the relative importance of SPS risks as compared to other health risks and the scarcity of resources available to pay for such risk reduction. Thus these benefits may be greater in affluent countries than in countries at lower levels of development.

Regulations laying down information requirements have the benefit of correcting market failures that arise due to information asymmetries between suppliers and purchasers.<sup>158</sup> Examples of this type of regulation are the requirements that products containing chemical additives be labelled as such, or that the presence of known allergens, such as nuts, in processed foods be clearly indicated on the label. Such regulation should eliminate the losses that arise when demand for a product is artificially high due to a lack of information regarding the risks on that product, leading to a misallocation of resources towards supplying larger quantities of that product than are efficient. However, the ability of consumers to read and understand information provided depends on their literacy, level of education and awareness of the health effects of the labelled ingredients. Such regulations may not create much benefit in countries where the level of education is low or consumer awareness of risks is lacking.<sup>159</sup>

Regulations to prevent the introduction and spread of plant and animal pests and diseases create benefits in the form of a healthier agricultural industry. Additional production costs for farmers in the form of veterinary services and herbicide and pesticide outlay are minimised and losses resulting from reductions in herds and harvest outputs due to pests or diseases are avoided if the regulatory systems in place are effective in addressing SPS risks. Farmers may also be able to access markets for higher quality crops and animal products. In addition, the export potential of the plant or animal products may increase due to their greater acceptability on foreign markets. Once again, the benefits of these regulations depend on the prevailing animal and plant health status in the national territory and the existence of demand for high-quality products at higher prices. Where droughts, poor soil conditions, inadequate animal feed and harsh climatic conditions are significant factors affecting animal and plant health, SPS regulations may bring limited benefits.

It appears, therefore, that while there are many benefits to be reaped from regulations to protect against SPS risks, the magnitude of these benefits is dependent on factors relating to the initial conditions in the relevant country, which in turn is linked to its level of development.

---

<sup>157</sup> Chang argues that it is important to distinguish between fears that have an objective source and fears that are artificially generated in this regard. Some fears are generated by publicity and media sensationalism and promoted by private interests that would benefit from regulation. To regulate in such cases would provide an incentive to private interest groups to generate fears to trigger regulation. Regulation could also lend credibility to baseless fears and sustain them, whereas they might otherwise have dissipated with time. *Ibid.*, 19-24.

<sup>158</sup> Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 152.

<sup>159</sup> Ogus notes that 'information regulation tends to discriminate against those with poor educational attainment'. *Ibid.*, 153.

### 1.4.2 Costs of SPS regulation

SPS regulations also entail costs. These costs may be borne by domestic private producers and processors, by the domestic public sector, or by foreign producers or governments with export interests in the domestic market.

In the first place, SPS regulations lead to compliance costs. Compliance costs are those additional costs necessarily incurred in order to meet an SPS requirement, beyond the costs that would have been incurred in the absence of the SPS requirement.<sup>160</sup> Economic operators in the *private* sector bear many of these compliance costs. The costs for producers of complying with the requirements laid down in SPS regulations may be high. For example, farmers may have to invest in better pest-control systems, modern harvesting equipment, segregated storage bins, etc. There may also be significant costs for processors, for example in achieving better sanitary levels in processing plants, training staff with regard to hygiene and cleanliness, investing in refrigeration facilities and implementing new risk management systems such as HACCP.<sup>161</sup> Aside from these compliance costs that often entail substantial investments, recurring compliance costs also exist in the form of higher production costs flowing from the SPS requirements.<sup>162</sup>

The impact of these compliance costs varies greatly depending on the size of the affected enterprise or economic operator and the availability of supporting infrastructure. Small-scale enterprises are less able to absorb the costs of adjustment to SPS requirements than are large-scale enterprises whose costs are reduced by economies of scale. In addition, small-scale producers often lack access to credit and have large fixed costs. As farmers are often unable to influence the price of their products and can therefore not pass on additional costs to the buyer, their ability to bear the additional costs is determinative of their survival on the market.<sup>163</sup> Particularly in countries at lower levels of development

---

<sup>160</sup> Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 67, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited on 27 June 2008.

<sup>161</sup> For a brief discussion of the HACCP system, see above, Part II, Section 1.3.

<sup>162</sup> The abovementioned World Bank report emphasises the distinction between recurring and non-recurring costs and notes that there may be significant economies of scale for non-recurring costs, high recurring costs can reduce competitiveness by increasing the production cost per unit. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 68, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited on 27 June 2008.

<sup>163</sup> For example, a case study in Latin America has shown that supermarkets there do not pay a premium for good quality produce but set a price and buy the produce that meets their safety/quality requirements at that price. Thus the producer is responsible for meeting the requirements and bears the costs for this, without being able to pass them on to the supermarkets. This results in changes to the structure of production in the food and agricultural sector. In Latin America the vast majority of fresh fruit and vegetables bought by supermarkets are produced by medium to large enterprises who can afford the additional costs. Small-scale enterprises are thus pushed out of the market. Julio A. Berdegué *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Supermarkets and Quality and Safety Standards for Produce in Latin America* (International Food Policy Research Institute, Washington D.C.), September 2003, available at: [http://www.ifpri.org/2020/focus/focus10/focus10\\_12.pdf](http://www.ifpri.org/2020/focus/focus10/focus10_12.pdf), visited on 23 January 2008.

where agricultural production is often largely in the hands of smallholders, these compliance costs may have a significant impact on small-scale enterprises and may put them out of business.<sup>164</sup>

The costs of SPS regulation for producers and suppliers of food and agricultural products relate not only to compliance with the requirements set in the relevant regulations, but also to being able to *demonstrate* such compliance. This necessitates the existence of an infrastructure for monitoring, testing and certification of compliance. The authority assessing and certifying conformity must be recognised and trusted. In developed countries where such infrastructure exists on public level and enjoys the confidence of both domestic and foreign buyers, producers bear little cost in respect of demonstrating compliance with SPS requirements. In countries with less-developed SPS systems, however, this infrastructure is often lacking, or its ability to ensure compliance is not trusted. This means that producers and suppliers in such countries may face rejection of their products both by domestic buyers and, more often, on foreign markets, not due to the fact that they are unsafe, but rather because compliance with SPS requirements cannot be reliably proven.<sup>165</sup> Private systems of conformity assessment and certification are very costly and difficult to implement.<sup>166</sup> Particularly with respect to foreign markets, recognition of the competence of such private certification bodies is hard to achieve.

An additional, but related, cost of SPS regulation for producers or suppliers is what could be termed ‘non-compliance’ costs. This refers to the costs resulting from the rejection of products that do not meet the applicable SPS requirements. Sometimes such products are impounded and destroyed by the relevant authorities, resulting in complete loss to the economic operators. In other cases they may be released to the relevant operator who may divert the products to another market where SPS requirements are less strict. This most often means that a reduction in price on the alternative market must be accepted and, in

---

<sup>164</sup> This point was made by the COMESA Secretariat in its report on market access barriers in the EU. COMESA Secretariat, *Market Access Constraints* (Common Market for Southern Africa, Lusaka), 2003, para. 52, available at: [www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en](http://www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en), visited on 10 January 2008.

<sup>165</sup> The COMESA Secretariat notes that Eastern and Southern African countries: ‘face difficulties in entering the EU food market not necessarily because their products are unsafe but often because the ESA country lacks the monitoring, testing and certification infrastructure that would make it possible for them to demonstrate compliance with import requirements.’ It gives the example of the EU rules with regard to import of live animals or animal products, which require that the competent national authority demonstrate that it has a competent management structure, is independent of outside pressures, has sufficient resources and staff, conducts training programmes, has enforcement powers, has properly sourced laboratory services, maintains effective import controls, has an effective detection and notification system for animal diseases, and applies appropriate food safety controls. Import approval will not be considered if any of these requirements is not met. *Ibid.*, para. 53.

<sup>166</sup> Such private certification is more often found with respect to quality requirements than with respect to safety requirements and occurs mainly within large multinational food enterprises that source their products in developing countries for sale on developed country markets. However, private food-safety certification schemes do exist, one example of which is the third-party certification of food safety used by a major food supplier in Guatemala, Honduras and Nicaragua, as reported in Julio A. Berdegué *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Supermarkets and Quality and Safety Standards for Produce in Latin America* (International Food Policy Research Institute, Washington D.C.), September 2003, available at: [http://www.ifpri.org/2020/focus/focus10/focus10\\_12.pdf](http://www.ifpri.org/2020/focus/focus10/focus10_12.pdf), visited on 23 January 2008.

the case of perishables, that additional losses are incurred from spoilage due to the delay in getting the products onto a market.

The extent to which a country has a well-functioning administration also affects the level of costs from SPS regulation. In countries where administrative procedures for the implementation and enforcement of SPS regulations are untransparent, inappropriate or inadequate or where bureaucratic corruption is rife, SPS regulation may create additional costs for producers. A recent UNCTAD report has noted that these costs can take the form of 'bureaucratic harassment of the public sector and a more uncertain business climate' and thus counteract the positive effects of SPS regulation on development.<sup>167</sup>

Aside from costs to private enterprises in the food and agricultural sector, *public* costs are generated by SPS regulation. The enactment, implementation and enforcement of domestic SPS regulations, and the determination and certification of compliance with foreign SPS requirements, by regulatory agencies and government departments entail public expenditure. For example, scientifically trained and technically skilled officials are needed to identify SPS risks and draft appropriate regulations to address such risks. Trained staff is required to undertake inspections of processing plants, storage facilities and products and to conduct sampling and testing activities to monitor compliance with (domestic and foreign) SPS requirements and administer certification schemes. Public infrastructure is also necessary to enforce SPS regulations; for example, well-equipped laboratories staffed by trained personnel are required for testing for chemical residues and microbiological contamination; and quarantine facilities are necessary at entry points to contain infested imports and prevent the entry of pests. In countries with a large tax base and sufficient public revenue, these costs may be easier to bear and therefore these countries often have well-established and effectively functioning SPS regimes in place. The enactment and enforcement of new SPS regulations and the determination of compliance with new foreign SPS requirements consequently do not entail significant additional costs.<sup>168</sup> Developed countries also tend to prioritise SPS issues as an area of government spending. In many developing countries, however, scarce public resources may be directed towards more pressing social needs which reflect the development priorities of the relevant country. As a result, the necessary public infrastructure and expertise to deal with SPS risks is weak or lacking. This means that the enactment and enforcement of SPS

---

<sup>167</sup> Philippe Brusick *et al.*, *Strengthening Institutions and Capacities in the Area of Competition and Consumer Protection Policies in Latin America: Cases of Bolivia, Costa Rica, El Salvador, Honduras, Guatemala, Nicaragua and Peru*, UNCTAD/DITC/CPL/2004/3 (United Nations Conference on Trade and Development, New York and Geneva), 2005, xv, available at: [http://www.unctad.org/en/docs/ditclp20043\\_en.pdf](http://www.unctad.org/en/docs/ditclp20043_en.pdf), visited on 14 September 2006. This report deals with consumer protection in general, including with regard to food-safety issues.

<sup>168</sup> As referred to above, a World Bank study notes that recurring and non-recurring costs should be distinguished. Non-recurring costs (such as upgrading SPS infrastructure and implementing new risk management systems) entail one-off or time-limited investments. Recurring investments (such as the costs of regular surveillance and testing) instead, are on-going. Poverty Reduction & Economic Management Trade Unit and Agriculture and Rural Development Department, *Food Safety and Agricultural Health Standards: Challenges and Opportunities for Developing Country Exports*, Report no. 31207 (World Bank, Washington D.C.), 10 January 2005, 68, available at: [http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards\\_challenges\\_synthesisreport.pdf](http://siteresources.worldbank.org/INTRANETTRADE/Resources/Topics/Standards/standards_challenges_synthesisreport.pdf), visited on 27 June 2008. Here it is argued that where the non-recurring public costs of setting up an effective SPS regime have already been borne by the relevant country, the additional costs of maintaining and adapting that system will most often be relatively small.

regulations, and ensuring compliance with foreign SPS requirements, in such countries will require substantial investments.

Indirect economic and social costs may also arise from SPS regulation.<sup>169</sup> To the extent that regulation may serve to lend credibility to baseless or disproportionate fears of health risks, it may impose social costs *ex post*, in the form of distortions in behaviour and consumer demands that the needless regulation remain in place.<sup>170</sup> Without such regulation, it is likely that many groundless fears, particularly those that are created artificially by publicity and media attention, may dissipate with time and increased familiarity with the product.<sup>171</sup> Also, regulation may indirectly generate *ex ante* costs in the form of incentives for special interest groups that stand to benefit from the relevant regulation, to generate public fears in order to induce regulation.<sup>172</sup>

In addition, if SPS regulation results from pressure from interest groups, for example from an industry that stands to gain from the regulation through protection from competition it would otherwise have faced, it gives rise to costs in the form of welfare loss due to the elimination of competition. The industry gains rents as they can charge higher prices than they could in the presence of competition.<sup>173</sup> Thus wealth is transferred from consumers to the industry.<sup>174</sup>

---

<sup>169</sup> Ogus notes that indirect costs are: ‘the generally unintended, and sometimes perverse, consequences of regulation.’ However, he points out in footnote that these costs ‘may, of course, be intended by those who benefit from them!’ Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 155 and note 124.

<sup>170</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 21, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006. Chang notes that this is especially the case if the relevant regulations prevent consumers from gaining experience with the supposedly risky product. This point is also made by Sunstein, who notes that ‘[i]f government attempts to reduce fear by regulating the activity that produces it, it may well intensify that very fear, simply by suggesting that the activity is worth regulating.’ He points to the example of a labelling requirement for genetically modified food, which may suggest a danger that (arguably) does not exist. Cass R. Sunstein, ‘Probability Neglect: Emotions, Worst Cases, and Law’, *Yale Law Journal* 112, 2002, 61-107, 104.

<sup>171</sup> Sunstein notes that: ‘[s]ometimes the fear that accompanies probability neglect diminishes over time, as experience moves the activity or process from the cognitive category of “unsafe” to “safe”. A regulatory approach might prevent this process (salutary when the risk is really low) from occurring.’ Cass R. Sunstein, ‘Probability Neglect: Emotions, Worst Cases, and Law’, *Yale Law Journal* 112, 2002, 61-107, 104-105.

<sup>172</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 22, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited 12 June 2006. For example, with regard to the regulatory response to consumer fears following the BSE outbreak, Loppacher and Kerr note that ‘most regretfully, certain groups with vested interests have actively worked to fuel those fears for their own benefit. Politicians have recognised this consumer fear and want to ensure that they are seen as doing something to protect their citizens.’ Laura J. Loppacher and William A. Kerr, ‘The Efficacy of World Trade Organization Rules on Sanitary Barriers: Bovine Spongiform Encephalopathy in North America’, *Journal of World Trade* 39 (3), 2005, 427-443, 429.

<sup>173</sup> For an explanation of ‘rents’, see note 104 above.

<sup>174</sup> Ogus notes that: ‘such wealth transfer can be condemned on *distributional* grounds’ but that there are also narrower *economic* grounds to condemn rent-seeking behaviour, namely ‘the waste engendered by devoting resources to capturing the wealth transfers, an activity which from society’s point of view, is entirely unproductive.’ Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 73.

Other indirect costs may arise from SPS regulation. For example, SPS regulations laying down requirements regarding processes and production methods may stifle innovation.<sup>175</sup> These costs are often difficult to quantify and to trace back to the regulatory action. Nevertheless, in some cases they may be quite substantial.

### 1.4.3 Cost/benefit analysis

As has been mentioned above, SPS regulation aims to address the failure of the market to achieve the public goal of health protection, due to problems of lack of information and externalities. However, as we have seen, regulation brings not only benefits but may entail substantial costs. Thus, in order to ensure that SPS regulation is welfare enhancing and leads to the most efficient allocation of resources, regulators should determine whether the benefits of the proposed regulation exceed its costs.

In economic terms, the Kaldor-Hicks criterion is the most appropriate to test the allocative efficiency of regulation.<sup>176</sup> According to this test, a policy is efficient if the aggregate gains there from exceed the aggregate losses, so that those who stand to gain from the policy could, theoretically, compensate the losers.<sup>177</sup> It is this test that forms the conceptual base for standard cost-benefit analysis of regulation.<sup>178</sup>

Ideally, according to the law-and-economics approach, each country would undertake such a cost/benefit analysis prior to taking a decision on whether to regulate in a particular situation, and if so, what level of protection to secure and what SPS measure to adopt to achieve this level of protection. However, this is very often not the case. Frequently, regulators lack the necessary information to undertake adequate cost/benefit analyses in order to determine the most welfare-enhancing regulatory outcomes.<sup>179</sup> In many cases the relevant information is very costly or difficult to obtain. In addition, the value of certain costs and benefits may be very difficult to quantify.<sup>180</sup> The uncertainty that commonly exists with regard to the effects of regulation aggravates this situation.<sup>181</sup>

<sup>175</sup> Ogus calls this type of requirement a 'specification standard' and notes that as a specification standard prescribes inputs in the production process and prohibits other inputs, it 'induces technological rigidity, since it inhibits firms from innovating in general, and from developing other, cheaper means of meeting regulatory targets in particular.' *Ibid.*, 169.

<sup>176</sup> The Pareto test of efficiency requires that at least one individual gains and no-one loses by the action. SPS regulation will almost never be Pareto-efficient as some individuals will unavoidably bear the costs of such regulation and thus be 'losers'. *Ibid.*, 24.

<sup>177</sup> Ogus notes, however, that this test does not require that the winners actually compensate the losers. *Ibid.*, 24-25.

<sup>178</sup> This point is made by Ogus. *Ibid.*, 25.

<sup>179</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 23, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006.

<sup>180</sup> According to Ogus, the benefits of regulation are more difficult to quantify than the costs. He attributes this to four reasons. First, the many benefits of regulation are diffuse and removed in time and space from the regulated activity. Second, establishing causality between the regulation and the benefit may be difficult. Third, often the benefits are non-marketed assets (such as life and health) which are difficult to convert to units of currency. Fourth, benefits may arise over long periods of time, necessitating the use of a discounting method to establish current value. Anthony Ogus, *Regulation: Legal Form and Economic Theory* (Clarendon Press, Oxford), 1994, 156.

<sup>181</sup> One alternative to cost-benefit analysis, in response to the difficulties of obtaining the necessary information

In addition, private-interest influence means that government regulation may not always reflect the optimal or most efficient balance between costs and benefits. Instead, certain pressure groups such as domestic industry may be the beneficiaries of regulatory interventions, leading to sub-optimal results and thus regulatory failure.<sup>182</sup> This is particularly the case when the competitors prejudiced by the regulation are foreign businesses, as they have insufficient influence with the regulating government to counteract the pressure from domestic interest groups.<sup>183</sup> Thus, the danger exists that regulators may undervalue the costs of regulation for foreign competitors.<sup>184</sup> The resulting regulations may therefore serve as protectionist tools for the benefit of domestic industry.<sup>185</sup> Another form of private-interest influence, as discussed above, is that of politicians and bureaucracies responsible for SPS regulation. Their wish to be seen to respond decisively to health risks may mean that those risks that are receiving most media attention are overvalued.

A mechanism is necessary to prevent such inefficient outcomes and to establish disciplines on governments' regulatory actions. The difficulty of conducting accurate cost/benefit analyses of regulatory initiatives means that this type of evaluation is not used to discipline government action in the area of SPS risks. Increasingly, countries have turned to science as the basis on which to establish such disciplines and use it as the touchstone against which SPS regulations can be judged.<sup>186</sup> Chang argues that science serves as a 'proxy' for the circumstances justifying regulation. As it may be too costly or otherwise impossible to gather all the relevant information on the costs and benefits of regulation, science can be used as an indicator or a 'proxy' for the variables that would ideally be

---

that is described by Ogus is that of 'cost-effectiveness analysis'. According to this second-best approach, a policy-maker may first establish a goal (for example a 10% reduction in the risk of microbiological contamination of meat) and the regulator must formulate requirements so as to achieve that goal at the lowest possible cost. Alternatively, the policy-maker may specify the cost (for example a budgetary limit of US\$500 000) and the regulator must then formulate requirements so as to maximise the benefits from the use of those resources. *Ibid.*, 161.

<sup>182</sup> Ogus points out that when regulation results from democratic processes it broadly reflects the range of economic interests in society and there is 'a good chance that it will be Kaldor-Hicks efficient, the aggregate gains from the measure exceeding the aggregate losses.' However, if the democratic process is frustrated by private interest groups, 'concentrated, minority economic interests prevail over the more widespread, majority economic interests; and the Kaldor-Hicks test of efficiency is not satisfied'. *Ibid.*, 72-73.

<sup>183</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 25, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006.

<sup>184</sup> Joanne Scott refers to Robert Keohane in this regard. Joanne Scott, *European Regulation of GMOs: Thinking About 'Judicial Review' in the WTO*, Jean Monnet Working Paper 04/04 (Jean Monnet Program, New York), 2004, 13, available at: [www.jeanmonnetprogram.org/papers/04/040401.pdf](http://www.jeanmonnetprogram.org/papers/04/040401.pdf), visited on 24 November 2007. Keohane argues that since the impact of regulation extends beyond the domestic jurisdiction, a problem of 'external accountability' arises (i.e. accountability of the decision-making body to the people outside its jurisdiction who are affected by its decisions). Keohane sees the WTO as promoting external accountability through its transparency requirements and possibilities for sanctions on the decision-maker. Robert Keohane, 'Global Governance and Democratic Accountability', in *Taming Globalization: Frontiers of Governance*, David Held and Mathias Koenig-Archibugi (ed.) (Polity Press, Cambridge), 2003, 130-159, 150-151.

<sup>185</sup> Howse argues that: 'especially with respect to trade regulations, 'democratic' outcomes typically reflect capture of the regulatory process by concentrated interests'. Robert Howse, 'Democracy, Science, and Free Trade: Risk Regulation on Trial at the World Trade Organization', *Michigan Law Review* 98, 2000, 2329-2357, 2333.

<sup>186</sup> Howse believes that 'hand-tying of the political process by international rules, or by an apolitical authority such as 'science,' actually may enhance domestic welfare.' *Ibid.*

considered. The use of a simple proxy is less costly and results in regulatory outcomes that are more predictable.<sup>187</sup> It is useful to examine, therefore, the use of science in the national regulatory process. This will assist in the understanding of the science-based disciplines on national SPS regulation contained in the *SPS Agreement*, discussed in Part III of this book.

### 1.5 Role of scientific analysis in national SPS regulation

National health regulation is normally purported to be based on scientific findings. Without such basis, regulatory measures would be subject to criticism at national level. In fact, it has been argued that science is used ‘as a screening device to rationalise priorities in risk regulation and, in particular, to ensure that government resources and authority are directed toward substantial risks as opposed to small or trivial ones.’<sup>188</sup>

Regulations gain authoritative validity through recourse to scientific justifications. This has been termed the ‘meta-legal’ authority of science.<sup>189</sup> Since the early 1970s, in developed countries national legislation governing the enactment of regulations by agencies began explicitly to set scientific justification requirements against which the validity of these regulations can be tested. Scientific committees were created to provide the input into the regulatory process necessary for rational decision making. Currently, scientific assessments of risks to human, animal or plant life or health determine areas in which regulatory action is necessary, and science is also used to evaluate the efficacy of the various possible measures in order to design an appropriate regulation.<sup>190</sup> Thus, it is clear that at national level, particularly in developed countries, science plays an important role in the regulatory process.

However, that is not the whole story. In practice, regulatory design is more than just a scientific discipline. Public health measures also reflect social policy choices. One must bear in mind that regulators do not operate in a vacuum. Instead, regulations are drafted in a particular economic, social and political context. They reflect societal values and preferences regarding acceptable levels of risk, economic judgements regarding the feasibility of alternative SPS measures and their costs to society when compared to the benefits to be achieved by the regulation concerned, political pressures brought to bear upon regulators by powerful lobby groups and other such non-scientific factors. As a result, disparate regulatory measures are taken across national boundaries even where the scientific rationale

---

<sup>187</sup> Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 24-25, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited on 12 June 2006.

<sup>189</sup> Christian Joerges, ‘Scientific Expertise in Social Regulation and the European Court of Justice: Legal Frameworks for Denationalized Governance Structures’, in *Integrating Scientific Expertise into Regulatory Decision-Making: National Traditions and European Innovations*, Christian Joerges, et al. (eds.) (Nomos, Baden-Baden), 1997, 295-323, 320.

<sup>190</sup> Jeffery Atik, ‘Symposium - Institutions for International Economic Integration: Science and International Regulatory Convergence’, *Journal of International Law and Business* 17, 1997, 736-758, 736.

for the measures is the same. Science does inform the process, but is not decisive in determining the regulatory outcome.

To reflect this, a conceptual distinction has been drawn between three principal aspects of the regulatory process: risk assessment, risk management and risk communication. Together, these three aspects form what is known as risk analysis. *Risk assessment* is the scientific process of evaluating a risk, i.e. identifying the hazard or harm at issue, establishing the probability that the harm will materialise and determining the magnitude of such harm.<sup>191</sup> *Risk management* is the process of evaluating the available options with regard to the levels of protection from risk and the measures that can be applied to achieve these levels of protection, and choosing among these options.<sup>192</sup> This is a policy decision-making process and involves not only a consideration of scientific evidence but also the making of value judgements based on political, social and economic considerations. *Risk communication* is the interactive exchange of information concerning risks, risk-related factors and risk perceptions among all interested parties (such as risk assessors, risk managers, consumers and industry). The idea behind drawing this distinction is to identify and delimit the aspects of the regulatory process that are subject to non-science influences.

A simplified illustration of this three-tier process would be the following, using the example of the contaminant acrylamide which is inadvertently produced by certain types of cooking of food at high temperatures (generally above 120°C) and is *inter alia* found in foods (such as crisps, cookies and coffee) produced in commercial processing plants. Due to concerns regarding the carcinogenic potential of acrylamide (the hazard), the Joint FAO/WHO Expert Committee on Food Additives (JECFA) reviewed all available scientific data on toxicity and intake levels of acrylamide.<sup>193</sup> JECFA used a risk assessment approach known as the Margin of Exposure (MOE).<sup>194</sup> It came to the conclusion that the MOE for acrylamide is 300 for the general population and 75 for high consumers (compared to MOEs of 25 000 and 20 000 for polycyclic aromatic hydrocarbons and ethyl carbonate respectively, both also shown to cause cancer in animal studies). This risk assessment therefore indicates a human health concern. The risk assessment results were communicated to national food safety authorities by the International Food Safety Authorities Network.

It is conceivable that country A, on the basis of this risk assessment and its own policy considerations (such as the high demands for health protection by citizens), decides to opt for a conservative level of protection. To achieve this level of protection it may impose a regulation prohibiting the marketing and importation of products such as crisps, cookies and coffee that have concentrations of acrylamide above a certain level (for example, 2 parts per billion). These are risk management decisions by national regulatory

---

Walker, 'Keeping the WTO from Becoming The "World Trans-Science Organization": Scientific Uncertainty, Science Policy, and Factfinding in the Growth Hormones Dispute', *Cornell International Law Journal* 31, 1998, 251-320, 263-267 for an in-depth discussion of the main elements of a risk assessment.

<sup>192</sup> *Ibid.*

<sup>193</sup> International Food Safety Authorities Network, *Acrylamide in Food Is a Potential Health Hazard*, INFOSAN Information Note No. 2/2005 (FAO and WHO, Geneva), 1 March 2005, available at: [http://www.who.int/foodsafety/fs\\_management/en/No\\_02\\_Acrylamide\\_Mar05\\_en.pdf](http://www.who.int/foodsafety/fs_management/en/No_02_Acrylamide_Mar05_en.pdf), visited 27 June 2008.

<sup>194</sup> The MOE is calculated by dividing the toxicity estimate from animal experiments by the estimated intake from food. Therefore, the lower the MOE the greater the public health concern. *Ibid.*, 2.

authorities. Country B may have different priorities (such as promoting the development of its emerging processed food sector) and, after considering the same JECFA risk assessment, may instead decide to choose a less-strict level of protection. It may therefore merely encourage food industries to develop new food preparation methodologies that significantly reduce the concentration of acrylamide in food, while not obliging them to meet specific requirements regarding acrylamide levels in products. Both these options are the outcome of risk-management decisions based on different value judgments and policy considerations.

During this whole process, information would be exchanged between risk assessors, risk managers, consumers and industry regarding risk and risk-perception. For example, in country A, a consumer group that is particularly concerned with children's health, could lobby the regulating agency to take strict measures to prevent harm to children who are typically large consumers of crisps and cookies. In country B, the food industry that would bear high costs if maximum acrylamide levels were imposed, could apply contrary pressure on its own regulators to allow the industry to develop acrylamide-reducing processing methods in its own time. The relevant regulator in each country would later explain the basis of its risk management decision to the public at large. All these information exchanges are part of the risk communication aspect of risk analysis.

The usefulness of the risk assessment/risk management/risk communication distinction lies in its identification of the limits of the role of science as part of the national regulatory process. Whereas previously regulatory agencies were seen as engaged in purely scientific decision-making, involving no discretion and thus free from political influence, and their decisions were thus not subject to democratic control, today suspicion of the actions of regulators and their claims of scientific expertise dominates the regulatory process. This has led to a transformation in agency decision-making processes, based on new requirements of openness, transparency, public participation and judicial review, in order to take account of the political aspects inherent in the regulatory process.<sup>195</sup> Part of this transformation has been, particularly in developed countries, the formal separation of the bodies charged with risk assessment and those charged with risk management functions and the improvement of transparency in the risk communication process.

However, this separation should not create the impression that risk assessment is a purely objective, scientific process. Even in the risk assessment part of the regulatory process, the reliance on the neutrality of science should be approached with caution. The traditionally uncritical view taken of science by the law is no longer generally accepted. Starting in the 1950s, a new understanding of the limitations of science has gradually replaced the initial authoritative view of its claims to objective validity. There is currently a more critical understanding of scientific processes, and general recognition of the fact that science is not absolute but is characterised by gaps in knowledge and uncertainties.<sup>196</sup> This

---

<sup>195</sup> Martin Shapiro, 'The Frontiers of Science Doctrine: American Experiences with the Judicial Control of Science-Based Decision-Making', in *Integrating Scientific Expertise into Regulatory Decision-Making: National Traditions and European Innovations*, Christian Joerges, et al. (eds.) (Nomos, Baden-Baden), 1997, 325-342, 326. Shapiro provides an interesting discussion of the changes in the perception of science in the US and how this affects the evaluation of regulations.

<sup>196</sup> Walker identifies three main categories of uncertainty in risk assessment, namely measurement uncertainty, uncertainty associated with the use of scientific models and gaps in data. Vern R. Walker, 'Keeping the

is particularly so in the field of health and the environment, due to the complexity of the human body and the ecology.<sup>197</sup> Further, the exponential growth in scientific knowledge has made it clear that science is inherently evolving and what is regarded as valid today may be substantially disproved tomorrow. Scientists deal with these realities by making use of basic assumptions, models, rules of thumb and extrapolations of conclusions from empirical data to similar areas for which insufficient data is available.<sup>198</sup> The choice of assumptions and models used to fill gaps in scientific knowledge involves subjective judgement which is based on the values<sup>199</sup> and the dominant paradigms and ideologies of the scientific community of which the scientist is part.<sup>200</sup> These discretionary elements of the risk assessment process are known as ‘science policy’ and are widely recognised in scientific discourse.<sup>201</sup> It is thus often the case that more than one scientifically valid conclusion can be drawn from the same data.<sup>202</sup> This is commonly known as the problem

WTO from Becoming The “World Trans-Science Organization”: Scientific Uncertainty, Science Policy, and Factfinding in the Growth Hormones Dispute’, *Cornell International Law Journal* 31, 1998, 251-320, 258.

<sup>197</sup> Atik states: ‘In general, the science which underlies regulation, including SPS regulation, is science applied to immense complexity. The human body, the ecology of a particular locale and the interplay of social factors are all enormously complex systems, about which strong scientific assertion breaks down. Heuristics (rules-of-thumb) replace direct observation and synthesis in guiding the formation of scientific consensus and introduce the possibility of multiple outcomes.’ Jeffery Atik, ‘Symposium - Institutions for International Economic Integration: Science and International Regulatory Convergence’, *Journal of International Law and Business* 17, 1997, 736-758, 747-748. Stark notes that while risk assessment was first developed by the insurance industry to determine life expectancies, it has developed into a highly sophisticated technique for establishing risks from chemicals in food and the environment. However, it is much less developed when it comes to assessing biological hazards, such as risks of the spread of exotic insect species. John D. Stark, ‘An Overview of Risk Assessment’, in *Incorporating Science, Economics, and Sociology in Developing Sanitary and Phytosanitary Standards in International Trade: Proceedings of a Conference*, National Research Council Board on Agriculture and Natural Resources (ed.) (National Academy Press, Washington D.C.), 2000, 51-64, available at: [www.nap.edu/openbook/0309070902/html/199.html](http://www.nap.edu/openbook/0309070902/html/199.html), visited on 25 June 2007.

(McGill-Queen’s University Press, Montreal), 2001, 13-23. The tools used to infer risks from data that is incomplete are termed ‘inference options’ and provide flexibility in the risk assessment process. Doaa Abdel Motaal, ‘Is the World Trade Organization Anti-Precaution?’ *Journal of World Trade* 39 (3), 2005, 483-501, 495.

<sup>199</sup> The fact that science incorporates cultural and social biases is demonstrated by the disparate scientific consensuses that exist across countries. Jeffery Atik, ‘Symposium - Institutions for International Economic Integration: Science and International Regulatory Convergence’, *Journal of International Law and Business* 17, 1997, 736-758, 739 and note 711.

<sup>200</sup> For an enlightening discussion of the cultural theory of risk analysis, which posits that the principles inherent in a particular institution or organisation determines how risks are perceived, defined and managed, see Steve Rayner, ‘Cultural Theory and Risk Analysis’, in *Social Theories of Risk*, S. Krimsky and D. Golding (eds.) (Praeger, Westport), 1992, 412.

<sup>201</sup> Vern Walker notes that science policies are the guidance followed by risk assessors in their choices on how to proceed when they are faced with specific types of scientific uncertainty. Vern R. Walker, ‘The Myth of Science as A “Neutral Arbiter” For Triggering Precautions’, *International & Comparative Law Quarterly* 26, 2003, 197-228, 211-216; Vern R. Walker, ‘Keeping the WTO from Becoming The “World Trans-Science Organization”’: Scientific Uncertainty, Science Policy, and Factfinding in the Growth Hormones Dispute’, *Cornell International Law Journal* 31, 1998, 251-320, 304.

<sup>202</sup> Harry Otway refers to a comparison of ten studies regarding risks to people living in proximity to liquefied natural gas terminals carried out in Germany, the UK, The Netherlands and the US. Although the technical facilities in the studies were alike, the risks established by these studies varied over a factor of 100 million, due to the assumptions and methods used by the analysts in making their quantitative assessments. Harry

of ‘duelling science’.<sup>203</sup> It is accordingly crucial to recognise that an element of subjectivity is present in most risk assessments. Aside from the uncertainty arising from these problems of insufficient evidence, measurement error, imperfect models and subjective evaluation, which Rosie Cooney and Andrew Lang refer to as ‘epistemic uncertainty’, in areas involving complex systems, there is also what these authors call ‘ontological uncertainty’.<sup>204</sup> This type of uncertainty is a result of the variability and unpredictability of the system under analysis.<sup>205</sup> Unlike epistemic uncertainty, ontological uncertainty is inherent and persistent – it cannot be eliminated or reduced by additional research.<sup>206</sup> It requires new approaches to risk management that take into account unpredictability and are responsive to systems-wide effects and interactions.<sup>207</sup>

This situation is further complicated by the effect of research funding on scientific results. Since science can be used strategically to benefit certain political or economic interests due to its influence on public action, there is competition for dominance of the scientific process.<sup>208</sup> Actors seek to promote the ‘vision of the world’ most suited to their interests.<sup>209</sup> This is often achieved through the provision of funding to particular areas of scientific research, which has the effect of directing the enquiry towards the thesis

---

Otway, ‘Public Wisdom, Expert Flexibility: Toward a Contextual Theory of Risk’, in *Social Theories of Risk*, S. Krimsky and D. Golding (eds.) (Praeger, Westport), 1992, 412.

<sup>203</sup> Carolyn Raffensperger and Joel Tickner note that: ‘[a] typical risk assessment relies on at least 50 different assumptions about exposure, dose-response, and relationships between humans and animals. The modelling of uncertainty also depends on assumptions. Two risk assessments conducted on the same problem can vary widely in results.’ Carolyn Raffensperger and Joel Tickner, ‘To Foresee and to Forestall’, in *Protecting Public Health and the Environment: Implementing the Precautionary Principle*, Carolyn Raffensperger and Joel Tickner (eds.) (Island Press, Washington D.C.), 1999, 1-12, 2.

<sup>204</sup> Rosie Cooney and Andrew T.F. Lang, ‘Taking Uncertainty Seriously: Adaptive Governance and International Trade’, *European Journal of International Law* 18 (3), 2007, 523-551, 529-530.

<sup>205</sup> *Ibid.*, 530.

<sup>206</sup> *Ibid.*

<sup>207</sup> In this respect, Cooney and Lang refer to the approach called ‘post-normal science’. *Ibid.* See further Silvio O. Funtowicz and Jerome R. Ravetz, ‘Science for the Post-Normal Age’, *Futures* 25 (7), 1993, 739-755; Silvio O. Funtowicz and Jerome R. Ravetz, ‘Three Types of Risk Assessment and the Emergence of Post-Normal Science’, in *Social Theories of Risk*, S. Krimsky and D. Golding (eds.) (Praeger, Westport), 1992, 412. These authors argue that a new conception of science is emerging to address prevailing circumstances where traditional scientific methodologies are ineffective. These are circumstances of high levels of uncertainty or high ‘decision stakes’ (referring to the costs, benefits and value commitments involved in the issue through various stakeholders). In such situations, the traditional methods of science of managing uncertainties automatically and leaving values unspoken, is inappropriate. In terms of the new methodology of science, ‘uncertainty is not banished but is managed, and values are not presupposed but are made explicit.’ *Ibid.* 740.

<sup>208</sup> Shiela Jasanoff notes the move in the US towards greater government-sponsored research to supply regulatory agencies (such as the Environmental Protection Agency) with the needed scientific information to fulfil their expanded mandates. The resultant distrust of the ‘regulatory science’ generated in this way led to calls for peer review and for greater demarcation of the line between ‘science’ and ‘policy’. Shiela Jasanoff, *The Fifth Branch: The Science Advisers as Policymakers* (Harvard University Press, Cambridge and London), 1990, 40-43 and 59.

<sup>209</sup> Olivier Godard, ‘Social Decision-Making under Conditions of Scientific Controversy, Expertise and the Precautionary Principle’, in *Integrating Scientific Expertise into Regulatory Decision-Making: National Traditions and European Innovations*, Christian Joerges, et al. (eds.) (Nomos, Baden-Baden), 1997, 39-73, 46. Godard (at 45) states that in cases where there is a feeling of urgency in society to take action for which there is still insufficient scientific basis, this pressure: ‘opens up the Pandora’s box of temptations of manipulating science for the benefit of political and economic interests. Concerned social actors and big corporations significantly involved in R & D activities are spreading their strategic field of action and competition to the scientific representations of the world...’

proposed by the commissioning actor.<sup>210</sup> The consequence of this ‘commodification’ of science is that the result of scientific analysis cannot be viewed as an objective, empirically based truth, but instead is partially a reflection of the interests of economically powerful groups or institutions in society.<sup>211</sup> As the generation of scientific evidence is costly and difficult, the requirement of scientific justification for SPS regulation results in a bias towards those with the resources necessary to produce scientific support for their initiatives. Thus science is not the objective, universally valid, neutral standard it appears to be. Any evaluation of regulation involving scientific justifications must thus take this important limitation into account.

This fundamental change in thinking extends to the appreciation of the use of science in regulation as a tool to depoliticise regulatory decisions.<sup>212</sup> A substantial debate exists today, for the reasons set out above, concerning the limitations of use of science in law, particularly as regards the uncritical use of risk assessment as a criterion for regulatory validity. These limitations of science, however, do not imply that it is not still a useful tool in promoting greater rationality in decision-making in the regulatory process and reducing the risks of protectionism due to private interest capture of the regulatory process. Requiring scientific justification from regulators at least improves the transparency of the regulatory process and forces regulators to produce the factual evidence on which they base their decisions.<sup>213</sup> Instead, account is increasingly taken of the limitations of science by means of a more realistic and nuanced approach to its justificatory capacity.<sup>214</sup>

A further, but related, limitation to the use of science as a basis for the evaluation of SPS regulation lies in the problem of scientific uncertainty. Rigorous evidentiary requirements may limit the possibilities for governments to act in situations where science has not yet provided a definite answer regarding the existence or magnitude of a risk. Increasing awareness of the limitations in the ability of science to accurately predict SPS risks, and

---

<sup>210</sup> Jeffery Atik, ‘Symposium - Institutions for International Economic Integration: Science and International Regulatory Convergence’, *Journal of International Law and Business* 17, 1997, 736-758, 750. Atik contends that a system that requires scientific justifications for self-interested positions is likely to find them. *Ibid.* 758.

<sup>211</sup> A constructivist approach to science has emerged, according to which it should be recognised that science is a social construct and may be contaminated by particular interests. It should therefore be viewed with scepticism. Ian Holland and Aynsley Kellow, ‘Trade and Risk Management: Exploring the Issues’, in *Globalization and the Environment. Risk Assessment and the WTO*, David Robertson and Aynsley Kellow (eds.) (Edward Elgar, Cheltenham), 2001, 229-248, 235-239 and 241.

<sup>212</sup> For an interesting discussion on the attempts to use of science and scientific committees to ‘take the politics out of policy making’ and thereby to legitimate regulation in the US, see Sheila Jasanoff, *The Fifth Branch: The Science Advisers as Policymakers* (Harvard University Press, Cambridge and London), 1990. Jasanoff argues that: ‘[t]he notion that the scientific component of decision making can be separated from the political and entrusted to independent experts has effectively been dismantled by recent contributions to the political and social studies of science. With the accumulation of evidence that “truth” in science is inseparable from power, the idea that scientists can speak truth to power in a value-free manner has emerged as a myth without correlates in reality.’ *Ibid.*, 16-17.

<sup>213</sup> Andrew Green and Tracey Epps, ‘The WTO, Science, and the Environment: Moving Towards Consistency’, *Journal of International Economic Law* 10 (2), 2007, 285-316, 303.

<sup>214</sup> The extent to which national administrative or judicial review of national regulations on the basis of scientific requirements has been tempered by this new realisation of the limits of science has been discussed elsewhere and it is not necessary to go into this issue for purposes of this book. Instead, the implications of this realisation for the use of science in *international* disciplines on SPS regulation, embodied in the *SPS Agreement*, is discussed below, Part III, Sections 5.1.5.1 and 5.1.5.2.

to do so early enough to allow for effective action to prevent the risk,<sup>215</sup> have led to a shift in approach ‘in favour of a bias towards safety or caution.’<sup>216</sup> Particularly in developed countries where high levels of health protection have been achieved, resulting in longer life spans and greater attention health risks that may only materialise in the long-term, regulators are under pressure to err on the side of caution in decision making in situations of scientific uncertainty. Another development reinforcing this trend is growing use of new technologies in agricultural and food production,<sup>217</sup> such as the use of hormones in beef and milk production, the genetic modification of crops, the use of meat and bone meal additives in cattle feed, the great increase in highly processed consumer-ready food and the concomitant increase in consumer fears regarding the safety of these products. Following highly publicised health risks, such as the BSE outbreaks in Europe or the dioxin scandal in Belgium, citizens demand regulatory action to protect them from possible risks from new technologies, even in those cases where there is no definitive proof of risk yet, as is the case with the use of rBST to increase milk production in cows.<sup>218</sup>

The precautionary principle, or precautionary approach,<sup>219</sup> emerged in response to the concerns regarding scientific uncertainty in environmental regulation.<sup>220</sup> It can be seen as complementary to the preventive principle,<sup>221</sup> which is reflected in the idea that established

<sup>215</sup> Owen McIntyre and Thomas Mosedale, ‘The Precautionary Principle as a Norm of Customary International Law’, *Journal of Environmental Law* 9 (2), 1997, 221-241, 222.

<sup>216</sup> David Freestone, ‘The Road to Rio: International Environmental Law after the Earth Summit’, *Journal of Environmental Law* 6, 1994, 193-218, 211.

<sup>217</sup> Neville Craddock, ‘Risk, Precaution, and the Food Business’, in *Governing Food: Science, Safety and Trade*, Peter W.B. Phillips and Robert Wolfe (eds.) (McGill-Queen’s University Press, Montreal), 2001, 75-88, 82.

<sup>218</sup> George G. Khachatourians, ‘How Well Understood Is The “Science” Of Food Safety?’ in *Governing Food: Science, Safety and Trade*, Peter W.B Phillips and Robert Wolfe (eds.) (McGill-Queen’s University Press, Montreal), 2001, 13-23, 17. Khachatourians points out that rBST is banned in both Canada and the EC, following expert advice that approval of a licence for the use of this hormone not be granted until the long term effects of rBST were studied.

<sup>219</sup> There is considerable debate on the nature of this concept between the EC which sees it as a ‘precautionary principle’ and the US which instead regards it as a ‘precautionary approach’. Nevertheless, both these Members, and many others, typically act with precaution when faced with serious, but uncertain, health risks. Catherine Button notes that; ‘[w]hile the US has not embraced the precautionary principle in the WTO, it would be wrong to assume that its domestic regulations are necessarily less protective than those of the EU.’ She recommends moving beyond the caricature of Europeans as ‘paranoid Luddites opposed to science and innovation’ and of the US as ‘forward-looking and risk-taking’, to a recognition that in both jurisdictions the approach taken depends on the particular health risk at stake. Catherine Button, *The Power to Protect. Trade, Health and Uncertainty in the WTO* (Hart Publishing, Oxford and Portland, Oregon), 2004, 126.

<sup>220</sup> It is generally accepted that the origins of the precautionary principle lie in the principle of precautionary action established in German environmental law in the 1970s and 1980s (*Vorsorgeprinzip*). Konrad Von Moltke, ‘The Relationship between Policy, Science, Technology, Economics and Law in the Implementation of the Precautionary Principle’, in *The Precautionary Principle and International Law: The Challenge of Implementation*, David Freestone and Ellen Hey (eds.) (Kluwer Law International), 1996, 97-108, 102. See also Owen McIntyre and Thomas Mosedale, ‘The Precautionary Principle as a Norm of Customary International Law’, *Journal of Environmental Law* 9 (2), 1997, 221-241, 221. McIntyre and Mosedale cite the following: S. Boehmer-Christiansen, ‘The Precautionary Principle in Germany – Enabling Government’ in T. O’Riordan and J. Cameron (eds), *Interpreting the Precautionary Principle* (Cameron May: London), 1994, 31-60; and K von Moltke, *The Vorzorgeprinzip in West German Environmental Policy*, 12<sup>th</sup> Report, (Royal Commission on Environmental Policy: London) 1998, Appendix 3.

<sup>221</sup> This point has been made by Alessandra Arcuri. Alessandra Arcuri, *The Case for a Procedural Version of the Precautionary Principle Erring on the Side of Environmental Preservation*, Global Law Working Paper 09/04 (Hauser Global Law School, New York), 2004, 16, available at: [www.nyulawglobal.org/workpapers/documents/GLWP0904Arcuri.pdf](http://www.nyulawglobal.org/workpapers/documents/GLWP0904Arcuri.pdf), visited 12 May 2005. Arcuri further notes that the prevention

hazards should be prevented before they occur. The precautionary principle goes beyond this, by dealing with the situation where there is a lack of scientific certainty regarding the risk that a hazard may occur or its magnitude. As explained by De Sadeleer:

The distinction between the preventive principle and the precautionary principle rests on a difference of degree in the understanding of risk. Prevention is based on certainties: it rests on cumulative experience concerning the degree of risk posed by an activity (Russian roulette, for example, involves a predictable one-in-six chance of death). Therefore, prevention presupposes science, technical control, and the notion of an objective assessment of risks in order to reduce the probability of their occurrence. Preventive measures are thus intended to avert risks for which the cause-and-effect relationship is already known .... Precaution, in contrast, comes into play when the probability of a suspected risk cannot be irrefutably demonstrated. The distinction between the two principles is thus the degree of uncertainty surrounding the probability of risk. The lower the margin of uncertainty, the greater the justification for intervention as a means of prevention, rather than in the name of precaution. By contrast, precaution is used when scientific research has not yet reached a stage that allows the veil of uncertainty to be lifted.<sup>222</sup>

The precautionary principle has gained wide acceptance on the international level,<sup>223</sup> particularly in the area of environmental protection,<sup>224</sup> in response to the increasing realisation

---

principle is tempered by the proportionality principle. Requiring that all risks be prevented would mean that most industrial activities (which are otherwise beneficial to society) should be banned. The proportionality principle, instead, brings in an element of cost-benefit analysis and trade-off which are part of a rational regulatory process.

<sup>222</sup> N. De Sadeleer, *Environmental Principles: From Political Slogans to Legal Rules*, (Oxford University Press, Oxford), 2002, 74.

<sup>223</sup> The precautionary principle is recognised in the following international instruments amongst others: the *Treaty on the European Community*, as amended by the *Treaty on the European Union* 1992 (Article 174, previously Article 130r, with regard to environmental protection), the *Framework Convention on Climate Change* (1992 31 I.L.M. 849 in Article 3.3), Agenda 21 of the *United Nations Conference on the Environment and Development* (1992, in para. 17.21), the *Rio Declaration on Environment and Development* (1992 31 I.L.M. 876 in Principle 15) and the *Cartagena Protocol on Biosafety*, UNP/157, adopted 29 January 2000, entry into force 11 September 2003, in Article 10.5).

<sup>224</sup> There is an extensive body of literature on the precautionary principle in environmental law, only a few examples of which are mentioned here for further information on this issue. James Cameron, 'The Precautionary Principle', in *Trade, Environment, and the Millennium*, Gary P. Sampson and W. Bradnee Chambers (eds.) (United Nations University Press, Tokyo), 1999, 239-269; James Cameron and Juli Abouchar, 'The Precautionary Principle: A Fundamental Principle of Law and Policy for the Protection of the Global Environment', *Boston College International and Comparative Law Review* 14 (1), 1991, 1-27; James Cameron and Juli Abouchar, 'The Status of the Precautionary Principle in International Law', in *The Precautionary Principle and International Law: The Challenge of Implementation*, David Freestone and Ellen Hey (eds.) (Kluwer Law International), 1996, 29-52; Nicole Coutrelis, *Le Principe De Precaution: Aspects Juridiques*, 16 May 2000; Frank B. Cross, 'Paradoxical Perils of the Precautionary Principle', *Wash & Lee Law Review* 53 (3), 1996, 1; Elizabeth Fisher, 'Precaution, Precaution Everywhere: Developing a Common Understanding of the Precautionary Principle in the European Community', *Maastricht Journal of European and Comparative Law* 9 (1), 2002, 7-28; David Freestone and Ellen Hey, 'Implementing the Precautionary Principle: Challenges and Opportunities', in *The Precautionary Principle and International Law: The Challenge of Implementation*, David Freestone and Ellen Hey (eds.) (Kluwer Law International), 1996, 249-268; Ellen Hey, 'The Precautionary Concept in Environmental Policy and Law: Institutionalizing Caution', *Georgetown International Environmental Law Review* 4, 1992, 303-318;

of the prevalence of uncertainty in science.<sup>225</sup> Although there is still debate regarding whether the precautionary principle has gained the status of a principle of customary international law and no generally accepted definition of the precautionary principle has yet emerged,<sup>226</sup> one can outline its ‘core content’ in broad terms. It comes down to the idea that a government may legitimately regulate against possible risks in situations where conclusive scientific evidence as to the existence or extent of the risk is still lacking. Thus, there are three components to this principle: (1) scientific uncertainty; (2) threat of harm; and (3) precautionary action.<sup>227</sup> Typically, certain thresholds or conditions are applied as limits to the possibility to rely on this principle, in order to prevent its misuse, but these vary in different formulations of the principle. According to one formulation, reliance on the precautionary principle is limited to situations where there are threats of serious or irreversible damage.<sup>228</sup> Other possible limits are the requirement that the threat of harm be based on ‘reasonable grounds for concern, rather than mere conjecture’,<sup>229</sup> and that precautionary action be effective and proportional to the risk involved.<sup>230</sup>

While in the area of SPS risk the status and content of the precautionary principle remain controversial, it is not debated that precautionary approaches are embedded in the regulatory processes of many countries and are particularly prevalent in those where SPS risks are a regulatory priority.<sup>231</sup> It is beyond the scope of this book to engage in an analysis of

<sup>225</sup> For a law-and-economics analysis of the precautionary principle, based on a broad interpretation of scientific uncertainty that includes not only situations where the probability of a risk cannot be ascertained but also situations of ambiguity and ignorance in risk appraisals, see Muhamad Ramdan Andri Gunawan Wibisana, *Law and Economics Analysis of the Precautionary Principle*, Doctoral Thesis, Maastricht University, Faculty of Law (Universitaire Pers, Maastricht), 2008. Andri Wibisana notes: ‘By recognizing the intrinsically subjective and political nature of risk regulations, the precautionary principle has a potential to reveal assumptions and reasons behind a particular policy or technological choice.’ *Ibid.*, 295.

<sup>226</sup> In the field of environmental protection, a convincing argument has been made by Trouwborst that the precautionary principle has evolved into a principle of customary international law, and he has conducted a thorough study into the content of the principle in this field. See Arie Trouwborst, *Evolution and Status of the Precautionary Principle in International Law* (Kluwer Law International: The Hague/Boston/London), 2002 and Arie Trouwborst, *Precautionary Rights and Duties of States*, Doctoral Thesis, Utrecht University, Faculty of Law (Martinus Nijhoff Publishers, Leiden/Boston), 2006.

<sup>227</sup> Pauline Barriau and Bernard Sinclair-Desgagne, *The Paradox of Precaution* (CIRANO, Montreal), October 2003, 5, available at: [www.cirano.qc.ca/pdf/publication/2003s-63.pdf](http://www.cirano.qc.ca/pdf/publication/2003s-63.pdf), visited 15 June 2004. These three elements are elaborated on in detail in Arie Trouwborst, *Precautionary Rights and Duties of States*, Doctoral Thesis, Utrecht University, Faculty of Law (Martinus Nijhoff Publishers, Leiden/Boston), 2006.

<sup>228</sup> This limitation is found in the formulation used in the *Rio Declaration*.

<sup>229</sup> This implies more than a theoretical possibility of harm, but does not go as far as to require proof of the existence and magnitude of the risk. See Arie Trouwborst, *Precautionary Rights and Duties of States*, Doctoral Thesis, Utrecht University, Faculty of Law (Martinus Nijhoff Publishers, Leiden/Boston), 2006, 115-117.

<sup>230</sup> See *Ibid.*, 147-153.

<sup>231</sup> Although it is often believed that ‘precaution is for Europeans’ and that the US takes a more rational, cost/benefit approach to risk regulation, due to certain widely publicised controversies regarding US’ criticism of precautionary European regulations, studies have shown that both the EC and the US have highly precautionary regulatory regimes. Where they differ is on the question of which risks to prioritise as significant enough for precautionary action, and this has often led to transatlantic tensions. See Jonathan B. Wiener, ‘Whose Precaution after All? A Comment on the Comparison of Civil Justice Systems’, *Duke Journal of Comparative and International Law* 13, 2003, 45; M. D. Rogers and Jonathan B. Wiener, ‘Comparing Precaution in the United States and Europe’, *Journal of Risk Research* 5 (4), 2002, 317-349. An example of a precautionary approach in US food regulation can be found in its statutes on pesticide residues, food additives, colorants and veterinary drug residues. The US takes the approach that all these substances are unsafe unless proven safe and consequently applies a pre-marketing approval requirement. To obtain such approval, convincing

the status and content of the precautionary principle in the area of SPS risk. Instead, brief reference is made to this principle to draw attention to the fact that SPS regulatory regimes currently take account of the fact that regulators may need to act to protect against harm in situations of scientific uncertainty. Precaution thus tempers the reliance on science as the final arbiter of the legitimacy of SPS regulation.<sup>232</sup> One example of a precautionary approach in the area of SPS regulation is the requirement of prior approval for the importation of a potentially risky product whose safety has not yet been determined, as is the case with the EC regime for genetically modified organisms or the Australian regime for novel foods. Such a system relies on an *a priori* ban on certain category of products, pending a scientific determination of their safety.<sup>233</sup>

Both the use of science as a tool, albeit an inherently limited one, to discipline and legitimate regulatory action and the attendant emergence of precautionary approaches to deal with situations of scientific uncertainty are developments rooted in advances in regulatory regimes in the developed world. They entail a high level of human and financial resources devoted to risk regulation and reflect best practices in dealing with the complexities of SPS risks. It should be borne in mind that these best practices do not present an accurate picture of the regulatory systems with regard to SPS risks in countries at lower levels of development. As will become apparent from the discussion in the following sections, while the SPS regimes in developed countries embody the abovementioned risk analysis practices in a variety of forms, many other countries at lower levels of development lack the capacity to staff and operate the scientific committees and regulatory agencies necessary to enact SPS regulations in a manner that conforms with these best practices.

---

evidence must be presented to the US Food and Drug Administration that no harm will result from the intended use of the product. Vern R. Walker, 'The Myth of Science as A "Neutral Arbiter" For Triggering Precautions', *International & Comparative Law Quarterly* 26, 2003, 197-228, 217-218. For a discussion of the application of the precautionary principle in the area of food and agricultural policy to avoid SPS risks, see Calum G. Turvey and Eliza M. Mojduzka, 'The Precautionary Principle and the Law of Unintended Consequences', *Food Policy* 30, 2005, 145 - 161.

<sup>232</sup> This issue is discussed further with the analysis of the scope for precautionary action under the provisions of the *SPS Agreement*. See below, Part III, Sections 3.2.3.2 and 5.2.5.

<sup>233</sup> An example of the use of precaution (partly) in the area of SPS risk at international level is the *Cartagena Protocol on Biosafety to the Convention on Biological Diversity*, UNP/157, adopted 29 January 2000, entry into force 11 September 2003. Article 10.6 of the *Cartagena Protocol* provides: 'Lack of scientific certainty due to insufficient relevant scientific information and knowledge regarding the extent of the potential adverse effects of a living modified organism on the conservation and sustainable use of biological diversity in the party of import, taking also into account risks to human health, shall not prevent that Party from taking a decision, as appropriate, with regard to the import of the living modified organism in question ... to avoid or minimize such potential adverse effects.' (Emphasis added).

## CHAPTER 2

### National SPS systems in selected developed- and developing-country Members

A specific examination of SPS regulatory systems across regions and economic levels is useful in providing practical insights into the differences in the ways Members at different levels of development regulate to protect human, plant and animal life and health. These differences have important implications for the impact of the *SPS Agreement* on the regulatory capacity of the relevant Members.<sup>1</sup> They also play a significant role in determining the ability of exporters from various Members across different levels of development to access foreign markets for their food and agricultural products, by meeting the SPS requirements of their trading partners. An understanding of these differences therefore forms the context for the examination of rules of the *SPS Agreement* in later chapters of this book.

#### 2.1 Choice of WTO Members

The WTO Members examined in this section are selected across a range of levels of economic development and geographical regions, in order to ensure that a broad spectrum of SPS regimes is covered. The relevant regions covered in this study are Africa, the Americas and the Asia/Pacific region. The Members from the European region are not selected as examples in this section. This is because SPS protection in the developed-country Members that are Member States of the European Union (EU) is achieved by a combination of national regulation at national level and supra-national regulation at EU level, making these countries atypical with respect to SPS regulatory systems. The countries in transition in Eastern Europe (such as Croatia, Turkey, the Former Yugoslav Republic of Macedonia) are also not useful as illustrative examples as they evince elements of both developing and developed countries, and are in the special position of receiving extensive assistance, both financial and technical, to strengthen their regulatory systems through the various aid programmes of the EU.

The selection of countries also attempts to ensure a spread across levels of economic development. For the sake of convenience, the World Bank classification<sup>2</sup> of countries by income is used as indicator of level of economic development. Income is calculat-

---

<sup>1</sup> In its report regarding how to meet the Millennium Development Goals, the UN Millennium Project points out that the assessment of the costs and benefits of WTO rules on domestic regulations (such as the *SPS Agreement*) will vary according to the level of development of the country. The report then links this fact to the issue of special and differential treatment (SDT), through the suggestion that an assessment of costs and benefits should guide what SDT to grant and to which countries. UN Millennium Project, *Investing in Development: A Practical Plan to Achieve the Millennium Development Goals* (United Nations Development Programme, New York), 2005, 219, available at: <http://www.unmillenniumproject.org/reports/fullreport.htm>, visited on 7 January 2008.

<sup>2</sup> See the World Bank classification, as at 1 July 2007, available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 18 December 2007.

ed as Gross National Income per capita (GNI),<sup>3</sup> converted into US dollars according to the World Bank Atlas method.<sup>4</sup> This classification divides countries into low-income countries (GNI of US\$905 or less), lower-middle-income countries (GNI of US\$906 – US\$3,595), upper-middle-income countries (GNI of US\$3,596 – US\$11,115) and high-income countries (GNI of US\$11,116 or more). Although low-income and (lower- and upper-) middle-income countries are, for the sake of convenience, sometimes referred to as developing countries, this income classification does not necessarily fully reflect the level of development of the relevant countries.<sup>5</sup> Nevertheless, it provides a useful tool for the selection of countries of varying capacity in the area of SPS regulation, as there is a logical correlation between the resources available in a country and the possibility to prioritise SPS regulation as an area of government.

The specific countries to be examined within these geographic and income categories are chosen by means of a purposeful sampling strategy rather than probability sampling. It is not the intention, as would be the case with probability sampling, to derive generalisations from the sample country with regard to SPS regimes that would be applicable to the relevant category of countries. Such an exercise would be futile in an area as diverse and complex as SPS regulation, where broad generalisations are not possible or useful. In this area, it is not only difficult but also misleading to draw conclusions from the experiences of one country for another, even at the same economic level. Instead, purposeful sampling calls for the selection of examples of cases where there is sufficient information for in-depth study.<sup>6</sup> The aim of such a sampling strategy is to provide ‘insights and in-depth understandings rather than empirical generalizations’.<sup>7</sup> For this reason, the availability of

---

<sup>3</sup> GNI per capita is defined as follows by the World Bank: ‘the gross national income (GNI) in current U.S. dollars as divided by the mid-year population. GNI measures the total domestic and foreign income claimed by the residents of the economy. It comprises GDP plus net factor income from abroad, which is the income residents receive from abroad for factor services (labour and capital) less similar payments made to non-residents who contributed to the domestic production. GNI in U.S. dollars is calculated according to the World Bank Atlas method of conversion from national currency to U.S. dollar terms.’ See the technical notes accompanying the World Bank country statistics available at: <http://www.worldbank.org/data/countrydata/aag.htm>, visited 25 June 2007.

<sup>4</sup> Conversion according to the Atlas method aims to reduce the impact of exchange rate fluctuations in the cross-country comparison of national incomes. It is explained as follows by the World Bank: The Atlas conversion factor for any year is the average of the country’s exchange rate for that year and those for the two preceding years, adjusted for differences in relative inflation between the country and the G-5 countries (France, Germany, Japan, the UK, and the US). From 2001 onwards, these countries include the Euro Zone, Japan, the UK, and the US. A country’s inflation rate is measured by the change in its GDP deflator. This three-year average smoothes fluctuations in prices and exchange rates for each country. See the technical notes accompanying the World Bank country statistics available at: <http://go.worldbank.org/8MH1UTJVK0>, visited on 18 December 2007.

<sup>5</sup> For example, although Saudi Arabia has a GNI per capita of US\$12,510 and is classified as a high-income economy by the World Bank, it is ranked only 61<sup>st</sup> in the Human Development Index of 2007, below countries such as Tonga (a lower-middle-income economy) and Bulgaria (a upper-middle-income economy) which have much lower income levels (GNI per capita of US\$2,170 and US\$3,990 respectively).

<sup>6</sup> Patton notes that: ‘[t]he logic and power of purposeful sampling lie in selecting *information-rich* cases for study in depth.’ See Michael Quinn Patton, *Qualitative Research and Evaluation Methods*, 3rd ed. (Sage, Thousand Oaks), 2002, 230. This statement by Patton was quoted in Diahanna L. Post, ‘The Diffusion of International Food Safety Policies: What’s the Motivation?’ presented at the *2003 Annual Convention of the International Studies Association*, Portland, Oregon) 25 February - 1 March 2003, 8.

<sup>7</sup> Michael Quinn Patton, *Qualitative Research and Evaluation Methods*, 3rd ed. (Sage, Thousand Oaks), 2002, 230.

data, in the form of case studies and reports from reputable and authoritative sources has been a guiding criterion in the selection of countries. The following table illustrates the geographic and income spread of the WTO Members studied in this chapter.

**Table 1: Selected WTO Members across geographic regions and income levels**

Income Classification	Geographic Region		
	Africa	Americas	Asia/Pacific
High income			Australia
Upper-middle income	Mauritius		
Lower-middle income		Jamaica	
Low income			Bangladesh

## 2.2 Choice of information provided

Sections 4 to 7 of Chapter 2 describe the SPS systems of one developed-country Member of the WTO (Australia) and three developing-country Members of the WTO (Mauritius, Jamaica, and Bangladesh). The information selected from the various sources relied upon, set out below, is aimed at providing a factual context for the analysis of the *SPS Agreement* and its impact on WTO Members across different levels of development that follows in Parts III to V of this book.

As explained in the Introduction to this book, the underlying assumption guiding the discussion of the *SPS Agreement* is that ‘level of development matters’ when it comes to WTO disciplines on regulatory regimes that go beyond non-discrimination obligations. This is of course a broad statement. What conclusions one can draw from it for WTO disciplines on SPS regulation depend in part on what the impact of level of development is on the ability of a Member to use the relevant disciplines to its benefit in gaining market access for its exports as well as on the capacity of that Member to comply with the disciplines at issue. In order to test whether the proposition that ‘one size does not fit all’ is true when it comes to WTO rules affecting the regulatory autonomy of Members, due to the differing initial positions of Members, it is necessary to have some understanding of what these initial positions might be.

Therefore the selection of information provided is guided by three considerations: (1) the need to position each Member discussed along the development continuum, by reference to various indicators of economic and human development that are directly or indirectly relevant to its SPS system; (2) the need to establish the relative importance of SPS issues for the health and trade priorities, particularly in the area of food and agriculture, of each

of the described Members; and (3) the need to describe, as accurately as possible, the institutional and legislative regime in place in each selected Member to address SPS risks.

To meet these objectives, for each selected WTO Member the following information is provided. The description in each case starts by setting out relevant factual background information with regard to the Member at issue. A first subsection in this factual background section provides certain economic and human development indicators. In each case, the indicators relate to most recent year for which data is available for all four selected Members. This information includes economic data regarding not only GNI per capita, but also GDP at purchasing power parity and GDP per capita at purchasing power parity.<sup>8</sup> In this way the strength of the economies of the selected countries can be compared. Selected data reflecting the level of human development is also provided in these

---

<sup>8</sup> The GDP of a country can be thought of as the sum of the prices multiplied by their quantities, for all products and services consumed in the relevant year. GDP is the primary basis used for comparing the relative sizes of various economies. GDP is also indicated on a per capita basis to represent the flow of goods and services available to countries to contribute to their economic well-being. GDP is indicated at purchasing power parity to deal with the problem of comparing economies across national boundaries since national GDP levels must be converted to a common currency to enable comparisons to be made. The purchasing power parity between two countries is the rate at which the currency of one country needs to be converted into that of a second country to represent the same volume of goods and services in both countries. A commonly known example of purchasing power parity is the 'Big Mac Index' compiled and published by *The Economist*. It is based on a single consumption item and compares the cost of a 'Big Mac' in different countries to its cost in the US. However, as price differences vary for different products and in different economic sectors, purchasing power parities are usually prepared using relative prices for a very large number of comparable goods and services. The International Comparison Program, initiated in 1968 as a joint venture of the UN and the University of Pennsylvania, with contributions from the Ford Foundation and the World Bank, generates purchasing power parities based on actual price data collected for over 1,000 items on a periodic basis in the currently 147 participating countries. International Comparison Program, *ICP 2003-2006 Handbook*, available at: <http://go.worldbank.org/MW520NNFK0>, visited on 7 January 2008. Since the most recent year for which GDP and GDP per capita at purchasing power parity is available for all selected Members is 2005, the 2005 data will be provided across all selected Members. This 2005 economic data is also used as one of the indicators to generate the *Human Development Index* of 2007 of the UNDP, discussed below.

background sections. Data is provided regarding population size, poverty levels,<sup>9</sup> and ranking on the UNDP's *Human Development Index* (HDI) of 2007.<sup>10</sup>

The data set out in this background section of the description of each Member is of interest for several reasons. In keeping with the understanding underlying the analysis in this book that 'development' is more than economic growth but also entails the realisation of all human rights,<sup>11</sup> the development level of a Member can only be established fully by looking at other indicators of human development. The composite HDI ranking based on key development indicators is therefore provided. In line with the recognition that development occurs along a continuum, the background data provided serves to outline various social and economic factors that play a role in situating a Member along this continuum. Specifically, it refers to factors that directly or indirectly influence the regulatory capacity

<sup>9</sup> Poverty is normally defined as the lack of minimum income, or consumption level, to meet basic needs. This minimum varies across countries. To make comparisons of poverty across countries, an international poverty measure is necessary. Using an absolute poverty line (i.e. one with fixed purchasing power across countries) rather than a relative poverty line is useful for comparative analysis. For this reason, in this book, the World Bank's international poverty measures will be used, as published in the *2005 World Development Indicators* (WDI), available at: <http://devdata.worldbank.org/wdi2005/index2.htm>, visited on 17 January 2008. The UNDP's *Human Development Index* for 2007 makes use of the World Bank data for 2005 in this regard. The Millennium Development Goals with respect to poverty are also monitored on the basis of the World Bank's annual WDI. The World Bank measures poverty as the percentage of people living below the international poverty lines of either US\$1 per day or US\$2 per day, measured in 1985 international prices and adjusted to local currency using purchasing power parities. According to the 2005 WDI report, 'Poverty measures based on an international poverty line attempt to hold the real value of the poverty line constant across countries, as is done when making comparisons over time.' In this book, the international poverty measure of US\$2 per day will be referred to as an indicator of the incidence of poverty in the countries studied. This is preferred to the US\$1 per day measure as the latter is a measure of extreme poverty, and is commonly used when analysing poverty in least-developed countries. The US\$2 per day measure is commonly used in comparisons involving not only low-income but also middle-income countries, as is the case in this book. However, for the sake of completeness, and because the Millennium Development Goals make reference to it, the poverty incidence based in the US\$1 per day measure will be indicated in footnote. Note that as the poverty measures based on the international poverty line of US\$2 per day were designed to compare low- or middle-income countries. They do not differentiate well between high-income countries. For these countries an alternative index, that of US\$4 per day may better facilitate comparisons of the level of poverty that still exists, and it is used in the UNDP's *Human Development Index* as one of the indicators of 'human poverty' for OECD countries, Central and Eastern Europe and the Commonwealth of Independent States. However, as this book does not compare high-income countries with each other, but only compares one high-income country with three middle- and low-income countries, the US\$2 per day poverty line will be used throughout United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 227 and Table 224, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>10</sup> See the *Human Development Index* (HDI) for 2007, *Ibid.*, 229-232.. The HDI was developed in 1990 by Nobel Laureate Amartya Sen and economist Mahbub ul Haq (assisted by Gustav Ranis of Yale University and Lord Meghad Desai of the London School of Economics). The Human Development Report of the UNDP is based on this index. The UN Human Development Index measures countries' achievements in terms of three indicators: (1) a long and healthy life as measured by life expectancy at birth; (2) knowledge, as measured by the adult literacy rate and the combined primary, secondary and tertiary gross educational enrolment ratio; and (3) a decent standard of living measured by GDP per capita. It can be regarded as an alternative measure of a country's level of development, going beyond categorisations on purely economic terms. Information on the meaning of terms, the calculations and the data sources underlying this index is available in United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 221-227 and 355-373, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>11</sup> See the discussion of the concept of development, above, Part I, Section 1.1.

of the relevant country and its ability to deal with SPS market barriers. For purposes of this book it is assumed that a country that ranks higher on the HDI is more likely to be able to deal with the social consequences of stricter SPS measures, the resultant concentration of export capacity in a few large firms, and concomitant decrease in traditional smallholder participation in trade.

In a second subsection of the background description of each selected Member, its health and sanitation levels are discussed.<sup>12</sup> These are selected for specific attention from among the various indicators of human development provided in the Human Development Report of 2007, due to their relevance to the subject of this book. Further information regarding the Member's health status and areas of policy focus is obtained, where available, from government strategy papers. This information on health status, including access to health care, clean water and sanitation, provides an indication of the priorities for public spending in the area of health in the selected Members. It helps to establish the likely effect on public health that diversion of resources towards building SPS regulatory capacity would have in Members with different health concerns. It also provides a context for understanding the impact of the disciplines of the *SPS Agreement* on the regulatory choices of the relevant Member in the area of health.

The third subsection of the factual background description addresses the trade priorities of each selected Member. The importance of trade to that Member's GDP and the extent of its participation in the multilateral trading system are discussed. In particular, the areas of focus of its trade policy are highlighted.

Fourth, in the following subsection the importance of the food and agricultural industry for the relevant Member is established, with special attention to the contribution of this sector to GDP and employment, its share in export revenue earnings and its degree of diversification. This aims to determine the effect that trade barriers in the form of SPS measures could have on that Member's economy and more particularly on poverty alleviation and the promotion of development in the sense used in this book. It is assumed that a Member in which trade in food and agricultural products makes a significant contribution to GDP, export earnings or employment will be more vulnerable to market access barriers in this sector. The bearing of such barriers on poverty in a Member is expected to be linked to the incidence of rural poverty and the contribution made by the agricultural sector, including in the food-processing industry, to employment and livelihoods. Similarly, it is assumed that a Member with a greater diversification in export products will suffer less from the impact of an SPS market barrier than one whose export trade is heavily dependent on a single agricultural product or a small number of such products.

A final subsection provides a brief overview of the relevance of the factual background set out with regard to each Member for the discussion of its SPS system.

The description then turns, in a second section, to each Member's SPS regime, with respect to human, animal and plant health regulation, and examines the impact of the SPS

---

<sup>12</sup> This information is drawn from the statistical tables contained in United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

regulations of other Members on its exports. Separate subsections address the Member's food-safety system, its system for the protection of animal health and its system for the protection of plant health. Deficiencies in the Member's SPS regime are highlighted. Where available, information is provided on specific SPS trade barriers faced by the Member at issue, in order to provide practical illustrations of the impact of SPS measures on exports. In addition, where the SPS measures of the Member at issue have led to reported market access concerns raised by other Members, information is provided on the matter.

Although part of the SPS system of a Member, the participation of the Member in international standard-setting activities and the use made of the disciplines of the *SPS Agreement* to address its trade-related SPS concerns are only briefly touched upon. The experiences of the selected Members with regard to participation in international standard setting are set out where relevant in Chapter 3 of Part II, where the international standard setting systems are examined in detail. The use made by the selected Members of the disciplines of the *SPS Agreement* and their implementation of these disciplines are set out in Parts III to V of this book, where the provisions of the *SPS Agreement* are discussed.

It is essential to bear in mind the purpose of the following descriptions. They do not attempt to provide detailed and comprehensive descriptions of the selected Members and their SPS regimes, something which is neither necessary for purposes of the discussion in this book, nor possible bearing in mind the difficulty in obtaining reliable information in this area. Neither, do these descriptions pretend to provide the basis for generalisations regarding the SPS regimes of countries at similar levels of economic and human development. As stated above, such generalisations would be imprudent in an area as complex and varied as that of SPS regulation. Instead, the factual descriptions undertaken below have a more modest objective. They provide a practical context within which to situate the theoretical discussion that follows in Parts III to V of this book where the disciplines of the *SPS Agreement* are analysed and their disparate impact on Members at different levels of development is highlighted. Their objective is to give illustrative examples across a range of regions and income levels in order to give the reader a foothold when considering legal disciplines on SPS regulation.

**Table 2: Summary table of relevant indicators per selected Members**

Member	World Bank income classification	HDI ranking 2007 (position, category)	Population below poverty line 2005 (%)	Public health expenditure 2005 (% of GDP)	Agriculture's share in GDP 2005 (%)	Agriculture's share in employment 2005 (%)	Agricultural exports' share of total export revenue 2006 (%)
Australia	High income	3rd; High	No data	6.5	3.1	3.5	18.0
Bangladesh	Low income (LDC)	140th; Medium	84	0.9	19.6	52	7.2
Jamaica	Lower-middle income	101st; Medium	14.4	2.8	5.9	18	15.5
Mauritius	Upper-middle income	65th; High	No data	2.4	5.6	10	30.2

### 2.3 Sources of information

In order to provide an overview of the SPS systems of the selected developed- and developing-country Members of the WTO, this Chapter makes use of several sources of information, chosen for their authoritative nature, reliability and, in some cases, depth of analysis.

Economic indicators, human development indicators and trade statistics with regard to each selected WTO Member are taken from the data provided on the websites of the World Bank, the WTO, the International Trade Centre of the WTO and UNCTAD, and the UNDP. In each case the most recent year for which data is available for all selected Members is used, to facilitate comparison.

Extensive use is made of the information provided in the reports drawn up by the WTO Secretariat in the context of the most recent trade policy reviews of the selected Members.<sup>13</sup> Such periodic reviews are required under paragraph C(ii) of the *Trade Policy*

<sup>13</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius - Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001; Trade Policy Review Body, *Trade Policy Review: Jamaica - Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005; Trade Policy Review Body, *Trade*

*Review Mechanism*, which is Annex 3 to the *WTO Agreement*.<sup>14</sup> The Secretariat report is usually extensive and can be regarded as an authoritative source of information on the trade policy of a country, including its agricultural policy and SPS regime, particularly where its findings are supported or not contradicted in the brief report submitted as part of the review process by the Member under review. Where relevant, the information obtained from the Secretariat report has been supplemented by information in the Member's corresponding report.<sup>15</sup>

In the case of the developed-country Member, Australia, as is the case with most developed-country Members, detailed and easily accessible information can be found on the official website of the relevant government Ministries and departments.

In particular, policy papers and annual reports of the Australian Government Department of Health and Aging, the Australian Government Department of Agriculture, Fisheries and Forestry, and the Australian Government Department of Foreign Affairs and Trade, available on their websites, are drawn from extensively.<sup>16</sup> The particular divisions and agencies responsible for various aspects of Australia's SPS regime provide detailed information that was used in setting out the complex regulatory system in place in Australia. Recent examples of policy developments and practical implementation of Australia's SPS system are taken from the Annual Report for 2007 of the Department of Agriculture, Fisheries and Forestry. In addition, data compiled by the Australian Bureau of Statistics is relied upon for statistical data with regard to health, trade and agriculture in Australia.<sup>17</sup> Further, several papers of the Australian Bureau of Agricultural and Resource Economics (ABARE) containing research and analysis with regard to various sectors of the Australian agricultural industry, are used. ABARE is an Australian government economic research agency noted for its professionally independent research and analysis.<sup>18</sup>

<sup>15</sup> Trade Policy Review Body, *Trade Policy Review: Australia - Report by the Government*, WT/TPR/G/178, circulated on 29 January 2007; Trade Policy Review Body, *Trade Policy Review: Mauritius - Report by the Government*, WT/TPR/G/90, circulated on 5 October 2001; Trade Policy Review Body, *Trade Policy Review: Jamaica - Report by the Government*, WT/TPR/G/139, circulated on 15 December 2004; Trade Policy Review Body, *Trade Policy Review: Bangladesh - Report by the Government*, WT/TPR/G/168, circulated on 9 August 2006.

<sup>16</sup> The website of the Australian Government Department of Health and Aging is available at: <http://www.health.gov.au>, visited on 18 January 2008; the website of the Australian Government Department of Foreign Affairs and Trade is available at: <http://www.dfat.gov.au>, visited on 18 January 2008; the website of the Australian Government Department of Agriculture, Fisheries and Forestry is available at: <http://www.daff.gov.au>, visited on 18 January 2008.

<sup>17</sup> Australian Bureau of Statistics, *2007 Year Book Australia: A Comprehensive Source of Information About Australia*, ABS Catalogue No. 1301.0 (Commonwealth of Australia, Canberra), 2007, 273, available at: [http://www.ausstats.abs.gov.au/Ausstats/subscriber.nsf/0/D6C6B02D31617DA4CA25726D000467A6/\\$File/13010\\_2007.pdf](http://www.ausstats.abs.gov.au/Ausstats/subscriber.nsf/0/D6C6B02D31617DA4CA25726D000467A6/$File/13010_2007.pdf), visited on 12 January 2008.

<sup>18</sup> ABARE also produces regular quarterly forecasts for the full range of export commodities, so that industries can plan their future better, based on sound research. ABARE employs around 150 staff comprising economists, statisticians, modellers, mathematicians and support staff. For further information on ABARE, see its website, available at: <http://www.abareconomics.com>, visited on 18 January 2008.

In addition, as Australia is an active participant in the SPS Committee, and has raised the trade concerns it has regarding the SPS measures of other Members in this forum, it was possible to draw interesting information in this regard from the yearly compilation of SPS trade raised at SPS Committee meetings concerns maintained by the WTO Secretariat.<sup>19</sup> The information provided in the Secretariat summary is supplemented by other official WTO documents related to the specific issue, where available.

Unlike in the case of developed-country Members of the WTO, information on the SPS systems of developing-country Members is often limited in scope, difficult to obtain, of varying accuracy and sometimes contradictory. To overcome these limitations, this Chapter examines the SPS systems of certain developing-country Members for which authoritative and reliable sources of information exist.

These sources of information are the following. First, this section relies to a large extent on the results of a project, jointly funded by the Commonwealth Secretariat and International Trade Centre of UNCTAD and the WTO, aiming to identify technical assistance needs of developing countries in the area of TBT and SPS requirements. In particular this project focused on the need to overcome problems of effective participation in international standard setting, meeting technical requirements on export markets and building capacity to derive full benefits from the WTO's *SPS Agreement* and *TBT Agreement*. This was done on the basis of case studies in six developing countries, namely Malaysia, Jamaica, Kenya, Mauritius, Uganda and Namibia. The results of this project were compiled in a two-volume report.<sup>20</sup> Both the final report, and papers compiled in the context of the project are drawn from.<sup>21</sup>

Second, where available, regard is had to country papers submitted in the context of the original and second Global Forum of Food Safety Regulators, convened by FAO and WHO in 2002.<sup>22</sup> This forum was intended to provide an opportunity for food safety

<sup>22</sup> Australia New Zealand Food Safety Authority, 'The Development and Implementation of the New Australian Food Safety Standards', presented at the *FAO/WHO Global Forum of Food Safety Regulators* (Food and Agriculture Organization and World Health Organization, Marrakesh) 28-30 January 2002, available at: [www.foodsafetyforum.org/global/](http://www.foodsafetyforum.org/global/), visited on 6 November 2002; Australian Government Department of Health and Ageing and Food Standards Australia New Zealand, 'Enhancing Surveillance of Foodborne Diseases in Australia to Control Disease and Improve Food Safety', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 6 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae019e.pdf>, visited on 22 January 2008; Australian Government Department of Health and Ageing and Food Standards Australia New Zealand, 'Emerging Chemical and Microbiological Issues - Importance of Surveillance and International Cooperation and Information Sharing', presented at the *FAO/WHO Second*

regulators from all countries of the world to come together and share experiences on food safety issues. In this context, several countries prepared papers briefly describing their food safety regulatory system or certain aspects thereof.

Third, the 2005 report of a World Bank study on the impact of SPS measures on developing country exports is relied upon.<sup>23</sup> This report is based on a series of case studies regarding selected commodities (fish, horticulture, livestock products, nuts and spices) across nine low- and middle-income countries. This study aimed to improve the understanding of emerging policy and commercial issues in the SPS area, and to guide World Bank activities in this area.

Fourth, use is made of reports, scoping papers and conference papers drafted in the context of a technical cooperation project implemented by the United Nations Conference on Trade and Development (UNCTAD), with the support of the International Development Research Centre (IDRC) in Canada, in 2001-2002.<sup>24</sup> This project, entitled 'Standards and Trade, Strengthening Developing Countries' Capacity to Respond to Health, Sanitary and Environmental Requirements' aimed to identify policies addressing developing country constraints in meeting SPS requirements on their export markets. It encompassed case studies in three developing regions, namely South Asia, Eastern and Southern Africa and Central America.<sup>25</sup> The outcome of this project was published in book form in 2006.<sup>26</sup>

Fifth, some use is made of a study commissioned in 2003 by the Technical Centre for Agricultural and Rural Cooperation ACP-EU, regarding the consequences of SPS measures taken by the EC on African, Caribbean and Pacific (ACP) countries.<sup>27</sup> This study examined EC SPS legislation and assessed its impact on the exports and infrastructure of ACP countries as well as on individual firms in ACP countries. It was based on existing reports and supplemented by discussions with organisations that play an important role in SPS issues between the EC and ACP countries,<sup>28</sup> and contacts with importers, standard-setters and others.

## 2.4 Australia

### 2.4.1 Factual background

Australia is a country in the Southern hemisphere, between the Indian and Pacific Oceans. It is the world's largest island and smallest continent.<sup>30</sup> The Commonwealth of Australia was formed in 1901, with the federation of six former British colonies. The Federation is now composed of six States and three Territories.<sup>31</sup> In order to situate Australia along the continuum of levels of development, it is useful to look at selected indicators of economic and human development.

#### 2.4.1.1 Development indicators

Australia falls, in terms of the World Bank's classification of countries by income, within the category of high-income countries.<sup>32</sup> Its GNI per capita in 2006 was US\$35,990.<sup>33</sup> Australia is a Member of the Organisation for Economic Cooperation and Development (OECD).<sup>34</sup> The GDP of Australia was US\$768.2 billion in 2006.<sup>35</sup> Its GDP at purchasing power parity was US\$646.3 billion and its GDP per capita at purchasing power parity was US\$31,794 in 2005.<sup>36</sup>

Australia is ranked third by the UN Human Development Index of 2007, and falls into the category of high-human-development countries.<sup>37</sup> In 2006, the population of Australia amounted to 20.5 million people.<sup>38</sup> There is no data available on the percentage of people

<sup>30</sup> Australia has an area of 7.69 million square km.

<sup>31</sup> Six States federated to form the Commonwealth of Australia, under the Commonwealth Government. However, they retain legislative power over matters not under the authority of the Commonwealth (Sec. 51 of the Australian Constitution). Territories are areas within Australia's borders that are not claimed by one of the six States. They can be governed by the Commonwealth Government, or they can be granted a right of self-government, which allows them to establish a government in a similar manner to a state. Three of the ten Australian Territories have limited self-government; the others fall under the Commonwealth Government. This information is provided on the website of the Australian Government, available at: [http://www.australia.gov.au/State\\_and\\_Territory\\_Government](http://www.australia.gov.au/State_and_Territory_Government), visited on 17 January 2008.

<sup>32</sup> See the World Bank classification of economies by income of July 2007 available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 8 January 2008.

<sup>33</sup> World Bank, *Key Development Data and Statistics*, available at: <http://go.worldbank.org/1SF48T40L0>, visited on 12 January 2008.

<sup>34</sup> The OECD is the successor of the Organisation for European Economic Co-operation (OEEC), which was established to administer aid from the US and Canada under the Marshall Plan for the reconstruction of Europe after the Second World War. Since the OECD replaced the OEEC in 1961, its membership has expanded to 30 countries (Australia, Austria, Belgium, Canada, Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Japan, Korea, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovak Republic, Spain, Sweden, Switzerland, Turkey, the UK and the US). There are no formal membership criteria other than a commitment to a market economy and a pluralistic democracy. This information is provided on the website of the OECD, available at: [www.oecd.org](http://www.oecd.org), visited on 12 January 2008.

<sup>35</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 1, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>36</sup> *Ibid.*, 277.

<sup>38</sup> See the World Bank webpage on Key Development Data & Statistics of 2006 available at: <http://web>.

in Australia living below the absolute poverty line for OECD countries of US\$4 per day in 2000-2004.<sup>39</sup> However, for purposes of comparison with the middle- and low-income Members selected in this Chapter, it seems safe to assume that there is no incidence of poverty below US\$2 per day in Australia. This does not mean, of course, that there is no poverty in relative terms in Australia. According to the alternative measure of *relative* income poverty in developed countries, namely the share of the population living on less than 50 percent of the median adjusted disposable household income, 12.2 percent of the Australian population fell below this relative poverty line in 2000-2004.<sup>40</sup>

### 2.4.1.2 Health priorities

Australia's public health priorities provide an indication of the relative importance of SPS regulation as an area of public spending and policy focus. They also provide the context within which the impact of the disciplines of the *SPS Agreement* on health regulation in Australia can be understood. Australia's priorities in the area of public health can be seen from the following factual background.

In Australia, government spending on public health accounted for 6.5 percent of GDP, or US\$3,123 per capita at purchasing power parity.<sup>41</sup> Life expectancy at birth is high, at 80.9 years.<sup>42</sup> This high life expectancy has significant implications for government spending in public health.

Death rates in Australia from all causes are reported by the Australian government to be among the lowest in the world,<sup>43</sup> which is consistent with Australia's relatively high life expectancy. The infant mortality rate in Australia is only 5 per 1000 births.<sup>44</sup> These achievements are due, in part, to the high levels of health care and sanitation in Australia.

---

<sup>39</sup> The absolute poverty lines of US\$1 and US\$2 per days were established for purposes of comparison between middle- and low-income countries, but are not useful in comparing high income countries since little or no differences will be found at these low levels. As a result, the Human Development Report does not provide data using these poverty measures for OECD countries, Central and Eastern Europe and the Commonwealth of Independent States. Instead, data is provided with regard to the percentage of population living below US\$4 and US\$11 per day. In addition data on the percentage of the population living below 50% of the median income is provided, as a measure of relative poverty in a particular country.

One hundred percent of the Australian population has sustainable access to clean water and sanitation.<sup>1</sup> There are 247 physicians in Australia per 100 000 people.<sup>2</sup>

Australia made the health transition, in the middle of the twentieth century, from a situation where infectious diseases were the primary cause of death, to the situation where the leading causes of death became non-communicable diseases. In 2004, communicable diseases accounted for only 4 percent of all deaths in Australia, largely due to influenza and pneumonia.<sup>3</sup> Diseases such as diphtheria, whooping cough and polio have either been eradicated or are negligible as causes of death, due to effective child immunisation programs.<sup>4</sup> The prevalence of tuberculosis in Australia is only 6 cases per 100,000 people.<sup>5</sup> However, food-borne infectious diseases (such as those caused by *Salmonella* and *E. Coli*) are still a considerable burden on the Australian economy. On average, 5.4 million cases of food-borne infection occur each year, costing about A\$1.2 billion.<sup>6</sup> Although most cases are not serious enough to require medical attention, the high number of affected people that have to take leave from work to recover or to care for affected family members account for 60 percent of the costs involved.<sup>7</sup>

The leading causes of death in Australia are currently non-communicable diseases. In particular, cardiovascular disease (primarily strokes and heart attacks) and cancer, account for almost two-thirds of all deaths.<sup>8</sup> Although significant reductions in death rates from cancer and cardiovascular diseases have been achieved in the last ten years, they are still a health challenge in Australia.<sup>9</sup> Important risk factors contributing to the incidence of non-communicable diseases in Australia are lifestyle related, including example the

<sup>9</sup> From 1994 to 2004, the death rate for malignant neoplasms (cancer) decreased by 14%, while the rate for circulatory diseases decreased by 39%. *Ibid.*

high prevalence of smoking, obesity, alcohol abuse, insufficient exercise and low levels of consumption of fruit and vegetables.<sup>10</sup>

Chronic disease, such as diabetes, arthritis, Alzheimer's, asthma, cancer and heart disease, is an increasing burden on the public health system in Australia as the population ages and lifestyle-related health risks play a larger role.<sup>11</sup> In 2004-2005, over three-quarters of people living in private dwellings (as opposed to institutions) had at least one chronic health condition.<sup>12</sup> This proportion increased with age, from 41 percent of children under 15 years to almost 100 percent of people aged 65 years and over.<sup>13</sup>

Due to the growing burden of chronic disease in Australia, a key policy objective of the Australian government and the governments of all its states is the prevention and effective management of chronic disease. This is evinced by the fact that the Australian National Health Priority Action Council under the Government Department of Health and Aging has adopted a *National Chronic Disease Strategy* as a public health priority.<sup>14</sup> Chronic illnesses are often lifestyle-related, and an important element hereof is diet. The focus in Australia's health strategy on the prevention of chronic disease therefore indicates that factors with long-term health effects, such as food-safety risks, have increased importance as regulatory priorities.

Already in 2000, the Council of Australian Governments established a single regulatory framework for the development of all national food-safety requirements covering the entire food chain, through an inter-governmental agreement on food-safety regulation, the *Food Regulation Agreement* of 2000, which was revised in 2002.<sup>15</sup> Several additional steps, which are discussed below,<sup>16</sup> have been taken to strengthen the food-safety system throughout the Commonwealth. In view of the fact that Australia imports a large amount of food,<sup>17</sup> this system has to include effective controls on imports to ensure that they meet the same safety levels as domestic products. The large share of processed foods in the food imports of Australia<sup>18</sup> increases the importance of a farm-to-fork approach to

---

<sup>10</sup> The outcome of a 2004 National Health Survey in Australia indicated that 23% of adults smoked, 13% of adults consumed alcohol at levels constituting a high risk to their health in the long term, 70% of adults had low exercise levels, 52% of adults were classified as overweight or obese based, and 86% did not consume the recommended daily intake of vegetables per day. *Ibid.*, 265.

<sup>18</sup> Ninety-five percent of the value of food imports is accounted for by processed food. Australia's main food imports are processed vegetables, fruit and nuts; processed dairy products; processed meat, bakery products and beverages. *Ibid.*

food-safety requirements, in order to prevent the introduction of contaminants, such as carcinogens, or other risks in the production process.

### 2.4.1.3 Trade priorities

Australia was one of the original 23 Contracting Parties to the GATT 1947. When the *Marrakesh Agreement Establishing the World Trade Organization (the WTO Agreement)*<sup>19</sup> was adopted on 14 April 1994, Australia became one of the original Members of the WTO.

Australia is an active participant in world trade. In 2006-07, its foreign revenue earnings from exports of goods and services amounted to A\$216 billion, an increase of 10 percent from the previous year,<sup>20</sup> and made up 20.6 percent of its GDP.<sup>21</sup> The ratio of trade to GDP in Australia in 2004 – 2006 was 39.8.<sup>22</sup> In the same period, total merchandise exports increased by 10 per cent to \$168 billion. Australia's main merchandise export products are coal, iron ore, gold and crude petroleum.<sup>23</sup> In 2006-2007, fuel and mineral exports, including gold, made up 50.1 percent of total merchandise exports.<sup>24</sup> Food and agricultural products made up another 16.1 percent in that period.<sup>25</sup>

Due to the important share of agricultural products in Australia's non-mineral exports,<sup>26</sup> liberalisation of agricultural trade is a priority for Australia. Australia is a founding member of the Cairns Group, a coalition of countries that are important exporters of agricultural

<sup>19</sup> 'Marrakesh Agreement Establishing the World Trade Organization', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 6-18.

<sup>22</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 10, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008. The ratio of trade to GDP is a useful indicator of the significance of international trade to a country's economy. It is calculated by dividing an economy's total trade in goods and services (exports + imports) by its GDP, on the basis of data for the three latest years available. GDP is measured in nominal terms and with market exchange rates.

<sup>23</sup> Australian Government Department of Foreign Affairs and Trade, *Composition of Trade Australia: 2006-07* (Commonwealth of Australia, Canberra), November 2007, 1, available at: [http://www.dfat.gov.au/publications/stats-pubs/downloads/COT\\_FY2007.pdf](http://www.dfat.gov.au/publications/stats-pubs/downloads/COT_FY2007.pdf), visited on 12 January 2008. Of Australia's A\$216 billion in export earnings in 2007-2007, coal accounted for A\$21.9 billion, iron ore for A\$15.5 billion, gold for A\$10.7 billion and crude petroleum for A\$7.6 billion.

<sup>24</sup> Australian Government Department of Foreign Affairs and Trade, *Exports of Primary and Manufactured Products Australia: 2006-07* (Commonwealth of Australia, Canberra), December 2007, 16, available at: [http://www.dfat.gov.au/publications/stats-pubs/downloads/pmp\\_2006\\_07.pdf](http://www.dfat.gov.au/publications/stats-pubs/downloads/pmp_2006_07.pdf), visited on 12 January 2008.

<sup>25</sup> This information is provided on the website of the Australian Government Department of Foreign Affairs and Trade, available at: [http://www.dfat.gov.au/trade/negotiations/trade\\_in\\_agriculture.html](http://www.dfat.gov.au/trade/negotiations/trade_in_agriculture.html), visited on 12 January 2008. In 2006 alone, the share of agriculture (including processed agricultural products) in Australia's export earnings was 18%. WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 11, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008.

<sup>26</sup> The share of food and agricultural products in Australia's merchandise exports, excluding fuels and minerals, was over 30% in 2006-2007.

products, which aims to promote the liberalisation of agricultural trade.<sup>27</sup> Australia chairs this coalition. One of Australia's main priorities with regard to the Doha Development Round of trade negotiations is to improve market access for agricultural products and reduce domestic support in agriculture.<sup>28</sup> In addition, it aims to increase market access for services and non-agricultural products, and to improve WTO disciplines on regional trade agreements.<sup>29</sup>

Australia actively defends its interests in the WTO regime,<sup>30</sup> including through the use of the dispute settlement system. It has been a complainant in seven disputes, five of which proceeded to adjudication by WTO panels and, in some cases, also by the Appellate Body.<sup>31</sup> Notably, most of these disputes had to do with agricultural products, although none of them was brought under the *SPS Agreement*. It has been a third party to disputes brought by other WTO Members in 45 cases,<sup>32</sup> 20 of which involved agricultural products and six of which were decided under the *SPS Agreement*.<sup>33</sup> Australia joined consultations initiated by other WTO Members in a further 18 cases, nine of which dealt with measures affecting agricultural products and one of which involved claims under the *SPS Agreement*.<sup>34</sup> Australia has also had disputes brought against it in ten cases, six of which were brought under the *SPS Agreement*.<sup>35</sup> Two of these disputes, one of which involved

<sup>27</sup> The Cairns Group is a coalition of agriculture exporting countries, formed in 1986. It is composed of the main exporters of agricultural products, including developed and developing countries, across the world (Argentina, Australia, Bolivia, Brazil, Canada, Chile, Colombia, Costa Rica, Guatemala, Indonesia, Malaysia, New Zealand, Pakistan, Paraguay, Philippines, South Africa, Thailand, Uruguay). Its members account for over 25% of world trade in agricultural products. It is influential in the negotiations on the reform of agricultural trade. See the website of the Cairns Group, available at: <http://www.cairnsgroup.org/>, visited on 8 January 2008.

<sup>28</sup> Trade Policy Review Body, *Trade Policy Review: Australia - Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section II para. 14.

<sup>29</sup> *Ibid.*, Section II para. 14-16.

<sup>30</sup> A WTO Trade Law Branch of the DFAT was created in 2001 to provide Australia with legal expertise and trade policy advice with regard to the WTO agreements. *Ibid.*, Section II para. 17 note 22.

<sup>31</sup> This information is taken from the page on Australia on the WTO website, available at: [http://www.wto.org/english/thewto\\_e/countries\\_e/australia\\_e.htm](http://www.wto.org/english/thewto_e/countries_e/australia_e.htm), visited on 23 January 2008.

<sup>32</sup> This information is taken from the page on Australia on the WTO website, available at: [http://www.wto.org/english/thewto\\_e/countries\\_e/australia\\_e.htm](http://www.wto.org/english/thewto_e/countries_e/australia_e.htm), visited on 23 January 2008. However, this number excludes a case erroneously included in the WTO list in which Australia was in fact the complainant (WT/DS290).

<sup>33</sup> Australia was a third party in the following 6 disputes regarding three different matters that were decided under the SPS Agreement: *European Communities Measures Concerning Meat Products (Hormones), Complaint by the United States*, WT/DS26; *EC Measures Concerning Meat and Meat Products (Hormones), Complaint by Canada*, WT/DS48; *Japan - Measures Affecting the Importation of Apples*, WT/DS245; *European Communities - Measures Affecting the Approval and Marketing of Biotech Products*, WT/DS291, WT/DS292, and WT/DS293; *United States - Continued Suspension of Obligations in the EC - Hormones Dispute*, WT/DS320; *Canada - Continued Suspension of Obligations in the EC - Hormones Dispute*, WT/DS321.

<sup>34</sup> *India - Quantitative Restrictions on Imports of Agricultural, Textile and Industrial Products - Request to Join Consultations*, WT/DS96/5, circulated on 5 August 1997.

<sup>35</sup> These are *Australia - Measures Affecting the Importation of Salmon, Complaint by Canada* (WT/DS18); *Australia - Measures Affecting the Importation of Salmonids, Complaint by the United States* (WT/DS21); *Australia - Certain Measures Affecting the Importation of Fresh Fruit and Vegetables, Complaint by the Philippines* (WT/DS270); *Australia - Certain Measures Affecting the Importation of Fresh Pineapple, Complaint by the Philippines* (WT/DS271); *Australia - Quarantine Regime for Imports, Complaint by the European Communities* (WT/DS287); and *Australia - Measures Affecting the Importation of Apples from New Zealand, Complaint by New Zealand* (WT/DS367).

a challenge under the *SPS Agreement*, have been adjudicated.<sup>36</sup> One dispute, brought by New Zealand against Australia under the *SPS Agreement* is currently before a Panel.<sup>37</sup> With regard to a further two disputes under the *SPS Agreement*, a panel has been established but not composed.<sup>38</sup>

Australia and New Zealand have greatly integrated economies, on the basis of the *Australia-New Zealand Closer Economic Relations Trade Agreement* of 1983 (ANZCERTA), which is the longest-standing preferential trade agreement to which Australia is party. It provides duty-free market access between the parties. This agreement is complemented by a range of bilateral agreements on specific issues, such as government procurement, movement of persons and mutual recognition of standards. In addition, an agreement on food-safety requirements was reached between Australia and New Zealand in 2002, creating a common regulatory authority.<sup>39</sup> New Zealand is currently Australia's 5th largest trading partner, accounting for 5.9 percent of its exports of goods and services.<sup>40</sup>

Australia also participates in other several preferential trade arrangements. It grants unilateral preferences to goods from least-developed and developing countries through the *Australian System of Tariff Preferences* (ASTP). In addition, since 1 July 2003, all 50 least-developed countries are given duty-free, quota-free market access. Unilateral preferences are also granted to Forum Island countries under the *South Pacific Region Trade and Economic Cooperation Agreement* (SPARTECA) and to Papua New Guinea under the *Papua New Guinea and Australia Trade and Commercial Relations Agreement*. Other regional arrangements and bilateral trade agreements in which Australia participates include: the *Asia Pacific Economic Cooperation* (APEC), the *Association of Southeast Asian Nations* (ASEAN), the *Singapore-Australia Free Trade Agreement* of 2003 (SAFTA), the *Thailand-Australia Free Trade Agreement* of 2005 (TAFTA), and the *Australia-United States Free Trade Agreement of 2005* (AUSFTA).<sup>41</sup>

Australia is also an active participant in specific bilateral arrangements with its trading partners, including with regard to agriculture-related issues. Examples of these are

<sup>36</sup> The following SPS dispute in which Australia was the respondent proceeded to adjudication by a panel, and on appeal by the Appellate Body: *Australia – Measures Affecting Importation of Salmon*, WT/DS18. In addition, a compliance panel established under Article 21.5 of the *Dispute Settlement Understanding* decided a dispute concerning Australia's implementation of the recommendations and rulings of the Dispute Settlement Body in this case.

<sup>37</sup> On 21 January 2008, a Panel was established to hear New Zealand's challenge to Australia's phytosanitary requirements to prevent the introduction of fire blight from the importation of New Zealand apples. Dispute Settlement Body, *Australia – Measures Affecting the Importation of Apples from New Zealand. Request for the Establishment of a Panel by New Zealand*, WT/DS367/5, circulated on 7 December 2007. The Panel was composed on 12 March 2008 and issued a preliminary ruling on 6 June 2008.

<sup>38</sup> In two parallel disputes concerning Australia's quarantine regime, initiated by the Philippines (WT/DS270) and the EC (WT/DS287), panels were established in August and November 2003 respectively. However, these panels have never been composed. A mutually agreed solution to the latter dispute was reported in March 2007. Dispute Settlement Body, *Australia – Quarantine Regime for Imports. Notification of Mutually Agreed Solution*, WT/DS287/8, G/L/618/Add.1, G/SPS/GEN/384/Add.1, circulated on 13 March 2007.

<sup>39</sup> This bilateral regulatory authority is discussed further below, Part II, Section 2.4.2.2.

<sup>40</sup> Australian Government Department of Foreign Affairs and Trade, *Composition of Trade Australia: 2006-07* (Commonwealth of Australia, Canberra), November 2007, 23, available at: [http://www.dfat.gov.au/publications/stats-pubs/downloads/COT\\_FY2007.pdf](http://www.dfat.gov.au/publications/stats-pubs/downloads/COT_FY2007.pdf), visited on 12 January 2008.

<sup>41</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section II paras 21-31.

memoranda of understanding with regard to quarantine controls and other SPS measures and technical cooperation in the agricultural sector.<sup>42</sup> Through these arrangements, Australia seeks both to facilitate market access for its agricultural products by means of harmonised SPS requirements or mutual recognition of SPS controls and to ensure the safety of the agricultural products imported into its territory. These initiatives reflect the importance given to agricultural trade by the Australian government. The role of this sector in the Australian economy, and more specifically in its export trade, deserves further attention.

#### 2.4.1.4 Significance of agricultural sector

The agricultural industry accounted for only 3.1 percent of GDP in Australia in 2005-2006.<sup>43</sup> This share has decreased from 4.4 percent in 2001-2002, partly due to widespread drought which has affected the productivity of farms.<sup>44</sup> In addition, the share of agricultural industry in employment has dropped from 4.9 percent in 2001-2002 to 3.5 percent in 2005-2006.<sup>45</sup>

However, despite its relatively small share in Australia's economy, agriculture plays a significant role in Australia's export trade as noted above.<sup>46</sup> Australia is very competitive in agricultural production and exports approximately two thirds of total production.<sup>47</sup> As mentioned above, in 2006, 18 percent of merchandise exports from Australia were agricultural products, including processed food and beverages.<sup>48</sup> The last decade has seen Australia's exports in this sector grow, and they currently account for 2.3 percent of all agricultural exports worldwide.<sup>49</sup>

<sup>42</sup> *Ibid.*, Section IV para. 8 and note 9.

<sup>43</sup> *Ibid.*, Section IV para. 6. The main contributor to GDP in Australia is the services industry, which accounted for 68.9% of GDP in 2005-2006.

<sup>44</sup> *Ibid.* Australian Bureau of Agricultural and Resource Economics, *Australian Farm Survey Results 2004-05 to 2006-07* (Commonwealth of Australia, Canberra), March 2007, 2, available at: [http://www.abareconomics.com/publications\\_html/economy/economy\\_07/fsr\\_07.pdf](http://www.abareconomics.com/publications_html/economy/economy_07/fsr_07.pdf), visited on 13 January 2008.

<sup>45</sup> Trade Policy Review Body, Trade Policy Review: Australia – Report by the Secretariat. Revision, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section IV para. 6. In 2005-2006, total employment in the food and beverage manufacturing sector fell by more than 13,000 to 181,775 persons. In agricultural production, employment figures also dropped from 313,275 persons in 2004-2005 to 305,800 persons in 2005-2006. In commercial fishing, the reduction in the same period was from 16,000 persons to 13,650. Australian Government Department of Agriculture Fisheries and Forestry, *Australian Food Statistics 2006* (Commonwealth of Australia, Canberra), 2007, 2, available at: [http://www.abareconomics.com/publications\\_html/crops/crops\\_07/fstats\\_main.pdf](http://www.abareconomics.com/publications_html/crops/crops_07/fstats_main.pdf), visited on 15 January 2008.

<sup>46</sup> Trade Policy Review Body, Trade Policy Review: Australia – Report by the Secretariat. Revision, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section IV para. 6.

<sup>47</sup> This makes it the second most export-oriented industry in Australia, after mining. Currently 95% of wool production, 65%-75% of beef sugar and wheat production and 50%-60% of sheep meat, wine and dairy products are exported. *Ibid.*, Section IV para. 6 and note 8.

<sup>48</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 10, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008.

<sup>49</sup> This information is provided on the website of the Australian Government Department of Foreign Affairs and Trade, available at: [http://www.dfat.gov.au/trade/negotiations/trade\\_in\\_agriculture.html](http://www.dfat.gov.au/trade/negotiations/trade_in_agriculture.html), visited on 12 January 2008.

Australia's main agricultural export is bovine meat, ranking eighth in value among Australia's export products in 2006-2007.<sup>50</sup> It accounted for 3 percent of total merchandise exports in 2006-2007.<sup>51</sup> Bovine meat exports are destined mainly for Japan and the US, with other important importers being the Republic of Korea, Taiwan and Indonesia.<sup>52</sup> Other important agricultural exports are wool, wheat, meat other than bovine meat, milk and cream and live animals.<sup>53</sup> The success of the live cattle industry of Australia in meeting the growing demand in South East Asian countries has been attributed in part to the disease-free status of Australian cattle, which gives it an advantage over potential competitors such as Brazil or India.<sup>54</sup>

The importance of the horticultural sector<sup>55</sup> in Australia is growing and has doubled in value over the 1990s to around \$680 million in 2000-01.<sup>56</sup> In particular, grapes, potatoes, apples, bananas and niche fruits and vegetables such as nashi pears, lychees, olives and herbs are important horticultural products in Australia. As over 60,000 of the persons employed in the horticultural industry are located in rural areas and outlying regions, this industry makes a significant contribution to rural and regional economies. Horticultural products make up approximately five per cent of the value of Australia's food exports. As Australia is located in the southern hemisphere, the horticulture industry can supply counter-seasonal fresh produce to many northern hemisphere markets. The main importers of Australia's horticultural products are Hong Kong, Singapore, Japan and the US.

<sup>50</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Australian Food Statistics 2006* (Commonwealth of Australia, Canberra), 2007, 34, available at: [http://www.abareconomics.com/publications\\_html/crops/crops\\_07/fstats\\_main.pdf](http://www.abareconomics.com/publications_html/crops/crops_07/fstats_main.pdf), visited on 15 January 2008.

<sup>51</sup> Australian Government Department of Foreign Affairs and Trade, *Composition of Trade Australia: 2006-07* (Commonwealth of Australia, Canberra), November 2007, 6, available at: [http://www.dfat.gov.au/publications/stats-pubs/downloads/COT\\_FY2007.pdf](http://www.dfat.gov.au/publications/stats-pubs/downloads/COT_FY2007.pdf), visited on 12 January 2008. Export earnings from bovine meat came to A\$4.9 billion in 2006-2007. Each year since 2001-2002, bovine meat export earnings increased by an average of 4%.

<sup>52</sup> These importers generated the following export earnings: Japan (\$2.1 billion), US (\$1.2 billion), Republic of Korea (\$894 million), Taiwan (\$140 million) and Indonesia (\$73 million). *Ibid.*

<sup>53</sup> *Ibid.*, 36. In 2006-2007, wool ranked 15<sup>th</sup> in contribution to merchandise export revenue and earned A\$2.7 billion (exported mainly to China and Italy). Wheat ranked 17<sup>th</sup> and generated A\$2.6 billion (destined mainly for Indonesia, India and Japan). Meat other than bovine meat ranked 18<sup>th</sup> in contribution to merchandise export earnings and generated A\$2.1 billion (destined mainly for the US and Japan). Milk and cream ranked 22<sup>nd</sup> and earned A\$1.3 billion in export revenue (destined mainly for Malaysia and Singapore), and live animals ranked 24<sup>th</sup>, earning A\$953 million. Exports of crustaceans earned A\$793 million (ranked 30<sup>th</sup>) and fish A\$259 million (ranked 72<sup>nd</sup>) in that year.

<sup>54</sup> Peter Martin *et al.*, *Australian Beef: Live Cattle Export Trade: Importance to Northern and Southern Australian Beef Industries* ABARE 07.1 (Australian Bureau of Agricultural and Resource Economics, February 2007, 4-5, available at: [http://www.abareconomics.com/publications\\_html/livestock/livestock\\_07/Beef07.pdf](http://www.abareconomics.com/publications_html/livestock/livestock_07/Beef07.pdf), visited on 16 January 2008. This study reports that the improved management systems initiated as part of the campaign to eradicate tuberculosis and brucellosis in cattle in the 1980s, led to expansion in cattle trade.

<sup>55</sup> The term 'horticulture' which means the art of gardening or plant growing, is often used to refer to the smaller scale cultivation of a wide variety of crops, including fruit trees, in contrast to agronomy which refers to the cultivation of field crops such as cereals and fodder, forestry, which refers to the cultivation of trees or agriculture, which refers to the practice of large scale farming.

<sup>56</sup> Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 9, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

The fishery sector in Australia (comprised mainly of rock lobster, prawns, abalone and tuna) is the fifth most viable rural industry.<sup>57</sup> It makes a significant contribution to the Australian economy. Fisheries employ approximately 21,000 people for catching and harvesting activities, 6,000 in aquaculture and a further 4,000 in processing.<sup>58</sup> Around 9,000 commercial fishing vessels operate in Australia.<sup>59</sup> Although fisheries production decreased by 13 percent in volume from 1999-2000 to 2005-2006,<sup>60</sup> it increased in value by one percent and now accounts for A\$2.13 billion.<sup>61</sup> The Australian government has made a significant investment, through its *Securing our Fishing Future* package, to promote the profitability and sustainability of Australian fisheries.<sup>62</sup> The Australian fishery industry contributes to export earnings. Exports fell by 36 percent in volume in 2005-2006,<sup>63</sup> but increased in value by A\$5.3 million that period to A\$1.55 billion.<sup>64</sup> Australia's edible fishery production is exported primarily to Hong Kong and Japan.<sup>65</sup> About 80 percent of export earnings come from edible fishery products.<sup>66</sup> Australia's main fisheries export product is rock lobster, followed by pearls, abalone, tuna and prawns. The Australian government is active in promoting fisheries exports. In order to ensure that market access issues with regard to Australian fishery exports are dealt with effectively and in a coordinated fashion by the Australian and State governments and the industry itself, the *Fisheries Market Access and Trade Program* was launched in March 2001.<sup>67</sup> In addition,

<sup>57</sup> This information is drawn from the fisheries page of the website of the Australian Government Department of Agriculture, Fisheries and Forestry, available at: <http://www.daff.gov.au/fisheries>, visited on 13 January 2008. According to this Department, the fishery industry ranks after beef, wool, wheat and dairy as most viable rural industry. The Department sees the challenge in this sector as how to develop the industry while ensuring the sustainability of Australia's marine ecosystem.

<sup>58</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat*, WT/TPR/S/178, circulated on 29 January 2007, Section IV para. 32.

<sup>59</sup> *Ibid.*

<sup>60</sup> Causes of reduced production include increased fuel prices and reduction in allowable catches to prevent over-fishing. Wildcatch fishery production fell by 13 percent in volume, although aquaculture production increased by 16 percent in volume, in this period. Roslyn Wood *et al.*, *Australian Fisheries Statistics 2006* (Australian Bureau of Agricultural and Resource Economics, Canberra), June 2007, 3, available at: [http://www.abareconomics.com/publications\\_html/fisheries/fisheries\\_07/07\\_fishstats.pdf](http://www.abareconomics.com/publications_html/fisheries/fisheries_07/07_fishstats.pdf), visited on 13 January 2008.

<sup>61</sup> This was due to an 18% increase in the value of aquaculture production (driven by higher prices for Tasmanian salmonids and increased production of South Australian southern bluefin tuna), which compensated for the loss of volume. *Ibid.*

<sup>62</sup> This A\$220 million package, announced in November 2005, aims to ensure profitable and sustainable Commonwealth fisheries for the future. It is reported to be the largest financial contribution ever made by the Australian Government to the fishery sector. This information is found on the *Securing our Future* page of the website of the Australian Government Department of Agriculture, Fisheries and Forestry, available at: <http://www.daff.gov.au/fisheries/domestic/fishingfuture>, visited on 14 January 2008.

<sup>63</sup> Roslyn Wood *et al.*, *Australian Fisheries Statistics 2006* (Australian Bureau of Agricultural and Resource Economics, Canberra), June 2007, available at: [http://www.abareconomics.com/publications\\_html/fisheries/fisheries\\_07/07\\_fishstats.pdf](http://www.abareconomics.com/publications_html/fisheries/fisheries_07/07_fishstats.pdf), visited on 13 January 2008.

<sup>64</sup> *Ibid.*, 9.

<sup>65</sup> *Ibid.*, 10.

<sup>66</sup> The main edible fishery exports in 2005-06 (and their export earnings) were rock lobster (A\$489 million), abalone (A\$246 million), tuna (A\$177 million) and prawns (A\$134 million). The non-food component of fisheries exports is made up of peals, fish meal and marine fats and oils. *Ibid.*, 3.

<sup>67</sup> This program, *inter alia*, aims to improve coordination and cooperation between the Australian fisheries industry and the Commonwealth, State and Territory governments in dealing with market access issues. See the website of the Fisheries Market Access and Trade Program, available at: <http://www.daff.gov.au/fisheries/marketaccess/about>, visited on 13 January 2008.

a wide range of services, grants and programs are provided by the Australian government to assist exporters of fishery products.<sup>68</sup>

Exports of processed food make up a greater share of the merchandise exports of Australia than unprocessed food products. In 2006-2007, processed food accounted for 9.2 percent of merchandise export earnings, while unprocessed food exports contributed 4.1 percent to these earnings.<sup>69</sup> The food and beverage industry is the largest manufacturing industry,<sup>70</sup> and one of the fastest growing manufacturing sectors in Australia.<sup>71</sup> This has been attributed in large part to the growth in exports and the development of more sophisticated processed food products.<sup>72</sup> Around 22 percent of processed food produced in Australia is exported.<sup>73</sup>

Australia's agricultural sector is greatly liberalised. Australia provides very little domestic support to the agricultural sector compared to other OECD countries.<sup>74</sup> In addition its

<sup>68</sup> These are set out in detail in *The FishBook*, drawn up under the auspices of the DAFF. This publication lists both the programs in place for the fisheries industry in general, and, in a separate section, those that are aimed at exporters of fishery products. Jim Fitzgerald and Shelley Kowalski, *The FishBook II: A Guide to Australian Government Programs, Grants and Services for the Australian Seafood Industry* (Department of Agriculture, Fisheries and Forestry of the Government of Australia, Canberra), 2006, 37, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0019/6049/fishbook\\_2.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0019/6049/fishbook_2.pdf), visited on 13 January 2008. Two examples of services listed in this book are the following: ANIMEX, a database maintained by the Australian Quarantine and Inspection Service (AQIS) of export requirements for live animals (including fish) and reproductive material; and publications issued to demystify the requirements for market access in various trading partners, for example *A\$40 billion reasons to access the EU seafood market* and *A\$34 billion reasons to access the US seafood market*. Additional programs and services are mentioned in the discussion of the animal health system of Australia, below Part II, Section 2.4.2.3.

<sup>69</sup> Exports of processed food earned A\$ 15,523 million in 2006-2007 (up from A\$14,738 million in 2001-2002). Exports of unprocessed food generated A\$ 6,948 million in the same period (down from A\$11.039 in 2001-2002). Australian Government Department of Foreign Affairs and Trade, *Composition of Trade Australia: 2006-07* (Commonwealth of Australia, Canberra), November 2007, 25, available at: [http://www.dfat.gov.au/publications/stats-pubs/downloads/COT\\_FY2007.pdf](http://www.dfat.gov.au/publications/stats-pubs/downloads/COT_FY2007.pdf), visited on 12 January 2008.

<sup>70</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Australian Food Statistics 2006* (Commonwealth of Australia, Canberra), 2007, 3, available at: [http://www.abareconomics.com/publications\\_html/crops/crops\\_07/fstats\\_main.pdf](http://www.abareconomics.com/publications_html/crops/crops_07/fstats_main.pdf), visited on 15 January 2008. This sector provided over 17% of employment in the manufacturing sector, and 21% of sales and service income (A\$68.8 billion) in 2004-2005.

<sup>71</sup> Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 8, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

<sup>72</sup> *Ibid.*

<sup>73</sup> *Ibid.* To promote the contribution of food processing to rural employment, the Australian government created the Food Processing in Regional Australia Programme. This is a four-year programme initiated in 2004 to provide grants to small- and medium-sized food processors in rural and regional areas to assist them to add value to food produce and establish regional networks and market contacts. Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2004-05* (Commonwealth of Australia, Canberra), October 2005, available at: [http://www.daff.gov.au/\\_data/assets/word\\_doc/0016/5704/2004-05\\_annual\\_report\\_exc\\_fin\\_statements.doc](http://www.daff.gov.au/_data/assets/word_doc/0016/5704/2004-05_annual_report_exc_fin_statements.doc), visited on 17 January 2008.

<sup>74</sup> Australia spends A\$980 million, or 0.11% of its GDP, on assistance to the agricultural sector. Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat*. Revision, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section IV Table IV.1. Australia's domestic support to agriculture amounts to just 4% of farm income, compared to 33% in the EC, 18% in the US and 56% in Japan. This data is provided in the 'Trade Fact Sheet' page on the website of the Australian Government Department of Foreign Affairs and Trade, available at: [http://www.dfat.gov.au/trade/fs/wto\\_agriculture.html](http://www.dfat.gov.au/trade/fs/wto_agriculture.html), visited on 22 January 2008.

tariffs on agricultural products are low (with a few exceptions),<sup>75</sup> averaging 1.4 percent *ad valorem* in 2006.<sup>76</sup> However, a significant barrier to market access for agricultural products is the very strict SPS regime in place in Australia, as will be discussed further below.

The Australian Government Department of Agriculture, Fisheries and Forestry (DAFF) has recognised that the continued competitiveness, future earnings and long-term viability of the Australian agricultural and food industry will be influenced by developments on international food markets and will depend on Australia's ability to harness global opportunities.<sup>77</sup> As stated by the Minister for Agriculture, Fisheries and Forestry, Warren Truss, when introducing the *National Food Industry Strategy* in 2002,<sup>78</sup> '[h]istorical advantages and approaches will not be sufficient to ensure success in the global food industry of the future. Industry and Government must work in partnership to capture the opportunities and meet the challenges arising from this global trend.'<sup>79</sup>

The DAFF has identified new market opportunities resulting from greater demand for agricultural raw materials and inputs for food production in growing developing countries such as China.<sup>80</sup> In addition, it has noted that improved living standards in some developing countries, such as India, with the concomitant change in consumer choice and demands, provide new markets for high quality food products.<sup>81</sup> In developed-country markets across the world, consumers are becoming increasingly affluent, sophisticated and discerning, leading to high consumer expectations regarding food-safety, nutritional value, variety and convenience of food products.<sup>82</sup> The *National Food Industry Strategy* therefore notes the importance of Australian producers and exporters responding to these changing consumer expectations. It recommends that producers and exporters take advantage of the niche market opportunities created by this changed demand by capitalising on Australia's reputation for producing safe food from a clean environment.<sup>83</sup> This repu-

<sup>75</sup> Certain non-*ad valorem* duties conceal tariff peaks, including the specific rate of A\$1.22/kg for cheese and curd (amounting to an *ad valorem* equivalent of 23.8% and the alternate rate of 5% or A\$0.45/kg for fruit juices. *Ibid.*, Section IV para. 16.

<sup>76</sup> *Ibid.*, Section IV para. 7.

<sup>77</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Australian Food Statistics 2006* (Commonwealth of Australia, Canberra), 2007, 23, available at: [http://www.abareconomics.com/publications\\_html/crops/crops\\_07/fstats\\_main.pdf](http://www.abareconomics.com/publications_html/crops/crops_07/fstats_main.pdf), visited on 15 January 2008.

<sup>78</sup> The *National Food Industry Strategy* is the outcome of the work of a task force created in 2000, by the Prime Minister's Supermarket to Asia Council, to analyse the issues that are likely to have an impact on the Australian food industry. The new global structure of food processing and retailing, involving a high degree of concentration and vertical integration, was identified as the key factor creating both opportunities and challenges for the Australian food industry. Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 34, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

tation can be marketed to consumers through, for example, organic certification, GM-free certification or eco-labelling. This in turn requires effective supply-chain management, ensuring traceability, product integrity and segregation.<sup>84</sup> This is an area in which Australian producers are weak.<sup>85</sup>

Certain challenges to the agricultural and food industry have been pointed out by the DAFF. One of these is the challenge arising from SPS risks. For example, the adverse impact of outbreaks of animal diseases, such as BSE and avian influenza, on global food trade has been noted.<sup>86</sup> As a result, the *National Food Industry Strategy* sees a strategic role for the government in supporting food trade through maintaining and refining its effective SPS controls to minimise incursions of pests and diseases into Australia, as well as to ensure that Australian food exports meet the SPS requirements of importing countries.<sup>87</sup> The DAFF has noted the need for the food and agricultural industry to adapt to the new regulatory environment to address SPS risks.<sup>88</sup> In addition, the *National Food Industry Strategy* sees an important role for government addressing SPS barriers to trade. It therefore includes in its strategy the continuation and expansion of the Technical Market Access Program, which comprises agricultural and veterinary counsellors on located in the importing countries as well as technical experts based in Canberra. This program aims at early intervention, on technical level, in case of SPS market barriers in order to ‘avert the occurrence of seriously disruptive decisions and actions by import agencies.’<sup>89</sup>

In addition, the *National Food Industry Strategy* points to the challenges arising from the increasing concentration of world food trade and retailing. Currently, just a few multinational firms, are responsible for about one third of processed food trade through via intra-firm transfers.<sup>90</sup> These firms are vertically integrated with producers and distributors, for example through joint ventures. In addition, some global processing companies use established supply-chain networks to source their agricultural inputs from producers, anywhere in the world.<sup>91</sup> Producers are chosen that can provide a reliable supply of high-

<sup>84</sup> *Ibid.*

<sup>85</sup> *Ibid.*

<sup>90</sup> *Ibid.*, 13.

<sup>91</sup> *Ibid.*

quality, safe, agricultural products at competitive prices. Similarly, there is a high level of concentration in food retailing.<sup>1</sup> The major international retailers, such as Wal-Mart, Carrefour and Ahold, are also sourcing their products through long-term global supply-chain relationships with a few selected suppliers.<sup>2</sup> These retailers impose their own systems-wide food safety and quality requirements, commonly known as ‘supermarket standards’, which are generally much stricter than the SPS requirements set by the countries in which they will market their products.<sup>3</sup> They discourage the ‘sharing’ of suppliers, making these exclusive supply agreements ‘a form of vertical integration’.<sup>4</sup> Currently, Australian food suppliers do not participate fully in these supply-chain relationships due to the ‘overall lack of a supply chain ethos in Australia’s food industry’.<sup>5</sup> This means that product integrity and traceability is not guaranteed. The *National Food Industry Strategy* emphasises the importance for Australian suppliers of tapping into the global supply-chain networks by forming strategic relationships with global food processors and retailers.<sup>6</sup> Australia is well placed to take advantage of the possibilities and to capture the benefits of participation in these global networks as its agricultural products are of a high quality and safety level, are competitive in price, and benefit from the ability to supply counter-seasonal fresh produce for countries in the Northern hemisphere.

To achieve the objectives of its *National Food Industry Strategy*, the Australian government committed A\$102.4 million over five years, as of 1 July 2002, to specific initiatives.<sup>7</sup> One of these initiatives is focused on providing the infrastructure and capabilities needed to enhance product integrity and supply-chain management of Australian products for international markets, to which A\$15.6 million has been allocated.<sup>8</sup> National Food Industry Council, composed of industry leaders and key Commonwealth Ministers, has been established to oversee the implementation of this strategy.<sup>9</sup> This Council reports to the Minister for Agriculture, Fisheries and Forestry.

#### 2.4.1.5 Summary of factual background

The factual background set out above aims to provide a context for the following discussion of Australia’s SPS system. It focuses on the health and trade priorities of Australia, to facilitate the understanding of the SPS system it has in place. Thereby it also forms

---

<sup>1</sup> *Ibid.*, 14. This strategy paper notes that six retail chains control around 80% of food retail outlets in the UK, and two retail chains are responsible for over 70% of sales in Australia. The 10 largest global retailers operate in at least 7 countries and in some cases in up to 28 countries.

<sup>2</sup> This maximizes profits due to improvements in efficiencies throughout the supply chain. *Ibid.*

<sup>3</sup> For a discussion on private SPS standards and reasons why processors and retailers impose these strict requirements, see above, Part II, Section 1.3.

<sup>4</sup> Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 14, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

<sup>9</sup> The National Food Industry Council replaces the Prime Minister’s Supermarket to Asia Council. It has a global focus and covers all the issues that have an on the competitiveness of the Australian food industry. *Ibid.*, 22.

a background against which the impact of the *SPS Agreement* on Australia's health and trade objectives and their implementation can be appreciated.

As has been seen above, Australia has a high level of health care and one of the lowest death rates in the world. It has long passed the stage where infectious diseases are a primary health concern, and instead the main health burden it faces comes from non-communicable, chronic diseases. Many of these diseases are life-style and diet related, and they require a preventative approach that addresses long term-causal factors, including unsafe food. In addition, some short-term health risks related to food safety remain a concern, namely those from pathogens such as Salmonella. Consequently, Australia has reformed its food-safety system to ensure effective control throughout the food chain. This food-safety system, however, must also avert risks from imported food products in order to meet the challenge of disease prevention. It is here that the disciplines of the *SPS Agreement* come into play.

While the agricultural industry does not contribute a large share to the Australian economy, it is nevertheless an important sector in export earnings. In addition, it plays a significant role in the rural economy. As a result, the Australian government sees the maintenance of this industry as a viable sector of the economy as a priority, as evinced by its active role in promoting liberalisation of agricultural trade and its significant investments in projects and services to assist agricultural producers and exporters.

The recognition by the Australian government of the need for the food industry to adjust to international developments, and its commitment to assist this industry in this task, is reflected in its *National Food Industry Strategy*. In order to remain competitive, Australia must take advantage of the opportunities and respond to the challenges of the global market. A key challenge in this respect is the significant concentration of food-processing and retailing, which makes use of established supply-chain relationships with trusted suppliers. These suppliers are required to comply with private SPS standards set by the global processors and retailers. To participate effectively in international food trade, Australian producers must therefore engage in these strategic supply-chain relationships. It is important, for this purpose, that Australian agricultural and food products maintain their reputation for providing a high level of safety and quality, in keeping with the demanding private standards set by processing and retailing conglomerates. In addition, supply-chain management in Australia must be improved to ensure the product traceability and integrity required by the major food processors and retailers that currently dominate food trade.

An examination of the SPS system in place in Australia provides an indication of the extent to which Australia is in a position to meet the challenges posed by the global environment both in the area of protecting the health of its citizens and with respect to promoting its trade in food and agricultural products.

#### **2.4.2 Australia's SPS system**

In order to ensure the consistency and effectiveness of its SPS system, Australia has a general framework of quarantine controls in place, applicable to humans, plants and animals and associated products, including food.<sup>10</sup> It also has specific systems in place under

---

<sup>10</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/

this framework to address food-safety, animal health and plant health. This rigorous and complex SPS system is outlined below.

### 2.4.2.1 General framework

Australia has a very stringent SPS system in place. It has characterised its SPS system as ‘providing a high level of sanitary and phytosanitary protection aimed at reducing risk to a very low level, but not to zero’,<sup>11</sup> in accordance with the expectations of its citizens. Australia justifies this very strict level of protection with reference to the particular vulnerability of its unique and diverse indigenous fauna and flora, and the fact that Australia is currently free from most pests and diseases of quarantine significance.<sup>12</sup> In addition, the importance of the agricultural sector for Australia is referred to in this regard.<sup>13</sup>

The SPS system of Australia is complex, involving three levels of authority. First, at the level of the Commonwealth government, responsibility for human health, including in the area of food-safety, lies in the final instance with the Australian Government Department of Health and Aging. Overall responsibility for animal and plant health in Australia is in the hands of the Australian Government Department of Agriculture, Fisheries and Forestry. Second, the various States and Territories of Australia play a key role in SPS regulation,<sup>14</sup> particularly with regard to differences in pest and disease status within Australia.<sup>15</sup> Implementation of national SPS policies and inspection to check compliance with SPS requirements is largely in the hands of the States and Territories. Third, in the area of food safety, an additional level of governance has been established under a cooperation agreement between Australia and New Zealand. This agreement creates a regu-

<sup>13</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Import Risk Analysis Handbook 2007* (Commonwealth of Australia, Canberra), September 2007, 8, available at: [http://www.daff.gov.au/biosecuritycoordination/import\\_risk\\_analysis\\_handbook\\_2007](http://www.daff.gov.au/biosecuritycoordination/import_risk_analysis_handbook_2007), visited on 15 January 2008; Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section III para. 48.

<sup>14</sup> In terms of the Australian Constitution, the Commonwealth Government does not have exclusive authority to legislate in the area of quarantine policy. Therefore State and Territory legislation also exists in this area.

<sup>15</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section III para. 50 and note 78. For example, in northern Australia, quarantine is crucial due to the proximity of this region to Southeast Asia and the Pacific, areas of prevalence of many pests and diseases of which Australia is currently free. The Northern Australia Quarantine Service is responsible for quarantine control of border movements through the Torres Strait and conducts pest and disease surveillance in coastal northern Australia and in Papua New Guinea, Indonesia and East Timor. This information is provided on the website of the Australian Quarantine and Inspection Service, available at: <http://www.daff.gov.au/aqis/about/reports-pubs/at-a-glance>, visited on 17 January 2008.

latory body called Food Standards Australia New Zealand (FSANZ),<sup>16</sup> responsible for developing and enforcing the *Australia New Zealand Food Standards Code*. Aside from these three levels of mandatory SPS regulation by central and local government and regional bodies, voluntary SPS standards in Australia are set by Standards Australia, a non-governmental body.<sup>17</sup> Almost a third of the standards developed by Standards Australia are taken up in a Commonwealth, State or Territory law, and thereby become mandatory.<sup>18</sup>

The SPS system of Australia is characterised by a high level of transparency and stakeholder participation. Key elements of the regulatory process are the publication of ‘issues papers’,<sup>19</sup> risk assessments and draft SPS measures and the invitation of comments from all interested parties at various stages of the risk analysis process. As highlighted in the 1996 Nairn Review, which led to the reform of Australia’s quarantine system, ‘[t]he effectiveness of consultation and communication will ultimately be judged by the credibility and ownership of quarantine policies, programs and decisions.’<sup>20</sup>

The general quarantine (or SPS) control framework at the Commonwealth level is based on the *Quarantine Act* of 1908 as amended in 2007,<sup>21</sup> as supplemented by the *Quarantine Regulations* of 2000<sup>22</sup> and three *Quarantine Proclamations*.<sup>23</sup> This framework rests on a prior-approval system, which entails that only those products whose safety has been established through risk analysis, and which have accordingly been granted an import

<sup>16</sup> The FSANZ is discussed further below, Part II, Section 2.4.2.2.

<sup>17</sup> Standards Australia was established in 1922. It is the main non-governmental standard-setting body in Australia, recognised through a Memorandum of Understanding with the Commonwealth Government. It is a limited company with 72 members representing groups interested in the development and application of standards and related products and services. The standards developed by Standards Australia are not limited to food safety standards, but include industrial standards, occupational health and safety standards, environmental standards etc. See the website of Standards Australia, available at: <http://www.standards.org.au/default.asp>, visited on 17 January 2008.

<sup>18</sup> See the ‘The Legal Status of Australian Standards’ on the website of Standards Australia, available at: <http://www.standards.org.au/cat.asp?catid=7>, visited on 17 January 2008.

<sup>19</sup> Issues papers are published for each IRA, providing background information, identifying the hazard at issue, and outlining the further steps in the IRA process. All stakeholders are invited to comment on issue papers.

permit, may be imported.<sup>24</sup> Quarantine controls are applied to humans, plants and plant products, animals and animal products, and processed food at three stages: pre-border, border and post-border.<sup>25</sup>

At the pre-border stage, assessment of risks to human health from food products and the formulation of risk management strategies is the responsibility of the FSANZ, which falls under the portfolio of the Department of Health and Aging. With respect to plant and animal health, Biosecurity Australia is responsible for conducting risk assessments and making risk management recommendations. Biosecurity Australia was created in 2000 to improve the SPS system of Australia. In 2004, this body became independent of both the Australian Quarantine and Inspection Service (AQIS) and the Department of Foreign Affairs and Trade of the Government of Australia.<sup>26</sup> Its task is to provide science-based quarantine risk analyses, known as import risk analyses (IRAs). In the IRA process, stakeholders are invited to submit their comments.<sup>27</sup> In cases of significant differences in scientific opinion or where the harm that could result from importation is significant, an expanded IRA will be carried out.<sup>28</sup> IRAs involve risk assessments which are required to identify the pests or diseases of quarantine concern that may be carried by the product involved; assess the likelihood that the identified pest or disease would enter, establish or spread, and assess the possible extent of the harm that would result.<sup>29</sup> On the basis of these risk assessments, Biosecurity Australia provides policy advice with regard to imports of animals and plants.<sup>30</sup> If Biosecurity Australia finds that the assessed risk exceeds

---

<sup>24</sup> Sec. 64(2) and 65(2) of the *Quarantine Proclamation* of 1998, as amended, prohibits the importation by a person into Australia of animals, plants or their products, or any material that may introduce a risk (such wood packaging material) unless a Director of Quarantine has granted the person a permit to import it into Australia. Australian Government Department of the Attorney General, *Quarantine Proclamation of 1998, as Amended, Made under Section 13 of the Quarantine Act of 1908* (Commonwealth of Australia, Canberra), 1 November 2007, available at: <http://www.comlaw.gov.au/ComLaw/Legislation/LegislativeInstrumentCompilation1.nsf/all/search/AA0B4452ED7BBD44CA25737F00157097>, visited on 24 January 2008.

<sup>25</sup> The idea of quarantine control as a continuum comprised of pre-border, border and post-border stages was introduced by the Nairn Review of Australia's quarantine system in 1996. This report was critical of the previous focus on border measures only. M.E. Nairn *et al.*, *Australian Quarantine: A Shared Responsibility* (Australian Quarantine Review Secretariat, Canberra), 1996, 7, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0009/111969/nairn\\_report.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0009/111969/nairn_report.pdf), visited on 24 January 2008. The three stages of quarantine control are currently an integral part of the SPS system of Australia, as recognised in Australian Government Department of Agriculture Fisheries and Forestry, *Import Risk Analysis Handbook 2007* (Commonwealth of Australia, Canberra), September 2007, 8-9, available at: [http://www.daff.gov.au/biosecuritycoordination/import\\_risk\\_analysis\\_handbook\\_2007](http://www.daff.gov.au/biosecuritycoordination/import_risk_analysis_handbook_2007), visited on 15 January 2008. <sup>30</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/

the level of protection chosen by Australia, it will examine whether risk management options are available to reduce the risk to the relevant level of protection. If so, the product will be granted an import permit subject to the condition that specified risk management requirements are met; if not, the product will be banned.<sup>31</sup> If an expanded IRA was carried out, it must be reviewed by an independent body called the Eminent Scientists Group before its publication.<sup>32</sup> Biosecurity Australia then prepares a final IRA report and recommendations,<sup>33</sup> which are submitted to the Director of Animal and Plant Quarantine for a determination.<sup>34</sup> The determination is published and notified to the WTO and to stakeholders. A problem that has been raised as a concern by several WTO Members is the length of time taken in conducting the import risk analyses (IRAs) required before import approval is granted by Australia.<sup>35</sup> In response, Australia has recently announced reforms to increase the transparency, efficiency, timeliness and predictability of the IRA procedures.<sup>36</sup> These reforms are contained in the revision to the *Quarantine Regulations* of 2000, which came into force on 25 June 2008.<sup>37</sup> Currently a standard IRA must be completed within 24 months, and an expanded IRA within 30 months.<sup>38</sup>

At the border stage, on the advice of Biosecurity Australia (for risks to animal or plant health) or the FSANZ (for food-safety), the AQIS implements quarantine policies. AQIS has a staff of 3300. Its activities include issuing import permits and export certificates,<sup>39</sup>

Australian Government Department of the Attorney General, *Quarantine Regulations of 2000, Statutory Rules No. 129 of 2000, as Amended, Made under the Quarantine Act 1908* (Commonwealth of Australia, Canberra), 15 December 2007, available at: [http://www.comlaw.gov.au/ComLaw/legislation/legislativeinstrumentcompilation1.nsf/0/3DE4AB6D94856101CA2573AA00197491/\\$file/QuarantineRegs2000.doc](http://www.comlaw.gov.au/ComLaw/legislation/legislativeinstrumentcompilation1.nsf/0/3DE4AB6D94856101CA2573AA00197491/$file/QuarantineRegs2000.doc), visited on 25 January 2008.

<sup>38</sup> *Ibid.* See also Australian Government Department of Agriculture Fisheries and Forestry, *Import Risk Analysis Handbook 2007* (Commonwealth of Australia, Canberra), September 2007, 14, available at: [http://www.daff.gov.au/biosecuritycoordination/import\\_risk\\_analysis\\_handbook\\_2007](http://www.daff.gov.au/biosecuritycoordination/import_risk_analysis_handbook_2007), visited on 15 January 2008.

<sup>39</sup> To facilitate the export certification process, AQIS implements an Export Documentation System (EXDOC) for the electronic preparation of export documentation for meat, dairy, fish, grain, horticulture, wool and skins, and hide exports. It is an integral part of AQIS certification system, which aims to ensure that products comply

and carrying out border inspections. A high level of border inspections is maintained. Government policy sets the level of inspection at 100 percent for all foreign air or sea vessels and their containers (externally) and for international mail consignments.<sup>40</sup> Increased funding has been provided to AQIS to enhance surveillance in order to diminish the risk of entry of highly pathogenic avian influenza (bird flu).<sup>41</sup> The tasks of AQIS with respect to export inspection and certification are carried out under the *Export Control Act* of 1982.

Post-border SPS matters are dealt with by the Product Integrity, Animal and Plant Health Division of the DAFF, in cooperation with the governments of the States and Territories. This Division manages risks to animal health (and welfare), plant health and human health from pests, diseases and food (including residues of agricultural and veterinary chemicals). It aims to strengthen the national SPS framework in place to address these risks.<sup>42</sup>

As noted above, aside from government regulations, also non-governmental standards, developed by Standards Australia, form part of the SPS system of Australia. These standards are not legally binding, but may become so if they are taken up in legislation by a State or Territory or by the Commonwealth. Standards Australia's policy is to develop standards that are based on international standards 'to the maximum extent possible'.<sup>43</sup> In terms of the Memorandum of Understanding between Standards Australia and the Commonwealth Government, Standards Australia must ensure that its practices comply with the *Code of Good Practice for the Preparation, Adoption and Application of Standards* contained in Annex 3 of the *WTO Agreement on Technical Barriers to Trade*.<sup>44</sup>

<sup>40</sup> The quarantine inspection target for air passengers is lower, at 81%, in order to permit efficient processing of passengers at peak arrival times. Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 253, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>41</sup> *Ibid.*, 144. According to this report, an additional A\$32.2 million over 3 years was provided for increased surveillance, additional staff at airports and seaports, community awareness campaigns and increased intervention of risk material (poultry, feathers and eggs).

<sup>42</sup> *Ibid.*, 119.

<sup>43</sup> Article 3.4 of the Memorandum of Understanding between the Commonwealth of Australia and Standards Australia International Limited, 2003, available at: [http://www.pc.gov.au/\\_\\_data/assets/pdf\\_file/0016/13516/sai1.pdf](http://www.pc.gov.au/__data/assets/pdf_file/0016/13516/sai1.pdf), visited on 17 January 2008.

<sup>44</sup> This Memorandum of Understanding sets out the agreement between the Commonwealth Government and Standards Australia, with respect to Australian standardisation. Among the main elements of this agreement are that no Australian Standard will contravene the requirement in the *TBT Agreement* that national standards may not be used as non-tariff barriers to trade; and that no new Australian Standard will be developed where an acceptable international standard already exists. See further on the *TBT Agreement's* Code of Good Practice, below, Part III, Section 2.4.1.

### 2.4.2.2 Food-safety system

Until 1990, food regulation was the responsibility of States and Territories in Australia, with the assistance of a small national advisory committee.<sup>45</sup> However, the result of this division of competence was fragmentation and inefficiency in food controls. A National Food Authority was created in 1991 to improve matters by drafting national food standards (excluding food-safety standards) and coordinating the surveillance of their implementation. In 1996 the National Food Authority was replaced by the Australia New Zealand Food Authority (ANZFA), the first bi-national food regulator.<sup>46</sup> However, food-safety standards were left outside the scope of its mandate.<sup>47</sup> This changed when, in 1995, an outbreak of E. Coli from contaminated mettwurst affected 170 people. In response to public outcry, ANZFA was then given the task of drafting a new *Model Food Act* to ensure uniform food-safety standards across Australia.

A review of the Australian food regulatory system, known as the Blair Review, was initiated in 1996, to examine ways to reduce the regulatory burden on industry. The Blair Review report, issued in August 1998, included recommendations for reform, leading to the establishment of a body called FSANZ on 1 July 2002, in terms of the *Food Standards Australia New Zealand Act of 1991*.<sup>48</sup> The FSANZ operates under the authority of the Australia New Zealand Food Regulation Ministerial Council, composed of health Ministers, and Ministers with related portfolios, from the governments New Zealand and Australia, as well as from all Australian States and Territories. The FSANZ has 142 staff members. Its task is to develop food standards and joint codes of practice with the food industry, for food marketed in Australia and New Zealand.<sup>49</sup> In addition, for Australia

---

<sup>45</sup> Australia New Zealand Food Authority, 'The Development and Implementation of the New Australian Food Safety Standards', presented at the *FAO/WHO Global Forum of Food Safety Regulators* (Food and Agriculture Organization and World Health Organization, Marrakesh) 28-30 January 2002, 1, available at: <ftp://ftp.fao.org/docrep/fao/meeting/004/y2003e.pdf>, visited on 22 January 2008.

<sup>46</sup> The Australia New Zealand Food Authority (ANZFA) was created on 5 July 1996, pursuant to the *Agreement between the Government of Australia and the Government of New Zealand Establishing a System for the Development of Joint Food Standards*, 5 December 1995, available at: [http://www.foodstandards.gov.au/\\_srcfiles/NZ\\_Treaty.pdf](http://www.foodstandards.gov.au/_srcfiles/NZ_Treaty.pdf), visited on 28 January 2008. This agreement aims to establish joint Australia New Zealand Food Standards Code. This information can be found on Food Standards Australia New Zealand, *A Short History of NFA/ANZFA/FSANZ* (Commonwealth of Australia, Canberra), available at: <http://www.foodstandards.gov.au/aboutfsanz/historyoffszanz.cfm>, visited on 17 January 2008.

<sup>47</sup> Australia New Zealand Food Authority, 'The Development and Implementation of the New Australian Food Safety Standards', presented at the *FAO/WHO Global Forum of Food Safety Regulators* (Food and Agriculture Organization and World Health Organization, Marrakesh) 28-30 January 2002, 2, available at: <ftp://ftp.fao.org/docrep/fao/meeting/004/y2003e.pdf>, visited on 22 January 2008.

<sup>48</sup> This information can be found on Food Standards Australia New Zealand, *A Short History of NFA/ANZFA/FSANZ* (Commonwealth of Australia, Canberra), available at: <http://www.foodstandards.gov.au/aboutfsanz/historyoffszanz.cfm>, visited on 17 January 2008. See also Australian Government Department of the Attorney General, *Food Standards Australia New Zealand Act No. 118 of 1991, as Amended* (Commonwealth of Australia, Canberra), 1991, available at: [http://www.comlaw.gov.au/ComLaw/Legislation/ActCompilation1.nsf/0/FE55337FDCFAA567CA25735B0001D93D/\\$file/FoodStandAusNZ1991.pdf](http://www.comlaw.gov.au/ComLaw/Legislation/ActCompilation1.nsf/0/FE55337FDCFAA567CA25735B0001D93D/$file/FoodStandAusNZ1991.pdf), visited on 20 January 2008.

<sup>49</sup> In addition, Sec. 13 of the *Food Standards Australia New Zealand Act of 1991* sets out a range of other functions of the FSANZ, such as facilitating the harmonisation of State and Territory food legislation, coordinating national food monitoring, surveillance and recall systems, conducting research, developing policies for risk assessment of imported food, working with other national food agencies and international agencies, reviewing existing Standards, and developing codes of practice with industry.

only, FSANZ develops food-safety standards, including maximum residue limits for agricultural and veterinary drug residues. All these standards are contained in the *Australia New Zealand Food Standards Code* (the *Food Standards Code*).<sup>50</sup> Another review, the Bansemer Review of 2004, led to the restructuring of the FSANZ to create separate risk assessment and risk management sections.<sup>51</sup> Changes to the *Food Standards Australia New Zealand Act* of 1991, which were proposed in 2006 and came into force on 1 October 2007, aim to improve the assessment procedures for new and amended food standards and make the regulatory process more efficient.<sup>52</sup>

The standard-setting process is set out in the *Food Standards Australia New Zealand Act* of 1991.<sup>53</sup> The FSANZ may develop standards on its own initiative, or on application by any person or body. In developing standards, it is required to have regard to the following: the need for standards to be based on risk analysis, using the best available scientific evidence; the promotion of consistency between domestic and international food standards; the desirability of an efficient and internationally competitive food industry; the promotion of fair trade in food; and any policy guidelines of the Australia New Zealand Food Regulation Ministerial Council notified to it.<sup>54</sup> However, provision is made for cases where the FSANZ considers that the best available scientific evidence is insufficient.<sup>55</sup> In such situations, it may provisionally adopt SPS measures on the basis of available pertinent scientific information. It must then take all reasonable steps to obtain the information necessary for a more objective risk assessment and a review of the SPS measures, to be undertaken within a reasonable period of time.<sup>56</sup>

---

<sup>50</sup> Food Standards Australia New Zealand, *Australia New Zealand Food Standards Code* (Commonwealth of Australia, Canberra), available at: <http://www.foodstandards.gov.au/thecode/foodstandardscode.cfm>, visited on 17 January 2008. The *Food Standards Code* is a compilation of the food standards developed by the FSANZ, subdivided into 4 Chapters. Chapter 1 contains generally applicable food standards, while Chapter 2 contains standards for particular types of food. Chapter 3 contains food-safety standards and Chapter 4 contains primary production and processing standards. The latter two Chapters apply to Australia only (New Zealand has its own national standards in these areas).

<sup>51</sup> This information can be found on Food Standards Australia New Zealand, *A Short History of NFA/ANZFA/FSANZ* (Commonwealth of Australia, Canberra), available at: <http://www.foodstandards.gov.au/aboutfsanz/historyoffsanx.cfm>, visited on 17 January 2008.

<sup>52</sup> These changes were introduced to address the backlogs in applications for amendments to food standards that had arisen because the same procedure was applied to all applications, regardless of the scope of the proposed change. The amendment introduces three different procedures for applications that would take 3 months, 9 months or 12 months depending on whether the application relates to a minor amendment to a food regulatory measure, a new food regulatory measure or a major amendment to an existing measure, or is an urgent application. This information is provided on the website of FSANZ available at: <http://www.foodstandards.gov.au/newsroom/factsheets/factsheets2007/changetothefsanxact3731.cfm>, visited on 17 January 2008.

<sup>53</sup> Sections 21-45 set out the procedure for standards developed on application by a person or body, and Sections 54-87 set out the procedure for standards developed at the initiative of the FSANZ itself. In case of urgent applications and proposals, Sections 95-105 set out an expedited procedure.

<sup>54</sup> Sec. 18(2) of the *Food Standards Australia New Zealand Act* of 1991, as amended. For example, the Australia New Zealand Food Regulation Ministerial Council has notified policy guidelines on primary production and processing standards, on novel foods, on the addition of caffeine to foods and on food safety management in Australia. These are found on the Ministerial Council Policy Guidelines page of the FSANZ website, available at: <http://www.foodstandards.gov.au/standardsdevelopment/ministerialcouncilpo1603.cfm>, visited on 22 January 2008.

<sup>55</sup> Sec. 18(4) of the *Food Standards Australia New Zealand Act* of 1991, as amended.

<sup>56</sup> Sec. 18(4) of the *Food Standards Australia New Zealand Act* of 1991, as amended.

A ten-step procedure is outlined for the development of standards by the FSANZ.<sup>57</sup> In broad lines, the procedure is as follows. The FSANZ prepares a proposal for a new or amended standard itself or an application is made by another body or person for a new or amended standard. In the case of applications, the FSANZ decides whether to accept or reject the application and notifies the applicant. Thereafter, public notice is given of the proposal. The FSANZ then assesses the proposal taking into account its costs and benefits,<sup>58</sup> and may decide to abandon it, or proceed with it. If the proposal is not abandoned, a call for public submissions is issued in order to obtain the views of all stakeholders (such as the affected industry and consumer groups) on the issues raised by the draft standard and the impacts of the regulatory options.<sup>59</sup> Having regard to any received submissions, the FSANZ prepares a draft regulatory measure or an amendment to an existing measure.

In drafting the food-safety measure or amendment, the FSANZ must take into account the abovementioned considerations,<sup>60</sup> including the need to base the measure on the best available scientific evidence, and to promote consistency between national and international standards.<sup>61</sup> Risk analysis forms the basis for any food safety measure drafted by the FSANZ. A risk assessment is prepared as part of this process. To undertake its risk assessments, FSANZ draws upon a broad range of in-house scientific expertise from its staff experts in fields including toxicology, nutrition, microbiology and biotechnology.<sup>62</sup> For proposals involving areas of expertise beyond its own capacities, FSANZ makes use of external scientific experts from government as well as from non-governmental organisations.<sup>63</sup> To assist in developing specific standards, Standards Development Committees (SDCs) are established, composed of persons from government and industry bodies and consumer groups in Australia and New Zealand. SDCs give expert advice regarding

---

<sup>57</sup> Sec. 21 of the *Food Standards Australia New Zealand Act* of 1991, as amended.

<sup>58</sup> In addition to the considerations that must be had regard to under Sec. 18 of the *Food Standards Australia New Zealand Act*, Sec. 29(2) and 59(2) oblige the FSANZ to have regard to whether the costs from the proposed measure outweigh the direct and indirect benefits to the community, government and industry that would arise from it, and whether there are more cost-effective measures than that proposed. The FSANZ must prepare a report which includes an analysis of potential social and economic costs and benefits of the regulatory options available, as part of its assessment (known as the Regulatory Impact Statement (RIS)). Food Standards Australia New Zealand, *Application Handbook*, Issue 1 (Commonwealth of Australia, Canberra), October 2007, 15, available at: [http://www.foodstandards.gov.au/\\_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf](http://www.foodstandards.gov.au/_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf), visited on 21 January 2008.

<sup>59</sup> *Ibid.*, 2.

<sup>60</sup> These considerations are set out in Sec 18(2) of the *Food Standards Australia New Zealand Act* of 1991, as amended.

<sup>61</sup> Food Standards Australia New Zealand, *Application Handbook*, Issue 1 (Commonwealth of Australia, Canberra), October 2007, 2, available at: [http://www.foodstandards.gov.au/\\_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf](http://www.foodstandards.gov.au/_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf), visited on 21 January 2008.

<sup>62</sup> This information is provided on the 'FSANZ Science Strategy' page of the FSANZ website, available at: <http://www.foodstandards.gov.au/aboutfsanz/scientificcapabilities/>, visited on 22 January 2008. In addition, FSANZ has a few staff members with expertise in immunology, chemistry, mathematical modelling, epidemiology and qualitative and quantitative research. *Ibid.*

<sup>63</sup> *Ibid.* These experts work in fields such as nutrition, social science and statistics. To supplement the scientific and other professional advice available to it, the FSANZ has also established a network of FSANZ Fellows, appointed for 3-year terms and selected on the basis of their expertise in the relevant fields (such as risk modelling, microbiology, food science etc.). In addition, a Science Network has been created between scientists in Australia and New Zealand to promote increased understanding and consensus on scientific issues relating to food regulation.

scientific, technical and policy issues of relevance to the standard being established or amended.<sup>64</sup> The FSANZ follows the guidelines of the Codex Alimentarius Commission with respect to the risk assessment process. On the basis of the risk assessment, and other mandated considerations including a cost/benefit analysis, a risk management plan, to determine the best regulatory options available, is developed. In order to ensure full transparency in risk communication, the FSANZ publishes the scientific reports relating to food safety underlying its regulatory measures.<sup>65</sup>

Public submissions are then called for on the draft measure. Taking into account any submissions received, the FSANZ subsequently decides whether to approve or reject the standard and prepares a report, setting out the reasoning for its decision particularly in cases where scientific views conflict.<sup>66</sup> If the measure is approved, it is notified to the Australia New Zealand Food Regulation Ministerial Council. Finally, this Council considers the standard or amendment and may request the FSANZ to review it. If the Council approves the standard or amendment, the FSANZ is obliged to publish it, after which it comes into force.

The FSANZ adopts a precautionary approach to food safety, based on a system of prior approval of novel foods.<sup>67</sup> This entails that food or food ingredients that do not have an established history of safe use by humans in Australia or New Zealand (known as ‘non-traditional foods’), and which have features that raise safety concerns, are prohibited, unless expressly permitted.<sup>68</sup> Standard 1.5.1 of the *Food Standards Code* applies to all novel foods, which are those ‘non-traditional foods’ for which there is insufficient knowledge in the broad community to enable safe use in the form or context in which it is presented. This Standard prohibits the sale of ‘novel foods’<sup>69</sup> unless they are listed in the Table attached to that Standard, and meet any special conditions set out in that Table (for example, composition or purity requirements, the requirement of preparation or cooking instructions, or warning statements). The FSANZ assesses the safety for human consumption of each novel food before it is included in the Table. Likewise, pre-marketing

---

<sup>64</sup> SDCs have been created with respect to issues including mandatory fortification of foods with folic acid and iodine, nutrition, and primary production and processing standards. *Ibid.*

<sup>65</sup> These scientific reports are published in the Technical Report Series on the FSANZ website, available at: <http://www.foodstandards.gov.au/mediareleasespublications/technicalreportserie1338.cfm>, visited on 22 January 2008. Another aspect of risk communication is the, already mentioned, incorporation of public comments into the regulatory process by making provision for notifications and calls for comments at two stages of the standard drafting procedure.

<sup>66</sup> Food Standards Australia New Zealand, *Application Handbook*, Issue 1 (Commonwealth of Australia, Canberra), October 2007, 2, available at: [http://www.foodstandards.gov.au/\\_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf](http://www.foodstandards.gov.au/_srcfiles/Application%20Handbook%20as%20at%201%20Oct%2007.pdf), visited on 21 January 2008.

<sup>67</sup> This approach follows that of the ANZFSA, the predecessor of the FSANZ. Ad Hoc Group on Food Safety, *Compendium of National Food Safety Systems and Activities*, SG/ADHOC/FS(2000)5/ANN/FINAL (Organisation for Economic Co-operation and Development, Paris), 12 May 2000, 6, available at: [http://www.oilis.oecd.org/olis/2000doc.nsf/LinkTo/sg-adhoc-fs\(2000\)5-ann-final](http://www.oilis.oecd.org/olis/2000doc.nsf/LinkTo/sg-adhoc-fs(2000)5-ann-final), visited on 12 January 2008.

<sup>68</sup> *Ibid.*

<sup>69</sup> A revision has been made to Standard 1.5.1 regarding the approach for determining whether a food is ‘novel’. An Advisory Committee on Novel Foods will be established by FSANZ (expected in February 2008) composed of representatives of Australian State and Territory jurisdictions, AQIS and the New Zealand Food Safety Authority. See the page on the ‘Review of Novel Foods’ of the FSANZ website available at: <http://www.foodstandards.gov.au/foodmatters/novelfoods/regulationofnovelfoo3024.cfm>, visited on 20 January 2008.

approval is required for genetically modified foods and irradiated foods, in Standards 1.5.2 and 1.5.3 of the *Food Standards Code*, subject to a risk assessment. Similarly, a precautionary approach is taken towards contaminants in food, in the form of agricultural and veterinary chemical residues. Those contaminants, for which safety levels, in the form of scientifically established maximum residue levels, have not been determined, are prohibited. Standard 1.4.2 of the *Food Standards Code* provides a list, in Schedule 1 thereto, of all of the permissible maximum residue levels (MRLs) for agricultural and veterinary chemicals in particular foods.<sup>70</sup> If an MRL for a chemical in a particular food is not listed in Schedule 1, no detectable residues of that chemical in that food are permitted. Also, if an agricultural or veterinary chemical is not listed in Schedule 1 at all, no detectable residues of that chemical (or its metabolites) in any food is allowed. In practice, the maximum residue level for such contaminants is set at the 'limit of determination' (LOD), i.e. the lowest level at which it is analytically possible to detect any residue. A different approach is followed in Standard 1.4.1 with regard to other contaminants. This standard sets certain maximum levels of specified metal and non-metal contaminants (such as mercury and aflatoxins) and natural toxicants (for example, quinine) in particular foods. Maximum levels are only established if this serves an effective risk management function and only for foods that contribute significantly to the total dietary exposure. However, whether or not a maximum level has been set, this Standard provides that the levels of contaminants and natural toxicants in all foods should be kept 'as low as reasonably achievable' (commonly known as the ALARA principle in risk management).

Australia applies a systems-wide (or 'farm-to-fork') approach with regard to food-safety risks, rather than just imposing end-product requirements.<sup>71</sup> This is reflected in Standard 3.2.1 of the *Food Standards Code*,<sup>72</sup> which lays down HACCP requirements for all food production firms in Australia that fall within a priority classification determined by the relevant authority.<sup>73</sup> In addition, the systems-wide approach is given further effect by the initiation by the Australian government, in May 2003, of the development of new 'primary production and processing standards' by the FSANZ.<sup>74</sup> These standards, contained in Chapter 4 of the *Food Standards Code* which is applicable only to Australia, require that operators in specific food industries identify potential food safety hazards and implement controls that are commensurate with the risk. This therefore extends the HACCP approach, applied in Standard 3.2.1 to food manufacturing and retailing, to cover also primary production and processing of food. The objectives of this new approach were stated to be the need to strengthen food-safety in Australia, in order to lower the incidence of food-borne diseases; and the need to assure foreign markets of consistent levels of food-safety in Australian exports, in order to promote export trade. Domestic food-safety

---

<sup>70</sup> This Standard applies only in Australia.

<sup>71</sup> On the difference between a systems-wide (or farm-to-fork) approach and a product-based approach to SPS regulation, see above, Part II, Section 1.3.

<sup>72</sup> This standard, like all standards contained in Chapters 3 (food safety) and 4 (primary production and processing) of the *Standards Code*, as mentioned above, apply only to Australia.

<sup>73</sup> For an explanation of the HACCP approach, see above, Part II, Section 1.3.

<sup>74</sup> The Australian government provided a total of A\$2.8 million over four years to develop these standards and to inform the food industry. This information is provided on FSANZ News Room, Food Standards Australia New Zealand, *Fact Sheet 2003: Imported Food. The Imported Food Inspection Scheme in Australia* (Commonwealth of Australia, Canberra), May 2003, available at: <http://www.foodstandards.gov.au/newsroom/factsheets/factsheets2003/importedfoodinspecti1985.cfm>, visited on 20 January 2008.

requirements in this integrated system are harmonised with the requirements for food exports applied by AQIS. In addition, like all standards contained in the *Food Standards Code*, these production and processing requirements apply to imported products. The first production and processing standard developed by FSANZ was for the seafood industry,<sup>75</sup> an industry particularly vulnerable to pathogen contamination.<sup>76</sup> There are now similar standards for poultry, meat, dairy and cheeses industries.<sup>77</sup>

Implementation of the standards developed by the FSANZ is the responsibility of the government of New Zealand and the States and Territories of Australia, which are obliged to give these standards legal effect in their jurisdictions.<sup>78</sup> The standards in the *Food Standards Code* are published in the government gazettes of Australia and New Zealand throughout the year, as they are approved. They are then adopted by reference and without amendment into the food legislation of New Zealand and the States and Territories of Australia and into the Commonwealth *Imported Food Control Act* of 1992. States and Territories may deviate from these standards only in limited cases of emergency situations creating risks for public health or safety, or due to exceptional conditions not presenting a public health or safety risk.<sup>79</sup> It is a criminal offence in Australia to supply food that does not comply with the standards set out in the *Food Standards Code*.<sup>80</sup>

As mentioned above, illness from food-borne pathogens remains a concern in Australia. A national program, called OzFoodNet, was established by the DHA in 2000 as a collaborative initiative between Commonwealth and State governments to improve surveillance of food-borne diseases from pathogens such as Salmonella and E. coli.<sup>81</sup> It aims, *inter alia*, to determine the causes of food-borne diseases and to coordinate investigations of food-borne disease outbreaks. Investigations increasingly relate to imported food products.<sup>82</sup>

---

<sup>75</sup> Standard 4.2.1 of the *Food Standards Code*.

<sup>76</sup> The majority of food-borne disease outbreaks in Australia are traced back to pathogens in fishery products, followed by poultry. <sup>81</sup> OzFoodNet is under the authority of the Communicable Diseases Network Australia, and gets technical assistance from the National Centre for Epidemiology and Population Health at the Australian National University, Food Standards Australia New Zealand and the Public Health Laboratory Network. This information is taken from the website of OzFoodNet, available at: <http://www.ozfoodnet.org.au>, visited on 13 January 2008.

<sup>82</sup> Australian Government Department of Health and Ageing and Food Standards Australia New Zealand, 'Enhancing Surveillance of Foodborne Diseases in Australia to Control Disease and Improve Food Safety', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 6 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae019e.pdf>, visited on 22 January 2008.

In order to ensure that imported food meets Australia's food-safety requirements, Australia has the Imported Foods Inspection Scheme in place, jointly run by FSANZ and AQIS. FSANZ is responsible for risk assessment policy for food products and AQIS undertakes the inspection and sampling, in terms of the *Imported Food Control Act* of 1992. The requirements against which imports are tested are those of the *Food Standards Code*, as mentioned above.<sup>83</sup>

The frequency with which imported food is inspected by AQIS officials depends on the inspection category it is placed in by FSANZ, on the basis of its risk assessments. The three categories are: risk, active surveillance and random surveillance.<sup>84</sup> Food is placed in the 'risk' category if it could pose high or medium risk to public health. The inspection rate applied to food in the 'risk' category is 100 percent.<sup>85</sup> In addition to inspection, these foods are subject to a pre-determined range of tests for risks such as microbiological contamination and pesticide residues.<sup>86</sup> Before the results of these analyses are known, the imported food in this category may not be marketed in Australia.<sup>87</sup> Foods in the 'active surveillance' category are subject to much lower levels of inspection. Only ten percent of shipments from each exporting country are referred to AQIS for inspection, and are permitted to be marketed after they have been sampled.<sup>88</sup> FSANZ periodically analyses the results of tests on these samples to review the appropriate inspection category of the food product. All food products not placed in the 'risk' or 'active surveillance' categories, fall into the 'random surveillance' category.<sup>89</sup> Only five percent of these products are referred to AQIS for inspection, and are released after sampling.<sup>90</sup> If a food product in the active

<sup>83</sup> This information is provided on FSANZ News Room, Food Standards Australia New Zealand, *Fact Sheet 2003: Imported Food. The Imported Food Inspection Scheme in Australia* (Commonwealth of Australia, Canberra), May 2003, available at: <http://www.foodstandards.gov.au/newsroom/factsheets/factsheets2003/importedfoodinspecti1985.cfm>, visited on 20 January 2008.

<sup>84</sup> The categorisation of imported food into these inspection categories is regularly reviewed by FSANZ. *Ibid.*

<sup>85</sup> Sec. 14(1) of the Imported Food Control Regulations. Australian Government Department of the Attorney General, Imported Food Control Regulations, Statutory Rules No. 100 of 1993, as Amended (Commonwealth of Australia, Canberra), 1 July 2005, available at: <http://www.comlaw.gov.au/ComLaw/Legislation/LegislativeInstrumentCompilation1.nsf/0/50F611D12A8F4B2CCA25702E007DFC1E?OpenDocument>, visited on 29 January 2008. In practice this means that the Australian customs service refers all shipments of these food products to AQIS for inspection and testing. However, not all food shipments in this category are actually inspected. Foods in the 'risk' category are subject to a 'performance-based approach' according to which imported food products from producers with a consistent history of compliance with the *Food Standards Code* are inspected less frequently than products from new suppliers or those with a history of non-compliance with the *Food Standards Code*. Sec. 15 of the *Imported Food Control Regulations* set out the performance-based inspection levels as follows: (1) The first 5 shipments of a food product from a particular producer are inspected - if 5 shipments are consecutively cleared, the inspection level decreases to the next level; (2) One in every 4 shipments is then inspected - if 20 of the inspected shipments are in compliance and if importation follows a steady pattern, the inspection level decreases to the next level; (3) One in every 20 shipments is then inspected.

<sup>86</sup> Sec. 29 of the *Imported Food Control Regulations*.

<sup>88</sup> Sec. 14(2) of the *Imported Food Control Regulations*. See also *ibid.*

<sup>89</sup> Sec. 11 of the *Imported Food Control Regulations*.

<sup>90</sup> Sec. 14(3) of the *Imported Food Control Regulations*. See also Food Standards Australia New Zealand, *Fact Sheet 2003: Imported Food. The Imported Food Inspection Scheme in Australia* (Commonwealth of Australia, Canberra), May 2003, available at: <http://www.foodstandards.gov.au/newsroom/factsheets/factsheets2003/importedfoodinspecti1985.cfm>, visited on 20 January 2008.

or random surveillance categories is found not to comply with the *Food Standards Code*, the inspection category of the product from the foreign supplier involved is raised to 'risk' level.<sup>91</sup> All shipments are then automatically detained for inspection and testing until five consecutive shipments are determined to be in compliance. Thereafter the product reverts to its prior inspection category.<sup>92</sup>

Australia is well-aware of the difficulty of averting food-safety risks from imported products purely by means of national measures. At the Second FAO/WHO Forum of Food Safety Regulators, the representatives of the Australian regulators emphasised the importance of international cooperation in this regard.<sup>93</sup> They noted that early detection, identification and tracing of risky imported products depend on effective communication with the authorities of the exporting country.<sup>94</sup> The current inadequacy of communication channels between food-safety authorities in different countries weakens food-safety controls. Information sharing with regard to disease outbreaks or the incidence of contaminants in food is therefore considered vital by Australia, and it supports initiatives in this regard, such as the International Food Safety Authorities Network (INFOSAN) and the Food Safety Emergency Network of the World Health Organization, that facilitate information exchange and thereby improve food-safety control.<sup>95</sup>

The international aspect of Australia's food-safety system extends beyond efforts, through national controls and international cooperation, to ensure the safety of food imports. Australia's sanitary regime also plays key role in promoting market access for its food and agricultural exports. As discussed above, the high level of food safety characterising Australian products due to the rigour of Australia's SPS system facilitates their acceptance on import markets. In addition, to assist its food and agricultural export industries to meet foreign SPS requirements, Australia issues publications containing detailed technical information regarding food-safety and other requirements on foreign markets.<sup>96</sup> Further, it has various financial programs to reduce the costs of SPS compliance.<sup>97</sup> However, often

<sup>91</sup> *Ibid.*

<sup>92</sup> *Ibid.*

<sup>93</sup> Australian Government Department of Health and Ageing and Food Standards Australia New Zealand, 'Emerging Chemical and Microbiological Issues – Importance of Surveillance and International Cooperation and Information Sharing', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 8 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae081e.pdf>, visited on 22 January 2008.

<sup>94</sup> *Ibid.*

<sup>95</sup> *Ibid.*

<sup>96</sup> For example, the NFIS publishes a range of 'toolkits' to assist its food exporters gain market access to various countries. They include summaries of the relevant food-safety standards applicable in the relevant countries. Currently, the following publications exist: *8 Steps to Dubai*, *8 Steps to India*, and *8 Steps to the UK*, available at: <http://www.nfis.com.au/index.html>, visited on 22 January 2008. In addition, guides for meeting requirements for fisheries exports in various countries have been issued by the DAFF in cooperation with the Australian Seafood Industry Council, for example, Jim Fitzgerald, *A\$34 Billion Reasons to Access the US Seafood Market: A Guide to Exporting Australia's Fisheries Products to the United States* (Department of Agriculture, Fisheries and Forestry of the Government of Australia and Australian Seafood Industry Council, Canberra), November 2002, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0017/6047/34billion.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0017/6047/34billion.pdf), visited on 22 January. Similar guides exist for Hong Kong and the EC.

<sup>97</sup> For example, the Export Market Development Scheme provides \$450 million over three years to assist smaller firms in the Australian food industry to develop an export capacity. In addition, a 40% reduction in the service fees of AQIS is granted to small businesses falling within its seven commodity programs. Australian

the ability of an exporter to *demonstrate* convincingly the conformity of its products with the applicable SPS requirements (whether public or private) is as important as the conformity itself. As a result, the Australian Government provides high-quality services in the area of export inspection and certification to its food and agricultural industries. The *Export Control Act* of 1982 governs the export of all products categorised as ‘prescribed goods’, such as meat, fish and processed food products. Export certificates issued by AQIS are based on inspection and auditing, to ensure that exports of food and agricultural products meet the SPS requirements of importing countries.<sup>98</sup> This service greatly facilitates Australian exports, and is carried out in consultation with industry consultative committees.<sup>99</sup>

Australia is also pro-active in dealing promptly with any food-safety issues that may arise, through technical consultations between officials of the International Food and Agriculture Service (IFAS) and the regulatory authorities of the importing country before a sanitary barrier to Australian exports is imposed. For example, when Australian food processing establishments started to use recycled potable water on food and food contact surfaces when water restrictions were imposed due to the drought, AQIS prepared a detailed protocol to enable such use. This protocol was used by IFSAS to obtain acceptance by the United States Food Safety Inspection Service of the safety of this practice, thus enabling exports from Australian establishments to continue unhindered.<sup>100</sup> This pro-active strategy avoids the costs that its industry would suffer from loss of market access if the relevant sanitary measure were imposed.<sup>101</sup> Australia also makes use of the mechanism

Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 25, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

<sup>98</sup> AQIS commodity inspectors in the regional offices provide assistance to food exporters in various areas, including the registration of food export establishments; the approval of HACCP-based systems; the auditing of export-registered establishments in accordance with both Australian and foreign requirements; the provision of export documentation; and general information. Jim Fitzgerald and Shelley Kowalski, *The FishBook II: A Guide to Australian Government Programs, Grants and Services for the Australian Seafood Industry* (Department of Agriculture, Fisheries and Forestry of the Government of Australia, Canberra), 2006, 31, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0019/6049/fishbook\\_2.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0019/6049/fishbook_2.pdf), visited on 13 January 2008.

<sup>99</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section III para. 51.

<sup>100</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 108 and 151, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008. The report notes that this has been a major achievement for the Australian meat and food processing industry as they use a large amount of water and are faced with water restrictions aimed at sustainable water use in Australia.

<sup>101</sup> As noted above, as part of the efforts to promote the food industry outlined in the *National Food Industry Strategy*, the Technical Market Access Program will be continued and expanded. This program aims to address SPS issues on existing or potential new markets for Australian products through early intervention by technical experts to avoid the imposition of market access barriers to Australian products by agencies in importing countries. It involves both Australian agricultural and veterinary experts located in the importing countries and a team of capital-based technical specialists. Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 25, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

provided by the SPS Committee for the raising of trade concerns with regard to the SPS measures of other WTO Members, in order to resolve issues if bilateral discussions are unsuccessful.<sup>102</sup>

In addition, the Australian government works towards concluding agreements with its trading partners regarding the recognition of the equivalence of the sanitary controls of the countries involved. In 2006, Australia reached agreement with New Zealand on the recognition of the equivalence of the two countries' sanitary systems for dairy exports. As a result, the certification requirement for soft cheese exports to New Zealand has been lifted.<sup>103</sup> Australia also has an equivalence agreement with Japan regarding exports of organic produce, which was been extended until 2009.<sup>104</sup> The EC recognises the equivalence of Australia's laboratory testing system with regard to testing of crustaceans for cadmium residues.<sup>105</sup>

It is useful to examine the implications of Australia's food-safety system for its trade, by looking at practical examples. One of these examples demonstrates the extent to which Australia's sophisticated and well-resourced food-safety system can promote market access for Australian exports by enabling it to deal effectively with potential SPS barriers to trade. The other example illustrates the impact of this highly protective food-safety system on exports from other Members.

#### **2.4.2.2.1 Example of a food-safety measure affecting Australian exports**

A good illustration of Australia's efforts to facilitate its exports through pursuing the recognition of the equivalence of its food-safety controls is provided by the example of the introduction of HACCP in the meat sector.<sup>106</sup>

Australia's main agricultural export, as previously mentioned, is bovine meat. After Japan, the US is its main export market. The US also has an important meat export industry and the two countries compete on the same markets.<sup>107</sup> However, their systems for inspection and certification of meat exports differ considerably. In the US, this system is centralized in the hands of the United States Department of Agriculture (USDA) whereas in Australia inspection authority remains with the governments of the States and Territories. In response to complaints regarding the complexity of this inspection and certification system by US importers of Australian meat, and following the recommendations of a

---

<sup>102</sup> Australia has raised 9 trade concerns regarding the SPS measures of other WTO Members to date, and has joined the concerns raised by other Members in 18 cases. The trade concerns mechanism of the SPS Committee will be discussed further below, Part IV, Section 2.1.2.

<sup>103</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 151, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>104</sup> *Ibid.*

<sup>105</sup> *Ibid.* Interestingly, the DAFF reports that Australia managed to keep its access to the EC market for prawns despite the fact that the natural levels of cadmium in Australian prawns sometimes exceed the MRL set by the EC.

<sup>106</sup> This example is taken from J.J. Kastner and R. K. Pawsey, 'Harmonising Sanitary Measures and Resolving Trade Disputes through the WTO-SPS Framework. Part II. A Case Study of the USA-Australia Determination of Equivalence in Meat Inspection', *Food Control* 13, 2002, 57-60.

<sup>107</sup> *Ibid.*, 57.

1996 review of Australia's quarantine system,<sup>108</sup> AQIS gained increased influence over the meat inspection programmes of the States and Territories.

In 1996, Australia moved away from the traditional product-based system for the control of meat safety and replaced this with a HACCP-based system, first for domestic production and then for export production.<sup>109</sup> Meat processing establishments were required to adopt HACCP systems and much of the control responsibilities shifted from AQIS inspectors to the establishments themselves. Regulatory oversight by the government took the form of periodic audits and the provision of one in-plant veterinarian.<sup>110</sup> Already during the process of implementing this changed sanitary system, due to the importance of the US market for its meat exports, Australia requested the US to recognise the equivalence of the new system with its own sanitary requirements for meat. A technical committee was established between the USDA and the Australian Food Safety Inspection Service to examine this issue. Although this committee found that the new system provided adequate safety assurance, in November 2007 the US rejected the request for recognition of equivalence.<sup>111</sup> According to the USDA, the new system resulted in an unacceptable reduction in government oversight and would lead to inadequate verification of food safety.<sup>112</sup> However the USDA offered to consider a revised proposal, if the level of federal oversight was equivalent to that provided in the US inspection system. In collaboration with the USDA, AQIS drew up an amended proposal for the recognition of equivalence of its meat safety system, increasing government oversight of the production process and adding another inspector to the processing line. In 1999, the USDA agreed to accept the equivalence of the revised system, on the basis that it ensured American consumers the same level of food-safety and provided by USDA domestic inspection.<sup>113</sup>

The willingness of Australia and the US to collaborate constructively on this issue has been ascribed to the importance of their trade relationship in the meat sector.<sup>114</sup>

---

<sup>108</sup> The report of the Nairn Review recommended that a nationally coordinated, consistent and transparent quarantine system be established. M.E. Nairn *et al.*, *Australian Quarantine: A Shared Responsibility* (Australian Quarantine Review Secretariat, Canberra), 1996, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0009/111969/nairn\\_report.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0009/111969/nairn_report.pdf), visited on 24 January 2008.

<sup>109</sup> J.J. Kastner and R. K. Pawsey, 'Harmonising Sanitary Measures and Resolving Trade Disputes through the WTO-SPS Framework. Part II. A Case Study of the USA-Australia Determination of Equivalence in Meat Inspection', *Food Control* 13, 2002, 57-60, 58.

<sup>110</sup> *Ibid.*

<sup>111</sup> *Ibid.*

<sup>112</sup> It is interesting to note that, at the time when the USDA turned down Australia's equivalence request, it was itself considering a new HACCP-based inspection system reducing reliance on government inspectors. It therefore used the opportunity to coordinate the changes in its meat safety system with those of Australia, by setting out 5 conditions that AQIS would have to meet to have its new system considered equivalent. Due to concerns of the US inspectors union that the US HACCP system would result in the transfer of most inspection tasks from government inspectors to company employees, as was the case in Australia, one of the US conditions for the recognition of equivalence related to the increase of government oversight. *Ibid.*, 59.

<sup>113</sup> *Ibid.*

<sup>114</sup> *Ibid.*, 60. In 1997, Australian meat exports to the US amounted to US\$344 million.

#### 2.4.2.2.2 Example of a food-safety measure affecting imports into Australia<sup>115</sup>

The Philippines exports sauces containing benzoic acid,<sup>116</sup> and wished to gain market access to Australia for these products. However, since 1996 Australia had maintained an import prohibition on sauces containing benzoic acid. In September 1998, the Philippines raised a trade concern on this issue at a meeting of the SPS Committee.<sup>117</sup>

In particular, the Philippines argued that Australia's import prohibition on Philippine sauces containing benzoic acid were discriminatory, as imports of sauces from New Zealand were permitted regardless of their benzoic acid content.

Australia showed readiness to address this matter with the Philippines, but at the SPS Committee meeting held in November 1998, the Philippines reported that bilateral discussions had been unsuccessful.<sup>118</sup> The lack of an international standard for benzoic acid in sauces was pointed out. Australia explained that its new joint food code with New Zealand was being developed and that it expected the final standard for food additives to be finalised in the first half of 1999. It pointed out that the reason why New Zealand sauces were granted import permission stemmed from the *Australian-New Zealand Agreement for the Development of a Joint Food Standard System*, and was only transitional.<sup>119</sup>

When the Philippines raised the matter again at the SPS Committee in July 1999, Australia confirmed that the new *Food Standards Code* would include benzoic acid as a permissible additive.<sup>120</sup> An update provided by Australia in June 2000 indicated that as of that month, the prohibition on benzoic acid would be lifted. Instead, a tolerance level of 1000 milligrams per kilogram would apply for benzoates in all sauces, whether domestically produced or imported.<sup>121</sup>

---

<sup>115</sup> This example is taken from the summary of trade concerns raised at SPS Committee meetings, maintained by the WTO Secretariat. Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum: Resolved Issues*, G/SPS/GEN/204/Rev.7/Add.3, circulated on 7 February 2007, item 49.

<sup>116</sup> Benzoic acid is an anti-microbial preservative used in sauces, particularly those intended for export which thus require a shelf-life of 6 to 12 months. Committee on Sanitary and Phytosanitary Measures, *Procedure to Monitor the Process of International Harmonization: First Annual Report Adopted by the Committee on 8 July 1999*, G/SPS/13, circulated on 12 July 1999, para. 23.

<sup>117</sup> Committee on Sanitary and Phytosanitary Measures, *Review of the Operation and Implementation of the Agreement on the Application of Sanitary and Phytosanitary Measures: Report of the Committee*, G/SPS/12, circulated on 11 March 1999, paras 83-85.

<sup>118</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 10-11 November 1998: Note by the Secretariat*, G/SPS/R/13, circulated on 15 January 1999, paras 24-25. See also Committee on Sanitary and Phytosanitary Measures, *Australian Import on Sauces Containing Benzoic Acid: Statement by Philippines at the Meeting of 11-12 November 1998*, G/SPS/GEN/106, circulated on 23 November 1998.

<sup>119</sup> Under this agreement, a mutual recognition arrangement was in place whereby Australia permitted the imports of food products from New Zealand that met the requirements either of the Australian Food Standards or of the New Zealand Food Regulations. Benzoic acid in sauces was permitted by the New Zealand Food Regulations. Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 10-11 November 1998: Note by the Secretariat*, G/SPS/R/13, circulated on 15 January 1999, para. 21.

<sup>120</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 7-8 July 1999: Note by the Secretariat*, G/SPS/R/15, circulated on 20 September 1999, para. 68.

<sup>121</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 21-22 June 2000: Note by the Secretariat*, G/SPS/R/19, circulated on 1 August 2000, para. 21.

At the SPS Committee meeting in October 2001, the Philippines confirmed that this change had occurred and that Philippine sauces were no longer being detained in Australia due to benzoic acid.<sup>122</sup>

### 2.4.2.3 Animal health system

Australia has a rigorous animal health system in place that successfully maintains a high level of protection. Australia is currently free of most major animal diseases, including avian influenza, foot-and-mouth disease and bovine spongiform encephalitis. In order to prevent the introduction of these and other exotic pests and diseases, Australia applies a prior approval system to imports of animals or animal products, based on a through risk analysis process.

Public provision of animal health services in Australia is in the hands of the Commonwealth Government, the governments of the States and Territories,<sup>123</sup> and local government.<sup>124</sup> In order to ensure that these services are provided in a coherent manner, a range of consultative committees have been established.<sup>125</sup> The Primary Industries Ministerial Council is the highest body responsible of agricultural policy making at national level.<sup>126</sup> It is composed of ministerial-level representatives of the Commonwealth Government, States and Territories. It is supported by the Primary Industries Standing Committee.<sup>127</sup> This Committee is advised by the Animal Health Committee (AHC), composed of the Chief Veterinary Officers of the Commonwealth, States, Territories and New Zealand, as well as representatives of Biosecurity Australia, Animal Health Australia and the Commonwealth Scientific and Industrial Research Organisation (CSIRO).<sup>128</sup> The AHC's task is to develop a coherent national policy on animal health that is science-based.<sup>129</sup>

At the Commonwealth Government level, animal health services are provided by the Office of the Chief Veterinary Officer (OCVO), AQIS and CSIRO.<sup>130</sup> It is responsible

---

<sup>122</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 31 October-1 November 2001. Note by the Secretariat, G/SPS/R/25*, circulated on 18 January 2002, para.36.

<sup>123</sup> The States and Territories are responsible for control and eradication of animal diseases within their territories. This information is taken from the 'Australia's Animal Health System' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/system>, visited on 23 January 2008.

<sup>124</sup> States and Territories are subdivided into veterinary regions under the control of a veterinary officer. *Ibid.*

<sup>125</sup> There are a range of consultative committees, including scientific committees focused on animal health and a ministerial-level committee working, in part, on animal health issues which require high-level policy endorsement. This information is available on the 'Committees that Deal with Animal Health' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/committees>, visited on 22 January 2008.

<sup>126</sup> This information is available on the 'Committees that Deal with Animal Health' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/committees>, visited on 22 January 2008.

<sup>127</sup> This Committee is composed of the Chief Executive Officers of the Commonwealth Government, States and Territories in the relevant policy areas. This information is available on the 'Committees that Deal with Animal Health' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/committees>, visited on 22 January 2008.

<sup>128</sup> This information is taken from the 'Animal Health Committee' page of the website of the DAFF, available at: <http://www.daff.gov.au/animal-plant-health/animal/committees/ahc>, visited on 22 January 2008.

<sup>129</sup> *Ibid.*

<sup>130</sup> The largest employer of veterinarians in Australia is the Commonwealth Government, due to the large number needed for meat inspection services. This enables it to provide an important reserve force to the States and Territories in case of any major outbreak of an exotic animal disease. This information is taken

for the formulation of national policies and strategies with regard to animal health in Australia.<sup>131</sup> The OCVO has around 30 staff members whose tasks include risk assessments, surveillance of animal diseases, laboratory diagnostics, veterinary epidemiology, and policy development.<sup>132</sup> It is also the main agency representing Australia internationally with regard to animal health matters, including in international standard-setting.<sup>133</sup>

Risk analysis in the area of animal health is the responsibility of Animal Biosecurity, a division of Biosecurity Australia. It has a staff of scientists and veterinarians whose task it is to assess the risks of the introduction and spread of exotic pests and diseases from imports of live animals (including aquatic animals), animal products and genetic material.<sup>134</sup> These import risk assessments underlie the quarantine policies developed by Animal Biosecurity for the protection of animal health in Australia.<sup>135</sup> Animal Biosecurity also participates in international standard-setting in the area of animal health and is actively involved in technical discussions with Australia's trading partners to promote market access for Australian animals and animal products.<sup>136</sup>

CSIRO has the task of carrying out research with regard to animal health. It is responsible for the operation of the Australian Animal Health Laboratory (AAHL), which is among the world's leading laboratories for safe handling and containment of animal diseases.<sup>137</sup> This laboratory not only provides a high-security facility for emergency research and diagnosis on animal diseases but is also used to provide training in animal disease emergencies to Australian and foreign veterinary and laboratory personnel.<sup>138</sup> The AAHL has the capacity to provide sensitive, accurate and fast diagnostic tests. The DAFF maintains a high level of funding of the AAHL, which ensures that its facilities can be regularly upgraded and continually improved. The budget of the AAHL was increased in May 2007 by A\$16.8 million over the next four years.<sup>139</sup> In addition to the AAHL, a network of an-

<sup>135</sup> *Ibid.*

<sup>136</sup> *Ibid.*

<sup>137</sup> The AAHL was established in 1985 and cost over A\$150 million to set up. It is able to handle the most infectious and pathogenic animal diseases. This information is taken from the AAHL website available at: <http://www.csiro.au/places/aahl.html>, visited on 22 January 2008.

<sup>138</sup> This information is published on the 'Australian Government responsibilities' page on the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/system/gvnt>, visited on 22 January 2008.

<sup>139</sup> The AAHL is designated by the World Organization for Animal Health as a Collaborating Centre for New and Emerging Diseases and as a reference laboratory for bluetongue, avian influenza, Newcastle disease, Hendra and Nipah virus diseases, yellowhead disease, epizootic haematopoietic necrosis, brucellosis and rabies. This information on the AAHL is provided on its website, available at: <http://www.csiro.au/places/aahl.html>, visited on 22 January 2008.

<sup>139</sup> This information is taken from the AAHL website available at: <http://www.csiro.au/places/aahl.html>, visited on 22 January 2008.

imal health laboratories exists at the State and Territory level, including public, private and university laboratories.<sup>140</sup> All government laboratories in Australia must be accredited to international standards. The National Association of Testing Authorities (NATA) conducts accreditation for veterinary laboratories to ISO/IEC 17025:2005 standards (General Requirements for the Competence of Testing and Calibration Laboratories).<sup>141</sup> Accreditation is important for the recognition of competent testing services, which facilitates the acceptance of Australian animal products on foreign markets.

The implementation of appropriate risk management measures is the responsibility of AQIS. The role of AQIS in the animal health system is to provide quarantine services as well as import inspection and export certification services with regard to animals and animal products. While it retains ultimate responsibility for these tasks, it may delegate some functions to AQIS-accredited veterinary officers of the States or Territories.<sup>142</sup> As in the area of food safety, with regard to animal health AQIS makes a considerable contribution to assisting the export of Australian livestock and fishery products through its reputable inspection and certification services and its provision of information to exporters.<sup>143</sup> It also facilitates audits by foreign inspectors of Australia's animal health system to check conformity with requirements in the importing country. For example, in July to August 2006, AQIS assisted the US Food and Drug Administration's review of the export dairy system in Australia. This review established the conformity of the Australian system with US requirements for dairy imports.<sup>144</sup> Subsequently, an AQIS submission in support of a request for simplification of the application procedure for import permits for Australian cream and milk was accepted by the US.<sup>145</sup>

---

<sup>140</sup> The laboratory network consists of 11 Commonwealth Government animal health laboratories, 6 central State or Territory government laboratories, 5 regional government laboratories, a private laboratory contracted by the Victorian government to undertake additional diagnostic and investigative work, an associated veterinary diagnostic laboratory in each of Australia's six veterinary schools, and a number of private veterinary laboratories in five States. This information is provided on the 'Australia's Animal Health Laboratories Network' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/animal/system/lab-network>, visited on 22 January 2008.

<sup>141</sup> *Ibid.* NATA also represents Australia in the International Laboratory Accreditation Cooperation (ILAC).

<sup>142</sup> *Ibid.* The OCVO is active in the World Organization for Animal Health in contributing to the development of international animal health standards.

<sup>143</sup> For example, AQIS maintains ANIMEX, which is a database of export requirements for live animals and reproductive material, available at: <http://www.aqis.gov.au/animex/asp/search.asp>, visited on 23 January 2008. The AQIS Fish Exports Program provides the seafood export industry with operational, policy and technical advice to assist it in obtaining and maintaining market access. The AQIS Export Facilitation Program, which works in cooperation with industry, promotes trade in agricultural products (including seafood) by providing information and advice to Australian exporters with regard to SPS requirements. It also provides an initial contact point for agricultural exporters facing SPS barriers to trade. Jim Fitzgerald and Shelley Kowalski, *The FishBook II: A Guide to Australian Government Programs, Grants and Services for the Australian Seafood Industry* (Department of Agriculture, Fisheries and Forestry of the Government of Australia, Canberra), 2006, 28-29, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0019/6049/fishbook\\_2.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0019/6049/fishbook_2.pdf), visited on 13 January 2008.

<sup>144</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 151, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>145</sup> *Ibid.*

The DAFF Division of Product Integrity, Animal (Including Aquatic Animal) and Plant Health (PIAPH) is, *inter alia*, responsible for post-border management of risks to terrestrial and aquatic animal health and welfare from pests, diseases and veterinary chemicals. It leads responses to animal disease incidents, and provides technical assistance to farmers in that regard. In 2006-2007, these incidents included anthrax outbreaks in Victoria and New South Wales, the detection of Asian honey bees in Cairns, and die-off events of abalone in wild fisheries.<sup>1</sup> The PIAPH takes a pro-active approach to prevention and preparedness for outbreaks of animal diseases of which Australia is currently free. It develops contingency plans, coordinates national responses and conducts training and simulation exercises. For example, in order to develop a strategy to prevent and respond to outbreaks of highly pathogenic avian influenza, it has involved the poultry industry, State and Territory authorities and the Australian Animal Health Laboratory.<sup>2</sup> The Avian Influenza Programme has established a national 'whole-of-government' policy for preparedness and response to avian influenza, including through surveillance and vaccination programmes.<sup>3</sup>

The Australian Pesticides and Veterinary Medicine Authority is responsible for regulating the use of veterinary drugs in livestock farming. A list of specific products to be included in a national registration scheme for agricultural and veterinary chemicals is being considered by the Primary Industries Standing Committee, which will make recommendations in this regard.<sup>4</sup> A National Residue Survey has undertaken random monitoring of animal products to assist the industry to gain access to national and foreign markets.<sup>5</sup>

In order to improve traceability of livestock, Australia has implemented a National Livestock Identification Scheme for cattle, and extending it to sheep and goats.<sup>6</sup> This scheme aims to create a nationally integrated system to trace livestock in case of animal disease emergencies or food-safety risks.<sup>7</sup>

The governments of the Australian States and Territories play an important role in animal disease control. In partnership with Animal Biosecurity and the PIAPH, they develop strategies to address regional differences in pest and disease prevalence, and adopt measures to maintain pest- or disease-free areas.<sup>8</sup>

One of the objectives of Australia's strict animal health system is to secure market access for its exports of animals and animal products. However, this same system has the effect of restricting market access for the products of other countries. It is useful to look at examples of both of these situations.

### 2.4.2.3.1 Example of an animal health measure restricting Australian exports

As previously mentioned, Australia maintains its territory free of most major animal diseases through its comprehensive system of animal health controls. However, it has been confronted with the problem of lack of recognition of its disease free status by importing countries. These countries impose generally-applicable restrictions without taking into account the disease-free status of Australia.

Australia has raised its trade concerns with regard to two such measures, taken by the EC. In 1997, Australia expressed its concerns with regard to a marketing ban imposed by the EC on cosmetics containing certain bovine, ovine and caprine tissues and fluids from the brain, spinal cord, or eyes,<sup>9</sup> due to the risks of transmission to humans of transmissible spongiform encephalitis from tissues infected with BSE.<sup>10</sup> Australia pointed out that it was free of BSE but that the EC measure did not take into account the animal health status of the supplying countries. The EC responded that in light of the fact that global surveillance of BSE was still being developed and that the long incubation period of BSE made its detection difficult, it was not prepared to recognise any country as BSE free.<sup>11</sup>

In 2003, Australia complained about the EC's notification regarding a measure to address blue tongue.<sup>12</sup> It argued that it had been free of blue tongue for over a decade, as recognized by several including the US, Canada, Mexico, New Zealand and Japan. Australia noted that it had repeatedly submitted scientific evidence to the EC. It pointed out that the EC measure would affect its alpaca exports to the EC.<sup>13</sup> The EC indicated that its measure did not address Australia's situation, and that it would address the matter bilaterally with Australia.<sup>14</sup> No solution to this issue has been reported, but the issue was not raised again in 2006 or 2007, which may indicate that it was resolved bilaterally.<sup>15</sup>

<sup>9</sup> European Commission, *20th Commission Directive 97/1/EC of 10 January 1997 Adapting to Technical Progress Annexes II, III, VI and VII of Council Directive 76/768/EEC on the Approximation of the Laws of the Member States Relating to Cosmetic Products*, 97/1/EC (European Community, Brussels), 10 January 1997, available at: <http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:31997L0001:EN:HTML>, visited on 28 January 2008. #### 2.4.2.3.2 Examples of animal health measure restricting imports to Australia

An illustration of the effect on exporting countries of Australia's strict system of prior approval of animal imports on the basis of IRAs, is provided by the example of shrimp exports from Vietnam. In 2000, Australia notified WTO Members of its draft IRA for prawn and prawn products from Asian countries, requiring risk management measures for white spot syndrome virus and yellowhead virus.<sup>16</sup> Before the comment period provided for in its notification had elapsed, Australia imposed interim quarantine requirements for whole or unpeeled headless green prawns.<sup>17</sup> These were motivated by Australia's concerns regarding the illegal use in its territory of uncooked prawns a fishing bait, which was occurring frequently and had resulted in an outbreak of White Spot Virus.

On behalf of ASEAN, Thailand raised concerns on this matter at an SPS Committee meeting in 2001, arguing that domestic illegal practices may not be taken into account as a major element in a risk analysis.<sup>18</sup> It urged Australia to complete the IRA and terminate the interim measure. Throughout 2001, 2002 and 2003, Thailand continued to raise this matter at SPS Committee meetings, complaining of the delay in completing the IRA and the continued imposition of the interim measure.

The revised draft IRA was finally made available for comments in 2007.<sup>19</sup> It found that five pathogens had to be controlled: Taura Syndrome Virus, Infectious Hypodermal and Haematopoietic Necrosis Virus, Necrotising Hepatopancreatitis Bacterium, White Spot Syndrome Virus and Yellowhead Virus. It indicated its intention to test 100 percent of prawn shipments for Yellowhead Virus and White Spot Syndrome Virus.

At the SPS Committee meeting in June 2007, Vietnam raised its concerns with regard to the revised IRA, pointing to the crucial economic importance of prawn industry to its economy<sup>20</sup> as well as the general acceptance by its trading partners of the good safety level of its prawns.<sup>21</sup> It claimed that only two of the five pathogens (White Spot Syndrome

<sup>16</sup> Committee on Sanitary and Phytosanitary Measures, *Notification by Australia*, G/SPS/N/AUS/124, circulated on 23 November 2000.

<sup>17</sup> Committee on Sanitary and Phytosanitary Measures, *Notification by Australia*, G/SPS/N/AUS/126, circulated on 19 February 2001.

<sup>18</sup> Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum: Issues Not Considered in 2006*, G/SPS/GEN/204/Rev.7/Add.2, circulated on 7 February 2007, item 85.

<sup>19</sup> The DAFF *Annual Report 2006-07* states that a revised draft IRA report on prawns was made available for public comment for a 90 day period ending in February 2007, resulting in over 50 submissions which were considered in the light of possible stricter measures. Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 192, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>20</sup> Vietnam reported that the fishery industry employs 4 million persons in Vietnam, 50% of whom are in the prawn sector (manufacturing feed for prawn, prawn culture, processing and other related logistics services). Committee on Sanitary and Phytosanitary Measures, *Australia's Revised Import Risk Analysis and Measures on Prawns and Prawn Products. Statement by Vietnam at the Meeting of 27-28 June 2007*, G/SPS/GEN/791, circulated on 4 July 2007.

<sup>21</sup> According to Vietnam, its prawns, particularly black tiger prawns are of high quality due to its well-organized system of aquatic animal disease control. It reported that in 2006, Vietnam exported prawn products to over 90 countries, including those with a strict food safety and disease control requirements (for example the EC, Japan and the US). *Ibid.*

Virus and Yellowhead Virus) had been found to occur in Vietnam and argued that Australia should conduct individual risk assessments for each country.

In addition, Vietnam pointed to the fact that despite the long history of importation by Australia of prawns from Asian countries where White Spot Syndrome Virus and Yellowhead are prevalent, these viruses have not occurred in Australia for the last six years. This was due to the effective operation of the quarantine measures in place in Australia since 2001,<sup>22</sup> according to Vietnam. Therefore, it argued that Australia should maintain the current quarantine measures and address the threat from illegal use as bait by tightening its domestic controls post-arrival. Thailand, Indonesia, the Philippines and China also raised concerns on this issue and urged the Australian authorities to consider the comments.<sup>23</sup>

In response, Australia pointed out that the comment period on the revised draft IRA, which had provided the opportunity for all interested parties to submit new scientific information that might not have been taken into account before Australia imposed the interim measures, had expired on 21 February 2007. Australia pointed out that it had reviewed the many submissions received. It reported that further consideration was required before the Director of Quarantine decided whether the interim measures had to be strengthened to achieve Australia's appropriate level of protection. Thereafter, the IRA would be reviewed by the Eminent Scientists' Group and then be finalised.<sup>24</sup> Thailand and Australia undertook further technical discussions through the ASEAN SPS group and bilaterally. In September 2007, Australia accepted Thailand's proposal on alternative cooking parameters for prawns and indicated its willingness to consider similar proposals from other exporting countries, and to discuss equivalent measures as well as zoning and compartmentalisation.<sup>25</sup> On 1 October 2007, Australia's revised interim measures for prawns and prawn products came into force.<sup>26</sup>

Another example of an animal health measure affecting imports into Australia, and one which is discussed in detail in Part III of this book, is the measure for the protection of Australian fish stocks against imported fish diseases, that was at issue in the *Australia – Salmon* dispute.<sup>27</sup> This measure, under Australia's *Quarantine Proclamation* of 1975,

<sup>22</sup> The quarantine measures in place since 2001 required imported prawns to be larger than 15gr/piece, and required certificates issued by the competent authority of the exporting country certifying that the prawns were not 'early harvest' prawns and that there were no clinical signs of White Spot Syndrome Virus or Yellowhead Virus. *Ibid.*

<sup>23</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting of 27-28 June 2007. Note by the Secretariat*, G/SPS/R/45, circulated on 12 September 2007, paras 33-36.

<sup>24</sup> *Ibid.*, para. 37.

<sup>25</sup> Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum. Issues Considered in 2007*, G/SPS/GEN/204/Rev.8/Add.1, circulated on 27 March 2008, item 85.

<sup>26</sup> These revised interim measures were notified in Committee on Sanitary and Phytosanitary Measures, *Notification. Addendum*, G/SPS/N/AUS/204/Add.1, circulated on 2 August 2007.

<sup>27</sup> These measures were also at issue in the parallel dispute brought by the US. Dispute Settlement Body, *Australia – Measures Affecting the Importation of Salmonids. Request for Consultations by the United States*, WT/DS21/1, G/L/39, G/SPS/W/40, circulated on 23 November 1995. A Panel was established to hear this dispute in June 1999 and composed in August 1999. However, in view of the ongoing consultations, the Panel was requested to suspend its work. A mutually agreed solution was achieved between Australia and the US in November 2000 on the basis of the revision of the Australian measures notified in G/SPS/N/AUS/117. Dispute Settlement Body, *Australia – Measures Affecting the Importation of Salmonids. Notification of Mutually*

amounted to a prohibition on the importation of dead salmon except if prior to importation the salmon had been treated in a manner that in the opinion of the Director of Quarantine was ‘likely to prevent the introduction of any infections or contagious disease, or disease or pest affecting persons, animals or plants’. In accordance with this mandate, the Director of Quarantine permitted importation of commercial quantities of heat-treated salmon products for human consumption and non-commercial quantities of other salmon (mainly for scientific research) under specific conditions. Canada was therefore denied market access for untreated fresh, chilled or frozen salmon. Canada expressed the view that this measure was contrary to the *SPS Agreement* and the GATT 1994, and requested consultations with Australia under the WTO dispute settlement system to resolve this dispute.<sup>28</sup> These were unsuccessful.

Subsequently, in December 1996, on the basis of an import risk analysis for uncooked, wild, adult, ocean-caught Pacific salmon conducted by AQIS in 1995 and finalised in 1996,<sup>29</sup> which identified 24 disease agents of concern in Canadian salmon,<sup>30</sup> the Australian Director of Quarantine decided to ban Canadian fresh, chilled or frozen salmon. In March 1997, Canada requested that a panel be established to hear this dispute, under various provisions of the *SPS Agreement* and the GATT. Broadly speaking, Canada alleged *inter alia* that the Australian measure was not based on a proper assessment of risks to salmonid life or health as required by the *SPS Agreement*; that it amounted to arbitrary and unjustifiable discrimination by Australia in the levels of protection it deemed appropriate in comparable situations since no similar restrictions were applied to imports of herring and live finfish; and that the measure was more trade restrictive than required to achieve Australia’s appropriate level of sanitary protection. A Panel was accordingly established in April 1997 and it circulated its report in June 1998, finding a violation of various provisions of Articles 2 and 5 of the *SPS Agreement*.<sup>31</sup> Both parties appealed certain legal findings and interpretations of the Panel.

The Appellate Body issued its report in October 1998, reversing the Panel’s findings.<sup>32</sup> The Panel Report and Appellate Body Report were adopted by the Dispute Settlement

---

*Agreed Solution*, WT/DS21/10, G/L/39/Add.1, G/SPS/W/40/Add.1, circulated on 1 November 2000.

<sup>28</sup> Dispute Settlement Body, *Australia – Measures Affecting Importation of Salmon. Request for Consultations by Canada*, WT/DS18/1, G/L/28, G/SPS/W/29, circulated on 11 October 1995. Consultations were held on 23–24 November 1995.

<sup>29</sup> The import risk analysis, as agreed with Canada and the US, was limited to wild, ocean-caught Pacific salmon in the first instance due to the complexity of the task of evaluating all the quarantine issues arising from importation of uncooked salmon. Panel Report, *Australia – Salmon*, para. 2.27.

<sup>30</sup> The 1996 Final Report of the Import Risk Analysis noted the possibility that up to 24 disease agents exotic to Australia might be present in Pacific salmon products. While the probability of establishment of the relevant diseases was low, the Report noted that the diseases would be ineradicable and the economic impacts of their establishment would be major, seriously threatening the viability of aquaculture and recreational fishing in Australia. It recommended that the present quarantine policies for uncooked salmon products remain in place. AQIS, *Salmon Import Risk Analysis: An Assessment by the Australian Government of Quarantine Controls on Uncooked, Wild, Ocean-Caught Pacific Salmonid Products Sourced from the United States of America and Canada*, Final Report, December 1996, 70.

<sup>31</sup> Panel Report, *Australia – Salmon*, para. 9.1. In particular, a violation of Articles 5.1, 5.5 and 5.6, and on that ground also Articles 2.2 and 2.3, were found. These findings are discussed where relevant in Part III of this book.

<sup>32</sup> Appellate Body Report, *Australia – Salmon*, para. 279. These findings are discussed in detail in Part III of this book.

Body (DSB) on 6 November 1998, recommending that Australia bring its measures into conformity with the *SPS Agreement*. On 15 July 1999, after the reasonable period of time for implementation of the recommendations and rulings of the Dispute Settlement Body had expired,<sup>33</sup> Canada indicated that it would request authorisation to suspend the application to Australia of tariff concessions and other GATT obligations, in retaliation for Australia's non-compliance.<sup>34</sup>

On 28 July 1999, Australia informed the DSB that an AQIS decision had been taken on 19 July 1999 on the basis of a new import risk analysis, allowing the importation into Australia of fresh, chilled or frozen salmon products from Canada that were either 'consumer-ready' (*inter alia* eviscerated, headless, pan-size fish; skinless, de-boned fillets of any weight; or skin-on, de-boned fillets of less than 450 grams in weight) or processed into a consumer-ready state at an AQIS approved plant before release from quarantine. Further, Australia stated that it had taken similar measures regarding imports of herring and finfish. According to Australia, this brought its measure into conformity with the *SPS Agreement*. Canada disagreed and a Panel was established under Article 21.5 of the DSU to hear this compliance dispute.<sup>35</sup> Also at issue before the compliance Panel was a newly imposed measure by the Government of Tasmania, an Australian State, banning the importation of fresh, chilled or frozen salmon unless it is derived from fish grown in an area free of six specified diseases. As Canada was not free of all these diseases, the measure amounted to an import prohibition on Canadian fresh, chilled or frozen salmon. The compliance Panel found that Australia's new measure as well as the Tasmanian ban were in violation of various provisions of the *SPS Agreement*.<sup>36</sup> This report was adopted by the DSB on 20 March 2000. In May 2000, Canada and Australia reported to the SPS Committee that a mutually agreed solution had been found to this dispute.<sup>37</sup>

#### 2.4.2.4 Plant health system

Australia has a favourable plant health status, being free of most major plant pests and diseases. This provides its plant products with a competitive advantage on export markets. Australia makes concerted efforts to maintain this health status as its plant industry (mainly in horticulture, grains and forestry) depends to a large extent on exports for its profitability.<sup>38</sup>

<sup>33</sup> The reasonable period of time was established by an Arbitrator, under Article 21.3(c) of the DSU, to be eight months from the adoption of the Panel and Appellate Body Reports, which period would expire on 6 July 1999. Award of the Arbitrator, *Australia – Salmon (Article 21.3(c))*, para. 39.

<sup>34</sup> Australia referred the matter of the level of suspension of concessions to arbitration under Article 22.6 of the DSU. Canada and Australia agreed that the arbitration proceedings would be held in abeyance until the Panel deciding the compliance dispute under Article 21.5 had circulated its report.

<sup>35</sup> The Article 21.5 dispute was referred to the original Panel, which issued its report on 18 February 2000.

<sup>36</sup> Panel Report, *Australia – Salmon (Article 21.5 – Canada)*, para. 8.1. The findings of the compliance Panel are discussed, where relevant, in Part III of this book.

<sup>37</sup> Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum. Resolved Issues*, G/SPS/GEN/204/Rev.8/Add.3, circulated on 27 March 2008, item 8. This solution has not been formally notified to the DSB.

<sup>38</sup> This information is drawn from the 'Plant Health' page of the DAFF website, available at: <http://www.daff.gov.au/animal-plant-health/plant>, visited on 24 January 2008.

Australia's phytosanitary system is currently regarded as one of the strictest in the world. In order to prevent the introduction of plant pests and diseases through imported products, this phytosanitary system relies on a prior-approval requirement. Only those plants or plant products that have been established through risk analysis to be safe are granted an import permit. The *Quarantine Proclamation* of 1998 states that the importation into Australia of a fresh fruit or vegetable, plant or plant part is prohibited unless the Director of Quarantine has granted the person a permit to import it into Australia.<sup>39</sup> The Australian government asserts that its strict phytosanitary system is based on scientific import risk assessments and maintains a high level of protection, independently of economic concerns on the domestic market.<sup>40</sup>

Responsibility for plant health is shared between the Commonwealth Government and the governments of the States and Territories. The Commonwealth Government regulates the movement of plants and their products into and out of Australia, while the State and Territory governments have primary responsibility for plant health controls within Australia both inter-state and intra-state. Similarly to the situation in the animal health system, coherence is ensured by the Primary Industries Ministerial Council, the highest national policy-making body, with the support of the Primary Industries Standing Committee.<sup>41</sup> This Committee is advised by the Plant Health Committee (PHC), composed of the Chief Plant Protection Officer of the DAFF, the departments of primary industries and agriculture of the States and Territories, as well as representatives of Biosecurity Australia, Plant Health Australia and the CSIRO.<sup>42</sup> The PHC's task is to facilitate a consistent and science-based approach to plant health at national level.<sup>43</sup>

As in the area of animal health, at Commonwealth level, pre-border risk analysis is conducted by Biosecurity Australia (specifically, by its Plant Biosecurity division) and research in the area of plant health is in the hands of CSIRO. Border inspection and certification is the responsibility of AQIS. Post border responsibility for plant health is in the hands of the Office of the Chief Plant Protection Officer (OCPPO) within the DAFF.<sup>44</sup> As

<sup>43</sup> *Ibid.*

<sup>44</sup> The creation of the OCPPO was one of the recommendations of the Nairn review of Australia's quarantine system in 1996. This review was critical of the imbalance between the regulatory attention given to the animal health sector as compared to the plant health sector, which it blamed for the fact that over the previous 25 years incursions of plant pests and diseases had exceeded ten times incursions of animal pests and diseases. M.E. Nairn *et al.*, *Australian Quarantine: A Shared Responsibility* (Australian Quarantine Review Secretariat, Canberra), 1996, 5, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0009/111969/nairn\\_report.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0009/111969/nairn_report.pdf), visited on 24 January 2008.

the arrangements in this regard are substantially the same as in the area of animal health, they will not be repeated here. Instead, aspects specifically relevant to Australia's phytosanitary system will be expanded upon. These relate to the IRA process that supports Australia's prior-approval system.<sup>45</sup>

An IRA must be carried out by Plant Biosecurity when an import permit is requested that requires a significant variation in established policy. This is the case, for example, if it relates to a product not previously imported and therefore one for which no IRA exists, or if there has been a considerable change in the phytosanitary situation with regard to that product. A routine IRA is sufficient if the change is less complex or entails a review of established policy. However, if the risk analysis required is likely to be extensive and complex, a non-routine IRA is carried out.<sup>46</sup>

In conducting the necessary risk assessments, Plant Biosecurity follows international risk assessment guidelines developed under the International Plant Protection Convention,<sup>47</sup> as well as the requirements of the *SPS Agreement*.<sup>48</sup> In accordance with these guidelines, Australia's pest risk assessments entail: the identification and categorisation of a pest; the determination of the probability of its entry, establishment or spread in Australia; and the assessment of the potential consequences thereof.<sup>49</sup> Pest categorisation refers to the determination whether a pest has quarantine significance for Australia.<sup>50</sup> The probability of entry, establishment or spread of a pest is expressed qualitatively, rather than quantitatively, to avoid unrealistically precise determinations.<sup>51</sup> Both direct and indirect biological and economic consequences of the risk occurring are assessed.

The risk management aspect of an IRA conducted by Plant Biosecurity entails the process of identifying and implementing measures to manage the identified risks so as to achieve

<sup>45</sup> The IRA process has been set out above, Part II, Section 2.4.2.1. The following description therefore only highlights particular aspects relevant to plant health IRAs.

<sup>46</sup> The IRA process for plant pests is set out in an introductory section of the draft and final IRAs published by Biosecurity Australia. The information provided here is drawn from Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, 25, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008.

<sup>47</sup> International Plant Protection Convention, Pest Risk Analysis for Quarantine Pests including Analysis of Environmental Risks, ISPM 11.

<sup>48</sup> An IRA refers directly to the requirements of the *SPS Agreement* and indicates the steps taken in accordance with these requirements. Of course this does not necessarily mean that the IRA in fact complies with the rules of the *SPS Agreement* applicable to risk analysis (discussed in Part III of this book), but rather indicates detailed awareness by Biosecurity Australia of the relevant rules and its active efforts towards compliance.

<sup>49</sup> Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, 47-48, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008.

<sup>50</sup> ISPM 11 defines a pest of quarantine significance as 'a pest of potential economic importance to the area endangered thereby and not yet present there, or present but not widely distributed and being officially controlled.'

<sup>51</sup> Likelihood is divided into six incremental categories, each assigned a broad probability range. Events considered virtually certain to occur are assigned a likelihood of 1. The parameters for the six qualitative expressions of likelihood are then: High 0.7 → 1, Moderate 0.3 → 0.7, Low 0.05 → 0.3, Very low 0.001 → 0.05, Extremely low 10<sup>-6</sup> → 0.001, Negligible 0 → 10<sup>-6</sup>. Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, 51, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008.

Australia's chosen (or 'appropriate') level of protection, which, as set out above, has been determined to be 'a high level of sanitary and phytosanitary protection aimed at reducing risk to a very low level, but not to zero.'<sup>52</sup> Consequently, if the risk from importation of the product without additional phytosanitary measures (called the 'unrestricted risk') is either 'negligible' or 'very low' it is considered to meet Australia's appropriate level of protection and no risk management measures are necessary.<sup>53</sup> Risks in any other category must be addressed by means of risk management measures that will achieve Australia's 'low' risk level of protection. The IRA must therefore assess the possible risk according to the various measures that could be taken to mitigate it. If effective measures are available to achieve a 'low' risk level, the IRA would recommend that an import permit be granted, subject to the condition that the identified measures be taken. If no risk management measure is available that would achieve Australia's level of protection, the IRA will recommend that no import permit be granted.

As stated above, IRAs are published in draft form and revised on the basis of comments by stakeholders. The revision may again be made available for comments, and revised a second time. A final IRA is reviewed by the Eminent Scientists Group before a decision is taken by the Director of Animal and Plant Quarantine. This process is extremely lengthy and complex, and has led to long delays in responding to import permit requests. Some of these delays have led to serious problems for other WTO Members. The DAFF reports that several high-profile IRAs relating to phytosanitary concerns have now been finalized, including those for apples from New Zealand, Tahitian limes from New Caledonia and table grapes from Chile.<sup>54</sup> It also reports good progress on the three 'remaining "legacy" IRAs' *inter alia* with regard to Philippine bananas, discussed further below.<sup>55</sup>

Australia has a high level of success in establishing and maintaining pest-free regions within its territory. It expends considerable effort on this task in order to ensure that exports from regions free of quarantine pests are able to have access to the markets of its trading partners, despite the prevalence of the relevant pests elsewhere in Australia. It also takes an active role in promoting the recognition of pest-free areas by importing countries.<sup>56</sup>

<sup>52</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Import Risk Analysis Handbook 2007* (Commonwealth of Australia, Canberra), September 2007, 8, available at: [http://www.daff.gov.au/biosecuritycoordination/import\\_risk\\_analysis\\_handbook\\_2007](http://www.daff.gov.au/biosecuritycoordination/import_risk_analysis_handbook_2007), visited on 15 January 2008.

<sup>53</sup> Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, 89, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008.

<sup>54</sup> This report states that the IRA process for New Zealand apples has been completed and a final determination was made by the Director of Animal and Plant Quarantine on 26 March 2007. AQIS is now processing the work plan in this regard. With regard to table grapes from California, the review of the conditions imposed for import has been completed. The final determination made concerning Tahitian limes from New Caledonian permits their importation. In addition to these high-profile cases, 15 other IRAs were completed in 2006-2007. Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 192, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>55</sup> *Ibid.* The *Annual Report 2006-07* states that a revised draft IRA with regard to Philippine bananas was made available for public comment by June 2007. The other two 'legacy' IRAs related to animal products (prawns and chicken meat). Aside from these high profile cases, progress was made on 59 risk analyses.

<sup>56</sup> Aside from bilateral initiatives with trading partners in this regard, Australia was a strong proponent for the

As is the case in the area of animal health, also in the area of plant health Australia is active in addressing barriers to market access for its exports. It does so by ensuring that its exporters have up-to-date detailed information on the phytosanitary requirements on foreign markets,<sup>57</sup> as well as by pro-actively addressing potential phytosanitary barriers through technical discussions. Australia is also very active in promoting its interests in this area in international fora.

#### **2.4.2.4.1 Example of a phytosanitary measure affecting Australian exports**

A useful recent illustration of the successful use by Australia of discussions at the technical level with regulatory authorities in importing countries to resolve SPS problems affecting its exports is reported in the DAFF *Annual Report 2006-07*.<sup>58</sup> It relates to Indonesian measures against fruit flies on fresh fruit and vegetables. This example also highlights the benefits of Australia's efforts to maintain pest- and disease-free areas within its territories.

In March 2006, new quarantine measures were imposed by Indonesia requiring fumigation or cold treatment of imports of certain fruit and vegetables that are known hosts of fruit fly. These requirements had a considerable impact on the Australian fruit industry, particularly in respect of table grapes and citrus, which together earn A\$22 million a year in the Indonesian market. The additional costs imposed by the new requirement would reduce the profits of Australian fruit exporters, who were already burdened by drought and increasingly stringent import requirements.

To resolve this problem, the DAFF responded promptly, as soon as the measure was announced, by working together with the States and industry involved to make a convincing case to Indonesia regarding the effectiveness of the systems in place to control fruit fly in Australia. High-level representations were held, involving the Minister of Agriculture, Fisheries and Forestry of Australia and the Minister of Agriculture of Indonesia and detailed technical information was provided with regard to the fruit-fly free regions in Australia. Technical experts from both countries conducted inspections of the relevant regions. In December 2006, Indonesia recognised the status of the districts of Riverina, Riverland and Sunraysia and the State of Tasmania as fruit-fly-free regions. According to Paul Morris of the International Division of the DAFF, this 'confirmed Australia's standing as a world leader in establishing and maintaining areas free of major pests.'<sup>59</sup>

---

establishment of guidelines in the SPS Committee for the recognition of pest- and disease-free areas, in line with work done on this issue in the international standard-setting bodies. See further below, Part IV, Section 1.2.6.

<sup>57</sup> AQIS maintains an Export Conditions Database, known as PHYTO, for plant and plant products including fruit, vegetables, seeds, grains, cut flowers and timber, available at: [http://www.aqis.gov.au/phyto/asp/ex\\_home.asp](http://www.aqis.gov.au/phyto/asp/ex_home.asp), visited on 25 January 2008.

<sup>58</sup> This example is set out in detail in a case study reported in the Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 109, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>59</sup> *Ibid.*

#### 2.4.2.4.2 Examples of phytosanitary measures affecting imports to Australia

The impact of the Australia's strict phytosanitary system on import products is illustrated by the example of its restrictions on Philippine fresh fruit and vegetables, particularly bananas.<sup>60</sup> The Philippines has an important economic interest in banana exports.<sup>61</sup> Its banana exports are accepted in Members that have high phytosanitary standards, such as Japan.<sup>62</sup> It is broadly estimated that access to the Australian market would add between five and 19 percent to Philippine banana exports amounting to between US\$14 million and US\$63 million.<sup>63</sup>

As mentioned above, Australia's SPS system, including in the area of phytosanitary protection, relies on the requirement of prior approval of food and agricultural products, based on IRAs and administered through import permits. In 1994 and 1995, under this system Australian importers applied for import permits with regard to papaya, plantain and bananas from the Philippines.<sup>64</sup> In January 1995, the Philippines provided AQIS with a list of pests and diseases of bananas.<sup>65</sup> At that time, Australia prohibited imports of fresh bananas from all countries as it had not yet conducted an IRA for this product.<sup>66</sup>

Between 1996 and 2000, the Philippines engaged in discussions on the issue, both bilaterally and in various fora,<sup>67</sup> including at meetings of the SPS Committee.<sup>68</sup> In the latter setting, the Philippines reported that its exports of fresh tropical fruit faced phytosanitary

<sup>60</sup> This example is taken from Josyline Javelosa and Andrew Schmitz, 'Costs and Benefits of a WTO Dispute: Philippine Bananas and the Australian Market', *The Estey Centre Journal of International Law and Trade Policy* 7 (1), 2006, 58-83.

<sup>61</sup> Banana production and packaging employs about 45,000 workers in the Philippines. Almost half of the banana production of the Philippines is exported. By contrast, 95% of Australian banana production is for domestic consumption. Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, 33-35, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008.

<sup>62</sup> Josyline Javelosa and Andrew Schmitz, 'Costs and Benefits of a WTO Dispute: Philippine Bananas and the Australian Market', *The Estey Centre Journal of International Law and Trade Policy* 7 (1), 2006, 58-83, 64. Javelosa and Schmitz note that most of Japan's banana imports come from the Philippines, and these imports must comply with the strict requirements of Japan's *Plant Protection Law* and *Food Sanitation Law*.

<sup>63</sup> This range reflects calculations made on the basis of different supply elasticities (0.5 to 3.57). *Ibid.*, 70.

<sup>64</sup> This is reported in Dispute Settlement Body, *Australia – Certain Measures Affecting the Importation of Fresh Fruit and Vegetables – Request for the Establishment of a Panel by the Philippines – Revision*, WT/DS270/5/Rev.1, circulated on 11 July 2003.

<sup>65</sup> Biosecurity Australia, *Import Risk Analysis (IRA) on Fresh Banana Fruit from the Philippines: Issues Paper* (Commonwealth of Australia, Canberra), 2 May 2001, available at: [http://www.daff.gov.au/\\_data/assets/word\\_doc/0018/22941/2001-10a.doc](http://www.daff.gov.au/_data/assets/word_doc/0018/22941/2001-10a.doc), visited on 25 January 2008.

<sup>66</sup> An IRA for Ecuadorian bananas had been initiated in 1991, but was suspended due to the withdrawal of the application by the prospective importer. *Ibid.*, 20.

<sup>67</sup> The matter was discussed in the Joint Philippine – Australian Bilateral Committee and in the Association of South East Asian Nations (ASEAN) – Australian dialogue. Josyline Javelosa and Andrew Schmitz, 'Costs and Benefits of a WTO Dispute: Philippine Bananas and the Australian Market', *The Estey Centre Journal of International Law and Trade Policy* 7 (1), 2006, 58-83, 61.

<sup>68</sup> The Philippines first raised a trade concern on this issue at the SPS Committee meeting in March 2000. Several other Members, namely Thailand, Brazil, Malaysia, Korea, India the EC and the US, supported the Philippine complaint and pointed to similar problems with delays in the granting of import permits for their fresh fruit exports to Australia. Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum: Issues Not Considered in 2006*, G/SPS/GEN/204/Rev.7/Add.2, circulated on 7 February 2007, item 74.

barriers to market access in Australia, for which no risk assessment existed.<sup>69</sup> Australia responded that it conducted a risk analysis process that was transparent and consultative to prevent the introduction of diseases. It mentioned that, due to scarce resources to conduct the necessary risk analyses, it was obliged to prioritise among the various import permit requests.<sup>70</sup>

To date, no IRAs have been initiated for papaya or plantain, despite the fact that over a decade has passed since the permit request. An IRA with respect to Philippine bananas was initiated in 2000.<sup>71</sup> The report of the first round of consultations with stakeholders on this issue stated that a non-routine IRA process would be followed, based on the consideration that an assessment of potentially significant quarantine risks that had not previously been studied by AQIS would be required, and that the analysis was likely to be large and technically complex. The IRA was expected to take 18 to 24 months.<sup>72</sup> A risk analysis panel was established, with the support of three technical working groups, to carry out the IRA.<sup>73</sup> A series of technical workshops, meetings with stakeholders and a meeting between Biosecurity Australia officials and their counterparts and industry technical experts in the Philippines followed in 2001 and early 2002.<sup>74</sup> In addition, written exchanges of questions and answers were conducted on technical level.

A draft IRA report was published in July 2002 and made available for comments.<sup>75</sup> Of the 80 banana pests identified in the draft IRA, 22 were categorised as pests of quarantine concern and subject to individual risk assessments.<sup>76</sup> One issue of concern with regard to banana imports was the possible spread of black Sigatoka disease, a disease of quarantine significance for Australia due to the fact that its presence in specific regions of Australia (the Torres Strait and far northern Queensland) is being strictly controlled to mitigate the risk of the disease spreading to production areas.<sup>77</sup> Other pests whose ‘unrestricted

<sup>69</sup> *Ibid.*, item 74 para. 29.

<sup>70</sup> *Ibid.*, item 74 para. 30. The issues paper published for the bananas IRA reports that in June 1996, the Philippines Bureau of Plant Industry and AQIS agreed that mango was the Philippines first priority, and therefore that its IRA would be carried out first and those for bananas and pineapples would be conducted in due course. Biosecurity Australia, *Import Risk Analysis (IRA) on Fresh Banana Fruit from the Philippines: Issues Paper* (Commonwealth of Australia, Canberra), 2 May 2001, available at: [http://www.daff.gov.au/\\_\\_data/assets/word\\_doc/0018/22941/2001-10a.doc](http://www.daff.gov.au/__data/assets/word_doc/0018/22941/2001-10a.doc), visited on 25 January 2008.

<sup>74</sup> Biosecurity Australia, *Plant Biosecurity Policy Memorandum* 2002/08, Canberra), 4 March 2002, available at: [http://www.daff.gov.au/\\_\\_data/assets/word\\_doc/0003/18930/2002-08.doc](http://www.daff.gov.au/__data/assets/word_doc/0003/18930/2002-08.doc), visited on 25 January 2008.

<sup>75</sup> Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Draft IRA Report* (Commonwealth of Australia, Canberra), June 2002, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0012/164001/draft-ira.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0012/164001/draft-ira.pdf), visited on 25 January 2008.

<sup>76</sup> The categorization of pests was based on their presence or absence in Australia, their association with banana fruit, their potential to become established in Australia, and the potential consequences of establishment. *Ibid.*, 13.

<sup>77</sup> Biosecurity Australia, *Import Risk Analysis (IRA) on Fresh Banana Fruit from the Philippines: Issues Paper*

risk<sup>78</sup> of entry, establishment or spread in Australia was evaluated to be too high to meet Australia's appropriate level of protection were Moko, freckle and mealybugs.<sup>79</sup> While appropriate risk management measures were identified to reduce the risks from Black Saratoga, freckle and mealybugs to 'very low' which would meet Australia's appropriate level of protection, no such measure could be found for Moko.<sup>80</sup> As a result, the draft IRA recommended that imports of Philippine bananas be prohibited.<sup>81</sup>

The Philippines initiated WTO dispute settlement proceedings against Australia in October 2002,<sup>82</sup> with the support of the Advisory Centre for WTO Law.<sup>83</sup> The driving force behind bringing this formal dispute is reported to be the Philippine Banana Growers and Exporters Association, which consists of the largest banana companies which are mostly affiliated with multinationals such as Dole, Del Monte and Chiquita.<sup>84</sup> On its side, Australia had to deal with pressure from the Australian Banana Growers Council, a powerful industry lobby organisation, which opposed changes to Australia's restrictive quarantine policy.<sup>85</sup>

Consultations between Australia and the Philippines failed to resolve the matter. Therefore, in 2003, the Philippines requested the establishment of a panel to hear the dispute.<sup>86</sup> It alleged that Australia's SPS system entailed an *a priori* prohibition on im-

(Commonwealth of Australia, Canberra), 2 May 2001, 21, available at: [http://www.daff.gov.au/\\_data/assets/word\\_doc/0018/22941/2001-10a.doc](http://www.daff.gov.au/_data/assets/word_doc/0018/22941/2001-10a.doc), visited on 25 January 2008.

<sup>78</sup> The term 'unrestricted risk' is used in Australia's IRAs to mean the risk associated with imports in the absence of specific risk management measures (in this case bananas 'produced to the standard achieved through normal practices of production, quality control, packing, transport and shipment from the specified areas, as described in documentation provided by the Philippines'). Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Draft IRA Report* (Commonwealth of Australia, Canberra), June 2002, 13, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0012/164001/draft-ira.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0012/164001/draft-ira.pdf), visited on 25 January 2008.

<sup>79</sup> *Ibid.* For all other identified pests, the risks were determined to be low enough to meet Australia's appropriate level of protection.

<sup>80</sup> *Ibid.*, 14.

<sup>81</sup> *Ibid.*, 15.

<sup>82</sup> Dispute Settlement Body, *Australia – Certain Measures Affecting the Importation of Fresh Fruit and Vegetables. Request for Consultations by the Philippines*, WT/DS270/1, G/L/575, G/SPS/GEN/345, G/LIC/D/34, circulated on 23 October 2002. This complaint listed the measures at issue as being Sec. 64 of the *Quarantine Proclamation* of 1998 (which establishes the prior-approval system for imports of fresh fruit and vegetables), the regulations, requirements and procedures issued there under, any amendments to these measures and their application. The complaint was brought not only in terms of the *SPS Agreement* but also the GATT 1994 and the *Agreement on Import Licensing Procedures*.

<sup>83</sup> The Advisory Centre on WTO Law is an intergovernmental organisation established in 2001 to provide legal advice on WTO legal issues at greatly reduced rates to developing countries. The Philippines is a member of the Advisory Centre on WTO Law, and pays a low legal fee of CHF 324 per hour. This information is provided on the website of the Advisory Centre on WTO Law, available at: <http://www.acwl.ch/>, visited on 24 January 2008.

<sup>84</sup> Josyline Javelosa and Andrew Schmitz, 'Costs and Benefits of a WTO Dispute: Philippine Bananas and the Australian Market', *The Estey Centre Journal of International Law and Trade Policy* 7 (1), 2006, 58-83, 66. This paper also reports that at the time of initiation of the WTO dispute, the Secretary of the Department of Agriculture of the Philippines was the former chair of the Philippine Banana Growers and Exporters Association.

<sup>85</sup> *Ibid.*, 66-67. Javelosa and Schnitz report that the Australian Banana Growers Council represents 1,900 banana growers. It has a full-time national secretariat in Brisbane.

<sup>86</sup> Dispute Settlement Body, *Australia – Certain Measures Affecting the Importation of Fresh Fruit and Vegetables. Request for the Establishment of a Panel by the Philippines. Revision*, WT/DS270/5/Rev. 1, circulated on 11 July 2003. The Philippines challenges Australian regime for the importation of fresh fruits and

ports of fresh fruit and vegetables, which subverts the fundamental principles of the *SPS Agreement*.<sup>87</sup> The Australian government characterised the Philippines's challenge as 'a broad systemic challenge to Australia's quarantine regime that strikes at the fundamental right of WTO Members to have a quarantine system.'<sup>88</sup> It asserted that many WTO Members have similar prior-approval systems in place. A panel was established to hear the dispute on 29 August 2003,<sup>89</sup> but was never composed.

In 2003, Australia's draft IRA was considerably revised in response to the substantial nature of the submissions and the technical information received, including research results submitted by the Philippines regarding the Moko bacterium.<sup>90</sup> The revised draft IRA was published for comments in February 2004. It recommends allowing the importation of Philippine bananas under strict conditions, including that bananas may only be sourced from plantations that can demonstrate that the prevalence of Moko and freckle diseases is below the level acceptable to Australia,<sup>91</sup> and from plants that have been inspected weekly and found free from symptoms of moko and freckle; that all bananas be treated with chlorine in the packing station and be inspected by quality assurance staff to reduce the risk of mealybugs to a very low level and that additional practical measures be taken with regard to packing materials, packing and transport procedures to reduce the risk of contaminants

---

vegetables, as centred on Section 64 of the *Quarantine Proclamation* of 1998 (containing the a priori prohibition on importation of fresh fruit and vegetables), in its request for the establishment of a panel. This document states the products of concern to be all fresh fruit and vegetables for which a Director of Quarantine has not yet made a decision whether or not to grant a permit for their importation into Australia. It challenges Australia's measures under the GATT 1994, the *Import Licensing Agreement*, and the *SPS Agreement*.

<sup>87</sup> Dispute Settlement Body, *Minutes of Meeting Held in Centre William Rappard on 29 August 2003*, WT/DSB/M/155, circulated on 7 November 2003, para. 24.

<sup>88</sup> *Ibid.*, para. 25.

<sup>89</sup> *Ibid.*, paras 26-27. The first panel request was made in July 2003, but the establishment of the panel was blocked by Australia, as is possible under Art. 6 of the *Dispute Settlement Understanding* (DSU). The second request, which cannot be blocked under DSU rules, was made in November 2003 and a panel was then established. China, the EC, Ecuador, India, Thailand and the US reserved their third party rights in this dispute. The EC brought a parallel complaint (WT/DS287) against Australia's quarantine regime (for imports of animals, animal parts, meat and meat products, dairy products, plants and plant products, fresh fruit and vegetables, seeds and bee products), and a panel was established in November 2003. The latter panel was however also never composed. A mutually agreed solution to the latter dispute was notified in March 2007. The agreed solution reportedly 'includes enhanced transparency of the quarantine regime of Australia, principles of treatment for market access applications from the European Communities, and continued expert discussions on scientific aspects associated with trade in pig meat and chicken meat.' Dispute Settlement Body, *Australia – Quarantine Regime for Imports. Notification of Mutually Agreed Solution*, WT/DS287/8, G/L/618/Add.1, G/SPS/GEN/384/Add.1, circulated on 13 March 2007.

<sup>90</sup> Biosecurity Australia, *Plant Biosecurity Memorandum*, 2003/30 (Commonwealth of Australia, Canberra), 22 October 2003, available at: [http://www.daff.gov.au/\\_\\_data/assets/word\\_doc/0015/14082/2003-30.doc](http://www.daff.gov.au/__data/assets/word_doc/0015/14082/2003-30.doc), visited on 25 January 2008.

<sup>91</sup> This acceptable prevalence level is extremely low (in the case of Moko, no more than one in 6,800 infected plants per year are permissible). It must be proven by weekly surveys over a minimum period of 2 years immediately preceding harvest of bananas intended for export to Australia. If the low prevalence level is exceeded, the affected area would be suspended from exporting to Australia for a minimum period of 2 years.

such as leaf trash, weed seeds and frogs.<sup>92</sup> These conditions were strengthened by the addition of further requirements in June 2004.<sup>93</sup>

In December 2004, the Australian government announced that as Biosecurity Australia had been restructured, it would have to review all the IRAs in progress, including that for Philippine bananas. A second revised draft IRA was finally issued for comment on 1 March 2007.<sup>94</sup> This second revision identifies additional pests of quarantine concern.<sup>95</sup> It finds that no individual measure can effectively manage the risks. It therefore recommends an integrated 'systems-approach' composed of a combination of measures for each disease. Mandatory pre-clearance arrangements are required. It requires that AQIS officials be involved in all risk management measures in the Philippines and that the Philippine certification system be audited. The panel that conducted the IRA for Biosecurity Australia recognised that some of the measures required would be difficult to achieve, but considered them feasible and therefore to be included in the IRA. One dissenting panel member was of the view that the risk management measures recommended for Moko were inappropriate, *inter alia* because areas of low pest prevalence 'cannot be defined, implemented, maintained and verified in the Philippines, where Moko is widespread' and there was, in his view, 'insufficient evidence to conclude that any measurable effect would result from visual inspection and corrective action.'<sup>96</sup> However, Biosecurity Australia chose to adopt the majority view.<sup>97</sup>

On the basis of the 21 comments received on its second revised draft IRA, Biosecurity Australia will draft a final IRA for review by the Eminent Scientists Group, after which

---

<sup>92</sup> These measures are on top of the risk management measures proposed by the Philippines proposed for the production, processing, packaging and transportation of bananas to Australia. Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Revised Draft IRA Report* (Commonwealth of Australia, Canberra), February 2004, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0006/22866/banana\\_rev\\_draft.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0006/22866/banana_rev_draft.pdf), visited on 28 January 2008. Note however, that no risk management measures are required for Black Sigatoka, as the revised draft IRA established that the unrestricted risk associated with black Sigatoka was actually acceptable as it is a *leaf* pathogen not a fruit pathogen and the risks that banana leaves would be accidentally imported was very small.

<sup>93</sup> Biosecurity Australia, *Importation of Fresh Bananas from the Philippines: Addendum to Revised Draft IRA Report of February 2004* (Commonwealth of Australia, Canberra), June 2004, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0003/22881/ban\\_add.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0003/22881/ban_add.pdf), visited on 25 January 2008. This change is due to an error in transcription in a cell of a spreadsheet used to estimate the risk in the IRA. This error had an impact on the risk assessment. The new requirements are the application of a more stringent 'area of low pest prevalence' regime for Moko, the additional requirement of insecticidal treatment for mealybugs, and the inclusion of quarantine conditions for banana bract mosaic virus.

<sup>94</sup> Biosecurity Australia, *Revised Draft Import Risk Analysis Report for the Importation of Cavendish Bananas from the Philippines* (Commonwealth of Australia, Canberra), February 2007, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/157964/2007-06a.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/157964/2007-06a.pdf), visited on 25 January 2008. The comment period was initially open until 30 May 2007, but was extended by another 30 days (until 29 June 2007) to give stakeholders sufficient opportunity to engage appropriate expertise and to comment on the substantial material contained in the report. Biosecurity Australia, *Plant Biosecurity Memorandum*, 2007/12 (Commonwealth of Australia, Canberra), 16 May 2007, available at: [http://www.daff.gov.au/\\_\\_data/assets/word\\_doc/0010/243982/2007\\_12.doc](http://www.daff.gov.au/__data/assets/word_doc/0010/243982/2007_12.doc), visited on 25 January 2008. 19 submissions were received.

<sup>95</sup> The pests and diseases of quarantine concern identified in the second revised draft are Moko, black Sigatoka, freckle, mealybugs, armoured scales, spider mites, and banana rust thrips.

<sup>96</sup> Biosecurity Australia, *Revised Draft Import Risk Analysis Report for the Importation of Cavendish Bananas from the Philippines* (Commonwealth of Australia, Canberra), February 2007, 19, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0005/157964/2007-06a.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0005/157964/2007-06a.pdf), visited on 25 January 2008.

<sup>97</sup> Comments on the minority view were received from stakeholders and from the Philippine government.

the final IRA will be issued. On this basis, the Director of Animal and Plant Quarantine will make a decision, which will determine whether an import permit will be granted and if so under what conditions. The status report in May 2008 indicates that submissions are being considered but no further progress has been made.<sup>98</sup> Not only has this process lasted over 12 years, but the resulting import permit is likely to be subject to quarantine requirements well beyond the capacity of the Philippines to meet.

The Australian government asserts that the fact that its phytosanitary system is strictly science-based is illustrated by the fact that its ban on Philippine bananas was kept in place despite the fact that the droughts in 2002-2003 and in 2006 and the tropical cyclone in early 2006 wreaked havoc with Australia's banana crop and led to significant price increases.<sup>99</sup> Therefore, the Australian government argues that its strict SPS system is applied consistently, regardless of domestic market considerations, such as the effect of natural disasters on domestic production, or consumer prices.<sup>100</sup>

Another example of an Australian phytosanitary measure is that applied to imports of apples from New Zealand, in order to prevent the introduction of fire blight. This measure is currently before a WTO Panel.<sup>101</sup> The background to this dispute is as follows. Since 1986, New Zealand has been seeking market access to Australia for apples, which are its second biggest horticultural export after kiwi fruit. In 1999 New Zealand applied for the fourth time for market access, but by 2005 the Australian authorities had only circulated two draft IRAs followed by comment periods. New Zealand considered this six year delay unacceptable and raised a concern regarding this matter at the SPS Committee meeting of June 2005.<sup>102</sup>

Chile, the EC and the US supported New Zealand in this matter. The EC and the US encouraged Australia in reviewing its 2004 risk assessment, to do so in the light of the findings of the Panel in *Japan – Apples* that stringent control measures are not justified on the basis of available scientific evidence showing that mature symptomless apple fruit do not pose a risk of transmission of fire blight.<sup>103</sup> The representative of Australia reminded

<sup>98</sup> Biosecurity Australia, *Import Risk Analysis for Bananas from the Philippines – Status Report*, Advice 2008/13, available at: [http://www.daff.gov.au/\\_data/assets/word\\_doc/0020/661403/2008-13.doc](http://www.daff.gov.au/_data/assets/word_doc/0020/661403/2008-13.doc), visited on 28 June 2008. The stakeholder comment period on the revised draft import risk analysis during which twenty one stakeholder submissions were received, closed on 29 June 2007. Regular meetings were held by the expert IRA team to consider the submissions. The May 2008 status report indicates that '[a] draft final IRA report will soon be forwarded to the independent Eminent Scientists Group for review.'

<sup>99</sup> Trade Policy Review Body, *Trade Policy Review: Australia – Report by the Secretariat. Revision*, WT/TPR/S/178/Rev.1, circulated on 1 May 2007, Section IV para. 49 and note 77.

<sup>100</sup> This argument is not very convincing. Australia's policy could also be explained on the grounds that Australia prioritises the protection of its banana producers above the interests of its consumers in access to cheaper bananas.

<sup>101</sup> Dispute Settlement Body, *Australia – Measures Affecting the Importation of Apples from New Zealand. Request for the Establishment of a Panel by New Zealand*, WT/DS367/5, circulated on 7 December 2007.

<sup>102</sup> Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum. Issues Considered in 2007*, G/SPS/GEN/204/Rev.8/Add.1, circulated on 27 March 2008, item 217. See also Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 29 and 30 June 2005. Note by the Secretariat. Corrigendum*, G/SPS/R/37/Rev.1 para. 13.

<sup>103</sup> The findings in the *Japan – Apples* dispute are discussed in Part III of this book. In this dispute, the Panel found that the 10 cumulative requirements applied by Japan to apple imports from the US, in order to prevent the introduction of fire blight were disproportional to the negligible risk of transmission of fire blight by mature symptomless apple fruit. See further below, Part III, Section 3.2.3.1.

the SPS Committee that recent changes to Biosecurity Australia had led to delays in completion of a number of risk analyses, but that Australia was committed to providing a science-based risk assessment for New Zealand apples as soon as possible. It noted that its ongoing risk analysis addressed a number of quarantine concerns about pests and diseases in addition to fire blight.<sup>104</sup>

In December 2005, Australia issued a third revised draft IRA for New Zealand apples, permitting importation subject to certain conditions including determination of the fire blight free status of orchards by Australian inspectors and chlorine treatment of apples prior to export. In addition, due to concerns with apple scab disease, the importation of New Zealand apples into Western Australia was prohibited. New Zealand argued that the requirements with regard to fire blight were not justified in the light of scientific evidence. Further, New Zealand pointed out that an outbreak of apple scab disease had been reported in Western Australia at the time of the revised draft IRA. In addition, the IRA process conducted in Australia, comprising successive cycles of draft IRAs and consultations, was criticised by New Zealand as causing undue delays and a disguised restriction on trade. Australia countered that all relevant scientific information, including that considered in the *Japan – Apples* case, had been taken into account in its revised draft IRA. It stated that fire blight was only one of several pests and diseases dealt with in the revised draft IRA. It also claimed that the variations in phytosanitary status of different regions within Australia had been appropriately taken into account. Its revised draft IRA was open for comments until March 2006.

New Zealand and the US provided comprehensive submissions to Biosecurity Australia on the revised draft IRA. Overall, 40 submissions were received from stakeholders and technical discussions were conducted in 2006. In June 2006 the consideration of submissions was completed and on 1 August 2006 the final draft report was referred to the Eminent Scientific Group for its recommendations. This group completed its review within the required 60-day period and transmitted its report to the Director of Animal and Plant Quarantine. Australia reported that Biosecurity Australia would take into account the recommendations of the Eminent Scientific Group and produce the final IRA by the end of 2006.

In February 2007, New Zealand raised the matter again at the SPS Committee meeting, noting that while some progress had been made, the IRA process had not been completed by the end of 2006 as expected. The final IRA had been issued, but subject to an appeal process open until January 2007.<sup>105</sup> New Zealand argued that the extensive conditions applied for the importation of New Zealand apples meant that it was doubtful whether commercially meaningful trade would be possible. The strict requirements relating to fire blight, were argued to be contrary to the conclusions in the *Japan - Apples* case, on the grounds that there was no scientific or legal justification for their imposition. New Zealand also expressed concerns regarding proposed measures relating to other pests, such as the requirement that Australian inspectors be present in orchards.<sup>106</sup> The US made

---

<sup>104</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 29 and 30 June 2005. Note by the Secretariat. Corrigendum*, G/SPS/R/37/Rev.1 paras 14-15.

<sup>105</sup> It should be recalled that the appeal process only covers procedural issues, not the scientific basis for the measure in the IRA report. Three appeals were heard and dismissed on this issue.

<sup>106</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting of 28 February - 1 March*

similar remarks. The EC further noted that ‘undue delays appeared to be a regular, most troublesome, feature of the Australian IRA process.’<sup>107</sup>

On 27 March 2007, the Australian Director of Animal and Plant Quarantine determined a policy for the importation of apples from New Zealand, stating that the importation of apples could be permitted subject to the *Quarantine Act* of 1908, and the application of the phytosanitary measures specified in the November 2006 Final Report of the IRA for apples from New Zealand. In June 2007, New Zealand reported that it was closely engaged with Australian authorities in negotiating standard operating procedures to implement the Australian requirements, but that it still considered them unjustified and would keep its options open for further action. On 31 August 2007 New Zealand initiated dispute settlement proceedings against Australia on this matter.<sup>108</sup> Consultations failed to resolve the matter and the dispute is currently before a Panel.<sup>109</sup>

### 2.4.3 Overall assessment of the SPS system of Australia

Australia’s SPS system is renowned for being one of the most stringent in the world, reflecting Australia’s vulnerable island ecosystem, its concerns with protecting its unique fauna and flora, and the importance of its agricultural industry. Australia has undertaken several reforms to its SPS system to further improve its effective functioning, *inter alia* by introducing HACCP requirements, by extending these requirements to the primary production and processing stage for key industries, and by separating the risk assessment and risk management tasks of the FSANZ.

However, the strictness of Australia’s SPS system has given rise to concerns by other WTO Members, which are faced with market access barriers in the form of Australia’s SPS measures. In particular, the prior-approval requirement for food and agricultural imports, coupled with the very lengthy IRA process, have been repeatedly criticised by other Members. Australia has taken some steps to address these concerns. Some concerns are resolved through bilateral discussions. For example, a long-running concern of the EC regarding Australia’s quarantine regime, in particular its measures on truss tomatoes, citrus, cured hams and poultry from the EC, was resolved in bilateral discussions in 2007.<sup>110</sup> Australia now allows imports of these products from the EC.<sup>111</sup> Other concerns have been addressed through changes to Australia’s SPS system. For example, as mentioned above, in response to the various complaints regarding the undue delays in issuing IRAs, the Australian government has announced reforms to increase the transparency, efficiency,

<sup>109</sup> Dispute Settlement Body, *Australia – Measures Affecting the Importation of Apples from New Zealand. Request for the Establishment of a Panel by New Zealand*, WT/DS367/5, circulated on 7 December 2007.

<sup>110</sup> Dispute Settlement Body, *Australia – Quarantine Regime for Imports. Notification of Mutually Agreed Solution*, WT/DS287/8, G/L/618/Add.1, G/SPS/GEN/384/Add.1, circulated on 13 March 2007.

<sup>111</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 104, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

timeliness and predictability of the IRA procedures. Nevertheless, several concerns remain, particularly with regard to the prior-approval nature of Australia's quarantine system as illustrated by the Philippine banana and the New Zealand apple disputes.

Australia also makes concerted efforts to address SPS market access barriers to its exports of food and agricultural products. It follows an effective three-pronged strategy in this regard. First, it provides extensive support to its food and agricultural industry to assist them in complying with the SPS requirements imposed by their trading partners, and in demonstrating such compliance. This support takes various forms, including the provision of high quality export inspection and certification services, the publication of clear and easily accessible information to the food and agricultural export industry with regard to SPS requirements on foreign markets, and various financial programs to reduce the costs of SPS compliance.

Second, Australia engages actively with its trading partners to resolve SPS issues affecting its exports. Australia engages on a technical level, with the regulatory authorities of its trading partners to resolve SPS issues before trade restrictive measures are imposed. In its *Annual Report 2006-07*, the DAFF notes that this work made measurable differences for Australian exporters of horticultural and animal products in particular.<sup>112</sup> Good examples in this respect are that with regard to Indonesia's recognition of Australia's fruit fly-free areas, and that with regard to the US recognition of the equivalence of Australia's sanitary system for meat exports, described above.<sup>113</sup> If its efforts to resolve SPS issues through bilateral technical discussions are unsuccessful, Australia raises trade concerns at WTO level, through the mechanism provided by the SPS Committee, discussed below.<sup>114</sup>

Third, Australia vigorously promotes its export interests at the international level, by monitoring and influencing the debate in international bodies on SPS issues. Australia is an active participant in the international standard-setting bodies referred to by the *SPS Agreement*, through the International Food and Agriculture Service of the DAFF. As part of its food market entry strategy, it has allocated budgetary resources to improving its capacity to pursue its objectives in international standard-setting bodies.<sup>115</sup> Australia effectively promotes its industry interests in the negotiations whereby these international bodies draft standards. For example, the DAFF *Annual Report 2004-05* states that a fruit juice standard favourable to trade in Australian fruit juices was negotiated by the DAFF at the Codex Alimentarius Commission, saving the industry an estimated A\$9 million per year.<sup>116</sup> In addition, at discussions in the SPS Committee with regard to making specific

---

<sup>112</sup> *Ibid.*, 108.

<sup>113</sup> See above, Part II, Section 2.4.2.2.

<sup>114</sup> Australia has raised 8 trade concerns regarding the SPS measures of other WTO Members to date, and has joined the concerns raised by other Members in 21 cases. These will be discussed further below, Part IV, Section 2.1.2.

<sup>115</sup> Australia has committed A\$2.5 million, as part of the budget from the implementation of the *National Food Industry Strategy* to increase Australia's capacity further its interests in the international standard-setting bodies. Australian Government Department of Agriculture Fisheries and Forestry, *National Food Industry Strategy: An Action Agenda for the Australian Food Industry* (Commonwealth of Australia, Canberra), June 2002, 31, available at: [http://www.daff.gov.au/\\_\\_data/assets/pdf\\_file/0017/183320/strategy\\_statement\\_final.pdf](http://www.daff.gov.au/__data/assets/pdf_file/0017/183320/strategy_statement_final.pdf), visited on 13 January 2008.

<sup>116</sup> Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2004-05* (Commonwealth of Australia, Canberra), October 2005, available at: [http://www.daff.gov.au/\\_\\_data/assets/](http://www.daff.gov.au/__data/assets/)

provisions of the *SPS Agreement* more effective and operational, Australia ensures that its voice is heard.<sup>117</sup> For example, it worked together with like-minded WTO Members in the informal discussions on the recognition of pest- and disease-free areas, an issue of particular relevance to Australia.<sup>118</sup> It also participated in the discussions on improving the transparency of special and differential treatment for developing countries, to ensure that this initiative does not undermine the right of each WTO Member to determine for itself the level of SPS protection it will ensure on their territories.<sup>119</sup>

Overall, Australia's SPS system can be characterised as extremely effective both in protecting Australia from SPS risks and in securing market access for its food and agricultural exports. However, it creates significant, and often insurmountable, difficulties for other Members, at all levels of development, who wish to gain market access to Australia for their food and agricultural exports.

## 2.5 Mauritius

### 2.5.1 Factual background

Mauritius is an African country, situated in the Indian Ocean. It is among the 'small-island developing states' (SIDS) of the world.<sup>120</sup> Mauritius became independent of British rule in 1968. The following indicators provide a picture of the development level of Mauritius both in economic and in human terms.

#### 2.5.1.1 Development indicators

According to the World Bank classification of countries by income, Mauritius graduated in 1991 from being a lower-middle-income economy<sup>121</sup> to being an upper-middle-income

word\_doc/0016/5704/2004-05\_annual\_report\_exc\_fin\_statements.doc, visited on 17 January 2008.

<sup>117</sup> Australia's delegation to SPS Committee meetings includes representatives of the International Division of the DAFF.

<sup>118</sup> These discussions address Article 6 of the *SPS Agreement*, discussed below, Part IV, Section 1.2. Australia's objective in this regard is the development of guidelines on the recognition of pest- or disease-free areas that complement the work done in this area by the relevant three international standard setting bodies. Australian Government Department of Agriculture Fisheries and Forestry, *Annual Report 2006-07: Growing Australia through Sustainable, Innovative and Profitable Agriculture, Fisheries and Forestry* (Commonwealth of Australia, Canberra), September 2007, 107, available at: [http://www.daff.gov.au/\\_data/assets/pdf\\_file/0005/439493/2\\_AR\\_06-07\\_ROP\\_WEB.pdf](http://www.daff.gov.au/_data/assets/pdf_file/0005/439493/2_AR_06-07_ROP_WEB.pdf), visited on 17 January 2008.

<sup>119</sup> *Ibid.*, 108.

<sup>120</sup> The UN has recognised the particular problems of 'small-island developing states' (SIDS) since 1994. They are considered to be at greater risk of marginalization from the global economy than many other developing countries due to their small size, remoteness from large markets and high vulnerability to economic and natural shocks. However, the UN has never established criteria to draw up an official list of SIDS. UNCTAD uses an unofficial list of 29 SIDS for purposes of establishing statistics for analysis. Mauritius is among these 29 SIDS. See the UNCTAD website's page on SIDS, available at: <http://www.unctad.org/Templates/Page.asp?intItemID=3620&lang=1>, visited on 9 January 2008.

<sup>121</sup> See the World Bank's table on *Analytical Classifications, (Country Analytical History)*, available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/OGHIST.xls>, visited on 8 January 2008.

economy.<sup>122</sup> Its GNI per capita in 2006 was US\$ 5,450.<sup>123</sup> Mauritius had a GDP of US\$ 15.8 billion at purchasing power parity and GDP per capita of US\$12,715 at purchasing power parity in 2005.<sup>124</sup>

Mauritius is ranked 65<sup>th</sup> in the world in the UN Human Development Index of 2007, and falls into the category of high-human-development countries.<sup>125</sup> Its population was 1.3 million in 2006.<sup>126</sup> In 2001/2002, only 1.5 percent of the Mauritian population lived below the poverty line of US\$2 per day.<sup>127</sup>

### 2.5.1.2 Health priorities

The health status of Mauritius provides an indication of its priorities in the area of public health spending and therefore also of the relative importance of guarding against SPS risks in its territory. Public health expenditure in Mauritius accounts for 2.4 percent of GDP, or US\$516 at purchasing power parity per capita.<sup>128</sup>

Life expectancy at birth in Mauritius has increased from 63 to 72 years, over the last 30-year period.<sup>129</sup> There has been a transition in the health state of Mauritius from a situation where communicable diseases were a primary concern, to a situation where non-communicable lifestyle-related diseases are the principal problem.<sup>130</sup> The prevalence of tuberculosis in Mauritius has decreased to 132 per 100,000 people.<sup>131</sup> Other communicable diseases have been virtually eradicated.<sup>132</sup> The main causes of death in Mauritius are

<sup>122</sup> See the World Bank classification of economies of July 2007 available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 8 January 2008.

<sup>132</sup> Major infectious diseases of significance in Mauritius in the past (malaria, polio, diphtheria, typhoid and cholera) which are still prevalent many African countries have almost been eradicated. Mauritius is also one of the most successful African countries in containing the spread of HIV/AIDS (0.08% of the adult

now heart disease and diabetes.<sup>133</sup> Other important health problems are related to smoking and obesity, such as cancer, hypertension and strokes.<sup>134</sup> This epidemiological transition is a result of improvements in living standards, health care and sanitation.

There are 106 physicians per 100,000 people in Mauritius.<sup>135</sup> Access to sanitation and clean water is enjoyed by 94 and 100 percent of the population in 2004, respectively.<sup>136</sup> Infant mortality in Mauritius is at a rate of 13 per 1000 births, in 2005,<sup>137</sup> down from 64 deaths per 1000 births in 1970s.<sup>138</sup> The percentage of children under five who die due to diarrhoeal diseases was 1 percent in 2000-2003.<sup>139</sup> Only 5 percent of the population is undernourished.<sup>140</sup>

The new pattern of health concerns, arising from lifestyle-related illness, creates a growing burden on the health services of Mauritius, including through complications that require heart surgery, haemodialysis and transplants.<sup>141</sup> To address these needs, Mauritius has invested in a range of new high technology diagnostic facilities such as CT scan and MRI. There have also been developments in sophisticated treatments such as a major expansion in heart surgeries, the provision of haemodialysis in four regions of Mauritius, the availability of radiotherapy for cancers and the modernisation of equipment for operation theatres and intensive care units.<sup>142</sup>

<sup>142</sup> Ministry of Health and Quality of Life, Republic of Mauritius, *White Paper on Health Sector Development and Reform*, December 2002, 6, available at: <http://www.gov.mu/portal/goc/moh/file/whitepap.doc>, visited

As a result of the new health issues confronting Mauritius, its health priorities, as noted in the *White Paper on Health Sector Development and Reform* of the Ministry of Health and Quality of Life of Mauritius, now focus on health promotion and preventive medicine.<sup>143</sup> The new Action Plan for Health aims to increase capacity to reduce deaths from kidney failure, by expanding provision of kidney dialysis and transplant services, to improve preventative care for those with hypertension and diabetes to reduce the risks of complications. Health promotion will aim at improvements in lifestyle, for example through the reduction of smoking and alcohol abuse, increasing exercise and improvements to diet.<sup>144</sup>

This current focus on preventative health care and on the long-term health benefits of diet increases the importance of preventing food-safety risks, such as from the presence of contaminants and carcinogens, as a priority of public spending. Therefore, the Action Plan for Health presented in the *White Paper* notes the importance of good hygienic sanitary conditions in commercial and industrial establishments. It includes as a priority for future action the strict enforcement of food-safety legislation in Mauritius.<sup>145</sup>

However, despite Mauritius's good record of achievements in the area of health, it lacks the financial and human capacity to keep pace with the needs both in primary health care and in high technology facilities. As a result, many hospitals are old and poorly maintained and equipment is in need of replacement.<sup>146</sup> Therefore, the Action Plan for Health set out by the *White Paper* notes the need for resources, beyond those drawn from general taxation, to implement its proposals.<sup>147</sup>

### 2.5.1.3 Trade priorities

Mauritius became a contracting party to the GATT 1947 in 1970, under the special provision for newly independent states in GATT Article XXVI:5(c),<sup>148</sup> after having applied the GATT on a *de facto* basis since its independence 1968.<sup>149</sup> It has been an original Member of the WTO since 1 January 1995. Mauritius participates actively in the multilateral trading system. It is regarded as a 'small vulnerable economy' and 'small-island developing state' for purposes of the WTO work programmes on these issues.

on 10 January 2008.

<sup>143</sup> *Ibid.*

<sup>144</sup> *Ibid.*, 7.

<sup>145</sup> *Ibid.*, 56.

<sup>146</sup> *Ibid.*

<sup>147</sup> *Ibid.*, 77. This *White Paper* estimates that the Action Plan for Health, if fully implemented by 2008/2009, will require a 75% increase in health expenditure (Rs4-5 billion in capital expenditure). In addition, Rs200 million per year is needed for maintenance and upkeep of the present buildings and equipment. The largest part of the additional resources is needed for developing services to meet the growing epidemic of non-communicable diseases. The *White Paper* notes that the additional funding required is beyond the limits likely to be provided from existing budgetary sources.

<sup>148</sup> This special procedure was discussed above, Part I, Section 1.3.

<sup>149</sup> Mauritius was under colonial rule for centuries, first by the Dutch (1598), then the French (1710) and finally the British (1810).

Exports of goods and services amounted to 24.5 percent of GDP in Mauritius in 2006.<sup>150</sup> The ratio trade to GDP in Mauritius in 2004 – 2006 was 125.9.<sup>151</sup> In the context of the WTO negotiations on agricultural liberalisation, Mauritius has pointed to the multifunctional role of agriculture in SIDS, particularly with regard to food security.<sup>152</sup> In a joint communication with other SIDS, Mauritius has pointed to the inherent structural difficulties that prevent SIDS for achieving the level of competitiveness needed for effective participation in agricultural trade, including diseconomies of scale and high costs of transport and input factors due to their remoteness, smallness, vulnerability to natural disasters and scarcity of resources.<sup>153</sup> The consequent dependence of SIDS on a limited range of agricultural products for their export earnings and the fact that these exports are made possible through non-reciprocal preferential trading arrangements was pointed out to highlight the threat to SIDS from the rapid erosion of preferential tariff margins due to multilateral tariff reduction.<sup>154</sup> In addition, this communication pointed to the fact that the agricultural exports of these countries face stringent SPS requirements that are ‘invariably beyond the administrative and technical capacity of SIDS’.<sup>155</sup>

In the context of the Doha Development Round of trade negotiations at the WTO, Mauritius is active in promoting the interests of developing countries, particularly ‘small vulnerable economies’ (SVES). It has stressed the importance of addressing supply-side constraints alongside improving market access. In particular, it regards as critical issues such as the need to ensure ‘balanced rules that provide developing countries the policy space to pursue development policies, enhanced market access for products and services of interest to them, capacity-building programmes and technical assistance (including supply-side capacity, institution building, and human resource development), and adjustment support measures.’<sup>156</sup> Mauritius regards the role of the international community as

<sup>150</sup> See the statistics in the World Bank’s country profile for Mauritius, available at: <http://devdata.worldbank.org/external/CPProfile.asp?PTYPE=CP&CCODE=MUS>, visited on 14 January 2008. According to the World Bank, in this calculation ‘Exports of goods and services represent the value of all goods and other market services provided to the rest of the world. They include the value of merchandise, freight, insurance, transport, travel, royalties, license fees, and other services, such as communication, construction, financial, information, business, personal, and government services. They exclude labour and property income (formerly called factor services) as well as transfer payments.’

<sup>151</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 111, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008. As noted above, the trade-to-GDP ratio reflects the significance of trade for a country’s economy. It is calculated by dividing an economy’s total trade in goods and services (exports + imports) by its GDP, on the basis of data for the three latest years available. GDP is measured in nominal terms and with market exchange rates.

<sup>152</sup> Mauritius, *Multifunctional Role of Agriculture in Small Island Developing States*, AIE/51, dated 10 March 1999, cited in Committee on Agriculture, *Non-Trade Concerns – Issues Raised by Members in AIE Papers and Pre-Seattle Submissions*, G/AG/NG/S/17, circulated on 16 October 2000.

<sup>153</sup> Committee on Agriculture, *WTO Negotiations on Agriculture: Proposals by Small Island Developing States (SIDS): Communication from Barbados, Cuba, Dominica, Jamaica, Mauritius, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago*, G/AG/NG/W/97 and Corr.1, circulated on 29 December 2000, paras 3-4.

<sup>154</sup> *Ibid.*, paras 5-6.

<sup>155</sup> *Ibid.*, para. 6. This communication proposes, *inter alia*, that non-reciprocal preferential tariffs for SIDS be improved and bound under the *Agreement on Agriculture* and that a framework be created for the provision of technical assistance for meeting the costs of compliance with SPS measures in the international market.

<sup>156</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part II para. 26. key in supporting developing countries to address the problem of supply capacity, competitiveness, and upgrading product standards to meet SPS and technical requirements in their export markets.<sup>157</sup>

Like many other more-developed developing countries, Mauritius has diversified its economy to some extent, moving away from the agriculture-based economy it had at independence, to an economy based on growing services and industrial sectors.<sup>158</sup> However, due to its narrow resource base and small domestic market, the diversification of the economy of Mauritius is still rather limited and its production and exports are largely concentrated on a relatively narrow range of products and services.<sup>159</sup>

In particular, Mauritius relies on textiles, sugar and tourism<sup>160</sup> and financial services<sup>161</sup> for its foreign revenue earnings. Textiles dominate the manufacturing industry of Mauritius and accounted for 49 percent of the merchandise exports of Mauritius in 2006.<sup>162</sup> However, they are currently subject to increased competition since the termination of the special regime under the WTO *Agreement on Textiles and Clothing* on 1 January 2005, and their resultant full integration into the multilateral trading system.<sup>163</sup> This competition will be even greater when the possibility for special safeguard measures against Chinese textiles is terminated at the end of 2008.<sup>164</sup>

Sugar made up 16 percent of the foreign revenue earnings from the merchandise trade of Mauritius in 2006.<sup>165</sup> The sugar exports of Mauritius, until recently, benefited from the

<sup>159</sup> See Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Government*, WT/TPR/G/90, circulated on 5 October 2001.

<sup>160</sup> Tourism accounted for 7,9% of GDP and for 25% of Mauritius's total export earnings in 2006, thus overtaking sugar as the largest source of foreign revenue in Mauritius. Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part IV para. 143.

<sup>161</sup> Financial services contributed 9,9% to GDP in 2005. *Ibid.*, Part IV para. 91.

<sup>162</sup> In 2006, textile exports accounted for 5.8% of GDP in Mauritius. *Ibid.*, Part IV para. 80. The value of textile exports from Mauritius in 2005 was US\$738.6 million. This data is provided by the International Trade Centre of UNCTAD/WTO, *Trade Competitiveness Map*, Exports of Mauritius, 2005, available at: [http://www.intracen.org/appli1/TradeCom/TP\\_EP\\_CI.aspx?RP=480&YR=2005](http://www.intracen.org/appli1/TradeCom/TP_EP_CI.aspx?RP=480&YR=2005), visited on 11 January 2008.

<sup>163</sup> This agreement is one of the outcomes of the Uruguay Round negotiations and is contained in Annex 1A to the *Marrakesh Agreement Establishing the World Trade Organization*. This agreement provided a 10-year phase out period for textile quotas, and terminated on 1 January 2005. 'Agreement on Textiles and Clothing', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 85-137.

<sup>164</sup> A special safeguards regime, applicable to Chinese textiles and clothing, was established in para. 242 of the *Report of the Working Party on the Accession of China*. This regime is applicable until 31 December 2008. It is part of the terms and conditions for China's accession and therefore considered part of China's *Protocol of Accession* to the WTO.

<sup>165</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198,

guaranteed high prices provided under the Sugar Protocol to the *Cotonou Agreement* with the EC.<sup>166</sup> Mauritius is a member of the group of ACP countries with which the EC had this non-reciprocal preferential trade agreement. The Sugar Protocol to this agreement guarantees prices significantly higher than the world market price for fixed quantities of sugar from specific ACP countries, including Mauritius. However, the EC is in the process of reforming its sugar regime, and has already cut prices by 36 percent, with significant consequences for Mauritius export revenue.<sup>167</sup> In addition, a Decision of the EC Council of Ministers has terminated the Sugar Protocol with effect as of 1 October 2009.<sup>168</sup> As the WTO waiver for the preferential arrangements under the *Cotonou Agreement* expired on 31 December 2007, the EC has negotiated new (comprehensive or interim) Economic Partnership Agreements (EPAs) with six different groups of ACP countries.<sup>169</sup> One of these groups is Eastern and Southern Africa, of which Mauritius is part. The interim EPA with Eastern and Southern African countries, initialled by Mauritius in December 2007, does not provide for guaranteed sugar prices, but only provide tariff-free access to sugar within specified quota limits during a transitional period.<sup>170</sup>

---

circulated on 19 March 2008, Part IV para. 19.

<sup>166</sup> *Partnership Agreement between the Members of the African, Caribbean and Pacific Group of States of the One Part and the European Community and Its Member States, of the Other Part*, signed in Cotonou, Benin, on 23 June 2000 (the *Cotonou Agreement*). The *Cotonou Agreement*, which replaced the successive *Lomé Conventions* between the EU and the ACP states, provides zero customs duties to almost all industrial products and lower than normal customs duties to agricultural products from ACP countries (Art. 1 of Annex V). Special regimes for bananas and sugar are established in the Banana Protocol and Sugar Protocol to the *Cotonou Agreement*.

<sup>167</sup> This price reduction, it is reported, will lead to a shortfall in export earnings for Mauritius of €782 million in the 2006-2015 period. Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Multi-Annual Adaptation Strategy Sugar Sector Action Plan 2006-2015: Safeguarding the Future through Consensus* (Republic of Mauritius, Port Louis), 2006, 1, available at: <http://www.gov.mu/portal/sites/moasite/download/Multi%20Annual%20Adaption%20Strategy.pdf>, visited on 10 January 2008.

<sup>168</sup> Council Decision 2007/627/EC of 28 September 2007 *denouncing on behalf of the Community Protocol 3 on ACP sugar appearing in the ACP-EEC Convention of Lomé and the corresponding declarations annexed to that Convention, contained in Protocol 3 attached to Annex V to the ACP-EC Partnership Agreement, with respect to Barbados, Belize, the Republic of Congo, the Republic of Cote d'Ivoire, the Republic of the Fiji Islands, the Republic of Guyana, Jamaica, the Republic of Kenya, the Republic of Madagascar, the Republic of Malawi, the Republic of Mauritius, the Republic of Mozambique, the Federation of Saint Kitts and Nevis, the Republic of Suriname, the Kingdom of Swaziland, the United Republic of Tanzania, the Republic of Trinidad and Tobago, the Republic of Uganda, the Republic of Zambia and the Republic of Zimbabwe* OJ L 255, 29.9.2007, p. 38.

<sup>169</sup> While the CARIFORUM group of ACP countries initialled a comprehensive EPA with the EC, members of the other five groups of ACP countries (Central Africa, West Africa, the Pacific Group, the Southern African Development Community (SADC) and Eastern and Southern African countries) initialled only interim EPAs, which cover only trade in goods but are the first step towards comprehensive EPAs (note that not all members of these groups have initialled the interim EPAs to date). Mauritius initialled the interim EPA between Eastern and Southern African countries and the EC on 4 December 2007.

<sup>170</sup> The new arrangements under the EPA agreements are given effect to in *Council Regulation applying the arrangements for products originating in certain states which are part of the African, Caribbean and Pacific (ACP) Group of States provided for in agreements establishing, or leading to the establishment of, Economic Partnership Agreements*, 14970/1/07 REV 1, Brussels, 18 December 2007, available at: <http://www.mcci.org/photos/news/EPAREgulation.pdf>, visited on 10 January 2008. Duty-free, quota-free market access for most products, excluding arms, but are subject to transitional periods and arrangements for certain sensitive products. Sugar is one of the sensitive products, and is subject to a tariff rate, under Art. 7(1) of the Regulation, during a transitional period from 1 October 2008 to 30 September 2009. From 1 October 2009 to 30 September 2012 a transitional safeguard mechanism applies under Art. 9 of the Regulation if sugar imports from ACP countries exceed specified limits.

Mauritius's participation in WTO dispute settlement, although very limited, reflects its particular focus on sugar exports as well as on preferential arrangements with the EC.<sup>171</sup> Mauritius has never initiated a WTO dispute, nor has it had a dispute brought against it. The five cases in which it has participated as a third party involve the EC's GSP system, the EC's sugar regime, and Mexico's anti-dumping investigation against high-fructose corn syrup from the US, which Mauritius considered to have an impact on market access to the US for its own sugar exports.<sup>172</sup>

The loss of export earnings due to the changes mentioned above in the textiles and sugar sectors, both of which are important sources of employment, pose great challenges to the economy of Mauritius, and to its development situation. Mauritius has recognized the need to diversify its exports.

As one of its policy objectives to diminish its dependence on preferential arrangements for the export of primary products, Mauritius has identified the aim of becoming an agro-processing hub in the region by importing agricultural products from other countries in the region and taking advantage of its technology, infrastructure and communications facilities to process and re-export these products.<sup>173</sup> This will make domestic agro-processing industries more competitive and better able to exploit export opportunities.

#### 2.5.1.4 Significance of the agricultural sector

The importance of the *SPS Agreement* for Mauritius depends on the role played by its food and agricultural industry in economic growth and poverty alleviation.

The share of the agricultural industry in the GDP of Mauritius has declined from 6.9 percent in 2001 to 5.6 percent in 2006.<sup>174</sup> Production capacity in Mauritius is low due to its geographical isolation and size, as is the case with many small-island developing states. Other challenges to the agricultural industry are climatic uncertainties, rising costs of

<sup>171</sup> These disputes are listed on the page for Mauritius on the WTO website, available at: [http://www.wto.org/english/thewto\\_e/countries\\_e/mauritius\\_e.htm](http://www.wto.org/english/thewto_e/countries_e/mauritius_e.htm), visited on 18 January 2008.

<sup>172</sup> Mauritius and Jamaica made a joint oral statement before the Panel emphasising the potential impact of the *Mexico – Corn Syrup* dispute on market access for sugar from Jamaica and Mauritius to the US. They argued that the dispute at issue was only one facet of a much broader disagreement over sweetener trade between these Mexico and the US. In particular they expressed concern that as market access for Mexican sugar to the US increased, market access for sugar from traditional suppliers was reduced correspondingly. Panel Report, *Mexico – Corn Syrup*, paras 5.654-5.660.

<sup>173</sup> Committee on Sanitary and Phytosanitary Measures, *The Mauritian Experience with the SPS Agreement from the Indian Ocean Perspective*, G/SPS/GEN/526, circulated on 25 October 2004, para. 12. See also Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 122, available at: <http://www.arenu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008. This policy document notes that neighbouring countries such as Madagascar and Mozambique have abundant unexploited land resources, very cheap labour resources and climactic conditions conducive to year-round crop cultivation. In addition, some crops (e.g. potatoes) that cannot be grown in Mauritius in specific periods can be grown in these same periods in these countries, thus ensuring a regular supply.

<sup>174</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 1, available at: <http://www.arenu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008. See also the World Bank, Countries at a Glance table for Mauritius, available at: [http://devdata.worldbank.org/AAG/mus\\_aag.pdf](http://devdata.worldbank.org/AAG/mus_aag.pdf), visited on 11 January 2008.

imported inputs, tougher competition from other countries, increased exposure to pests and increasingly rigorous sanitary and phytosanitary requirements on export markets.<sup>175</sup> In addition, the agricultural industry has remained mostly traditional and has not kept pace with the modernisation achieved in the other sectors of the economy. Therefore, the competitiveness of Mauritian agricultural products on the world market is weak, and Mauritius is highly dependent on imports for its food security.<sup>176</sup>

However, agriculture and food exports still account for a considerable share of Mauritius's merchandise export earnings. In 2006, this share amounted to 30.2 percent.<sup>177</sup> In addition, as the agricultural industry, excluding fisheries, still provided direct employment to 10 percent of the labour force of Mauritius in 2005 its socio-economic importance is still significant.<sup>178</sup> The government of Mauritius considers that agriculture plays a crucial multifunctional role. Not only does it provide income to industries and their employees, but it also increases food procurement capacity, reduces dependency on imported oil, promotes the development and stability of the rural areas, and ensures the protection of the environment against erosion.<sup>179</sup>

Mauritius's agricultural exports are dominated by sugar.<sup>180</sup> As mentioned above, sugar accounts for 16 percent of Mauritius's merchandise export earnings and 10 percent of its to-

<sup>175</sup> These challenges were identified in Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius, *A Sustained Programme for Agricultural Diversification: A Non-Sugar Sector Strategic Plan 2003-2007* (Republic of Mauritius, Port Louis), 2003, ii, available at: <http://www.gov.mu/portal/sites/moasite/download/nssplan.pdf>, visited on 11 January 2008.

<sup>176</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 2, available at: <http://www.areu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008. This consultative document notes that domestic production accounts for only 23% of food consumption in Mauritius. In 2005, imports of agricultural and food products amounted to Rs15,492 million (17% of total imports) which represents an increase of 50% since 2000, and that the food import bill keeps increasing every year.

<sup>179</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Multi-Annual Adaptation Strategy Sugar Sector Action Plan 2006-2015: Safeguarding the Future through Consensus* (Republic of Mauritius, Port Louis), 2006, 2, available at: <http://www.gov.mu/portal/sites/moasite/download/Multi%20Annual%20Adaption%20Strategy.pdf>, visited on 10 January 2008.

<sup>180</sup> In 2001, sugar exports accounted for US\$ 279 million in export earnings for Mauritius and amounted to 3.5% of world trade in sugar. Mauritian sugar was exported mainly to the UK (81%) and Portugal (9%). This information is reported in the country market-analysis profile of Mauritius provided by the International Trade Centre, see [www.intracen.org/menus/countries.htm](http://www.intracen.org/menus/countries.htm), visited on 25 June 2007. According to World Bank estimates, in 2002, Mauritius's export earnings from sugar had increased to US\$ 283 million. (see [http://www.worldbank.org/data/countrydata/aag/mus\\_aag.pdf](http://www.worldbank.org/data/countrydata/aag/mus_aag.pdf), visited on 25 June 2007). Sugar is likely to remain the main component of the agricultural sector in Mauritius in the near future, according to the Mauritian government. Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Government*, WT/TPR/G/90, circulated on 5 October 2001. See also Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Multi-Annual Adaptation Strategy Sugar Sector Action Plan 2006-2015: Safeguarding the Future through Consensus* (Republic of Mauritius, Port Louis), 2006, available at: <http://www.gov.mu/portal/sites/>

tal foreign exchange earnings, amounting to US\$ 350 million in 2006.<sup>181</sup> The main market for Mauritian sugar is the EC,<sup>182</sup> and in particular the UK. These exports previously took place under the Sugar Protocol to the *Cotonou Agreement*, as mentioned above. However, Mauritius has had to deal with the impact of the reform of the EC's sugar regime as well as the erosion of its preferential access to the EU market.<sup>183</sup> This sector will be the worst affected by preference erosion as production costs of sugar in Mauritius are twice as high as in the rest of the world.<sup>184</sup> Mauritius has developed a Sugar Sector Action Plan to make the sugar industry competitive and sustainable in the long term, so that it can continue to fulfil its multifunctional role.<sup>185</sup> However, the need to develop the non-sugarcane sector has been recognized by Mauritius since the 1960s.<sup>186</sup>

The non-sugarcane sector, which comprises horticulture, livestock, and food processing, is a sector which the Mauritian government wants to develop.<sup>187</sup> However, it faces prob-

<sup>181</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part IV para. 19. See also International Trade Centre of UNCTAD/WTO, *Trade Competitiveness Map*, Exports of Mauritius, 2005, available at: [http://www.intracen.org/appli1/TradeCom/TP\\_EP\\_CI.aspx?RP=480&YR=2005](http://www.intracen.org/appli1/TradeCom/TP_EP_CI.aspx?RP=480&YR=2005), visited on 11 January 2008.

<sup>182</sup> Mauritius enjoyed a duty-free quota of 507,000 tons for sugar exports to the EC under the Sugar Protocol to the Cotonou Agreement, mentioned above. Another 16,000 tonnes had preferential access under the Special Preferential Sugar Agreement. The latter agreement was replaced by the Complementary Quantity (CQ) system on 1 July 2006. In 2006/07, Mauritius exported 487,000 tonnes under the Sugar Protocol, which applied a guaranteed price of €523.70 per tonne till 30 June 2006. This price is scheduled to decrease to €496.80 (1 July 2006 - 30 September 2008); €434 (1 October 2008 - 30 September 2009); and €335 (as of 1 October 2009). In addition, a small proportion of sugar exports (12,000 tons) enter the US market under the US Tariff Rate Quota Arrangements. See *Ibid.*, Part IV paras 20-21. See also Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Government*, WT/TPR/G/90, circulated on 5 October 2001, paras 12-14; Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, para. 52.

<sup>183</sup> This erosion of preferences is due to the 'Everything But Arms' initiative of the EC in the context of its Generalised System of Preferences for developing countries. Under this initiative, the EC grants duty-free market access to essentially all products, except arms, from LDCs. This duty-free access came into effect in March 2001, except for three products, including sugar for which duty-free access was delayed until 2009. Low production costs in LDCs mean that importers are very likely to source their sugar from these countries which can provide it at lower prices than Mauritius. Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Government*, WT/TPR/G/90, circulated on 5 October 2001, paras 121-125.

<sup>184</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, para. 23.

<sup>185</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Multi-Annual Adaptation Strategy Sugar Sector Action Plan 2006-2015: Safeguarding the Future through Consensus* (Republic of Mauritius, Port Louis), 2006, available at: <http://www.gov.mu/portal/sites/moasite/download/Multi%20Annual%20Adaption%20Strategy.pdf>, visited on 10 January 2008.

<sup>186</sup> Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius, *A Sustained Programme for Agricultural Diversification: A Non-Sugar Sector Strategic Plan 2003-2007* (Republic of Mauritius, Port Louis), 2003, 3, available at: <http://www.gov.mu/portal/sites/moasite/download/nssplan.pdf>, visited on 11 January 2008. The COMESA Secretariat reported in 2003 that non-sugar exports from Mauritius remained marginal, representing less than 3% of total agricultural exports. Nevertheless, it expressed the belief that export potential exists for processed vegetables and food, game meat, spices and fresh organic fruits and vegetables. COMESA Secretariat, *Market Access Constraints* (Common Market for Southern Africa, Lusaka), 2003, para. 84, available at: [www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en](http://www.comesa.int/trade/multilateral/epa/Market%20Access%20Constraints/en), visited on 10 January 2008.

<sup>187</sup> In 2001, food crops accounted for around 17% and livestock for 12% of the share of agriculture in GDP while flowers, fruits and forestry accounted for the remaining 4%. The share of tea and tobacco to GDP are negligible. Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius,

lems at production and institutional levels. Crop production in Mauritius largely in the hands of small-holder farmers.<sup>188</sup> A wide range of crops are cultivated including potatoes, onions, tomatoes, chillies, crucifers, garlic, and ginger. The main constraints for increasing crop production are the lack of suitable land and labour, the insufficiency of irrigation facilities, the increasing cost of energy and the need for pest and disease control.<sup>189</sup> Institutional problems identified in the non-sugarcane sector are the lack of coordination in information dissemination, the weakness in providing support services to farmers and food processors and the inadequate response to the needs and requirements in the agricultural supply chain.<sup>190</sup>

Mauritius has a small but successful export trade in flowers, particularly anthuriums, destined for the European, Japanese and Australian markets.<sup>191</sup> It also exports some wheat or meslin flour, mainly to Madagascar.<sup>192</sup> However, overall the contribution of food crops, aside from sugar, to export earnings is negligible.<sup>193</sup>

Animal husbandry does not make up a significant part of Mauritian agriculture. Although Mauritius is self-sufficient with regard to eggs and poultry meat, it imports large quantities of other meat, fish, and dairy products. The livestock sector faces many constraints, including the small number of commercial farmers, the deficient husbandry skills of livestock farmers and the insufficiency of lands allocated to livestock farming.<sup>194</sup>

<sup>189</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 2, available at: <http://www.aren.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

<sup>190</sup> *Ibid.*, 3.

<sup>191</sup> In 2001, exports of flowers and foliage amounted to 2% of total agricultural exports. Anthurium exports have been the second largest export earning product in the agricultural sector, after sugar, since the late 1980s. Currently Mauritius is the second anthurium exporter in the world, after the Netherlands. Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius, *A Sustained Programme for Agricultural Diversification: A Non-Sugar Sector Strategic Plan 2003-2007* (Republic of Mauritius, Port Louis), 2003, 2-3, available at: <http://www.gov.mu/portal/sites/moasite/download/nssplan.pdf>, visited on 11 January 2008. In 2006, Mauritius exported MUR 96 million worth of anthurium. Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat WT/TPR/S/198*, circulated on 19 March 2008, Part IV para. 6.

<sup>192</sup> Wheat or meslin flour earned Mauritius US\$7 million in foreign revenue in 2001, and was exported mainly to Madagascar (66%). However, Mauritius imported US\$18 million worth of wheat or meslin flour in the same year. This information is reported in the country market analysis profile of Mauritius provided by the International Trade Centre, see [www.intracen.org/menus/countries.htm](http://www.intracen.org/menus/countries.htm), visited on 25 June 2007.

<sup>193</sup> Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius, *A Sustained Programme for Agricultural Diversification: A Non-Sugar Sector Strategic Plan 2003-2007* (Republic of Mauritius, Port Louis), 2003, 2, available at: <http://www.gov.mu/portal/sites/moasite/download/nssplan.pdf>, visited on 11 January 2008.

<sup>194</sup> *Ibid.*, 67.

Consequently Mauritius is dependent on imports of milk and meat (other than poultry).<sup>195</sup> As the prices of milk and meat products are increasing, the government of Mauritius is concerned that there will be insufficient supply of these food products on the domestic market and believes that there is an urgent need to address the decline in domestic production of milk and meat.<sup>196</sup>

Food processing is fast becoming one of Mauritius's most promising industries. A few large processing establishments have emerged especially in the sectors of edible oil refining, animal feed compounding, wheat flour milling, and tuna canning.<sup>197</sup> Also, a few firms now import fruits and vegetables for processing and some smaller-scale businesses have started food crop processing and preservation using exotic recipes. Although these industries initially targeted the domestic market, they have started to expand to export markets, regionally and internationally, through their variety of exotic niche products.<sup>198</sup> As noted above, Mauritius's strategy for agricultural diversification aims to develop the country's potential to become an agro-processing hub in the region, by importing agricultural products from neighbouring countries and processing them for export.<sup>199</sup> It has particular attributes giving it an advantage in this area, such as the fact that it has existing know-how and technology in agro-processing, that some of its agro-processing firms are already producing under international franchises, that it has modern infrastructure at ports and airports (warehouses, cold rooms and processing centres).<sup>200</sup> However, as mentioned above, processed food products are subject to stricter SPS requirements on export markets than bulk primary products such as sugar. Therefore, the success of the export diversification of Mauritius to the processed food sector depends on its ability to meet the SPS requirements of its trading partners. This is recognised by the strategy paper, which notes that a serious constraint to exploiting the possibilities to become a regional agro-processing hub is the poor sanitary and phytosanitary conditions in the region.<sup>201</sup> The strategy paper emphasises the importance of establishing and vigorously enforcing international norms in Mauritius and in countries in the region where Mauritian agro-processors will source their inputs, are essential prerequisites for achieving success in this initiative.<sup>202</sup>

Similarly, Mauritius is trying to develop its fishery sector, which employs around 12,000 persons.<sup>203</sup> As it does not have a large continental shelf, its fisheries are concentrated in the lagoon, off-lagoon and banks. Although local fish production does not contribute significantly to GDP,<sup>204</sup> Mauritius is also actively engaged as a landing and processing site

---

<sup>195</sup> The Ministry of Agro-Industry and Fisheries reports that Mauritius's dependency on imported meat and milk has been increasing over the last 5 years. In 2005, the Mauritian meat production (excluding poultry) satisfied only 6% of its consumption. Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 67, available at: <http://www.areu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

<sup>204</sup> The fishery sector, excluding processing, contributed 1% to GDP in 2007. Trade Policy Review Body, *Trade*

for fishery products and 40 percent of its fishery exports in 2006 were in fact re-exports of landed fish.<sup>205</sup> The economic contribution of these ‘seafood hub’ activities to the economy of Mauritius was reported by the Minister of Agro-Industry and Fisheries Arvin Boolell to be US\$250 million in 2006.<sup>206</sup> Mauritius intends to expand its capacity to act as a seafood hub. However, it will have to upgrade its inspection and certification capacity to meet the sanitary requirements of the EC, which is the main importer of Mauritian fish and fishery products.<sup>207</sup>

### 2.5.1.5 Summary of factual background

This factual background sketch aims to provide an indication of the trade and health priorities in Mauritius as the context within which the relevance of the *SPS Agreement* for this Member can be understood.

The significant developments have taken place in the health status of Mauritius, in particular its transition from a situation where life expectancy was low and infectious diseases were a primary concern, to the current situation where most infectious diseases have been eradicated and the main challenges in the area of health are lifestyle and diet related. With this transition comes a new emphasis on the prevention of health risks and the importance of food-safety controls. However, financial and human resource constraints still play a role and make it difficult for Mauritius to maintain its high level of health achievements without additional resources being made available.

The trade concerns of Mauritius have also undergone changes. The share of agricultural exports in GDP is declining, being overtaken by the textile and tourism sectors. In addition, export earnings from sugar are facing serious challenges due to the reform of the EC sugar regime and the erosion of tariff preferences. However, the agricultural sector still plays an important socio-economic role in ensuring food security, generating employment and providing rural livelihoods. Therefore steps are urgently needed to revitalise the sector. The new agricultural strategy of Mauritius focuses on diversification to new horticultural products as well as to exploiting its comparative advantage in the region as a hub for processing and re-exporting imported agricultural and fisheries products. To meet its objectives in this regard, however, Mauritius must have a well-functioning SPS system in place.

The SPS system of Mauritius is now examined. On the one hand, this examination will help to establish its ability to enact and enforce regulations to protect against SPS risks

---

*Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part IV para. 58.

<sup>205</sup> About 90% of imports of fish and fish products consist of frozen tuna for processing by the canning industry. Most fishery exports of Mauritius are canned tuna and loins. Fishery exports accounted for MUR 7 billion in export earnings in 2006. *Ibid.*

<sup>206</sup> The Minister reported that while domestic fish production generated 700 million rupees in 2006, fishing vessels calling in the port produced 3.5 billion rupees. The fish processing sector generated a further 6 billion rupees. In total this amounts to US\$250 million, which is a significant amount compared to other sectors of the economy. Speech by Dr. the Hon. Arvin Boolell, Minister of Agro Industry and Fisheries, to the National Assembly on 13 November 2007, presenting the *Fisheries & Marine Resources Bill (Second Reading)*, available at: [http://www.gov.mu/portal/site/moa?content\\_id=fc3eda1ef2f36110VgnVCM1000000a04a8c0RCRD](http://www.gov.mu/portal/site/moa?content_id=fc3eda1ef2f36110VgnVCM1000000a04a8c0RCRD), visited on 10 January 2008.

<sup>207</sup> *Ibid.*

to human, animal and plant life or health in its territory, and thereby to achieve its public health objectives as well as its priorities with regard to the protection of its agricultural industry. On the other hand, the discussion will address the ability of Mauritius to meet the SPS requirements of its trading partners, in order for it to take advantage of new export possibilities, for example in the horticultural and food-processing sectors. This section will therefore proceed to give an overview of the SPS system currently in place in Mauritius.

## 2.5.2 Mauritius's SPS system

### 2.5.2.1 Food-safety system

Food-safety is gaining importance in Mauritius, due to improvements in the health awareness of its population and the rapid rise in non-transmissible diseases that are linked to poor eating habits.<sup>208</sup> Therefore there is a new focus on the need to incorporate food-safety measures into the strategy for development of the agro-food industry.<sup>209</sup> In addition, order to make certain that this emerging industry gains access for its products on foreign markets, the importance of ensuring conformity with international food safety standards has been recognised.<sup>210</sup>

Food safety is primarily the responsibility of the Preventive Branch of the Ministry of Health and Quality of Life of Mauritius, both with regard to imported and domestically produced food.<sup>211</sup> However, not only the Ministry of Health, but also other ministries are involved in the enforcement of different aspects of food control, leading to overlaps, duplication and gaps in enforcement, as reported by the WHO Regional Office for Africa.<sup>212</sup>

Food safety activities are currently carried out in terms of the *Food Act* of 1998,<sup>213</sup> the *Food Regulations* of 1999 and the *Ministry of Health and Quality of Life Guidelines* of

<sup>208</sup> In its most recent strategy paper, the Ministry of Agro-Industry and Fisheries has noted the very high rate of lifestyle-related diseases, such as diabetes, hypertension and cardiovascular diseases in Mauritius, which are all, to some extent, linked to eating habits. The need to address the presence of toxins and chemical residues and the fat content in food has been stressed. Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 115, available at: <http://www.arem.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

<sup>209</sup> *Ibid.*

<sup>210</sup> *Ibid.*

<sup>211</sup> In its report regarding the second trade policy review of Mauritius, the WTO Secretariat noted that food-safety legislation in Mauritius applies equally to imports and locally-produced food. See Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 84.

<sup>212</sup> WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa – Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 3, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf>, visited on 24 June 2008.

<sup>213</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 84. See also Southern African Development Community, *SADC SPS and Food Safety Issues: An Agenda for Action* (SADC Consultative Forum on SPS/Food Safety, Windhoek, Namibia), 20-22 November 2000, 15, available at: [www1.worldbank.org/wbi/trade/Stds\\_Africa/SADC\\_SPS.pdf](http://www1.worldbank.org/wbi/trade/Stds_Africa/SADC_SPS.pdf), visited on 1 February 2001.

2006. The *Food Act* of 1998 was passed to update the *Food and Drugs Act* of 1940 and related legislation, in response to the rapid growth of tourism. Under this new Act, 428 regulations, the *Food Regulations* of 1999, were promulgated, based on the standards of the Codex Alimentarius Commission.<sup>214</sup> Both the *Food Act* of 1998 and the *Food Regulations* of 1999 came into effect on 1 January 2000. The Health Inspectorate Division of the Ministry of Health has been reinforced and has established more than 494 violations under this legislation over the past two years.<sup>215</sup>

However, as reported by the WHO Regional Office for Africa, the food industry has strongly criticised the new *Food Act*, arguing that it is too modern for the Mauritian situation, did not involve industry in its drafting and did not allow enough time for compliance. Also, the food industry argues that it introduces requirements that deviate from international standards, making importation of some food products difficult. As a result, a joint committee was established to review and amend the *Food Act*.<sup>216</sup> These problems illustrate the difficulties that arise when new food safety requirements, imposed to meet trade needs (either with regard to tourism services or with regard to exports of food products) no longer accord with the capacity of producers on the domestic market.

Mauritius is a net food-importing country. It therefore has a particular interest in the safety of imports of food products. Prior approval by the Ministry of Health is required for the importation of new food and beverage products, and certain chemicals.<sup>217</sup> A permit is issued if it is established that new food products meet Mauritian sanitary requirements.

Food-safety standards are developed by the Mauritius Standards Bureau (MSB), which was established in 1975 under the authority of the Standards Council. Its task is to provide services to the manufacturing and services sectors in the areas of metrology, standards, testing and quality assurance.<sup>218</sup> Voluntary technical standards are developed by nine Standards Committees, one of which deals with food and agriculture standards (both with regard to food safety and food quality).<sup>219</sup> When the relevant committee reaches agreement on a draft standard, it is published for public comment.<sup>220</sup> After comments are

<sup>214</sup> The Codex Alimentarius Commission is an international standard setting body in the area of food safety and quality. It is discussed below, Part II, Section 3.2.

<sup>215</sup> Ministry of Health and Quality of Life, Republic of Mauritius, *White Paper on Health Sector Development and Reform*, December 2002, 56, available at: <http://www.gov.mu/portal/goc/moh/file/whitepap.doc>, visited on 10 January 2008.

<sup>216</sup> WHO Regional Office for Africa, 'Developing and Maintaining Food Safety Control Systems for Africa – Current Status and Prospects for Change', presented at the *FAO/WHO Second Global Forum of Food Safety Regulators*, Conference Room Document 32 (Food and Agriculture Organization and World Health Organization, Bangkok, Thailand) 12-14 October 2004, 3, available at: <ftp://ftp.fao.org/docrep/fao/meeting/008/ae144e/ae144e00.pdf>, visited on 24 June 2008.

<sup>217</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 80.

<sup>218</sup> The Mauritius Standards Bureau is currently a corporate body administered by the Standards Council in terms of the *Mauritius Standards Bureau Act* of 1993, as amended in 1999. For further information on the MSB see its website, available at: <http://msb.intnet.mu/MSB/MSBHome.nsf?Open>, visited on 12 January 2008.

<sup>219</sup> See the MSB website, available at: <http://msb.intnet.mu/MSB/MSBHome.nsf?Open>, visited on 12 January 2008.

<sup>220</sup> The period allocated for public comments on draft standards, proposed amendments, withdrawals or revisions of standards was increased from one month to 60 days by the 1999 amendment to the Mauritius Standards Bureau Act of 1993, in Section 18. Trade Policy Review Body, *Trade Policy Review: Mauritius*

considered, the draft is submitted for approval to the Standards Council. The standards of the MSB can become mandatory upon publication of a notice to that effect by the Minister of Agro-Industry and Fisheries.<sup>221</sup>

The food-safety requirements of Mauritius are based on the international standards set by the Codex Alimentarius Commission, whenever possible.<sup>222</sup> Mauritius has very little capacity for carrying out its own risk assessments, as this would require substantial empirical data and scientific expertise.<sup>223</sup>

Inspection of food products for food-safety risks is carried out by officials of the Ministry of Health's Health Inspectorate Division.<sup>224</sup> These officials must establish whether food products conform to the relevant food-safety requirements. The evaluation of hundreds of new products every year creates a substantial workload for the laboratories of the Ministry of Health.<sup>225</sup> Food processing establishments are also regularly inspected by the Health Inspectorate Division.<sup>226</sup>

Food-labelling requirements for pre-packaged foods are in place in Mauritius, including the obligation to indicate ingredients, sell-by date and, where necessary, instructions for storage and use.<sup>227</sup> Food containing preservatives must be labelled as such.<sup>228</sup> In an effort to curb the high incidence of heart disease in its population, Mauritius applies restrictions to the saturated fatty acid content of animal and vegetable fats and oils.<sup>229</sup> A certificate

– Report by the Secretariat, WT/TPR/S/90, circulated on 5 October 2001, Section III note 36.

Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 148.

<sup>223</sup> *Ibid.*

<sup>224</sup> Inspection of food products where animal and plant health issues are at stake is carried out by officials of the Ministry of Agriculture. Meat and fish imports are inspected by the Division of Veterinary Services of the Ministry of Agriculture. *Ibid.*

<sup>225</sup> Doubts have been expressed about the adequacy of this prior approval system to address risks associated with a branded product (such as low-acid canned food) in situations where products marketed under the same brand may be safe when sourced from a particular factory yet unsafe when sourced from another factory. *Ibid.*

<sup>226</sup> Over the last 2 years, around 43,000 food premises and 10,000 containers of imported foodstuffs have been inspected and about 379,000 kg of food (such as meat, fish, vegetables, fruits and canned food) have been seized, condemned and destroyed. Ministry of Health and Quality of Life, Republic of Mauritius, *White Paper on Health Sector Development and Reform*, December 2002, 56, available at: <http://www.gov.mu/portal/goc/moh/file/whitepap.doc>, visited on 10 January 2008. See also Southern African Development Community, *SADC SPS and Food Safety Issues: An Agenda for Action* (SADC Consultative Forum on SPS/Food Safety, Windhoek, Namibia), 20-22 November 2000, 14, available at: [www1.worldbank.org/wbiep/trade/Stds\\_Africa/SADC\\_SPS.pdf](http://www1.worldbank.org/wbiep/trade/Stds_Africa/SADC_SPS.pdf), visited on 1 February 2001.

<sup>227</sup> *Mauritian Standard MS 30-1984 on the Labelling of Prepackaged Foods*, General Notice No. 1058 of 1983.

<sup>228</sup> This information is provided in the report of the WTO Secretariat during the second trade policy review of Mauritius in 2001. See Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 87.

<sup>229</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III Table III.7. For example, margarine rich in polyunsaturates (HS 15.17) must contain not less than 45% of polyunsaturated fats and not more than 25% of saturated fats on the fat weight basis; and edible mixtures or preparations of animal or vegetable fats or oil or of fractions of different fats or oil (HS 15.17 and 15.18) must contain not more than 23% of saturated fatty acids and not more than 25% of palm oils.

of analyses by a recognised authority of the exporting country is required for imports of animal and vegetable fats.<sup>230</sup>

In order to ensure acceptance of its food exports on the markets of its trading partners, Mauritius maintains an export certification system. An exporter must obtain an export permit from the Ministry of Health, which is issued once Ministry officials are satisfied that all requirements of the importing country with regard to the production, processing, packing, labelling and storage of the product have been met.<sup>231</sup> If an export is subject to SPS requirements, the exporter is obliged to submit a certificate of sanitary and phytosanitary health to the Ministry of Industry, Commerce and International Trade, before the shipment may leave Mauritius.<sup>232</sup>

### **2.5.2.1.1 Example of a food-safety measure affecting Mauritian exports – pesticide residue levels**

A weakness of the Mauritian food-safety regime has been the lack of adequate laboratory facilities for the analysis of pesticide residues.<sup>233</sup> This makes it difficult to establish whether the relevant maximum residue levels for pesticide residues imposed on Mauritian export markets have been met.

This problem is significant in view of the increasingly strict maximum residue limits for pesticides are being imposed, particularly on the EC market which is the main importer of Mauritian fresh produce.<sup>234</sup> The proposed EC limitation on pesticide residue levels for as many as 100 chemical ingredients at the lowest level of determination has caused much concern.<sup>235</sup> This would require substantial laboratory capacity in Mauritius, in order to be able to test for all relevant residues at this extremely low level.

Currently, misuse of pesticides is rife among Mauritian farmers. As a result, tropical fruit exports are expected to be dramatically affected, as are processed food products using domestic inputs.<sup>236</sup>

<sup>232</sup> *Ibid.*

<sup>233</sup> *Ibid.*, 15. See also Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 107, available at: <http://www.areu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008. This report notes that facilities for analysis of food to assess conformity with sanitary requirements in Mauritius 'are almost non-existent' creating significant difficulties for the agro-processing industry. Analyses are currently carried out in foreign laboratories, leading to great expense and delays.

<sup>234</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 107, available at: <http://www.areu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

<sup>235</sup> Committee on Sanitary and Phytosanitary Measures, *The Mauritian Experience with the SPS Agreement from the Indian Ocean Perspective*, G/SPS/GEN/526, circulated on 25 October 2004, para. 2.

<sup>236</sup> Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 107, available at: <http://www.areu.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

The Mauritian government has recognized the crucial importance of making sure that the necessary legal framework, analytical capacity and enforcement mechanisms are in place to ensure that food production and processing complies with the requirements of its trading partners.<sup>237</sup> As existing laboratory facilities under the Ministry of Agro-Industries and Fisheries were inadequate, the Mauritian government has established the Food Technology Laboratory that will be accredited for quality control of agricultural produce.<sup>238</sup> These and other efforts to help Mauritius to comply with the new pesticide levels are being made with the support of the EC, previously within the context of the *Cotonou Agreement*.<sup>239</sup>

### 2.5.2.2 Animal health system

Livestock health is the responsibility of the Ministry of Agro-Industries and Fisheries' Division of Veterinary Services, which has only 21 officers.<sup>240</sup> Livestock health is still regulated by the *Animal Disease Act* of 1925 although an amendment to this Act has been in preparation for over ten years.<sup>241</sup> Fish health falls under the responsibility of the Ministry of Agro-Industries and Fisheries in terms of the *Fisheries and Marine Resources Act* of 1998.

Animal diseases such as tuberculosis and brucellosis in cattle, Marek's disease in poultry and infectious bursal disease are present in Mauritius but at low incidence levels. A weakness of the current animal health regime is the inadequate flow of information to stakeholders following the outbreak of diseases at local or national level.<sup>242</sup> This makes disease control more difficult.

Mauritius adopts animal health measures following the guidelines and standards set by the World Health Organisation (OIE) to protect human and animal health in its territory

<sup>237</sup> *Ibid.*

<sup>238</sup> Committee on Sanitary and Phytosanitary Measures, *The Mauritian Experience with the SPS Agreement from the Indian Ocean Perspective*, G/SPS/GEN/526, circulated on 25 October 2004, para. 3. This laboratory tests products destined for both exportation and domestic consumption. It aims to help agro-processors and food exporters to ensure compliance with food-safety export requirements and international standards in a timely manner. It also aims to ensure the safety of food imports into Mauritius. Ministry of Agro-Industry and Fisheries of the Republic of Mauritius, *Strategic Options in Crop Diversification and Livestock Sector 2007-2015 (Consultative Draft)* (Republic of Mauritius, Port Louis), August 2007, 107, available at: <http://www.aren.mu/files/pub/areunssp.pdf>, visited on 10 January 2008.

<sup>239</sup> The EC Directorate General for Development has mandated the Liaison Committee Europe-Africa-Caribbean-Pacific (COLEACP) to implement urgently the Pesticide Initiative Programme. An information centre has been created in Brussels and databases developed on existing residue limits and pesticide usage. In addition, the list of chemical ingredients whose tolerance level may be set at the level of determination has been reduced from 450 to 100. Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 150.

<sup>240</sup> *Ibid.*, 148.

<sup>241</sup> The *Veterinary Services (Duties and Powers) Bill* has been adopted by Parliament and is awaiting official decree to enter into force. *Ibid.* See also Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III para. 66.

<sup>242</sup> Southern African Development Community, *SADC SPS and Food Safety Issues: An Agenda for Action* (SADC Consultative Forum on SPS/Food Safety, Windhoek, Namibia), 20-22 November 2000, 15, available at: [www1.worldbank.org/wbi/trade/Stds\\_Africa/SADC\\_SPS.pdf](http://www1.worldbank.org/wbi/trade/Stds_Africa/SADC_SPS.pdf), visited on 1 February 2001.

from risks in imported animal products.<sup>243</sup> Live animals, meat, fish and products thereof may only be imported if authorised by an import permit once compliance with OIE standards (where relevant) has been established.<sup>244</sup> Certification by the relevant authority in the exporting country of compliance with the conditions of the import permit is required.<sup>245</sup> Quarantine regulations are in place with regard to the importation of live animals. Mauritius bans the importation of animals from countries where diseases of great economic or zoonotic importance prevail.<sup>246</sup> Currently, Mauritius does not publish the specific standards it adopts in the area of animal health.<sup>247</sup>

As mentioned above, Mauritius relies on a system of import and export permits and certification for the implementation of its SPS regime. This is also the case for animal products. The MSB has conformity assessment procedures in place in terms of which it provides export certification services for producers, including in the area of sanitary and phytosanitary requirements. This assists exporters to prove compliance with SPS requirements on their import markets. The MSB will seek to have all its testing laboratories accredited with the Mauritius Accreditation Service (MAURITAS), the accreditation body for Mauritius.<sup>248</sup> With regard to imports, Mauritius accepts accreditations and certifications issued under the auspices of the mutual recognition agreements of the International Laboratory Accreditation Cooperation and the International Accreditation Forum.

The main exports of Mauritius in the animal and fishery sector are canned tuna<sup>249</sup> and live primates<sup>250</sup> for laboratory use. It also exports small quantities of chicken, smoked marlin and venison. Mauritius applies an export certification system to exports of animals and animal products, which for the most part does not create significant problems.<sup>251</sup>

<sup>243</sup> *Ibid.*, 14.

<sup>244</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III para. 70.

<sup>245</sup> *Ibid.*

<sup>246</sup> For example, a ban on the importation of dogs from Africa, Madagascar, Latin America and Asia is in place due to the prevalence of rabies in those areas. See Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 82.

<sup>247</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 149.

<sup>248</sup> MAURITAS was established in 1998 and is an associate member of the International Laboratory Accreditation Cooperation and a member of the International Accreditation Forum. See Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para. 77.

<sup>249</sup> The exports of Mauritius of preserved and prepared fish in 2001 amounted to US\$ 62 million in 2001. This information is reported in the country market analysis profile of Mauritius provided by the International Trade Centre, see [www.intracen.org/menus/countries.htm](http://www.intracen.org/menus/countries.htm), visited on 25 June 2007.

<sup>250</sup> Export earnings from live animals in 2001 amounted to US\$ 10 million, which accounted for a 2.2% share of world trade. These animals were destined mainly for the US (34%) and France (26%). This information is reported in the country market analysis profile of Mauritius provided by the International Trade Centre, see [www.intracen.org/menus/countries.htm](http://www.intracen.org/menus/countries.htm), visited on 25 June 2007.

<sup>251</sup> An exception is the case of canned tuna exports to South Africa, discussed below.

### 2.5.2.2.1 Examples of animal health measures affecting exports

Mauritius faces trade barriers in the form of sanitary requirements with regard to its exports of animal and fishery products, some of which have been addressed by bilateral discussions or with the help of technical assistance.<sup>252</sup> For example, South Africa does not accept the current conformity assessment procedures applied in Mauritius with regard to canned tuna.<sup>253</sup> Further, the possibility of exporting small quantities of venison and value-added poultry products to the island of Reunion is prevented by the fact that Reunion applies French law and thus the SPS requirements of the EC. Mauritius is unable to meet EC requirements with regard to abattoirs and meat processing plants and is thus denied access to the Reunion market. Mauritius also lacks a fish processing plant that is eligible to export smoked marlin to the EU.

To address some of these problems, the Division of Veterinary Services of the Ministry of Agro-Industries and Fisheries, which is the ‘competent authority’ for issuing export permits in respect of meat and fishery products, has been assisted by two consultants, appointed to help the Division to upgrade its capacity.<sup>254</sup> The Division is now in a position to submit to the EC new processing establishments for accreditation. As mentioned above, Mauritius also has a new Food Technology Laboratory and is working towards its accreditation. The support from this laboratory is essential for the certification of fish and fish products.<sup>255</sup> The laboratory monitors fish processing plants for HACCP compliance.<sup>256</sup> The Minister for Agro-Industry and Fisheries reported recently that three new establishments will soon be in a position to export fish and fish products to the EC.<sup>257</sup>

<sup>252</sup> A ban on day-old chicks from Mauritius was imposed recently by Kenya, due to concerns regarding avian encephalomyelitis. According to Mauritius, Kenya had not conducted a risk assessment, no testing had been done and Kenya had not notified its measure to the WTO. Mauritius requested advice from the Secretariat of the International Office of Epizootics as to the status of avian encephalomyelitis. Although Mauritius considered raising the issue at the following SPS Committee meeting, it did not do so and the matter was resolved bilaterally, with Kenya withdrawing its measure. In addition, canned tuna from Mauritius was denied entry into the South African market due to non-compliance with the food safety standards sets by the South African Bureau of Standards (SABS). The International Trade Centre organised an inspection visit to the Mauritian company involved, to determine whether it could meet the relevant standards and to assist in the negotiation of a technical agreement between the SABS and the corresponding regulatory authority in Mauritius. These examples were reported in Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 151 and 153.

<sup>253</sup> The technical agreement reached between Mauritius and South Africa with regard to canned tuna specifies that in the short term, South Africa would agree to accept Mauritian canned tuna on the condition that each shipment be inspected and, in the medium term, the Mauritian Department of Veterinary Services would have to be accredited as an inspection body and the food laboratory of the Mauritian Standards Bureau would have to be accredited as a testing laboratory.

<sup>257</sup> Speech by Dr. the Hon. Arvin Boolell, Minister of Agro Industry and Fisheries, to the National Assembly on 13 November 2007, presenting the *Fisheries & Marine Resources Bill (Second Reading)*, available at: [http://www.gov.mu/portal/site/moa?content\\_id=fc3eda1ef2f36110VgnVCM1000000a04a8c0RCRD](http://www.gov.mu/portal/site/moa?content_id=fc3eda1ef2f36110VgnVCM1000000a04a8c0RCRD), visited on 10 January 2008.

### 2.5.2.3 Plant health system

Plant health was the responsibility of the Division of Plant Pathology and Quarantine<sup>258</sup> of the Ministry of Agro-Industry and Fisheries of Mauritius, under the *Plants Act* of 1976.<sup>259</sup> In order to update this legislation, and to take account of new requirements under the *SPS Agreement*,<sup>260</sup> a new *Plants Protection Act* was adopted in 2006, to replace the dated *Plants Act*.<sup>261</sup> The new legislation also confers investigative powers on certain officials, to deal with issues of organic farming and makes provision for plant variety rights. The *Plant Protection Act* creates a National Plant Protection Office, with responsibility for phytosanitary control in Mauritius. This Act creates the legal and administrative framework necessary to meet Mauritius's international obligations under the IPPC. The NPPO is responsible for issuing phytosanitary export certificates, and may lay down phytosanitary import requirements.<sup>262</sup> In addition, a new legislative proposal regarding seed quality control, marketing, export and import and the necessary institutional framework is being prepared.<sup>263</sup>

Mauritius applies a well-developed system of border controls to protect plant health in its territory against phytosanitary risks from imported products.<sup>264</sup> Prior to the importation of plant and plant products, a permit is required from the NPPO.<sup>265</sup> Imports must be accompanied by a certificate by the relevant authority in the country of origin, attesting conformity with the conditions on the import permit.<sup>266</sup>

These controls are supported by facilities such as glasshouses for post-entry plant quarantine. Its border control system for the prevention of entry of exotic pests and diseases at its

See also Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat*, WT/TPR/S/90, circulated on 5 October 2001, Part III para 84.

<sup>260</sup> These requirements are discussed in detail in Parts III-IV of this book.

<sup>261</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III para. 66.

<sup>262</sup> *Ibid.*, Part III para. 67.] Plant products that do not comply with phytosanitary requirements or are infested with pests may be seized or destroyed.

<sup>263</sup> These developments are reported in Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 148. See also Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III para. 66.

<sup>264</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 149.

<sup>265</sup> Trade Policy Review Body, *Trade Policy Review: Mauritius – Report by the Secretariat* WT/TPR/S/198, circulated on 19 March 2008, Part III para. 68.

<sup>266</sup> Such certificate must be issued, after inspection of the products, not more than 14 days before dispatch of the shipment. See the report of the WTO Secretariat during the second trade policy review of Mauritius in 2001. *Ibid.*

port and airport is well developed and adequately resourced.<sup>267</sup> Imported seeds are tested by means of germination under quarantine control. All ships that arrive in Mauritius are inspected for quarantine pests. In addition, ship containers that contain plant or animal products are examined by inspectors at the port, responsible for both animal and plant health inspections.<sup>268</sup> Adequate facilities for post-arrival fumigation of consignments with phosphine gas or methyl bromide exist.<sup>269</sup> Quarantine procedures are also carried out at the airport, including the spraying of cargo holds of incoming aircraft. An incinerator for quarantine waste is available at the airport. In exceptional cases, luggage is X-rayed on arrival to detect quarantine risk materials. A light-trapping device near the airport exists in order to detect exotic pests that may have come in with incoming aircraft.<sup>270</sup>

Mauritius follows the international phytosanitary standards set by the IPPC where possible. However, few international standards exist in the areas of plant health that are of relevance to Mauritius.<sup>271</sup> In addition the specific phytosanitary controls appropriate in a particular situation depend on the pest and disease status of the exporting and importing country and the conditions prevailing in each.<sup>272</sup> As a result, Mauritian phytosanitary measures are often not in conformity with international standards. Mauritius lacks the capacity to undertake detailed scientific risk assessments to support each of its phytosanitary measures, as a result of which Mauritian phytosanitary measures are largely vulnerable to challenge under the rules of the *SPS Agreement*.<sup>273</sup>

As mentioned above, the Mauritian economy is heavily dependant on sugar exports. The phytosanitary regime of Mauritius therefore focuses on protecting sugar cane against pests and diseases. Special protocols exist aimed at reducing the risk of entry of sugar cane white grub to extremely low levels. For example, during the season when the sugar cane grub is in its moth stage (November-January), ships from Reunion may not enter a Mauritian port unless it left Reunion during the daytime, when its lights would not have attracted the moths. The decks of such ships may be treated with insecticides if deemed necessary. All yachts from Reunion are subjected to quarantine inspection during the flight season of the sugar cane white grub.<sup>274</sup>

<sup>272</sup> *Ibid.*

<sup>273</sup> The rules of the *SPS Agreement* requiring that SPS measures that do not conform to international standards be based on a risk assessment are discussed below, Part III, Section 4.2.3. Note, however, that to date no challenges have been made to Mauritius's SPS measures, whether in formal dispute settlement procedures or through raising trade concerns at meetings of the SPS Committee.

<sup>274</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 149.

Despite the well-developed system of phytosanitary controls in Mauritius, there have been some cases of entry and establishment of plant pests and diseases.<sup>275</sup> For example, the Peach fruit fly (*Bactrocera zonata*) was detected in 1987 and is now established and a serious pest in Mauritius. Another fruit fly (*Carpomya vesuviana*) was detected in 1986 and is now established. In 1996, an infestation of Oriental fruit fly (*Bactrocera dorsalis*) was detected, which was presumably caused by some kind of quarantine failure.<sup>276</sup> It was successfully eradicated at very high cost in 1999. To avoid its reintroduction, in 2003 Mauritius imposed an emergency measure temporarily banning the importation of fruits and vegetables from Kenya, following information of a detection of fruit fly on the Kenyan coastal region.<sup>277</sup> Recently, two species of white fly have become established in Mauritius.<sup>278</sup>

With regard to its current exports of plants and plant products, Mauritius has a well-functioning export certification system in place to assess conformity with the phytosanitary requirements on its export markets.<sup>279</sup> This certification system is generally accepted by its trading partners. However, it still faces certain barriers to its exports in the form of phytosanitary requirements.

### 2.5.2.3.1 Examples of phytosanitary measures affecting exports

Mauritian horticultural exports are occasionally rejected due to the detection of plant pests, or are subject to burdensome phytosanitary measures. For example, Japan requires that flowers from Mauritius be fumigated and Reunion bans chillies from Mauritius due to concerns regarding Oriental fruit fly, despite the fact that this pest has already been eradicated in Mauritius.<sup>280</sup>

Another phytosanitary issue of concern to Mauritian exporters is the IPPC's international standard ISPM 15, which lays down guidelines for regulating wood packaging material in international trade, in order to avoid the risk of introduction of pests through wood packaging. Mauritius does not have the capacity to set up the required heat-treatment plant for wood packaging material. The methyl bromide quarantine treatment currently in use in Mauritius is unable to deal with the large volumes of wood materials and pallets used

<sup>275</sup> These examples were reported in the ITC/Commonwealth Secretariat report cited above. *Ibid.*, 150.

<sup>276</sup> *Ibid.*, 149.

<sup>277</sup> Committee on Sanitary and Phytosanitary Measures, Notification of Emergency Measures, G/SPS/N/MUS/11, circulated on 3 December 2003.

<sup>278</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 149.

<sup>279</sup> For example, anthurium growers and exporters are expected to register their nurseries with the NPPO so that the phytosanitary status of their nurseries may be regularly monitored in conformity with agreements made with the phytosanitary authority of the importing countries regarding phytosanitary certification of cut flowers. See the website of the National Plant Protection Office, available at: [http://www.gov.mu/portal/site/agroind/menuitem.1a1e1e9713e711c26a7a98ada0208a0c/?content\\_id=2d5a5533c1adc010VgnVCM100000a04a8c0RCRD](http://www.gov.mu/portal/site/agroind/menuitem.1a1e1e9713e711c26a7a98ada0208a0c/?content_id=2d5a5533c1adc010VgnVCM100000a04a8c0RCRD), visited on 12 January 2008.

<sup>280</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 150.

to package exported products. Mauritius has raised concerns in the SPS Committee that pressure from ISPM-compliant countries threatens its export market.<sup>281</sup> It has therefore recently sought, through the WTO Secretariat, the granting to it by the IPPC secretariat of a four-year moratorium for the implementation of ISPM 15. Mauritius has already taken steps towards setting up a heat-treatment facility, but proposes to use phosphine fumigation in the meantime, recognised by the IPPC as a possible alternative to heat treatment.<sup>282</sup>

### 2.5.3 Overall assessment of the SPS system of Mauritius

As noted above, Mauritius would like to diversify its agricultural export trade to fruit, vegetables and other horticultural products, thereby reducing its dependence on sugar for export earnings. This would require the development of its phytosanitary regime to enable it to manage risks from the manifold of pests and diseases that form a potential threat to this sector, while avoiding heavy use of pesticides that would affect the acceptability of its products on export markets. Mauritian authorities would have to draw up an adequate plant pest list based on sufficient data from monitoring and surveillance and extend the export certification system to this broad range of products. This is currently not within the capabilities of Mauritius.<sup>283</sup> Currently, misuse of pesticides and inadequate sanitary controls are restricting the ability of Mauritius to achieve its ambition to become a food and fish processing hub and in the region. For this reason, it is important that the new Food Technology Laboratory of Mauritius have the capacity to test for a wide range of contaminants and for pesticide residues at very low levels. In addition, effective monitoring of HACCP implementation and other SPS requirements on export markets is essential.

Some shortcomings identified with regard to Mauritian SPS controls are the absence of an incinerator for quarantine risk material at the port, the inadequate coordination of the light-trapping device at the airport and the absence of such a device at the port.<sup>284</sup> In addition, Mauritius does not conduct detailed and comprehensive risk assessments to support its phytosanitary measures where no international standards exist.<sup>285</sup>

The government of Mauritius has recognized the vital importance of developing good tools for diagnosis of phytosanitary pests and diseases, to make early action possible.<sup>286</sup> The NPPO aims to upgrade its inspection system protocol and to develop a manual for officers enforcing phytosanitary measures at ports of entry. Additionally, it intends to review its list of quarantine pests and diseases and to draft regulations necessary to imple-

<sup>286</sup> Ministry of Agriculture Food Technology & Natural Resources of the Republic of Mauritius, *A Sustained Programme for Agricultural Diversification: A Non-Sugar Sector Strategic Plan 2003-2007* (Republic of Mauritius, Port Louis), 2003, 58, available at: <http://www.gov.mu/portal/sites/moasite/download/nssspan.pdf>, visited on 11 January 2008.

ment the *Plant Protection Act* of 2006.<sup>287</sup> In addition, Mauritius has recognised the need to establish an independent food-safety authority with greater capacity for sanitary control.<sup>288</sup> Also, in light of its strategy to overcome its own constraints in the production of agricultural products by sourcing inputs from countries in the region and focusing on developing its comparative advantage as a processing hub for fish and agricultural products, Mauritius must promote regional cooperation on SPS matters.<sup>289</sup> Such cooperation would ensure that the inputs it uses in its processing activities meet the SPS requirements of its export markets.

In general, Mauritius has very little capacity to conduct risk analyses with respect to the SPS measures it adopts in the absence of relevant international standards. It lacks the substantial empirical data necessary to undertake such analyses and the requisite professional expertise. For this reason, it is of particular importance to Mauritius that international SPS standards be set in areas of relevance to it and that such standards reflect its capabilities and concerns.

## 2.6 Jamaica

### 2.6.1 Factual background

Jamaica is a 'small-island developing state' in the Caribbean Sea, south of Cuba.<sup>290</sup> It gained independence from the UK in 1962. The following indicators are useful in situating Jamaica within the spectrum of levels of human and economic development.

#### 2.6.1.1 Development indicators

Jamaica's GNI per capita in 2006 was US\$3,480.<sup>291</sup> It is therefore classified by the World Bank as a lower-middle-income economy.<sup>292</sup> Jamaica had a GDP of US\$10.5 billion in 2006.<sup>293</sup> Its GDP in 2005 at purchasing power parity was US\$11.4 billion and its per capita GDP at purchasing power parity in that year was US\$4,291.<sup>294</sup>

---

<sup>287</sup> *Ibid.*

<sup>288</sup> *Ibid.*, 121.

<sup>289</sup> *Ibid.* Areas of cooperation mentioned in this paper are capacity building, and the harmonisation of standards and procedures.

<sup>290</sup> For more information on the UN classification of 'small-island developing states and territories', see above, Part II, Section 2.5.1, note 407.

<sup>291</sup> See the World Bank webpage on Key Development Data & Statistics of 2006 available at: <http://web.worldbank.org/WBSITE/EXTERNAL/DATASTATISTICS/0,,contentMDK:20535285~menuPK:1192694~pagePK:64133150~piPK:64133175~theSitePK:239419,00.html> visited on 9 January 2008.

<sup>292</sup> See the World Bank classification of economies by income of July 2007 available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 9 January 2008.

<sup>293</sup> See the World Bank webpage on Key Development Data & Statistics of 2006 available at: <http://web.worldbank.org/WBSITE/EXTERNAL/DATASTATISTICS/0,,contentMDK:20535285~menuPK:1192694~pagePK:64133150~piPK:64133175~theSitePK:239419,00.html> visited on 9 January 2008.

<sup>294</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 278, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

Jamaica is ranked 101<sup>st</sup> in the UN Human Development Index of 2007, and falls into the category of medium-human-development countries.<sup>295</sup> Jamaica's population was 2.7 million in 2006,<sup>296</sup> 14.4 percent of which lives below the US\$2 per day poverty line.<sup>297</sup> While Jamaica made significant advances in poverty alleviation between 1988 and 2002, rural poverty remains a serious problem.<sup>298</sup>

### 2.6.1.2 Health priorities

Jamaica's public health priorities, and therefore the relative importance of SPS regulation as an area of public spending can be understood against the following factual background. Jamaica spends 2.8 percent of its GDP on public health, which amounts to US\$223 per capita at purchasing power parity.<sup>299</sup> Life expectancy at birth is 72 years,<sup>300</sup> reduced from 75 years due to problems of violence and HIV/AIDS.<sup>301</sup> The prevalence of tuberculosis in Jamaica is 10 cases per 100,000 people.<sup>302</sup> The infant mortality rate in Jamaica is 17 per 1000 births.<sup>303</sup> Merely twenty-one percent of children under five with diarrhoea receive oral hydration and continued feeding.<sup>304</sup> Jamaica has only 85 physicians per 100 000 people.<sup>305</sup>

In Jamaica 80 percent of the population has sustainable access to improved sanitation and 93 percent to clean water.<sup>306</sup> Nine percent of the population is undernourished.<sup>307</sup>

<sup>295</sup> *Ibid.*, 262.

<sup>296</sup> See the World Bank webpage on Key Development Data & Statistics of 2006 available at: <http://web.worldbank.org/WBSITE/EXTERNAL/DATASTATISTICS/0,,contentMDK:20535285~menuPK:1192694~pagePK:64133150~piPK:64133175~theSitePK:239419,00.html> visited on 9 January 2008.

<sup>297</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 239, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007. If one measures poverty as the percentage of people living on less than US\$1 per day, less than 2% of Jamaica's population lives below the poverty line.

<sup>298</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. This report notes that the poverty headcount declined from 30.5% in 1988 to 19.9% in 1997 and by 2002 had stabilized in the upper teens. However, in rural areas poverty was still at 24.1% (in 2001), with high and persistent rates of extreme poverty.

<sup>299</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 248, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>300</sup> *Ibid.*, 262.

<sup>301</sup> The Minister of Health of Jamaica stated in 2006 that the total number of AIDS cases reported in Jamaica since the start of the epidemic in 1982 was 9,682, and the total number of AIDS deaths was 6,032. An estimated 25,000 HIV infected persons live in Jamaica. HIV/AIDS is the second leading cause of death in the 30-34 year age group. This was stated in the policy speech by the Jamaican Minister of Health in September 2006, during the Sectoral Debate session, available at: [http://www.moh.gov.jm/Sectoral\\_Debate\\_20061.pdf](http://www.moh.gov.jm/Sectoral_Debate_20061.pdf), visited on 28 December 2007.

<sup>302</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 258, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>303</sup> *Ibid.*, 262.

<sup>304</sup> *Ibid.*, 248.

<sup>305</sup> *Ibid.*

<sup>306</sup> *Ibid.*, 252.

<sup>307</sup> *Ibid.*

The public health strategy, outlined in the National Strategic Plan for 2006-2010,<sup>308</sup> aims at refocusing on primary health care, particularly with regard to maternal and child health, and addressing the challenges posed by violence and HIV/AIDS.<sup>309</sup> An additional priority is the implementation of the Healthy Lifestyle Policy, promulgated in 2004, to control the incidences of life-style related, chronic, non-communicable diseases (such as diabetes).<sup>310</sup>

### 2.6.1.3 Trade priorities

Jamaica became a GATT Contracting Party in 1963, before which it applied the GATT *de facto* as a territory of the UK. It became an original Member of the WTO on 9 March 1995. Jamaica bound all its tariff lines in the Uruguay Round negotiations and made commitments in various service sectors.

It is useful to look at Jamaica's trade interests to determine the importance of exports for its economy. Exports of goods and services accounted for 43.6 percent of GDP in Jamaica in 2006.<sup>311</sup> The trade-to-GDP ration in Jamaica in 2004 – 2006 was 105.4.<sup>312</sup> The service sector, especially the tourism industry, is the main foreign revenue earner in Jamaica and continues to increase in importance.<sup>313</sup> In recent years Jamaica has seen a decline in its exports of goods overall. However, in 2006, exports of primary products have risen to 90.2 percent of its total merchandise exports (75.7 percent is made up of mining products and the remaining 15.5 percent is made up of agricultural products) thus making Jamaica even more dependent on primary commodities for foreign revenue earnings in the merchandise sector.<sup>314</sup>

Much of Jamaica's trade occurs in the context of preferential trade arrangements. Jamaica is a member of the group of ACP countries with which the EU had, until 31 December

<sup>308</sup> The Ministry of Health of Jamaica has a five year strategic planning cycle. The National Strategic Plan for 2006-2010 took effect in April 2006. This information can be found on the Ministry of Health's website, available at: <http://www.moh.gov.jm>, visited on 28 December 2007.

<sup>309</sup> These priorities were identified in the policy speech by the Minister of Health in September 2006, available at: [http://www.moh.gov.jm/Sectoral\\_Debate\\_20061.pdf](http://www.moh.gov.jm/Sectoral_Debate_20061.pdf), visited on 28 December 2007.

<sup>310</sup> *Ibid.*

<sup>311</sup> See the statistics in the World Bank's country profile for Jamaica, available at: <http://www.worldbank.org/data/countrydata/countrydata.html>, visited on 28 December 2007. According to the World Bank, in this calculation 'Exports of goods and services represent the value of all goods and other market services provided to the rest of the world. They include the value of merchandise, freight, insurance, transport, travel, royalties, license fees, and other services, such as communication, construction, financial, information, business, personal, and government services. They exclude labour and property income (formerly called factor services) as well as transfer payments.'

<sup>312</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 88, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008. This indicates the significance of trade to Jamaica's economy.

<sup>313</sup> Tourism alone accounts for as much in foreign exchange earnings as do all merchandise exports combined. The service industry employs about three quarters of Jamaica's labour force. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Table I.5 and Section IV para. 75.

<sup>314</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 88, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008. Exports of manufactured goods have decreased significantly (from 23.7% in 1998 to 9.8% in 2002) mainly due to a sharp decrease in exports of clothing to the US. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section I paras 3 and 37.

2007, a non-reciprocal preferential trade agreement, the *Cotonou Agreement*.<sup>315</sup> Jamaica relied upon the preferential treatment provided under the *Cotonou Agreement* for much of its agricultural trade, as set out below. As noted above, due to the expiry of the WTO waiver for this preferential arrangement on 31 December 2007, negotiations have been undertaken to replace the *Cotonou Agreement* with EPAs between the EC and six different groups of ACP countries.<sup>316</sup> One of those EPAs is the EPA between the EC and a group of 15 Caribbean countries including Jamaica.<sup>317</sup> Under this EPA, Jamaica still benefits from duty-free and quota-free market access for most of its exports to the EU, including bananas and other agricultural products. However, sugar is subject to a special transitional regime which only provides tariff-free access to sugar within specified quota limits during a transitional period ending in 2009, after which a safeguard mechanism is in effect until 2012.<sup>318</sup> Preferential access to the US market is enjoyed by Jamaica under the Caribbean Basin Initiative. In addition, under the *Caribbean – Canada Trade Agreement* (CARIBCAN) programme, Jamaica has preferential access to the Canadian market (together with other Commonwealth Caribbean countries). The largest market for Jamaican exports is currently the EU, followed by the US and Canada.<sup>319</sup> Jamaica, as a member of

---

<sup>315</sup> *Partnership Agreement between the Members of the African, Caribbean and Pacific Group of States of the One Part and the European Community and Its Member States, of the Other Part*, signed in Cotonou, Benin, on 23 June 2000 (the *Cotonou Agreement*). The *Cotonou Agreement*, which replaced the successive *Lomé Conventions* between the EU and the ACP states, provides zero customs duties to almost all industrial products and lower than normal customs duties to agricultural products from ACP countries (Art. 1 of Annex V). Special regimes for bananas and sugar are established in the Banana Protocol and Sugar Protocol to the *Cotonou Agreement*.

<sup>316</sup> For more details on the EPAs and the reform of the EC sugar regime, see above, Part II, Section 2.5.1.3.

<sup>317</sup> On 16 December 2007 the European Commission initialled the Economic Partnership Agreement with the 15 ‘Cariforum’ countries, i.e. the forum of Caribbean ACP states, bringing together the CARICOM member states except Montserrat (Antigua and Barbuda, Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Saint Lucia, Saint Vincent and the Grenadines, Saint Kitts and Nevis, Surinam, and Trinidad and Tobago) and the Dominican Republic. This was the only comprehensive EPA initialled to date (i.e. unlike the interim EPAs initialled with the other groups of ACP countries, which cover only trade in goods, this comprehensive EPA covers a broad range of areas, including trade in services, investment, government procurement and intellectual property protection). Agricultural and processed agricultural products are excluded from liberalisation obligations of the Cariforum countries under this EPA. The EPA contains provisions regarding the regional harmonisation of SPS regulations. See European Commission, Directorate General for Trade, ‘Update: Interim Economic Partnership Agreements’, *Trade Policy in Practice*, 19 December 2007, available at: [http://trade.ec.europa.eu/doclib/docs/2007/november/tradoc\\_136959.pdf](http://trade.ec.europa.eu/doclib/docs/2007/november/tradoc_136959.pdf), visited on 21 December 2007. See also European Commission, Directorate General for Trade, *Note on the State of Play in the EPAs Negotiations*, Brussels, 20 December 2007, available at: [http://trade.ec.europa.eu/doclib/docs/2007/december/tradoc\\_137364.pdf](http://trade.ec.europa.eu/doclib/docs/2007/december/tradoc_137364.pdf), visited on 22 December 2007.

<sup>318</sup> European Commission, Directorate General for Trade, *Economic Partnership Agreements: Questions and Answers*, Brussels, 2 October 2007, available at: [http://trade.ec.europa.eu/doclib/docs/2007/october/tradoc\\_136230.pdf](http://trade.ec.europa.eu/doclib/docs/2007/october/tradoc_136230.pdf), visited on 21 December 2007.

<sup>319</sup> The EU absorbed around 32.6% of Jamaican exports, the US 28.2% and Canada 14.1% in 2002. Trade with Latin America, China and Japan is on the increase. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Chart I.2. See also Eurostep *et al.*, *New ACP-EU Trade Arrangements: New Barriers to Eradicating Poverty?* (Eurostep, Brussels), March 2004, 19, available at: [www.eurostep.org/pubs/trade\\_study.pdf](http://www.eurostep.org/pubs/trade_study.pdf), visited on 25 June 2007.

the Caribbean Community (CARICOM), also enjoys preferential access to the markets of the other 14 members.<sup>320</sup> However, trade with CARICOM countries remains limited.<sup>321</sup>

As discussed further below, the erosion of trade preferences, particularly with regard to sugar and bananas, due to progressive liberalisation of trade at the multilateral level and due to reforms in the EU trade and support regimes for sugar and bananas, is creating challenges for Jamaica, since these Jamaican products are not competitive on the world market.<sup>322</sup>

The fact that much of its trade occurs under preferential agreements, is reflected in the nature of Jamaica's participation in the multilateral trading system. It has made several negotiating proposals in the Doha Development Round, including in the area of agriculture, focusing on its concerns regarding preference erosion following tariff reductions with regard to agricultural products, and on securing exemptions from tariff reductions for a percentage of developing country export commodities.<sup>323</sup> In the negotiating proposal of the CARICOM countries, the fact that the majority of agricultural exports, employment and investment resources are oriented towards the production of agricultural products benefiting from preferential arrangements is highlighted, to indicate the problems from preference erosion.<sup>324</sup> At the same time, it is noted that, while significantly smaller, the proportion of exports of value-added and processed agricultural products is growing rapidly. Such trade occurs on non-preferential terms and is therefore not directly affected by preference erosion.<sup>325</sup> Jamaica is an active advocate of special and differential treatment for developing countries at the WTO and has proposed that special status be granted to small-island developing countries within the WTO regime on SDT.<sup>326</sup> In addition, the

<sup>320</sup> The *Treaty Establishing the Caribbean Community* (CARICOM) was signed in Chaguaramas, on 4 July 1973. The Caribbean Community comprises a customs union between 15 Caribbean countries, namely Antigua and Barbuda, Bahamas, Barbados, Belize, Dominica, Grenada, Guyana, Haiti, Jamaica, Montserrat, Saint Kitts and Nevis, Saint Lucia, Saint Vincent and the Grenadines, Suriname, and Trinidad and Tobago. In 2002, the *Revised Treaty of Chaguaramas Establishing the Caribbean Community, Including the CARICOM Single Market and Economy* was signed, establishing the CARICOM Single Market and Economy, according to which most trade restrictions between member countries were to be removed by 2005. CARICOM has 15 members. See Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section II para.56. See also the website of CARICOM, available at [www.caricom.org](http://www.caricom.org), visited on 8 January 2008.

<sup>321</sup> *Ibid.*, Section 1 para. 42.

<sup>322</sup> Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat*, WT/TPR/S/139, circulated on 11 October 2004, Section II para. 5; Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 110. The latter report notes that Jamaican banana exports declined by 34% between 1996 and 2000.

<sup>323</sup> See WTO documents TN/AG/R/6, circulated on 21 February 2003, TN/AG/R/8, circulated on 18 July 2003, and TN/AG/9, circulated on 25 August 2003. According to Jamaica, an essential element of special and differential provisions for developing countries must be the creation of a special safeguard mechanism for developing countries, in view of their food security and genuine non-trade concerns. See General Council, *Preparations for the 1999 Ministerial Conference – Agreement on Agriculture*, WT/GC/W/370, circulated on 13 October 1999.

<sup>324</sup> Committee on Agriculture, *WTO Negotiations on Agriculture - Market Access. Negotiating Proposal on Behalf of Members of the Caribbean Community (CARICOM)*, G/AG/NG/W/100, circulated on 15 January 2001.

<sup>325</sup> *Ibid.*

<sup>326</sup> FAO Commodities and Trade Division, *Agriculture, Trade and Food Security: Issues and Options in the*

preservation of policy space to pursue development objectives has been identified by Jamaica as one of its goals in the Doha Development Round negotiations.<sup>327</sup> In particular, it has noted that as trade rules increasingly encompass behind-the-border measures, it seeks to ensure that sufficient room is provided for developing countries to pursue their development goals.<sup>328</sup>

Jamaica has never initiated a WTO dispute, nor has it been challenged in WTO dispute settlement proceedings. It has, however, acted as a third party in eight disputes, which mainly concerned measures affecting its preferential access to agricultural markets.<sup>329</sup> In addition, it joined consultations between other WTO Members in one further dispute that did not proceed to a panel.<sup>330</sup> In the context of the Doha Development Round negotiations on the reform of the dispute settlement system, Jamaica has made proposals on SDT for developing countries.<sup>331</sup>

#### 2.6.1.4 Significance of agricultural sector

The role played by the food and agricultural sector in Jamaica's economy provides an indication of the importance of the *SPS Agreement* in improving market access for its exports in this sector.

Agriculture is an important sector of the Jamaican economy, but has been overtaken in significance by the services industry.<sup>332</sup> Agriculture accounted for only 5.9 percent of GDP in 2006<sup>333</sup> (or 13.8 percent if processed agricultural products are included).<sup>334</sup> However,

<sup>328</sup> Trade Policy Review Body, para. 6.2.

<sup>329</sup> The list of disputes in which Jamaica was a third party is found on the page for Jamaica on the WTO website, available at: [http://www.wto.org/english/thewto\\_e/countries\\_e/jamaica\\_e.htm](http://www.wto.org/english/thewto_e/countries_e/jamaica_e.htm), visited on 25 January 2008. One of these is the previously mentioned *Mexico – Corn Syrup* dispute, where Jamaica made a joint statement with Mauritius expressing their concerns regarding the impact of the outcome of this dispute on their sugar trade. See further above, Part II, Section 2.5.1.3.

<sup>330</sup> *United States – Section 306 of the Trade Act of 1974 and Amendments Thereto. Request to Join Consultations*, WT/DS200/3, circulated on 22 June 2000.

<sup>331</sup> See Jamaica's proposal on SDT contained in WTO document TN/DS/W/21, circulated on 10 October 2002; as well as the joint proposal in which Jamaica participated, contained in WTO document TN/DS/W/47, circulated on 11 February 2003. Jamaica also made a proposal concerning the right of a Member to determine the composition of its delegation in dispute settlement proceedings in WTO document TN/DS/W/44, circulated on 11 February 2003.

<sup>332</sup> The service industry is currently the largest employer in Jamaica, employing 60% of the economically active population. Technical Centre for Agricultural and Rural Cooperation ACP-EU, *Study of the Consequences of the Application of Sanitary and Phytosanitary (SPS) Measures on ACP Countries* (CTA, Wageningen), May 2003, 26, available at: <http://www.tcd.ie/iiis/policycoherence/index.php/iiis/content/download/371/1446/file/CTA%20Impact%20of%20SPS%20Measures%20on%20ACP%20countries.pdf>, visited on 23 January 2008.

<sup>333</sup> See the World Bank, Countries at a Glance table for Jamaica, available at: [http://devdata.worldbank.org/AAG/jam\\_aag.pdf](http://devdata.worldbank.org/AAG/jam_aag.pdf), visited on 9 January 2008.

<sup>334</sup> Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 9. The contribution of agriculture to GDP here is calculated in terms of figures for 2003 and takes into account also forestry and fishery products. See

this sector still employs 18 percent of the labour force<sup>335</sup> and supports 150 000 rural families. In addition, as 72 percent of the poor in Jamaica live in rural areas,<sup>336</sup> the agricultural sector is crucial for the alleviation of poverty and rural development.<sup>337</sup>

In a Special Session of the WTO Committee on Agriculture in 2000, Jamaica noted the importance of the agricultural sector for its socio-economic development and pointed to the difficulties of small-island economies that are dependent on a limited number of crops and face difficulties in diversifying.<sup>338</sup> Jamaica participated in the joint communication of SIDS, mentioned above,<sup>339</sup> pointing to the inherent structural problems (like remoteness, smallness and vulnerability to natural disasters) preventing SIDS from becoming competitive in agricultural trade, and resulting in dependence on non-reciprocal preferences.<sup>340</sup> The additional constraints caused by stringent SPS requirements that are beyond the capabilities of SIDS were also noted with concern.<sup>341</sup>

The main agricultural products of Jamaica are sugarcane, fruits and vegetables, roots and tubers, meat, fish and molluscs.<sup>342</sup> Agricultural production is primarily oriented towards the domestic market and is largely produced by smallholders.<sup>343</sup> However, some agri-

<sup>338</sup> Committee on Agriculture, *Fourth Special Session of the Committee on Agriculture. Statement by Jamaica*, G/AG/NG/W/86, circulated on 6 December 2000. This statement was made in the context of the discussion on non-trade concerns in agriculture, and Jamaica indicated that it shared the non-trade concern of the threat to social and political stability due to major negative changes in the agricultural sector. It proposed flexibility for developing countries in the rules on agricultural liberalisation to allow for the promotion of rural development.

<sup>339</sup> See above, Part II, Section 2.5.1.3.

<sup>340</sup> Committee on Agriculture, *WTO Negotiations on Agriculture: Proposals by Small Island Developing States (SIDS): Communication from Barbados, Cuba, Dominica, Jamaica, Mauritius, St. Kitts and Nevis, St. Lucia, St. Vincent and the Grenadines, and Trinidad and Tobago*, G/AG/NG/W/97 and Corr.1, circulated on 29 December 2000, paras 3-6.

<sup>341</sup> *Ibid.*, para. 6. As noted above, this joint communication proposes the binding of non-reciprocal preferential tariffs for agricultural products from SIDS under the *Agreement on Agriculture* and the creation of a framework for the provision of technical assistance for compliance with SPS measures in the international market.

<sup>342</sup> See FAO Statistical Yearbook, Country Profile of Jamaica, available at: [http://www.fao.org/es/ess/yearbook/vol\\_1\\_2/pdf/Jamaica.pdf](http://www.fao.org/es/ess/yearbook/vol_1_2/pdf/Jamaica.pdf), visited on 9 January 2008.

<sup>343</sup> These smallholders comprise about 77% of Jamaican farmers and have farms of 2.02 ha or less. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 10. The fragmented nature of agricultural production in Jamaica has been noted to be of questionable viability. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

culture and food products do constitute major exports for Jamaica. In 2006, agricultural exports, including processed food, amounted to 15.5 percent of all exports of goods in Jamaica.<sup>344</sup> Most of Jamaica's agricultural exports are food products.<sup>345</sup> Historically, these exports have been dominated by traditional products, produced mainly by large-scale farmers.<sup>346</sup> The most important traditional export crops are sugar, bananas and coffee,<sup>347</sup> which together make up almost 50 percent of Jamaica's agricultural exports and 9.4 percent of total merchandise export earnings.<sup>348</sup> Food processing in Jamaica occurs mostly with regard to animal feed, sugar, poultry, flour and beverages<sup>349</sup> and is one of Jamaica's most important industries.<sup>350</sup>

Sugar is Jamaica's main export crop, its second largest employer<sup>351</sup> and third largest earner of foreign revenue.<sup>352</sup> The most important export market for Jamaican sugar is the EU.<sup>353</sup> The sugar industry in Jamaica faces high production costs,<sup>354</sup> therefore preferential access for sugar is regarded by Jamaica as essential for its economy. Until 31 December 2007, Jamaica's sugar exports benefited from the preferential regime of the Sugar Protocol to the *Cotonou Agreement*, allowing Jamaica to sell its raw sugar above world market prices.<sup>355</sup> As noted above, however, the regime for sugar under the new EPA, allows tariff

<sup>344</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 88, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008.

<sup>345</sup> Jamaica exports both unprocessed and processed agricultural products. The processed agricultural product sector (comprising food, beverages and tobacco) is the largest manufacturing sector in Jamaica, accounting for 23.2% of GDP in 2003. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Chart IV.3.

<sup>346</sup> These large-scale farmers represent less than 1% of all Jamaican farmers and use about 39% of arable land. *Ibid.*, Section IV para. 10.

<sup>347</sup> *Ibid.*

<sup>348</sup> Together with other traditional exports (such as rum), these products constituted 72% of Jamaica's agricultural and food exports in 2000. Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 109.

<sup>349</sup> Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 10.

<sup>350</sup> See the *World Fact Book*, US Central Intelligence Agency, 2003, available at: <http://www.odci.gov/cia/publications/factbook/geos/jm.html#Intro>, visited on 25 June 2007.

<sup>351</sup> The sugar industry employs 41,000 people during cropping season and 28,000 during the rest of the year. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 13.

<sup>352</sup> The first two export earners are bauxite and tourism. *Ibid.*

<sup>353</sup> Although Jamaica also has a quota for sugar exports to the US, in 2000-2002 no sugar was shipped to the US due to lack of demand, and in 2003 Jamaica was unable to produce enough sugar to meet its US quota requirement. *Ibid.*, Section IV para. 14.

<sup>354</sup> It is reported that the average production cost for sugar in Jamaica is US\$ 0.24/lb, which is about three times the world market price and double the sugar price expected in the EU after the current reform process is completed. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>355</sup> The Sugar Protocol to the *Cotonou Agreement* provided for specific quantities of sugar from 18 ACP countries to be imported into the EU at a guaranteed price. However, on 29 September 2007, the European Council of Ministers unilaterally renounced the *Sugar Protocol*, in the context of reforms to the EU sugar regime to bring it more into line with world market prices, following successful challenges by Brazil and Australia in WTO dispute settlement. The abolition of the existing sugar regime is set to take effect in October 2009.

free quotas only until 2009, and establishes an import surveillance system and special safeguard mechanism thereafter, until 2012..<sup>356</sup>

Coffee is Jamaica's second largest export crop, and is destined mainly for the Japanese market, where it commands premium prices.<sup>357</sup> Bananas are the third most important agricultural export.<sup>358</sup> Bananas are almost exclusively exported to the EU (mainly to the UK)<sup>359</sup> previously under the *Cotonou Agreement*.<sup>360</sup> The new EPA, initialled on 16 December 2007, includes tariff free treatment for bananas. Like sugar, bananas produced in Jamaica are not competitive on the world market due to low productivity and high costs, and exports are only possible through non-reciprocal preferential arrangements, especially those with the EU.<sup>361</sup> In addition, export revenues from bananas are decreasing due to the inability of farmers to meet stricter standards on their export markets.<sup>362</sup>

As preferences are being phased out, a sharp contraction in Jamaica's sugar and banana exports has resulted.<sup>363</sup> Non-traditional exports in the agricultural sector (i.e. exports other than sugar, bananas, and coffee) are therefore increasing in importance.<sup>364</sup> An emergent but uneven trend of exports has been reported with regard to three categories of non-

<sup>356</sup> The regime under the *Cotonou Agreement*, as noted above, will be replaced by the EPA between the EU and the Cariforum countries (initialled on 16 December 2007) as the WTO waiver for the preferential system expired on 31 December 2007.

<sup>357</sup> The coffee industry employs about 25,000 people directly and 150,000 indirectly. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 15.

<sup>358</sup> The banana industry accounts for 6,000 jobs in Jamaica. *Ibid.*

<sup>359</sup> FAO Commodities and Trade Division, *Agriculture, Trade and Food Security: Issues and Options in the WTO Negotiations from the Perspective of Developing Countries. Volume II: Country Case Studies* (Food and Agriculture Organization, Geneva), 2000, Chapter 7 Section 3.1, available at: [www.fao.org/docrep/003/X8731e/X8731e00.htm](http://www.fao.org/docrep/003/X8731e/X8731e00.htm), visited on 7 January 2008.

<sup>360</sup> Jamaica benefited from the *Cotonou Agreement's* quota regime for banana imports from ACP countries. After this regime was found to be WTO incompatible, it was replaced in January 2006 by a tariff only regime. This was also found to be inconsistent with the terms of the relevant waiver. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 15.

<sup>361</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>362</sup> Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV para. 12.

<sup>363</sup> Henson and Jaffee report that Jamaica's banana exports declined by half and its sugar exports declined by 33% between 1997 and 2003, and that further major contraction is expected in the coming years. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>364</sup> Henson and Jaffee note that while the Jamaican government is relying on growth in the tourism industry to reduce the growing trade deficit, 'there is some hope and expectation that the country can increase its exports in a broadly diversified range of fruits and vegetables, fishery products and processed foods'. *Ibid.* Non-traditional products made up 27% of agricultural and food exports from Jamaica in 2000. They are mainly exported to the US, followed by the UK and Canada. See Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 109.

traditional products, namely (1) a broad range of fruit and vegetables; (2) fishery products; and (3) processed foods.<sup>365</sup> The non-traditional fruit and vegetable exports mainly take the form of staples in the Jamaican diet (such as yam,<sup>366</sup> papaya,<sup>367</sup> ackee,<sup>368</sup> sweet potato and hot pepper) and have been destined mostly for Africa, Asian and Caribbean immigrant communities in Canada, the UK and the US or for exports to other Caribbean countries.<sup>369</sup> This is part of the growing phenomenon of trade in 'ethnic foods' stimulated by migration of developing country nationals as well as by travel and demand for variety by developed country nationals.<sup>370</sup> Jamaica's non-traditional exports of fishery products, which grew strongly through the 1990s,<sup>371</sup> are mainly concentrated in conch, tilapia and lobster. As these non-traditional products are mostly produced by small-holder farmers or artisanal fishers in Jamaica,<sup>372</sup> the expansion of this trade holds much potential for poverty reduction in rural areas.<sup>373</sup> However, it is precisely with regard to this type of exotic, high-value food products that demanding SPS measures in import markets are rife. In order for Jamaica to be able to diversify into this lucrative niche market, it needs to en-

<sup>365</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee report that Jamaica's trade in non-traditional products rose rapidly in the early 1990s (from US\$45 million in 1990 to US\$75 million in 1994) and is now between US\$70-85 million per year, although the export revenues from specific non-traditional products have varied widely due, in part, to difficulties meeting SPS requirements of trading partners. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 8, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>366</sup> Jamaica accounts for 50% of world exports of yams. It produces about 150,000 tons of yams, of which 10,000-12,000 tons are exported. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 41, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>367</sup> The papaya sector is the most integrated of the indigenous food sectors in Jamaica. Three producers (a subsidiary of a US company and two farmers contracted to it) dominate export trade in this product. *Ibid.*, 44.

<sup>368</sup> Exports of ackee accounted for US\$7.2 million in export revenue in 2002, up from US\$5.6 million in 2001. The livelihood of around 50,000 Jamaicans comes from ackee production and a further 3,700 are employed in the ackee processing and canning sectors. *Ibid.*, 45.

<sup>369</sup> *Ibid.*, 4. These three markets accounted for 95% of Jamaica's exports of non-traditional agricultural products in 2000. Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 109.

<sup>370</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 4-5, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>371</sup> *Ibid.*, 34. In the late 1990s, fishery products accounted for US\$16-19 million of foreign revenue earnings for Jamaica, and amounted to 1.2% of total merchandise exports. Jamaica is an important exporter of conch, destined mainly for the EU French Caribbean territories of Martinique and Guadelupe. Smaller amounts are exported to the US and other parts of the EU.

<sup>372</sup> *Ibid.*, 5.

<sup>373</sup> Supply of non-traditional products takes place by between 3, 500 and 4, 000 producers. These small producers also supply the domestic market. Exports are usually channelled through intermediaries, who sometimes source a product from over 100 farmers. Due to limited irrigation, many farmers rely on rainfall, making supply unreliable. *Ibid.*, 9.

sure that it can meet the SPS requirements of its trading partners. For this, Jamaica must develop public and private sector capacity. However, as the trade volume of each of these non-traditional products on its own is still small, it is difficult to create incentives for the investment in the public and private infrastructure needed for this purpose.<sup>374</sup>

The Ministry of Foreign Affairs and Trade of Jamaica is responsible setting international trade policy,<sup>375</sup> including policy with regard to trade-related SPS issues. Within this Ministry, a Trade Coordination and Policy Committee was established in 1992, with the aim of coordinating trade matters and promoting public/private cooperation.<sup>376</sup> In addition, the Jamaica Trade Adjustment Team, composed of representatives of industry and civil society and officials of ministries and departments active in the area of trade, establishes a consultative forum that informs the trade policy formulation process.<sup>377</sup>

Jamaica's trade and development policy aims are elaborated in the National Industrial Policy 1996-2010, which has as its objectives the improvement of quality of life in Jamaica and the efficiency of the Jamaican economy by promoting growth in GDP and increasing the value of exports. Among the economic areas targeted by this policy is agri-processing. The National Industrial Policy was supplemented by the New Trade Policy developed by the Ministry of Foreign Affairs and Trade in 2001. One of the main objectives of the New Trade Policy is to move away from the previous focus on preserving preferential trade arrangements and to promote the expansion and diversification of trade.<sup>378</sup> It therefore aims to enhance Jamaica's export capacity by, *inter alia*, building human and physical resources, broadening its export base, negotiate for the removal of tariff and non-tariff barriers and engaging in sector- or issue-specific negotiations to address supply side constraints.<sup>379</sup> From these policy documents it is evident that in order to meet its trade and development objectives, Jamaica will need market access for its agricultural and food products, particularly for non-traditional products, and assistance in addressing supply-side constraints in this sector.

The Jamaican government's *Agricultural Policy Framework* aims at food security and poverty alleviation.<sup>380</sup> To achieve these aims, *inter alia*, the following tools are mentioned: enhanced efficiency and productivity in the various subsectors (including traditional and non-traditional crops); increased exports of traditional and non-traditional agricultural products; provision of support services such as research, development and training; re-

---

<sup>374</sup> Henson and Jaffee state that aside from yam, which exceeds US\$10 million per year in export value, non-traditional agricultural exports only earn a few million dollars of export revenue each per year. It is therefore difficult to mobilise sufficient resources or to achieve economies of scale to address SPS challenges. *Ibid.*, 8-9.

<sup>380</sup> *Ibid.*, Section IV para. 19.

habilitation of infrastructure and improving agri-processing.<sup>381</sup> Some agricultural support services provided by the Jamaican government are livestock research and improvement, crop research and plant protection, advisory services and veterinary services (including artificial insemination, laboratory services and training).<sup>382</sup> In order to promote the development of the food processing industry, increase rural incomes and earn foreign exchange through exports, the government of Jamaica has used funding from the US to implement a fruit tree crop project. It provides for developing and producing commercial orchards of indigenous fruit tree crops.<sup>383</sup> Another project to support the agricultural industry is the Eastern Jamaica Agricultural Support Project. This project was implemented from 2000 to 2004, giving support to small-scale farmers to increase production of non-traditional agricultural products with a competitive advantage on export markets.<sup>384</sup> In addition, the Jamaican government supports its agricultural industry through imposing high tariffs on imports of agricultural products that compete with local farmers.<sup>385</sup>

### 2.6.1.5 Summary of factual background

This factual background aims to provide an indication of the health and trade priorities in Jamaica as the context within which the relevance of the *SPS Agreement* for its health and trade objectives can be understood. As a net importer of food and agricultural products, Jamaica has an important interest in the safety of imported food and agricultural products. However, SPS protection is unlikely to be one of Jamaica's highest priorities in the area of health spending. More pressing health priorities are primary health care, the prevention of violence and the fight against HIV/AIDS.

It appears that while Jamaica's main source of export revenue is not agricultural products but rather tourism services, agriculture plays an important role in poverty alleviation as a major source of employment and domestic food production. However, the main traditional export crops in Jamaica are uncompetitive and thus dependent on preferential market access. Preference erosion and stricter product standards threaten the viability of this export industry.

In addition, burgeoning export trade in non-traditional agricultural products, which are mainly produced by small-scale farmers and thus important for poverty alleviation in Jamaica is constrained by SPS barriers. Therefore strengthening the non-traditional agricultural export industry, particularly by improving the ability of exporters to meet the legitimate SPS requirements on their export markets, or ensuring that Jamaica can effectively challenge those requirements that are not legitimate, is essential to Jamaica's development.

It is now necessary to examine Jamaica's SPS regime in order to establish its ability to meet these challenges. This section will therefore proceed to give an overview of the SPS

<sup>381</sup> *Ibid.*

<sup>382</sup> These agricultural support measures cost US\$9.3 million in 1999-2000 and US\$13.9 million in 2002-2003. *Ibid.*, Section IV para. 32.

<sup>383</sup> The J\$100 million needed for this project was covered by funds made available under the United States' Agricultural Trade Development and Assistance Act. *Ibid.*, Section IV para. 36 and Table IV.34.

<sup>384</sup> The EU funded €6 million of the costs of this project and the remaining €1.1 million was funded by the Jamaican government. *Ibid.*, Section IV para. 37 and Table IV.34.

regime currently in place in Jamaica, and will provide examples of some problems, both with regard to SPS measures applied by Jamaica and with regard to Jamaica's ability to comply with the SPS measures of its trading partners.

## 2.6.2 Jamaica's SPS system

### 2.6.2.1 Food-safety system

Responsibility for different aspects of food safety in Jamaica is divided between the Ministry of Health,<sup>386</sup> the Ministry of Agriculture and Lands and the Ministry of Commerce, Science and Technology. In addition, the Bureau of Standards of Jamaica (BSJ) plays an important role in the food safety system. This fragmented system is sketched below.

The Ministry of Health has three divisions, the Standards and Regulation Division, the Health Promotion and Public Health Division, and the Planning and Integration Division. The Health Promotion and Protection Division is in charge of food safety policy, also with regard to zoonoses.<sup>387</sup> Enforcement is decentralised into four regional authorities, which are responsible for health services in their regions, such as food safety inspections and veterinary public health inspections.<sup>388</sup> The regional authorities have 150 food safety inspectors and 14 veterinary inspectors.<sup>389</sup> The Health Promotion and Inspection Division of the Ministry of Health has an Environmental Health Unit, which cooperates with regional inspectors with regard to training, planning and setting priorities. However, this Unit has only one food safety officer and one veterinary public health officer.<sup>390</sup>

The Ministry of Commerce, Science and Technology bears responsibility for preventing contamination and infestation of both domestic and imported food and feed, in particular through its Food Storage and Prevention of Infestation Division (FSPID).<sup>391</sup> The FSPID aims to control pests, contaminants and residues in food and may condemn and destroy infested or contaminated food. There are 15 FSPID inspectors.<sup>392</sup>

The Ministry of Agriculture and Lands, through its Veterinary Services Division, is responsible for food-safety certification of meat and fishery products for export.<sup>393</sup> However, it has no authority to inspect meat or fish processing establishments, as this competence lies

---

<sup>386</sup> The competences of the Ministry of Health with regard to food safety are set out in the *Public Health Act* of 1985 and the *Food and Drugs Act* of 1974. Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/ WTO and Commonwealth Secretariat, Geneva), 2004, 110.

<sup>387</sup> *Ibid.* Zoonoses are animal diseases that can be transmitted to humans, for example Bovine Spongiform Encephalopathy that can cause Creutzfeldt-Jakob disease in humans.

<sup>388</sup> *Ibid.*

<sup>389</sup> *Ibid.*

<sup>390</sup> *Ibid.*

<sup>391</sup> *Ibid.* The FSPID operates under the *Food Storage and Prevention of Infestation Act* of 1958 and its Regulations of 1973.

<sup>392</sup> *Ibid.*

<sup>393</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 11, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

with the Ministry of Health and the BSJ. This lack of coherence in the allocation of competences created problems for Jamaica's fishery exports to the EC, as discussed below. A Memorandum of Understanding had to be signed between the Ministry of Agriculture and Lands and the Ministry of Health in terms of which inspections by officials of the Ministry of Health are recognised for export certification purposes by the Ministry of Agriculture and Lands.<sup>394</sup>

Food-safety standards (as well as other technical standards) are set by the BSJ, under the authority of the Ministry of Commerce, Science and Technology.<sup>395</sup> The mission of the BSJ is 'to promote the international competitiveness of Jamaican products, facilitate trade and protect consumers'.<sup>396</sup> Mandatory requirements are established in terms of the *Processed Food Act* of 1959 and voluntary standards in terms of the Standards Act of 1968.<sup>397</sup> The Standards Council<sup>398</sup> is set up to give general policy and administrative guidance to the work of the BSJ.<sup>399</sup> The standard-setting procedure is as follows.<sup>400</sup> The Standards Council authorises the commencement of work on new or amended (sanitary or technical) standards, upon initiative of BSJ staff, BSJ committees or national organisations.<sup>401</sup> Once authorised, the work is referred to one of the 36 standing technical committees, or if none exists for the relevant issue, a new committee is formed.<sup>402</sup> The actual standard-setting work is carried out by these committees, in which consumer and industry interests and the public sector are represented.<sup>403</sup> Very little use is made of international

<sup>394</sup> *Ibid.*

<sup>395</sup> The BSJ was established in 1969 by the *Standards Act* of 1963, under Art. 3. It also sets standards and specifications in non-food-related areas. For further information on the work of the BSJ, see its website, available at: [www.jbs.org.jm](http://www.jbs.org.jm), visited on 8 January 2008.

<sup>396</sup> Mission Statement of the BSJ, in its Citizens' Charter, available online at: <http://www.jbs.org.jm/charter.htm>, visited on 8 January 2008.

<sup>397</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 110. The Standards Act of 1968 is available at: [http://www.jbs.org.jm/regulations/standards\\_act.pdf](http://www.jbs.org.jm/regulations/standards_act.pdf), visited on 8 January 2008 and the *Processed Food Act* of 1959 is available at: [http://www.jbs.org.jm/regulations/processed\\_food.pdf](http://www.jbs.org.jm/regulations/processed_food.pdf), visited on 8 January 2008.

<sup>398</sup> The Standards Council is composed of the Director of Standards and 13 other members, namely, one former senior civil servant, one representative of the interests of the agricultural producers, three representatives of manufacturers, wholesalers and retailers, three representatives of consumer interests, and four persons in government service. See The Standards Act, Act 58 of 1968 (the Standards Act), in force on 15 July 1969, Second Schedule, Art.1.

<sup>399</sup> The Standards Act, Art. 4(1).

<sup>400</sup> This procedure is detailed in the foreword to the *Catalogue of Jamaican Standards* of the BSJ (as updated in 2001), available at: [http://www.jbs.org.jm/standards/section\\_one\(sectional\\_list\\_of\\_jamaican\\_standards\)\(part1\).pdf](http://www.jbs.org.jm/standards/section_one(sectional_list_of_jamaican_standards)(part1).pdf), visited on 8 January 2008.

<sup>401</sup> The possibility for initiatives from the private sector was introduced in 2001, during the restructuring of the BSJ. This was done in order to increase participation by industry and consumer groups and public sector experts.

<sup>402</sup> Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section III para. 82. These committees are composed of, *inter alia*, representatives of consumer interests, the public and manufacturing sectors.

<sup>403</sup> Before July 2001, standards were drafted by committees of volunteers set up by the BSJ and approved by the Standards Council. As these committees were sometimes not representative of the industry for which the standard was drafted, implementation of standards was often problematic. Since the 2001 restructuring of the BSJ, new technical committees are set up by the industry stakeholders with regard to the standard being set, and approved by the Standards Council. These technical committees evaluate the need for a new standard and

guidelines for risk analysis.<sup>404</sup> It has been reported that, due to the limited availability of scientific information, an *ad hoc* approach is followed with regard to risk assessments for fresh produce.<sup>405</sup> The resulting draft standard is approved by the Standards Council and forwarded to the Minister of Commerce, Science and Technology, to obtain approval of any other Minister in whose portfolio the standard falls. Thereafter, the draft standard is made available for public comment.<sup>406</sup> Comments received are considered by the relevant technical committee and a final standard is drafted. The Standards Council then recommends the standard to the Minister for approval. The Council may recommend that a particular standard be made compulsory (i.e. be promulgated as a sanitary or technical regulation). Where it appears to him necessary to do so in the public interest, the Minister may declare a standard to be compulsory.<sup>407</sup> Approved standards and regulations are published in the Government Gazette and copies made available for sale.

By 2001, the BSJ had established 66 food-related standards,<sup>408</sup> for example standards for frozen foods, fruit juices, meat products and sauces. The BSJ policy is to make effort to adopt international food-safety standards, particularly those of the Codex Alimentarius Commission and those of CARICOM.<sup>409</sup> If this is not possible, it uses international standards in the development of national standards.<sup>410</sup> In practice BSJ food standards are largely based on Codex standards although sometimes adjusted according to local requirements.<sup>411</sup> In 2002, the CARICOM Regional Organisation for Standards and Quality (CROSQ) was established in response to the need for more formal standard-setting to improve the competitiveness of Caribbean goods.<sup>412</sup> The primary objective of the CROSQ is to develop and harmonise regional standards to facilitate trade and improve consumer protection.<sup>413</sup> However, as noted by the Executive Secretary of the CROSQ, Kenneth Mullin, there is growing recognition in the region that most new standards are being

---

draft the standard if necessary. This aims to create 'ownership' of resulting standards by the industry. The BSJ acts as facilitator in the standard-setting process. See the standards development section on the BSJ website, available at: <http://www.jbs.org.jm/standardization.htm>, visited on 8 January 2008.

<sup>404</sup> Janice Reid, *Needs Analysis of the Readiness of Jamaican Institutions for WTO-SPS: Executive Summary* (Inter-American Institute for Cooperation on Agriculture, Kingston), April 2000, 7, available at: [www.agroinfo.org/caribbean/iicacarc/jamaica/summary.pdf](http://www.agroinfo.org/caribbean/iicacarc/jamaica/summary.pdf), visited on 7 January 2008.

<sup>405</sup> *Ibid.*

<sup>406</sup> A notification is placed in the press inviting all interested parties to comment. In addition, copies of the standard or regulation are sent to those known to be interested in the subject of the standard.

<sup>407</sup> *The Standards Act*, Art. 7(7).

<sup>408</sup> The most recent version of the *Catalogue of Jamaican Standards* that is available on the website of the BSJ is that published in 2001, available at: <http://www.jbs.org.jm/standards.htm>, visited on 28 December 2007.

<sup>409</sup> International standard setting by the Codex Alimentarius Commission is discussed below, Part II, Section 3.2.1.

<sup>410</sup> See the standards development section on the BSJ website, available at: <http://www.jbs.org.jm/standardization.htm>, visited on 20 December 2007.

<sup>411</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 115.

<sup>412</sup> The *Agreement establishing the CARICOM Regional Organisation for Standards and Quality (CROSQ)* signed at Belize City on 4 February 2002. The CROSQ replaces the Caribbean Common Market Standards Council, an informal grouping of national standard-setting organization, which had no own staff, and thus established few standards (27 food standards by 2001). See *Ibid.*, 121-122. See also the website of CROSQ, available at: <http://www.crosq.org>, visited on 8 January 2008.

<sup>413</sup> Art. 4(1) of the *Agreement establishing the CARICOM Regional Organisation for Standards and Quality*.

developed at the international level and that it is more important for the region to participate effectively in international standard setting than to set its own standards.<sup>414</sup> The CROSQ is therefore not very active in regional standard setting.<sup>415</sup> Instead its priority is to assist regulatory bodies and the private sector in the region to implement international standards and to coordinate regional positions for participation in international standard setting.<sup>416</sup>

Jamaica has experienced great problems with regard to the acceptance of its standards on export markets, particularly where these are not based on international standards. The absence of standards with respect to many products of export interest to Jamaica is therefore clearly problematic. Interestingly, the BSJ sometimes takes over the SPS requirements of its trading partners, namely those of the US and the UK, in its own standard setting.

Food safety regulations may also be made by the Minister of Health consistent with the terms of the *Processed Food Act* in order to carry out its purposes, including regulations prescribing standards of purity, composition or other quality of food destined for domestic consumption or exportation,<sup>417</sup> and regulations with regard to processes or production methods for food to protect consumer health.<sup>418</sup> The *Processed Food Act* of 1959 lays down guidelines for the preparation and packaging of processed foods, including those intended for export.<sup>419</sup> It requires the registration and inspection of any establishment where food for which standards have been prescribed is produced or processed for domestic sale or for export.<sup>420</sup> This inspection is carried out by the BSJ which bears responsibility for approving establishments. However, the Ministry of Health is responsible for sanitary requirements for milk and dairy products produced in establishments approved by the BSJ, leading to overlapping regulatory responsibilities.<sup>421</sup> The Act also lays down penalties (fines or imprisonment) for contravention of its provisions or for the offering to, or acceptance by, inspectors of bribes in connection with matters under the Act.<sup>422</sup>

The BSJ undertakes conformity assessment of imports and domestic products with regard to SPS requirements. For this purpose it carries out inspections at factories and points of entry and conducts random inspections and testing at retail level.<sup>423</sup> The BSJ

<sup>414</sup> Message from the Executive Secretary, *The CROSQ Standard* 1(2), 2007, 1.

<sup>415</sup> Although a list of standards in development is provided by the CROSQ, including 16 standards for food products, there is neither any information on the stage of development of these standards, nor any publication of finalized standards available on the CROSQ website. See the website of CROSQ, available at: <http://www.crosq.org>, visited on 8 January 2008.

also administers a system for certification of compliance with requirements of its trading partners. Certification by the BSJ is in certain cases accepted by importing countries under informal arrangements.<sup>424</sup> Finally, note that the BSJ functions as Jamaica's Codex Contact Point.

Pesticide residues in food can create food-safety risks. Responsibility for control of pesticides in Jamaica lies with the Pesticides Control Authority, an agency of the Ministry of Health. This Unit consists of four technical staff members.<sup>425</sup> Its duties include registration and approval of pesticides, control of domestic pesticide use and of pesticides in imported food and agricultural products, and analysis of pesticide residues.<sup>426</sup> Pesticide approval in Jamaica does not occur on a crop-by-crop basis but instead is for use in agricultural production in general. No national maximum residue levels for pesticides are set in Jamaica – instead it uses the residue levels set by the Codex Alimentarius Commission, as necessary.<sup>427</sup> However, for many of the non-traditional fruit and vegetables exported by Jamaica, no Codex MRLs have been established.<sup>428</sup> In addition, in many cases Jamaica's trading partners do not establish specific MRLs for these products. Due to the lack of scientifically established MRLs, the residue limit applied at point-of-entry inspections is the LOD, i.e. the level at which analytical instruments can detect any residue.<sup>429</sup> These very strict limits are imposed for purely practical purposes in the absence of specific MRLs rather than due to the identification of particularly serious risks from pesticide residues on the relevant products. However, their implications for Jamaican exports are severe since the detection levels of the sophisticated testing equipment available in Jamaica's trading partners are extremely low. The problem of these strict requirements for pesticide residues is greatly exacerbated by the fact that, due to limited resources in Jamaica, the controls in place on pesticide use and residue levels are weak. This leads to widespread misuse of pesticides by producers, including by application at the wrong concentration, frequency and/or interval before harvest.<sup>430</sup> This misuse has partly been attributed to producers'

<sup>426</sup> *Ibid.*

<sup>427</sup> *Ibid.*

<sup>428</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 40, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>429</sup> *Ibid.*, 41. Henson and Jaffee note that the small volume of production and trade in non-traditional agricultural products means that there is no incentive for agro-chemical companies to supply the data necessary for establishing an MRL for each of these products. Similar disincentives can be supposed to exist for importing countries to invest in the necessary analyses to establish the relevant MRLs for products traded in such small volumes. The application of a limit set at the level of determination avoids any risk in the absence of specific MRLs.

<sup>430</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 118. Henson and Jaffee note that non-traditional agricultural products are produced by small-holder farmers who lack awareness and training in the proper use of pesticides. Resource limitations have

attempts to avoid rejection of their products by the US, which applies a ‘zero tolerance’ policy with regard to pests.<sup>431</sup> Small farmers are reportedly resistant to changing these practices.<sup>432</sup> Due to the inadequacy of the laboratories in Jamaica to handle large volumes of samples, discussed below, routine residue testing of fresh produce is not carried out.<sup>433</sup>

National food safety legislation in Jamaica is, in many cases, outdated, or poorly implemented. Efforts have been made to modernise national regulations where necessary to meet requirements on Jamaica’s export markets, to comply with international standards and to facilitate enforcement.<sup>434</sup> In some cases new food-safety legislation was drafted but left unadopted until demand arose from potential export markets. For example, before Jamaica was confronted with the need to meet EC requirements on fish and fishery products in order to gain market access, it had no legislation in force in this area. In 1991, as discussed below, the *Aquaculture, Inland and Marine Products and By-Products (Inspection, Licensing and Export) Act* was drafted based on the relevant EC Directives,<sup>435</sup> imposing hygiene requirements for fish and fishery products broadly equivalent to those of the EC.<sup>436</sup> As the new EC requirements were not fully implemented until the late 1990s, the draft Jamaican legislation was left unadopted until 1999 when it was necessitated by the imposition of the relevant EC hygiene requirements.<sup>437</sup> Similarly updated legislation in the meat sector aims at facilitating exports to the US and EC.<sup>438</sup>

Laboratory facilities in Jamaica have the capacity to conduct a wide range of tests but significant problems remain particularly in the light of the new tests and increased sensitivity of analysis currently required in Jamaica’s export markets.<sup>439</sup> The National Public Health Laboratory undertakes laboratory testing for food safety purposes.<sup>440</sup> It is responsible for microbiological testing and surveillance of meat, fish and dairy products. While its

---

restricted government initiatives to provide training to farmers. Instead training is provided by agro-chemical companies, focusing on how to address a pest using their pesticides rather than on how to reduce pesticide use.

facilities are relatively up-to-date and capable of carrying out many, albeit not all, of the analyses required by Jamaica's trading partners, it is not adequate for high-volume quick turnaround analyses.<sup>441</sup> Facilities need to be upgraded and staff must be retrained.<sup>442</sup> Five additional laboratories, none of which are internationally accredited, are run by the FSPID of the Ministry of Industry, Commerce and Technology. These laboratories are responsible for testing with regard to entomology, microbiology, pesticide residues, mycotoxins and post-harvest technology, but are staffed by only three persons.<sup>443</sup> The chemical residue laboratory can test for most residues except heavy metals.<sup>444</sup> The mycotoxin laboratory is only able to conduct semi-quantitative tests so that samples in which mycotoxins are detected must be sent elsewhere for quantitative testing. In addition resource constraints have led to shortages in solvents and other chemicals as a result of which the equipment is operating at only 40 to 50 percent of its capacity.<sup>445</sup> Testing backlogs occur when there is a surge in samples due to the limited capacity of the equipment.<sup>446</sup> The FSPID is struggling with the cost of maintenance of laboratory equipment. For example, equipment software must be updated every three years to incorporate new chemical residues. Further, there is only one engineer in the region able to service the chemical residue equipment and he must be flown in at great cost for maintenance work.<sup>447</sup> The fragmentation of laboratory capacity means that economies of scale cannot be exploited to reduce costs.

Another area where human capacity is important is in the implementation of HACCP requirements. HACCP implementation is still in its early stages in Jamaica, although the 30 inspectors of the Veterinary Services Department of the Ministry of Agriculture and Lands are fully trained in the HACCP system.<sup>448</sup> The fish processing industry is fully HACCP compliant. However, capacity with regard to HACCP system implementation needs to be developed further.<sup>449</sup> Funding has been received from the Canadian Food Inspection Agency to train staff of the Food Storage and Prevention of Infestation Division of the Ministry of Industry, Commerce and Technology in this area.<sup>450</sup>

While no trade concerns have been raised at the SPS Committee with regard to sanitary measures taken by Jamaica, some such concerns have been discussed at the meeting of the Trade Policy Review Body in 2005, in the context of the trade policy review of Jamaica. At this meeting, the US inquired about the scientific basis for the application by Jamaica of the same SPS requirements for processed, packaged, dry products that contain minor amounts of dairy content as for fresh dairy products, whereas the former pose a different level of risk than the latter.<sup>451</sup> Jamaica clarified that all processed animal products, including milk-based products, in Jamaica are required to be certified by the official regulatory agency as being wholesome, safe and fit for human consumption. Such certification

<sup>445</sup> *Ibid.*, 111.

<sup>446</sup> *Ibid.*

<sup>447</sup> *Ibid.*, 112.

<sup>448</sup> *Ibid.*

<sup>449</sup> *Ibid.*

<sup>450</sup> *Ibid.*

<sup>451</sup> Trade Policy Review Body, para. 5.5.

addresses the process or production method of the product, for example pasteurisation or ultra-heat treatment of milk in order to render it safe to use in milk-based products. Jamaica pointed out that when animal products that are allergen producing, such as dairy, are contained in a processed product, the amount of that ingredient is irrelevant to the allergenic response.<sup>452</sup>

A well-functioning sanitary regime is not only important for Jamaica's public health objectives but also to its trade objectives. Market access for food products depends on the ability of Jamaican exporters to meet the food-safety requirements of its trading partners. Particularly in view of Jamaica's attempts to diversify its agricultural exports into high-value, non-traditional food products, it is important to ensure that its trading partners have confidence in the capacity of its exporters to guarantee high levels of food safety. Where the sanitary requirements set in national legislation in Jamaica are not as strict as those set by its trading partners, private investment in meeting these requirements and demonstrating compliance is necessary. This is made difficult by the greatly fragmented nature of production and export in the non-traditional agricultural sector (except in the case of more integrated sectors such as papaya and fish processing).<sup>453</sup> Investments to comply with SPS requirements beyond those necessary on the domestic market are not economically viable for small producers or exporters.<sup>454</sup> As a result there is little or no food-safety control capacity in the private sector. No collective efforts are made in the private sector to develop such capacity, for example by drafting industry codes of practice.<sup>455</sup> In addition, traceability through the supply chain is almost entirely lacking,<sup>456</sup> making it difficult to document compliance particularly with regard to farm-to-fork process standards such as HACCP. For this reason, government action is essential to assist exporters in gaining market access abroad, for example by updating food-safety legislation to reflect export standards, effective compliance control, and proactive efforts to find solutions in consultation with trading partners.

It is elucidating to examine the extent to which Jamaica has been able to assist its food exporters that face problems due to sanitary trade barriers. Some examples are those of fishery exports and of indigenous food products to the EU and US that were restricted by food-safety requirements. It is interesting to look at these SPS restrictions in more detail and to examine whether, and if so how, they have been addressed.

---

<sup>452</sup> *Ibid.*

<sup>453</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 15, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>454</sup> As mentioned above, Henson and Jaffee report that almost all non-traditional agricultural exports are sourced from hundreds of smallholder farmers or artisanal fishers. Their production is not dedicated to export but also supplies the domestic market. Thus there are diseconomies of scale in investing to meet demanding SPS requirements on export markets. Also export is fragmented with some 35 active firms, each with a turnover of only a few million dollars a year. This is different in the case of papaya, where 3 major producer-exporters dominate trade. *Ibid.*, 9.

<sup>455</sup> *Ibid.*, 15. Henson and Jaffee note that although the Jamaica Exporters' Association has been created as part of private sector efforts to promote exports of non-traditional food and agricultural products, it is not active in creating food-safety capacity. Instead it focuses on providing capital, lobbying and trade show administration.

<sup>456</sup> *Ibid.*, 9.

### 2.6.2.1.1 Examples of food-safety measures affecting Jamaican exports

As mentioned above, Jamaica has developed a small but profitable export industry in fish and fishery products in the early 1990s. The fishery industry is in the hands of artisanal fishers and employs 20,000 fishers along 184 landing beaches.<sup>457</sup> It is traditionally unregulated to a large extent. The Veterinary Services Division is responsible for checking compliance with food safety requirements but it lacks inspection capacity and the legislative authority to inspect and certify products for export.<sup>458</sup> In 1991, new hygiene requirements for fisheries were set by the EC in new Directives,<sup>459</sup> but the deadline for implementation of at least equivalent hygiene controls for marine gastropods,<sup>460</sup> bivalve molluscs, tunicates and echinoderms was only 31 June 1998.<sup>461</sup> Therefore, although Jamaica drafted the *Aquaculture, Inland and Marine Products and By-Products (Inspection, Licensing and Export) Act* in 1991, it left it unadopted. Jamaica's failure to meet the implementation deadline for the EC's new hygiene requirements led to a ban on Jamaican exports of conch. Other Jamaican exports of fish and fishery products were provisionally permitted. As noted above, this led to the adoption of the new legislation, the *Aquaculture, Inland and Marine Products and By-Products (Inspection, Licensing and Export) Act* in 1999, incorporating EU requirements.<sup>462</sup> However, this legislation was poorly implemented and control of the production process was inadequate.<sup>463</sup> In 1999, an inspection visit of the Food and Veterinary Office of the European Commission to Jamaica discovered discrepancies in Jamaica's sanitary regime for fish and fishery products, leading to food-safety concerns.<sup>464</sup> The inadequate implementation and monitoring of the relevant requirements was noted. The processing plants were found not to comply with EU requirements regarding water control, pest and vermin control and maintenance and production conditions.<sup>465</sup> The implementation of HACCP was still in its early stages, with critical control points having been identified but not yet monitored or verified.<sup>466</sup> In addition, laboratory

<sup>466</sup> *Ibid.*

facilities for microbiological and residue testing were regarded as inadequate.<sup>467</sup> Jamaica undertook considerable efforts to rectify the problems with its sanitary regime for fish and fishery products, resulting in only a few remaining discrepancies being identified in a second inspection visit in April 2000.<sup>468</sup> After written assurances had been provided by the Jamaican government that also these problems had been remedied, the EU, in December 2000, established special conditions for imports from Jamaica and added Jamaica to its list of approved countries for the export of fish, fishery products and marine gastropods to its market.<sup>469</sup> Among these conditions was the identification of the area from which conch exports to the EU could be sourced, namely Pedro Bank, and requirements regarding record-keeping, water monitoring, microbiological and contaminant analyses, and upgrading of vessels.<sup>470</sup> It is reported that six plants and six freezer vessels were approved for export to the EU by 2004.<sup>471</sup>

Jamaica has doubts as to the appropriateness of the EU requirements for its fisheries. In particular, the EU's maximum levels and monitoring requirements for coliforms and biotoxins are argued by Jamaica to be more appropriate for the areas where marine gastropods, tunicates, echinoderms and bivalve molluscs are typically produced in Europe, namely shallower, in-shore waters, than for the deep water fishery of Pedro Bank in Jamaica.<sup>472</sup> These concerns, however, have not been officially communicated to the EU.<sup>473</sup>

The delayed fashion in which Jamaica responded to the EU's sanitary requirements for fisheries has been attributed, in part, to the considerable investments required.<sup>474</sup> Jamaica had to create mechanisms for the approval of processing plants, the issuance of health certificates and the monitoring of water and fish for contaminants. There were insufficient Veterinary Service Division inspectors for these tasks, and an understanding had to be reached with the Ministry of Health to use their inspectors.<sup>475</sup> Laboratories had to be upgraded to carry out the required analyses.<sup>476</sup> Private investments by fish processors were

<sup>475</sup> *Ibid.*

<sup>476</sup> *Ibid.*

also undertaken.<sup>477</sup> Additional ongoing public investments are needed to operate this new sanitary system and to upgrade its capacity.<sup>478</sup>

As noted above, Jamaica has been trying to develop its export industry with respect to indigenous agricultural and food products. These indigenous products such as callaloo, yam, hot peppers and ackee, provide a living for approximately 50 000 Jamaicans. As noted above, the US, together with the UK and Canada, constitutes Jamaica's whole export market for these indigenous products. An important impediment to trade in these products is the problem of compliance with strict MRLs for chemicals in fresh produce.

Some indigenous food products that reportedly face problems meeting food-safety requirements when exported to the US market are yams and callaloo (a spinach-like vegetable). These problems are due to fungicide and pesticide residues. In the case of yams, the fungicide commonly used in Jamaica to prevent the growth of blue mould on cut ends of yams during sea shipment is not registered by the US Food and Drug Administration (FDA).<sup>479</sup> Consequently the MRL is set at the analytical limit of determination.<sup>480</sup> Periodic spot checks by the FDA in 2000 detected residues of this fungicide leading to the loss of shipments by several large exporters. Although the US did not impose a ban on Jamaican yams, it only granted them provisional entry subject to the requirement that the next five shipments were certified as residue free by an approved laboratory.<sup>481</sup> Jamaica created the Yam Task Force to address this problem. It applied for permission from the FDA to use two other fungicides that were already approved for sweet potato and for which specific MRLs were established.<sup>482</sup> In the meantime it advised yam producers to use calcium

---

<sup>477</sup> *Ibid.* As hygiene controls were absent in processing plants, the cost of changes amounted to US\$740,000 per plant or US\$4.5 million industry-wide. Plants still depend on public capacity (e.g. public laboratories) to meet EU requirements.

<sup>478</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee point out that current capacity is only the minimum of what is required. Laboratory testing capacity must be improved to test for dioxins and steroids and to do quantitative analyses of antibiotic residues. Further, the laboratory must be accredited. Expenses to maintain the current capacity are expected to be high. Fees charged for laboratory tests recover only 50% of the costs and it is considered politically unacceptable to charge fees for processing plant inspections.

<sup>479</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 118.

<sup>482</sup> These two fungicides are Deccosol and Botran. However, the manufacturer of Deccosol has not provided the information necessary for approval of that product in Jamaica. As a result, the Ministry of Agriculture and Lands has approved only Botran and calcium hypochloride for use as fungicides on yams for export. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World

hypochlorite and to grow a smaller variety of yams that does not require cutting before export.<sup>483</sup> The FDA approved the alternative fungicides. However, as the alternative treatments are less effective in abating mould growth, it is suspected that Imazilil is still extensively used.<sup>484</sup>

With regard to callaloo, there have been recurring detections of pesticides exceeding US MRLs at US ports of entry.<sup>485</sup> Consequently, all shipments from the same exporter are automatically detained until a pattern of compliance with US requirements for pesticide residues has been re-established.<sup>486</sup> This problem is caused by the inadequacy of controls on pesticide use discussed further below.<sup>487</sup>

Many crops indigenous to Jamaica are also being restricted from market access to the EU due to pesticide residues. As mentioned above, this problem is exacerbated by the EU's latter's policy of setting MRLs for pesticides on tropical fruits and vegetables (such as yams and callaloo) at the LOD, due to the absence of commercial support to conduct the experimental trials that are necessary to establish specific MRLs on these products.<sup>488</sup> The EU has acknowledged the serious implications of this policy for many ACP countries. It has therefore implemented the Pesticides Initiative Programme through the Committee for Liaison for Europe and the African Caribbean and Pacific countries (COLEACP) to assist the producers in these countries to respond to this issue.<sup>489</sup> This programme aims to collect information on pesticide use in ACP countries and to support the establishment of MRLs for crops of interest to these countries.<sup>490</sup> Jamaica has been involved with the Pesticides Initiative Programme since 2000. An area under discussion is the application of the same MRL that is used for sweet potato to yams. These discussions reportedly had not borne fruit by 2004.<sup>491</sup>

<sup>491</sup> *Ibid.*

Another SPS problem limiting diversification to non-traditional exports relates to farm-to-fork food safety requirements for processed foods. Jamaica is developing an export industry in processed foods such as pepper sauces, soups, sauces and tinned products. While these were initially destined for Caribbean immigrants in the UK, US and Canada, the growing demand for ethnic foods among wider populations of developed countries has increased the market base.<sup>492</sup> Processed foods typically are subject to more stringent SPS requirements than fresh produce. Developed countries have HACCP requirements in place in many processed-food sectors to ensure a systems-wide approach to the prevention of food-safety risks. In 1973, due to the presence of the toxin hypoglycin in unripe ackee, the US placed an import alert on canned ackee. This was extended to all ackee exports to the US in 1993, effectively amounting to an import ban on Jamaican exports of this product.<sup>493</sup> Due to the importance of the US market for this product, Jamaica had a strong incentive to resolve the SPS problems to regain market access to the US. It took an active approach, engaging in bilateral discussions with US authorities to identify the problems and take the necessary action, with the support of financing from the US. These steps were (1) the implementation of a US-approved system of prior approval and regulation of ackee processors, including the requirement to implement a HACCP system in this sector, in terms of which four processors had been approved by 2001; and (2) the operation of a pre-clearance programme for fresh produce exports to the US (initially funded by USAID and now funded through a box levy on exports).<sup>494</sup> Jamaica developed a national standard for canned ackee in brine.<sup>495</sup> It has now implemented HACCP requirements with regard to canned ackee.<sup>496</sup> Exports of canned ackee to the US restarted in 2001.<sup>497</sup>

Other examples of processed food requirements affecting Jamaican exports are the US requirement that the details of the production process be filed with the FDA before market access is granted.<sup>498</sup> Prior approval of the production process is also required for acidified

<sup>498</sup> *Ibid.*, 46.

canned foods.<sup>499</sup> Jamaican processed foods have sometimes been rejected by the US due to the use of unapproved additives and colorants.<sup>500</sup> Compliance with process requirements requires a coordinated systems-wide approach, rather than *ad hoc* initiatives to deal with specific trade restrictions as they arise. More training of producers and processors is needed, particularly with regard to HACCP requirements.

### 2.6.2.2 Animal health system

Animal health is the responsibility of the Veterinary Services Department of the Ministry of Agriculture and Lands, with a staff of 55 persons, 48 of whom are technical staff.<sup>501</sup> The Veterinary Services Department is in charge of monitoring the incidence of animal diseases and setting and enforcing quarantine requirements. It operates a quarantine facility for this purpose.<sup>502</sup> This Department is additionally responsible for issuing import and export permits for meat and fishery products. Control of slaughtering and processing plants for export products is also in the hands of the Veterinary Services Department. However, control of slaughtering and processing plants for products intended for domestic consumption is the responsibility of the Ministry of Health.<sup>503</sup>

The World Organisation for Animal Health (OIE),<sup>504</sup> which maintains lists of countries recognised as free of particular animal diseases, lists Jamaica as free of ‘List A’ diseases, except for Newcastle disease.<sup>505</sup> Jamaica has, however, been free of Newcastle disease since 1969,<sup>506</sup> and is in the process of requesting recognition of its status as Newcastle disease free from the OIE. Screwworm and leptospirosis are endemic, however, and present problems for Jamaica’s trade in animal products.<sup>507</sup> With respect to several animal diseases, such as bovine tuberculosis, bovine brucellosis, classical swine fever and Newcastle disease, Jamaica conducts routine surveillance.<sup>508</sup>

Jamaica has implemented some projects to address animal health concerns in its territory. For example, in order to eradicate screwworms, and prevent re-infestation, a project was implemented from 1998 to 2001 and then extended until 2005, using government and do-

<sup>499</sup> *Ibid.*

<sup>500</sup> *Ibid.*

<sup>501</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 113.

<sup>502</sup> *Ibid.*

<sup>503</sup> *Ibid.*, 111.

<sup>504</sup> For a discussion of this international standard-setting organisation, see below, Part II, Section 3.2.2.

<sup>505</sup> List A diseases are the transmissible animal diseases that have the potential for very serious and rapid spread, irrespective of national borders (e.g. Foot-and-Mouth Disease, Newcastle Disease, Rinderpest, Rift Valley Fever). See Section 2.1.1 of the *Terrestrial Animal Health Code* (16<sup>th</sup> ed. May 2007) of the World Organisation for Animal Health.

<sup>506</sup> The last incidence of Newcastle disease in Jamaica according to the OIE database was in 1969 and the disease is under general surveillance.

<sup>507</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 113.

<sup>508</sup> *Ibid.*

nor funding.<sup>509</sup> In addition, Jamaica has made significant efforts to upgrade the capacity of the Veterinary Services Department, *inter alia* as noted above, to facilitate exports of fish and fishery products to the EU.<sup>510</sup> Once again, these efforts have been reactive, coming only after market access had been denied due to sanitary problems. While these efforts have proved sufficient to obtain the approval of Jamaica to export fish, fishery products and marine gastropods to the EU, further investment is required.<sup>511</sup>

Much of the animal health legislation in Jamaica is outdated, for example the *Animal Diseases and Importation Act* 1943 and the *Pets Import Regulations* of 1943.<sup>512</sup> Improvements in the area of animal health controls are driven by Jamaica's trade, rather than health, priorities. In response to sanitary requirements on its export markets, as noted above, Jamaica has enacted and implemented new legislation in this area, namely the *Meat and Meat Products (Inspection and Export) Act* of 1998 and the *Aquaculture, Inland and Marine Products and By-Products (Inspection, Licensing and Export) Act* of 1999.<sup>513</sup>

Meat and meat products are tested for veterinary drug and pesticide residues by a laboratory of the Veterinary Services Department. This laboratory has the capacity to test for most micro-organisms and some residues of antibiotics and pesticides.<sup>514</sup> Jamaica would like to achieve accreditation of this laboratory for biotoxin and residue testing to perform analyses at regional level. The laboratory was upgraded at an expense of J\$10 million but still requires further investment.<sup>515</sup> Human resource constraints are also a significant difficulty – there is a shortage of skilled staff and a high turnover rate.<sup>516</sup> A reported example of this problem is the fact that a high-performance liquid chromatograph was

<sup>509</sup> The Jamaican government spent US\$9.9 million from funds made available under the United States Agricultural Trade Development Act and also received funding from USAID and IAEA for this project. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. Revision*, WT/TPR/S/139/Rev.1, circulated on 9 March 2005, Section IV, Table IV.4.

<sup>510</sup> See above, Part II, Section 2.6.2.1.

<sup>511</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 113. Henson and Jaffee point out that investments to upgrade sanitary controls in the fishery sector in order to gain access to the EU market were driven by the public sector. Fishery firms depend for their continued compliance with EU requirements on laboratory testing services provided by the Ministry of Agriculture and Lands, as they are unable to make investments in this type of facilities themselves. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 39, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>515</sup> *Ibid.*

<sup>516</sup> *Ibid.*

acquired by the laboratory for US\$80,000 but could not be used due to lack of the necessary expertise.<sup>517</sup>

To guard against the introduction of animal pests or diseases through imported products, Jamaica's procedures for the importation of live animals or animal products require the consideration of relevant factors including the reported animal disease status of the exporting country; the implementation of the official regulatory agency's management or monitoring systems during production, slaughtering and processing; and the risk that importation, use and waste disposal of the animal products or their by-products may pose to Jamaica's human or animal population.<sup>518</sup>

In the discussions in the context of the latest trade policy review of Jamaica, the US noted that Jamaica has banned all US pork products due to the presence of Aujeszky's disease (pseudorabies) in certain states. As there have been no reported cases of Aujeszky's disease in the US since March 2003, the US asked Jamaica when it planned to remove its import ban.<sup>519</sup> Jamaica responded that its Veterinary Services Division will always respond to a request from the competent authority or an exporting country for an evaluation of that country's disease status and the implementation of its sanitary programme with respect to the production and processing of the relevant product.<sup>520</sup>

### 2.6.2.3 Plant health system

The responsibility for protecting plant health against harm from plant pests and diseases rests with the Plant Quarantine/Produce Inspection Unit of the Marketing Division of the Ministry of Agriculture and Lands. This unit is responsible for inspection of domestic controls and inspections as well as inspection of imports and exports.<sup>521</sup> It has 23 inspectors and three regional offices. The unit carries out its functions in cooperation with other government agencies, specifically the Rural Agricultural Development Authority, the Plant Protection Division of the Ministry of Agriculture and Lands and the Food Storage and Prevention of Infestation Division of the Ministry of Commerce, Industry and Technology.<sup>522</sup>

In an effort to improve plant protection in its territory, Jamaica has upgraded its *Plant Quarantine Act* of 1993 and *Agricultural Produce Act* of 1926.<sup>523</sup> It has also undertaken projects to deal with phytosanitary problems, for example, the Citrus Tristeza Virus, which is of concern to Jamaica's citrus sector. A project has been implemented with government funding, loans and grants to increase production through the use of planting

material free of Citrus Tristeza Virus. It involves public education, technical services (certification, research and implementation management) and credit services.<sup>524</sup>

Jamaica has implemented several phytosanitary measures to protect its crops from imported plant pests and diseases. Jamaica has in place an import prohibition on coffee berries, bananas, citrus fruits and plants and raw honey, which according to the authorities is due to the high risk of introduction of exotic pests and diseases carried by such products.<sup>525</sup> Similarly, the importation of fruits that are known hosts of pests that are not known to exist in Jamaica is banned.<sup>526</sup> To avoid the introduction of plant pests through soil or wooden pallets used in transportation, Jamaica has banned soil imports and prohibited the entry of wooden pallets from India, Thailand and Indonesia unless they are treated in accordance with the relevant standard developed by the International Plant Protection Convention, to address the risk from plant pests in wooden packaging material, ISMP 15.<sup>527</sup>

The Plant Quarantine/Produce Inspection Unit is subject, however, to considerable resource constraints. Due to under-resourcing, this Unit has difficulty maintaining an adequate level of import inspection.<sup>528</sup> It has only three cold storage facilities to inspect imports and despite the significant increase in imports since the 1990s, it has no additional dedicated import inspection facilities at its disposal.<sup>529</sup> Information on rejections of imported produce is imprecise, recording is sporadic and often contradictory.<sup>530</sup> Due to lack of coordination between customs officials and the Plant Quarantine/Produce Inspection Unit, shipments have been released before they have been examined.<sup>531</sup>

The situation for exports is better. Two well-functioning export complexes, one at each international airport, exist for inspection and certification of exports.<sup>532</sup> Both have fumigation facilities but only one, at Kingston airport, has cold storage facilities available.<sup>533</sup>

<sup>524</sup> The Jamaican government and DBJ spent US\$5.69 million on this project and a US\$ 9.9 million loan and US\$0.26 million grant was obtained from the CBD. The remaining US\$4.6 million was funded from other sources. Trade Policy Review Body, *Trade Policy Review: Jamaica – Report by the Secretariat. The Kingston facility was developed by means of a loan from the World Bank in 1989 and significantly upgraded in the late 1990s with a government investment of J\$30 million.<sup>534</sup> Exporters are required to have a pack house meeting particular requirements, which is inspected and approved by plant quarantine inspectors.<sup>535</sup> For exports to the US,<sup>536</sup> pre-clearance is conducted by inspectors of the Plant Quarantine/Produce Inspection Unit under the oversight of an official of the US Animal and Plant Health Inspection Service (APHIS), based in Jamaica.<sup>537</sup> There are considerable benefits to Jamaica from the operation of a pre-clearance system. Exporters can be confident that pre-cleared shipment will gain market access to the US as border officials will conduct only periodic checks. This eliminates the high costs of rejections at the border, allowing exporters to divert their products to other destinations if they do not pass pre-clearance.<sup>538</sup> Sixty-four different products from about 80 percent of exporters destined for export to the US are approved for pre-clearance in Jamaica. Rejections are, in more than 80 percent of cases, due to arthropod pests<sup>539</sup> and are highest for callaloo, peppers and papaya.<sup>540</sup> To avoid undermining the integrity of the pre-clearance program in the eyes of APHIS, Jamaica has responded quickly and rigorously to phytosanitary problems.<sup>541</sup> In some cases it has even voluntarily removed a product subject to repeated pest detections from the program.<sup>542</sup> However,

<sup>535</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 113.

<sup>536</sup> Exports destined for other markets are inspected and certified separately from the US pre-clearance program.

<sup>537</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 113.

<sup>538</sup> If products are not taken through pre-clearance and are rejected at the US border, they not only unnecessarily bear the high costs of transportation, but also lose the possibility of diversion to another destination due to the fact that the US destroys rejected products automatically. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 29, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>539</sup> The pests at issue are mainly Homoptera and Lepidoptera. Janice Reid, *Needs Analysis of the Readiness of Jamaican Institutions for WTO-SPS: Executive Summary* (Inter-American Institute for Cooperation on Agriculture, Kingston), April 2000, 7, available at: [www.agroinfo.org/caribbean/iicacare/jamaica/summary.pdf](http://www.agroinfo.org/caribbean/iicacare/jamaica/summary.pdf), visited on 7 January 2008.

<sup>540</sup> *Ibid.*

<sup>541</sup> Although APHIS requires only a 2% level of inspection of produce, Jamaica conducts a 10% level to avoid detections leading to loss of confidence in the system by the US. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 27, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>542</sup> *Ibid.* Henson and Jaffee give the example of the voluntary withdrawal by Jamaica of callaloo from the pre-clearance program to prevent devaluation of the program and the introduction of fumigation requirements

the pre-clearance system is costly to operate, despite the cost-recovery fee imposed, and it reportedly absorbs a quarter of the budget of the Plant Quarantine/Produce Inspection Unit.<sup>543</sup> Some exporters have chosen to avoid the fee for pre-clearance and take their chances with possible detentions at US ports of entry.<sup>544</sup>

Jamaica is free of most plant pests and diseases of significance to international trade.<sup>545</sup> It has surveillance programmes in place to control plant pests and diseases in domestic production. The Rural Agricultural Development Authority has 60 extension officers, stationed across Jamaica in offices with a computer linked to centrally stored data, responsible for conducting the necessary surveillance. Surveillance is carried out for fruit fly, scale insects, papaya ring spot virus, papaya mealy bug (of which Jamaica is free), pink mealy bug and hot pepper gall midge.<sup>546</sup> The Rural Agricultural Development Authority is notified of rejected export shipments and is supposed to investigate the matter. However, financial constraints have led to poor implementation of this inspection system.<sup>547</sup> In addition, as Jamaica lacks sufficient capacity to undertake pest risk assessments, its status as being free from certain pests and diseases is not confirmed.<sup>548</sup> There are insufficient inspectors for proper surveillance of plant pests and diseases.<sup>549</sup> In addition, the weakness of Jamaica's diagnostic laboratory capacity with regard to plant pathology and pest identification and its lack of expertise in this area has made it difficult for Jamaica to defend its export interests when faced with phytosanitary barriers imposed by its trading partners.<sup>550</sup>

With regard to the plant pests that are present in Jamaica, for example fruit flies, Jamaica faces significant problems. As is the case in many developing countries, Jamaica's diversification into exports of high-value horticultural products has been plagued by the problem of how to eliminate harmful pests from shipments while keeping to the maximum residue levels for pesticides required by its trading partners.<sup>551</sup> Horticultural products are vulnerable to infestation by many pests, and the incidence of pests, particularly exotic or

---

by the US.

<sup>543</sup> *Ibid.*, 27. Henson and Jaffee report that the pre-clearance system was initially funded by USAID but since 1996 it has had to be self supporting. Until 2001 the system was operated by the Jamaican Exporters' Association, and since then it is run by the Ministry of Agriculture, funded by a 20% cost recovery fee. The fee has proved insufficient and the system has run into arrears. The cost of the system is US\$390,000 per year, much of which goes to the resident APHIS official (US\$150,000 per year). Jamaica would like to save on these costs by operating the pre-clearance system itself, seeing as its inspectors already conduct most of the inspections and the APHIS official only provides oversight. However, the US is unlikely to agree.

<sup>544</sup> Unlike in other countries where export associations have made the use of pre-clearance systems mandatory, in Jamaica exporters may choose to take their products through the pre-clearance program or not. *Ibid.*, note 8, 27.

<sup>545</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. invasive ones, are a significant cause of shipment detentions at posts of entry.<sup>552</sup> Since horticultural exports from developing countries are often non-traditional, pre-inspection protocols may not exist, rendering these exports especially likely to be detained for inspection or fumigation. The discovery of a pest in even one shipment may lead to an exporting country being placed on a quarantine list, resulting in denial of market access. As a result, heavy pesticide use occurs.<sup>553</sup> However, exceeding pesticide residue limits is also an important cause of shipment detentions, and repeated violations may lead to the automatic detention of all shipments from that country.<sup>554</sup>

### 2.6.2.3.1 Examples of phytosanitary measures affecting Jamaican exports

The problem caused by plant pests is illustrated by the example of exports of hot peppers from Jamaica. Hot peppers are identified as a priority crop by the Jamaican government, as it helps small farmers increase their income.<sup>555</sup> This product is exported to Canada, the UK and the US, reaching high export levels in the mid-1990s but experiencing a decline in exports since then, largely explained by phytosanitary problems with exports to the US.<sup>556</sup> In 1997 on its arrival in US ports a hot pepper shipment was found to be infested with gall midge, a pest not normally associated with peppers, and not a quarantine pest under international standards.<sup>557</sup> The APHIS imposed a mandatory requirement of fumigation with methyl bromide on all peppers from Jamaica (including bell peppers and chilli peppers) leading to a three quarter reduction in hot pepper exports from Jamaica due to the added costs and reduced quality resulting from fumigation.<sup>558</sup> To address this set-

---

<sup>552</sup> *Ibid.*

<sup>553</sup> With regard to Jamaica's food-safety controls of pesticides, see the discussion in the food safety subsection above.

<sup>554</sup> George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 1, 1.

<sup>555</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 30, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee report that in 2000 a plot of only 0.005 hectares, which can support about 1,000 plants, could produce an estimated weekly income of J\$10,000.

<sup>556</sup> *Ibid.*, 31. Other obstacles to exports noted by Henson and Jaffee are production problems caused by variable rainfall and poor quality seed, and the fact that the demand for and price of hot peppers on the domestic market are good. As a result of these factors and the phytosanitary problems with exports to the US, exports accounted for only 5% of total production in the late 1990s.

<sup>557</sup> More than 100 shipments in 1998 were found to be infested with gall midge. George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 2, 2.; Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 31, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee point out that gall midge is also found in Florida.

<sup>558</sup> George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 2, 2. Hot pepper exports fell from over 200 tons in 1997 to only 25 tons in 2002 and 2003. According to Henson and Jaffee, the cost of fumigation is estimated to be 8% of the FOB value of hot peppers, making it difficult for Jamaican peppers to compete with

back, the Jamaican government established a National Pepper Task Force to identify and correct the problem. Inspections revealed a high incidence of gall midge on hot peppers in the rainy months.<sup>559</sup> However, as gall midge is not a pest of quarantine significance under international protocols, and is present in the US already (in Florida), Jamaica questioned the justification for the US measure and requested documentary evidence of risk. Despite repeated such requests, no justification has been provided.<sup>560</sup>

Instead, a collaborative effort was undertaken by the Jamaican government and the US Agency for International Development (USAID) under the latter's Integrated Pest Management Collaborative Research Support Program (IPM CRSP).<sup>561</sup> IPM systems use biological, cultural and less chemically intensive pest management approaches.<sup>562</sup> The IPM strategy used in this case involved a ten-point protocol, including the establishment of a pre-clearance system under which approved peppers would be allowed market access without fumigation, the reduction of pesticide use and the improvement of cultivation practices; replacing methyl bromide with a less costly and environmentally friendly fumigant where fumigation was still needed for clearance; establishing a traceability system for growers; monitoring of gall midge progression in the field; and training officers and farmers.<sup>563</sup> The system was based on sourcing hot peppers from gall midge-free areas and on rigorous controls throughout the supply chain.<sup>564</sup> If the rejection rate due to detection of any quarantine pests reaches 15 percent, however, all peppers will again require fumigation. This initiative is reported, in a study by the ITC and Commonwealth Secretariat, to have led to a 90 percent reduction in infested shipments and subsequently to the lifting

---

those of other Caribbean producers which are not subject to fumigation requirements. It is reported that fumigated peppers, due to their reduced quality, can only be sold for processing rather than on the fresh produce market. Fumigated peppers lose their sheen and have limited shelf-life. Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 118. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 31, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>559</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee note that over 70% of shipments are infested with gall midge in the rainy months.

<sup>560</sup> *Ibid.*

<sup>561</sup> George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 2, 2.

<sup>562</sup> *Ibid.*, 1, 1.

<sup>563</sup> *Ibid.*, 2, 2. The ten elements of the protocol are set out by Henson and Jaffee. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 33, Box 32, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>564</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 32, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

of the fumigation requirement in 2002 subject to the requirements that growers had to participate in the IPM field control program and those with shipments rejected once due to gall midge would be removed from the program.<sup>565</sup> More than 400 farmers were assigned traceability numbers under this program in 2003.<sup>566</sup>

Fumigation requirements are also imposed by the US on yam exports from Jamaica, since the 1940s, to eliminate a weevil found in Jamaica.<sup>567</sup> Although Jamaica claims that a survey by the Ministry of Agriculture and Lands has identified pest-free areas in Jamaica and has requested that APHIS undertake a pest risk assessment in order to lift the requirement for yam exports from pest-free areas,<sup>568</sup> no solution to this problem has yet been reported.<sup>569</sup>

Another significant, and to date unresolved, problem with a phytosanitary trade barrier affecting Jamaican non-traditional exports has been the US measure to prevent the introduction of West Indian and Caribbean fruit flies through mango imports from Jamaica.<sup>570</sup> The US requires hot water treatment of mangoes before it will allow importation. However, Jamaica lacks the facilities to provide this treatment and has thus been unable to obtain approval for its mango exports to the US.<sup>571</sup> The costs of creating the necessary facility, which would be able to treat 1,000 tons of mangoes per month, have been estimated at

<sup>565</sup> George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 2, 2. Note however, that, to the contrary, Henson and Jaffee report that the ten-point protocol had not been implemented by the Jamaican government at the date of the writing of their report (2004) and that all hot pepper shipments remained subject to compulsory fumigation. They note that no economically significant areas in Jamaica could be identified that would be able to produce peppers with a level of infestation that could be controlled at pack houses. They note further the problems for traceability caused by the fragmented supply chains. In addition they point out that the required changes are not regarded as cost effective by exporters, particularly in view of high risk of re-imposition of the fumigation requirements if pest detection reaches 15%, which would render their investment worthless. They also recall the fact that the domestic market for hot peppers, where these phytosanitary requirements do not apply, remains lucrative. Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 33-34, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>566</sup> George W. Norton *et al.*, *Food Safety in Food Security and Food Trade: Case Study: Reducing Pesticide Residues on Horticultural Crops*, in 2020 Vision for Food, Agriculture and the Environment (International Food Policy Research Institute, Washington D.C.), September 2003, 2, 2.

<sup>567</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 42, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>568</sup> This example is reported in Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 118.

<sup>569</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 43, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>570</sup> *Ibid.*, 27.

<sup>571</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume I: Background Information, Findings from Case Studies and Technical Assistance Needs* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2003, 58.

US\$175, 000.<sup>572</sup> Neither the production in Jamaica of export-quality mangoes nor the demand in the US for such mangoes is sufficient to support even one such facility. Therefore no investment has been made to deal with this problem.<sup>573</sup>

A further problem faced by Jamaica with regard to its exports of fresh fruit and vegetables relates to private standards. In particular, the requirement imposed by UK supermarkets that fresh produce imports be certified for compliance with EUREPGAP standards, many of which are SPS requirements, is problematic for Jamaican exporters.<sup>574</sup> In 2005, Jamaica supported a trade concern raised by Saint Vincent and the Grenadines at the SPS Committee in this regard.<sup>575</sup> This concern related to the significant cost implications of these private standards, which are typically much more demanding than government standards, for small farmers in vulnerable economies.<sup>576</sup>

A report of an UNCTAD study has pointed out that the EUREPGAP protocol requires a high level of investment and expertise for its implementation.<sup>577</sup> According to this study, the EUREPGAP protocol is best suited to large producers that have the necessary human and financial resources. In addition, due to the lack of local certification bodies for EUREPGAP, exporters are forced to use the services of multinational companies, at high costs.<sup>578</sup>

The EC representative pointed out that EUREPGAP was not an EC body, but instead a private sector consortium representing the interests of major retailers. Therefore

<sup>572</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 26, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee note that the cost would rise to US\$250,000 if a new building were to be constructed to house the necessary facilities.

<sup>573</sup> *Ibid.* Notable additional reasons given by Henson and Jaffee for the lack of investment in creating this facility are the fact that Jamaican mango producers still have access to the UK and Canadian markets; the fact that Jamaica does not benefit from a seasonal niche in the US market; and the fact that there is strong competition from Brazil, Haiti and Mexico where extensive investments have been made in hot water treatment facilities and economies of scale exist. Investment in such facilities in Jamaica would therefore only be worthwhile if there were parallel investments in improving mango production.

<sup>574</sup> As explained above, EUREPGAP requirements are standards for 'good agricultural practices' (GAP) laid down by the Euro-Retailer Produce Working Group (EUREP), a consortium representing major retailers. This consortium was rebranded as GLOBALGAP in September 2007, to indicate that its standards are open to producers worldwide. See further above, Part II, Section 1.3.

<sup>575</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 29-30 June 2005. Note by the Secretariat. Revision*, G/SPS/R/37/Rev.1, circulated on 18 August 2005, para. 17. See further Committee on Sanitary and Phytosanitary Measures, *Specific Trade Concerns. Note by the Secretariat. Addendum: Issues Considered in 2006*, G/SPS/GEN/204/Rev.7/Add.1, circulated on 6 February 2007, item 219. This complaint was supported not only by Jamaica but also by Argentina, Belize, Cuba, Dominica, Ecuador, Egypt, Indonesia, Kenya, Mexico, Peru and South Africa. See also Committee on Sanitary and Phytosanitary Measures, *Private Industry Standards. Communication from Saint Vincent and the Grenadines*, G/SPS/GEN/766, circulated on 28 February 2007.

<sup>576</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting of 11-12 October 2006. Note by the Secretariat*, G/SPS/R/43, circulated on 3 January 2007, para. 41.

<sup>577</sup> Committee on Sanitary and Phytosanitary Measures, *Executive Summary of a Study on Agri-Food Safety and SPS Compliance in Guinea Conakry, Mozambique and Tanzania. Communication from UNCTAD*, G/SPS/GEN/567, circulated on 17 June 2005, para. 43.

<sup>578</sup> *Ibid.*, para. 51. In order to be allowed to certify compliance with EUREPGAP, a certification body must be accredited by Food PLUS, the legal owner of the EUREPGAP protocol. A prerequisite for such accreditation is accreditation to ISO 65/EN 45011 standards.

EUREPGAP standards could not be regarded as EC requirements. In addition, the EC stated that such standards did not violate EC legislation and therefore the EC was not in a position to object to them, even if they were stricter than the SPS requirements of the EC. The EC advised WTO Members that had concerns with EUREPGAP requirements, especially LDCs, to discuss the matter with consumer-interest non-governmental organisations, since in many cases EUREPGAP standards reflect consumer concerns.<sup>579</sup>

Arising from this discussion, and the interest expressed by several Members in this issue, informal sessions of the SPS Committee were held in October 2006 and February 2007 to discuss private standards. These discussions were not limited to EUREPGAP standards, but addressed the over-400 private standard schemes that are in operation.<sup>580</sup>

### 2.6.3 Overall assessment of the SPS System of Jamaica

As has been seen from the above discussion, while Jamaica has the basic framework of laws and institutions needed for a well-functioning SPS system, the great degree of fragmentation in responsibility evinced by the many public agencies and plethora of laws and regulations making up this system undermine its effectiveness.<sup>581</sup> This leads to problems of overlapping regulatory competence, duplication of tasks,<sup>582</sup> waste of scarce resources and lack of coordination.<sup>583</sup> This fragmentation has been criticised as compromising Jamaica's ability to identify and respond to emerging SPS problems effectively.<sup>584</sup>

<sup>579</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 29-30 June 2005. Note by the Secretariat. Revision*, G/SPS/R/37/Rev.1, circulated on 18 August 2005, para. 18.

<sup>580</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting of 11-12 October 2006. Note by the Secretariat*, G/SPS/R/43, circulated on 3 January 2007, para. 40.

<sup>581</sup> This criticism has also been made in Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 110.

<sup>582</sup> For example, the monitoring of imported products to avoid the introduction of SPS risks is carried out by a variety of officials from the Ministry of Health, the BSJ, the Veterinary Services Division, the Plant Quarantine/Produce Inspection Unit and the FSPID. Further, the control of pesticides is carried out by the Pesticide Control Authority (PCA) under the *Pesticides Act*, but the FSPID also has tasks relating to aspects of pesticide control. These overlaps have been the subject of negotiations between PCA and the FSPID over many years. These problems of overlap are mentioned in the *Proposal for the Coordination of the Activities of Agricultural Health and Food Safety Agencies in Jamaica*, dated May 2005, included with the Memorandum of Understanding signed by the Ministry of Health, the Ministry of Agriculture and Lands and the Ministry of Industry, Commerce and Technology of Jamaica setting up a single Food Safety Authority for Jamaica, available at <http://www.mct.gov.jm/FINAL%20CO-ORDINATION%20PROPOSAL%20-Signed1.pdf>, visited on 27 December 2007.

<sup>583</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 10, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. Henson and Jaffee point to the examples of the overlapping responsibility for licensing of pest control operators by both the PCA of the Ministry of Health and the FSPID of the Ministry of Industry, Commerce and Technology; and the responsibility for inspection and approval of food processing establishments by both the BSJ and the Ministry of Health.

<sup>584</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 116. This also limits Jamaica's ability to use the *SPS Agreement* to challenge the SPS measures of its trading partners.

Consequently, Jamaica's approach to SPS trade barriers, as has been seen above, has been characterised as 'reactive'. In other words, although the Jamaican government has demonstrated its ability and willingness to address SPS problems vigorously through cooperation with its trading partners, it develops strategies and makes changes only once these SPS problems have led to a loss of market access.<sup>585</sup> This creates uncertainty among producers and exporters and is a disincentive to investment in export production. In addition, while Jamaica has identified SPS trade restrictions on its exports that seem to be unjustified, it has not strongly pursued the avenue of challenging the legitimacy of such restrictions.

Human resources are an important constraint reducing the capacity of Jamaica to respond effectively to SPS problems. Across the various agencies with responsibility in the area of food safety, there are limited skills and experience in risk analysis and equivalence issues.<sup>586</sup> In addition, capacity to implement HACCP systems needs to be increased.<sup>587</sup>

SPS legislation in Jamaica is in many cases outdated and poorly implemented. Changes are driven by demands on export markets and are therefore sector specific, leading to greater incoherence in the SPS system. There is a need to consolidate legislation and make SPS requirements clearer to producers. In addition, legislative authority to set MRLs for pesticides is needed.<sup>588</sup>

The limited capacity of Jamaican laboratories is also a problem, as it undermines regulatory initiatives to control pesticide residues and other contaminants. The lack of accreditation of these laboratories weakens the credibility of their test results in the eyes of trading partners.

Lack of adequate controls on the use of pesticides and veterinary drugs is a significant concern. There is a pressing need to develop guidelines for good pest management practice based on international standards and to strengthen programmes relating to integrated pest management.<sup>589</sup> Good Agricultural Practice (GAP) standards must be implemented and compliance therewith documented to ensure acceptability of produce by means of the demonstration of successful control of pests.<sup>590</sup>

---

<sup>585</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 1, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>586</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume II: Procedures Followed by Selected International Standard-Setting Organisations and Country Reports on TBT and SPS* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2004, 112.

<sup>587</sup> *Ibid.*

<sup>588</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 15, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008.

<sup>589</sup> This need is identified in Janice Reid, *Needs Analysis of the Readiness of Jamaican Institutions for WTO-SPS: Executive Summary* (Inter-American Institute for Cooperation on Agriculture, Kingston), April 2000, 10, available at: [www.agroinfo.org/caribbean/iicacarc/jamaica/summary.pdf](http://www.agroinfo.org/caribbean/iicacarc/jamaica/summary.pdf), visited on 7 January 2008.

<sup>590</sup> *Ibid.*

In order to improve the reception of its agricultural and food products on its export markets, Jamaica has taken steps to improve its SPS regime, including through implementing new legislation that incorporates the SPS requirements of its export markets, creating 'one-stop' export pre-clearance centres at its two international airports, establishing a residue-testing laboratory at the Ministry of Agriculture and Lands, and increasing participation in international standard-setting bodies.<sup>591</sup>

In addition, to reduce fragmentation and improve coordination of responsibilities, Jamaica established a National Agricultural Health and Food Safety Coordinating Committee (NAHFSCC) on which 23 agencies and departments are represented.<sup>592</sup> In May 2005 a memorandum of understanding was signed between the Ministry of Health, the Ministry of Agriculture and Lands and the Ministry of Industry, Commerce and Technology in collaboration with the NAHFSCC in order to create a single food-safety authority.<sup>593</sup> In addition, in 2006, the Ministry of Agriculture and Lands started preliminary work towards a Comprehensive Agricultural Policy, requesting technical assistance from the FAO in this regard. The new policy aims to create a comprehensive framework for rural and agricultural development, to promote investment, job creation and rural prosperity.<sup>594</sup> Currently several policies are in the process of being developed by the Ministry of Agriculture and Lands. With regard to animal and plant health, the intention to create new policies has been notified to the Cabinet and concept papers are being drafted.<sup>595</sup> *Inter alia*, these policies aim to satisfy requirements in international trade.<sup>596</sup>

---

<sup>591</sup> FAO Commodities and Trade Division, *Agriculture, Trade and Food Security: Issues and Options in the WTO Negotiations from the Perspective of Developing Countries. Volume II: Country Case Studies* (Food and Agriculture Organization, Geneva), 2000, Chapter 1, Section 2.4, available at: [www.fao.org/docrep/003/X8731e/X8731e00.htm](http://www.fao.org/docrep/003/X8731e/X8731e00.htm), visited on 7 January 2008.

<sup>592</sup> Spencer Henson and Steve Jaffee, *Jamaica's Trade in Ethnic Foods and Other Niche Products: The Impact of Food Safety and Plant Health Standards*, Agriculture and Rural Development Discussion Paper (World Bank, Washington D.C.), 2005, 10, available at: [http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF\\_final.pdf](http://siteresources.worldbank.org/INTARD/Resources/JamaicaStandardsF_final.pdf), visited on 7 January 2008. The National Agricultural Health and Food Safety Coordinating Committee is mandated: 'to establish and maintain a rational and integrated farm-to-table agricultural health and food safety system in Jamaica that harmonizes inter-agency conflict and overlap, and ensures the protection of public health in a manner consistent with WTO and other international standards.' The NAHFSCC is composed of senior technical officers from the three ministries, representatives from Scientific Research Council, the BSJ, the University of the West Indies, the Caribbean Food and Nutrition Institute, the FAO, IICA, Consumer Affairs Commission and the Jamaica Exporters Association among others. The chair of this committee is rotated annually between the three ministries and the Agricultural Support Services Project (ASSP) hosts the secretariat.

<sup>593</sup> This development took place under the auspices of the Agricultural Support Services Project (ASSP). Ministry of Development, 'MOU Signed for Creation of Single Food Safety Agency' *Jamaica Information Service*, Kingston, 25 May 2005, available at: <http://www.jis.gov.jm/development/html>, visited on 27 December 2007. Note that already in 2001 the National Quality Policy for Jamaica approved by the Cabinet included the establishment of a single Food Safety Agency. A MOU to this effect was finally agreed in 2002, but it was only signed in 2005. Henson and Jaffee attribute the delay in signing to the large degree of inertia and resistance to change within the SPS administration of Jamaica and the political sensitivities linked to the reforms. *Ibid.*, 10-11.

<sup>594</sup> This information is provided on the 'Agricultural Planning and Policy' page of the website of the Ministry of Agriculture and Lands of Jamaica, available at: <http://www.moa.gov.jm/agripp/pol/index.php>, visited on 28 December 2007.

<sup>595</sup> Ministry of Agriculture and Lands, *Policies Being Developed for the Financial Year 2006/2007*, Synopsis Table, available at: <http://www.moa.gov.jm/agripp/pol/index.php>, visited on 28 December 2007.

<sup>596</sup> *Ibid.*

However much more needs to be done if Jamaica is to be able to exploit the potential to diversify its agricultural exports to high-value, non-traditional products, thereby reducing its dependence on preferential trade regimes and making an important contribution to the alleviation of rural poverty. Aside from *ad hoc* initiatives to address specific SPS issues, such as those outlined above, Jamaica has received limited assistance in upgrading its SPS regime to achieve these objectives.<sup>597</sup>

## 2.7 Bangladesh

### 2.7.1 Factual background

Bangladesh is a South Asian country, bordering Burma, India and the Bay of Bengal. It gained independence from West Pakistan in 1971.<sup>598</sup> It is useful to examine selected economic and human development indicators in order to determine the position of Bangladesh along the continuum of levels of development.

#### 2.7.1.1 Development indicators

Bangladesh's GNI per capita in 2006 was US\$480.<sup>599</sup> It is therefore classified as a low-income economy, according to the World Bank classification of countries according to income.<sup>600</sup> Its GDP in the same year amounted to US\$62 billion.<sup>601</sup> The GDP of Bangladesh at purchasing power parity in 2005 was US\$291.2 billion and the GDP per capita at purchasing power parity in the same year was US\$2,053.<sup>602</sup> Bangladesh is designated as a LDC by the United Nations Conference on Trade and Development.<sup>603</sup>

<sup>597</sup> FAO Commodities and Trade Division, *Agriculture, Trade and Food Security: Issues and Options in the WTO Negotiations from the Perspective of Developing Countries. Volume II: Country Case Studies* (Food and Agriculture Organization, Geneva), 2000, Chapter 1, Section 2.4, available at: [www.fao.org/docrep/003/X8731e/X8731e00.htm](http://www.fao.org/docrep/003/X8731e/X8731e00.htm), visited on 7 January 2008.

<sup>598</sup> 'West Pakistan' was the common name (and official name in 1955–1970) of the western wing of Pakistan until 1971. The eastern wing, previously known as 'East Pakistan', became independent as Bangladesh in 1971.

<sup>599</sup> See the World Bank *Key Development Data and Statistics* page for Bangladesh, available at: <http://go.worldbank.org/1SF48T40L0>, visited on 9 January 2008.

<sup>600</sup> See the World Bank classification of economies by income of July 2007, available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 9 January 2008.

<sup>601</sup> See the World Bank webpage on Key Development Data & Statistics of 2006 available at: <http://web.worldbank.org/WBSITE/EXTERNAL/DATASTATISTICS/0,,contentMDK:20535285~menuPK:1192694~pagePK:64133150~piPK:64133175~theSitePK:239419,00.html>, visited on 9 January 2008.

<sup>602</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 279, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>603</sup> UNCTAD maintains a list of least-developed countries, classified as such according to specified criteria. The current criteria are: low national income (per capita GDP under US\$750 for countries now joining the list, US\$900 for graduation), weak human assets (a composite index based on health, nutrition and education indicators) and high economic vulnerability (a composite index based on indicators of instability of agricultural production and exports, inadequate diversification and economic smallness). Different thresholds are used for addition to, and graduation from, the list of LDCs. A country qualifies for addition to the list if it meets inclusion thresholds on all three criteria, and if its population does not exceed 75 million. See *Least Developed Countries at a Glance*, Press Release TAD/INF/PR/LDC02, (UNCTAD) 18 June 2002, available at: <http://www.unctad.org/Templates/webflyer.asp?docid=2929&intItemID=1634&lang=1>, visited on 25 June 2007.

In 2005, the population of Bangladesh was 153.3 million,<sup>604</sup> making it one of the most densely populated countries in the world.<sup>605</sup> Poverty rates in Bangladesh are high with 84 percent of the population living below the US\$2 per day poverty line.<sup>606</sup>

Despite still being dreadfully poor, Bangladesh has experienced ‘some of the developing world’s most rapid advances in basic human development indicators’.<sup>607</sup> It graduated in 2003 from being classified as a low-human development country to being classified as a medium-human development country.<sup>608</sup> It is now ranked 140<sup>th</sup> in the world by the UNDP’s Human Development Index of 2007.<sup>609</sup>

### 2.7.1.2 Health priorities

The relatively low importance of public health as an area of government spending in Bangladesh is illustrated by the following. Bangladesh only spends 0.9 percent of its GDP on public health, which amounts to US\$64 per capita at purchasing power parity.<sup>610</sup> Despite increased attention to the health sector leading to some improvements in recent years, serious challenges remain.

Life expectancy at birth is low, at 63.1 years.<sup>611</sup> The prevalence of tuberculosis in Bangladesh is 406 per 100,000 people.<sup>612</sup> The infant mortality rate is 54 per 1000 births.<sup>613</sup>

<sup>604</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 245, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>605</sup> The population density in Bangladesh is 872 persons per square kilometre, which is three times the density of India, five times that of Pakistan and eight times that of Indonesia. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, note 22.

<sup>606</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 239, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007. If one measures poverty as the percentage of people living on less than US\$1 per day, 41.3% of Bangladesh’s population lives below the poverty line.

<sup>607</sup> United Nations Development Programme, *Human Development Report 2005. International Cooperation at a Crossroads: Aid, Trade and Security in an Unequal World* (United Nations, New York), 2005, Box 1.7, available at: [http://hdr.undp.org/en/media/hdr05\\_complete.pdf](http://hdr.undp.org/en/media/hdr05_complete.pdf), visited on 2 January 2008. This report notes that child and infant mortality rates in Bangladesh have been falling at over 5% per year, malnutrition among mothers decreased from 52% in 1996 to 42% in 2002, primary school enrolment rose from 72% to 90% since 1990. This was achieved through strong state action and civic activism, rather than by significant income growth.

<sup>608</sup> United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 231, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007.

<sup>609</sup> *Ibid.*

<sup>610</sup> *Ibid.*, 249.

<sup>611</sup> *Ibid.*, 231.

<sup>612</sup> *Ibid.*, 259.

<sup>613</sup> *Ibid.*, 263. Maternal mortality is also high, at 320 deaths per 100,000 births (and double that rate among adolescent mothers). Ninety percent of births occur at home, with skilled health personnel are present only at 13 percent of all births. United Nations Population Fund, *Draft Country Programme Document for Bangladesh*, DP/FPA/DCP/BGD/7 (United Nations, New York), 7 April 2005, paras 2-3, available at: <http://www.unfpa.org/exbrd/2005/annualsession/bangladesh-final-draft.doc>, visited on 9 January 2008.

Improvements with regard to child mortality have been attributed to an expanded immunization programme, covering 81 percent of children aged between 12 to 23 months in 2004.<sup>614</sup> However, significant health concerns remain. Communicable diseases, including respiratory infections, diarrhoeal diseases, malaria, and tuberculosis remain prevalent, and HIV/AIDS rates are increasing.<sup>615</sup> Of children under five with diarrhoea, only 35 percent receive oral hydration and continued feeding. Bangladesh has only 29 physicians per 100 000 people.<sup>616</sup>

In Bangladesh, a mere 38 percent of the population has sustainable access to improved sanitation,<sup>617</sup> although an improved water source is accessible to 72 percent.<sup>618</sup> Under-nourishment prevails in 30 percent of the population.<sup>619</sup> Health case service in Bangladesh is inadequate, and the government's recent Health Nutrition Population Strategic Investment Plan 2003-2010 indicates that the priority area is pro-poor health service provision.<sup>620</sup> An area that receives particular attention is reproductive health, due to the high incidence of infant and maternal mortality and the particularly vulnerable position of women in society.

With these critical health concerns in mind, it seems unlikely that regulation against SPS risks is a priority for public health spending in Bangladesh.

### 2.7.1.3 Trade priorities

The importance of trade as an engine for growth and poverty alleviation in Bangladesh can be evaluated by examining its participation in the multilateral trading system. Bangladesh became a contracting party to the GATT 1947 in 1972 and is an original Member of the WTO.

Since the mid-1980s, Bangladesh abandoned its inward-looking growth strategy and embraced trade liberalisation. Although, as a least-developed country Member, it was entitled to longer transition periods for the implementation of the Uruguay Round agreements, it decided not to postpone implementation. Instead, it adopted a phased programme, to gradually develop and strengthen the capacity of its ministries, departments and agencies to derive full benefits from the WTO regime and to conform to its rules.<sup>621</sup> Bangladesh participates actively in WTO negotiations. On behalf of LDC, Bangladesh is an active advocate for SDT in favour of least-developed-country Members.<sup>622</sup> In the context of the Doha Development Round, Bangladesh has voiced LDC interests in various negotiating groups.<sup>623</sup> It is interesting to note that Bangladesh has twice participated in the early stages of dispute settlement proceedings in the WTO, once by requesting consultations (being the first LDC to do so)<sup>624</sup> and once by joining consultations between other Members.<sup>625</sup>

In 2006, exports of goods and services contributed 17.8 percent<sup>626</sup> to the GDP of Bangladesh,<sup>627</sup> from which it earned US\$8.6 billion.<sup>628</sup> The ratio of trade to GDP in

<sup>621</sup> A statement to this effect in a report by the Ministry of Commerce of Bangladesh in 1998 is quoted in Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Part II para. 23.

<sup>622</sup> For example, Bangladesh acted as spokesman for the LDCs during the Uruguay Round negotiations. Further, Bangladesh communicated the outcome of the Second LDC Trade Ministers' Meeting to the WTO Director-General, on behalf of the LDC Group in the WTO. At this meeting, a common strategy for LDCs for the Doha Development Round was drawn up. See World Trade Organization, *Second LDC Trade Ministers' Meeting, Dhaka, Bangladesh. Communication from Bangladesh*, WT/L/521, circulated on 26 June 2003.

<sup>623</sup> For example, Bangladesh participated in the joint communication on the Doha Work Programme on Special and Differential Treatment and Outstanding Implementation Issues. It has been involved in negotiations at the Special Session of the Committee on Agriculture with regard to food aid, exemption of LDCs from tariff reduction commitments, quota free access for LDCs and phasing out of export-subsidies. In the Negotiating Group on Rules, Bangladesh participated in a joint communication on anti-dumping actions on textiles and clothing.

<sup>624</sup> *India – Anti-dumping Measure on Batteries from Bangladesh. Request for Consultations by Bangladesh*, WT/DS306/1, circulated on 2 February 2004. The EC joined the consultations and in 2006 a mutually agreed solution was reported as the measure had been terminated in January 2005.

<sup>625</sup> *United States – Rules of Origin for Textiles and Apparel Products. Request to Join Consultations. Communication from Bangladesh*, WT/DS243/2, circulated 5 February 2002. When a panel was established in this case, Bangladesh reserved its third party rights but did not make a written submission or present its views orally before the Panel.

<sup>626</sup> It is typical of LDCs that trade accounts for only a small share (usually between 9% and 16%) of their GDP. See High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development, *Market Access for Least Developed Countries*, WT/LDC/HL/14, circulated on 23 October 1997, para. 8.

<sup>627</sup> See the statistics in the World Bank's data profile for Bangladesh, available at: <http://devdata.worldbank.org/external/CPPProfile.asp?PTYPE=CP&CCODE=BGD>, visited on 9 January 2008.

<sup>628</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168,

Bangladesh in 2004 – 2006 was 42.1.<sup>629</sup> The official trade figures for Bangladesh, however, do not reflect the significant amount of unofficial trade taking place along the border with India, which was estimated at 13 percent of total trade in 2000.<sup>630</sup>

As is often the case with LDCs, Bangladesh's exports are concentrated in a few commodities and a few markets.<sup>631</sup> Bangladesh's major export product is clothing, which makes up 76.6 percent of its exports, and to a lesser extent textiles, which account for a further 6.7 percent.<sup>632</sup> These products are currently subject to strong competition after the phasing out of textile quotas under the WTO *Agreement on Textiles and Clothing*.<sup>633</sup> This competition will increase further when special safeguard measures against Chinese textiles are terminated at the end of 2008.<sup>634</sup> Therefore, the future trade performance of Bangladesh's depends on its success in diversifying to new products and gaining access to new markets.

The main export markets of Bangladesh are those of the EC and the US,<sup>635</sup> with which Bangladesh enjoys preferential market access under GSP schemes.<sup>636</sup> Under the 'Everything But Arms' initiative on the EC's GSP regime, most products from LDCs such

circulated on 9 August 2006, Section I Table 1.

<sup>629</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 15, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008. This indicator reflects the relative importance of trade to the economy of Bangladesh.

<sup>630</sup> The main items smuggled into Bangladesh are food, agricultural products and livestock, making up over 70% of smuggled imports. Incentives for smuggling include high tariffs, quantitative restrictions and import bans. See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Part I para. 31 and Part III para. 26. This was reiterated in Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section I para. 36.

<sup>631</sup> See High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development, *Country-Specific Round Tables: Documentation – Bangladesh: Addendum*, WT/LDC/HL/12/Add.1, circulated on 24 October 1997, 3. Typically, the top three export products of an LDC account for over 70% of its total exports, as is the case for Bangladesh. This makes such countries particularly vulnerable to fluctuations in demand for and prices of these products, as well as to market barriers affecting them. However, it should be noted that, relative to other LDCs, Bangladesh (like Haiti, Laos, Madagascar and Myanmar) has a significantly more diversified export structure. See High-Level Meeting on Integrated Initiatives for Least-Developed Countries' Trade Development, *Market Access for Least Developed Countries*, WT/LDC/HL/14, circulated on 23 October 1997, para. 11.

<sup>632</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section I Chart I.3.

<sup>633</sup> This agreement is one of the outcomes of the Uruguay Round negotiations and is contained in Annex 1A to the *Marrakesh Agreement Establishing the World Trade Organization*. This agreement provided a 10-year phase out period for textile quotas, and terminated on 1 January 2005. 'Agreement on Textiles and Clothing', in *The Results of the Uruguay Round of Multilateral Trade Negotiations: The Legal Texts* (World Trade Organization, Geneva), 1994, 85-137.

<sup>634</sup> Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 18.A special safeguards regime, applicable to Chinese textiles and clothing, was established in para. 242 of the *Report of the Working Party on the Accession of China*. This regime is applicable until 31 December 2008. It is part of the terms and conditions for China's accession and therefore considered part of China's *Protocol of Accession* to the WTO.

<sup>635</sup> In 2003/2004, the EC accounted for 58.4% of Bangladeshi exports and the US for 25.6. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section I Chart I.4.

<sup>636</sup> Bangladesh benefits from the EU's Everything But Arms initiative for least developed countries, providing duty and quota-free market access for most products under its GSP scheme.

as Bangladesh, including textiles, agriculture and fishery products, benefit from duty-free, quota-free access to the EC market.<sup>637</sup> Under the GSP system of the US, Bangladesh is the second largest LDC exporter.<sup>638</sup> The GSP system of the US excludes 20 clothing items from preferential treatment, thereby reducing the share of the US market in exports from Bangladesh.<sup>639</sup> Bangladesh benefits from GSP treatment from several other WTO Members, including Japan and Canada.<sup>640</sup>

#### 2.7.1.4 Significance of agricultural sector

The importance of the *SPS Agreement* for Bangladeshi trade must be seen in the light of the role played by agriculture in its economy. The share of agriculture in the GDP of Bangladesh has declined in the last 6 years, whereas the share of manufacturing and services has increased.<sup>641</sup> Agriculture, including livestock and fisheries, now accounts for 19.6 percent of Bangladesh's GDP.<sup>642</sup> Agricultural exports in 2006 amounted to 7.2 per cent of overall merchandise exports of Bangladesh.<sup>643</sup> The low level of mechanisation and fragmentation in land holdings, together with the frequency of natural disasters, have been identified as causes for the low productivity of the agricultural sector.<sup>644</sup>

<sup>637</sup> The new GSP scheme that came into force in January 2006 extends the coverage of preferential treatment to a greater number of LDC products, particularly agriculture and fishery products. It has been reported, however, that the benefits to Bangladesh under this scheme are diminished due to the strict rules of origin that apply for products to receive these preferences. Bangladesh has not yet taken advantage of the offer by the EC of regional cumulation and relaxation of value-added requirements. As Bangladeshi export industries are heavily dependent on imported inputs, and add little value, the products will often not qualify as originating in Bangladesh under these rules. Bangladesh does not qualify for 'GSP plus' treatment as it does not meet the requirement of ratification and application of 27 human rights treaties and the conditions regarding labour standards, environmental protection and good governance. Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 18).

<sup>638</sup> Bangladesh accounted for 33% of all LDC exports to the US in 2001, and its products made up 1% of both products eligible for GSP treatment and those receiving such treatment. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section II para. 41.

<sup>639</sup> *Ibid.* The US *Trade and Development Act* of 2000 excluded, as of 2001, 20 clothing items from its GSP scheme. Bangladesh has been the LDC most affected by this exclusion.

<sup>640</sup> As from 31 December 2002, Bangladesh benefits from duty-free, quota-free treatment of its exports under Canada's Least-Developed Country Market Access Initiative, leading to a 40% increase in its total exports to Canada.

<sup>641</sup> The share of agriculture, including livestock and fisheries fell from 25.3% in 1998/1999 to 19.2% in 2004/2005. Manufacturing increased its share in GDP slightly from 14.9% in 1998/1999 to 16.58% in 2004/2005. In the same period, services increased their share in GDP from 46.9% to 50.7%, and are the fastest growing component of GDP in this period. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section IV paras 8, 48 and 62.

<sup>642</sup> See the World Bank, Countries at a Glance table for Bangladesh, available at: [http://devdata.worldbank.org/AAG/bgd\\_aag.pdf](http://devdata.worldbank.org/AAG/bgd_aag.pdf) visited on 23 January 2008. Nazneen Ahmed points out that another 36% of GDP is generated by the rural non-farm sector. This sector is dependent on the agricultural industry for its existence, thus increasing the indirect impact of agriculture on the economy. Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 27).

<sup>643</sup> WTO Secretariat, *Trade Profiles 2007* (World Trade Organization, Geneva), October 2007, 15, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/trade\\_profiles07\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/trade_profiles07_e.pdf), visited on 8 January 2008.

<sup>644</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168,

However, as 52 percent of the work force of Bangladesh is employed in the agricultural sector,<sup>645</sup> this sector is of crucial importance for poverty alleviation in Bangladesh.<sup>646</sup> Three-quarters of the population of Bangladesh, and 85 percent of the poor, live in rural areas and their livelihoods depend on the agricultural industry, not only through formal employment but also through informal work.<sup>647</sup> As a result, the government of Bangladesh has identified agriculture and rural development as its main priorities in respect of poverty reduction.<sup>648</sup>

Crop production dominates the agricultural industry, and is followed by fisheries and then livestock.<sup>649</sup> Rice is the most important agricultural product in Bangladesh,<sup>650</sup> followed by

---

circulated on 9 August 2006, Section IV para. 8.

<sup>645</sup> This data relates to 2005. United Nations Development Programme, *Human Development Report 2007/2008. Fighting Climate Change: Human Solidarity in a Divided World* (Palgrave Macmillan, New York), 2007, 300, available at: [http://hdr.undp.org/en/media/hdr\\_20072008\\_en\\_complete.pdf](http://hdr.undp.org/en/media/hdr_20072008_en_complete.pdf), visited on 10 December 2007. In 2003, Ahmed notes that the agricultural industry employed 51.7% of the 44.3 million labour force of Bangladesh, whereas the manufacturing industry employed only 9.7%. Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 6.

<sup>646</sup> In a study carried out in the context of the Partnership Agreement on Poverty Reduction between Bangladesh and the Asian Development Bank, it is noted: 'In Bangladesh, agriculture assumes a considerably important role in stimulating growth and creating a growth structure leading to alleviation of poverty. The impact of agricultural growth on rural wages is an important element in the process since a major share of income of the poor originates from wage labour in agricultural and non-agricultural activities. A high agricultural growth creates synergies for diversification of the rural economy and development of the rural non-farm sector with greater poverty-reduction impact.' Mustafa K. Mujeri, *Rural Development Priorities for Poverty Reduction in Bangladesh* (Bangladesh Resident Mission of the Asian Development Bank, Dhaka), November 2001, 1, available at: [www.adb.org/documents/epps/ban/rural\\_development/rural\\_development.pdf](http://www.adb.org/documents/epps/ban/rural_development/rural_development.pdf), visited on 6 December 2006.

<sup>647</sup> Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 27. This point is also made in C.A.F. Dowlah, 'Agriculture and the New WTO Round - Economic Analysis of Interests and Options for Bangladesh', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 31 December 2000, 4, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/NewDelhi.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/NewDelhi.doc), visited on 7 July 2001. In Bangladesh the informal sector of the economy dominates employment, accounting for an estimated 80% to 90% of the labour force. It is characterised by unregistered, small-scale, labour-intensive activities, carried out mainly by family labour. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section I para. 11.

<sup>648</sup> Nazneen Ahmed, *Ad Hoc Expert Meeting in Preparation for the Mid-Term Review of the Programme of Action for the Least Developed Countries for the Decade 2001-2010: Case Study on Bangladesh* UNCTAD/LDC/MISC/2006/4 (United Nations Conference on Trade and Development, May 2006, 27.

<sup>649</sup> In 2002/2003 in the agricultural sector, crops accounted for 11.5% of GDP, livestock for 2.4 % and fisheries for 4.4%. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section IV para. 14.

<sup>650</sup> *Ibid.*, Section IV para. 8.

jute,<sup>651</sup> tea, wheat, sugarcane, and potatoes.<sup>652</sup> Livestock and fisheries production is growing.<sup>653</sup> The government of Bangladesh supports the agricultural industry through various forms of subsidy, including through the distribution of low-cost seeds, the provision of subsidies for production of non-urea fertilisers and for the electricity costs of irrigation, and the government purchase of food grains from domestic producers at pre-announced prices for distribution through the Public Food Distribution System.<sup>654</sup>

Frequent cyclones and floods are an important impediment to the growth of the agricultural sector,<sup>655</sup> and contribute to food insecurity. Bangladesh is heavily dependent on imports of food as well as food aid.<sup>656</sup> Agricultural imports are mainly edible oils, dairy products, fruit, vegetables and sugar. In addition, considerable amounts of food-grain (rice and wheat) are imported to meet the country's food requirements.<sup>657</sup>

Agricultural exports are mainly primary products,<sup>658</sup> such as fish and shrimp, raw jute, tea and vegetables. Exports of processed agricultural products are negligible.<sup>659</sup> The Bangladeshi government is trying to promote export-oriented agricultural industries by providing export incentives and facilities to farms of at least five acres for the production of fruit, vegetables, fresh flowers etc. for export.<sup>660</sup> Direct cash subsidies are given for

<sup>651</sup> Bangladesh is the world's largest jute producer. Jute is either sold raw or in the form of manufactured goods (burlap, sacks, rope, mats, twine and carpet backing). Although jute is a major earner of export revenue for Bangladesh, it is subject to vast price fluctuations (of 30 major internationally-traded commodities, only 6 are subject to as much price and supply instability as jute). See the Country Study of the Federal research Division of the US Library of Congress for Bangladesh, available at: <http://countrystudies.us/bangladesh/71.htm>, visited on 25 June 2007.

<sup>652</sup> See the *World Fact Book*, US Central Intelligence Agency, 2007, available at: <https://www.cia.gov/library/publications/the-world-factbook/geos/bg.html#Intro>, visited on 10 January 2008.

<sup>653</sup> In 1992/1993 crops made up 64% of agricultural production, while livestock, fishery and forestry accounted for the remaining 36%. In 1998-1999 this was 58% and 42% respectively. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Part IV para.7 and Chart IV.3. Currently, fish account for over 80% of consumption of animal protein of Bangladeshis.

<sup>654</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section IV paras 18-28. In 2005/2006, the budget allocation for subsidies for crops was Tk 11 billion.

<sup>655</sup> The Government of Bangladesh notes that growth in per capita GDP would have been higher were it not for the devastating floods of 1987, 1988 and 1998 and the catastrophic cyclone of 1991. See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Government*, WT/TPR/G/68, circulated on 3 April 2000, para. 10.

<sup>656</sup> Food security is a major policy goal of the Bangladeshi government. A substantial portion of the foreign aid received by Bangladesh entails food. See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Part I paras 3 and 28.

<sup>657</sup> Food-grain imports are covered by foreign aid and government and commercial imports. See *Ibid.*, Part IV paras 8 and 17.

<sup>658</sup> C.A.F. Dowlah, 'Agriculture and the New WTO Round - Economic Analysis of Interests and Options for Bangladesh', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 31 December 2000, 13 and 15, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/NewDelhi.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/NewDelhi.doc), visited on 7 July 2001.

<sup>659</sup> Important reasons for this are the poor rural infrastructure and financial services, weak functioning of public institutions in rural areas, lack of electrification and communication facilities and the lack of marketing networks to reduce price variability. See World Bank, *Bangladesh. A Proposed Rural Development Strategy* (World Bank, Dhaka), 1999, 26-27.

<sup>660</sup> Export Policy, 1997-2002. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Box III.2.

agricultural exports.<sup>661</sup> Agricultural exports, especially processed agricultural products, are, however, decreasing.<sup>662</sup>

An increasingly important export of Bangladesh in the area of fisheries is shrimp. Bangladesh is uniquely situated to cultivate and harvest shrimp, due to its location at the confluence of several rivers.<sup>663</sup> From being negligible in the early 1970s, shrimp exports grew to be one of the main exports<sup>664</sup> of primary products in Bangladesh.<sup>665</sup> After clothing, shrimp ranks second with regard to ability to earn foreign exchange.<sup>666</sup> The shrimp sector is also important to rural livelihoods. About 1.2 million Bangladeshis are directly engaged in activities relating to shrimp production, such as harvesting, culture, processing and exporting, while an additional 4.8 million household members are supported by

<sup>661</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section IV para. 15. These subsidies were notified to the WTO (G/AG/N/BGD/1, dated 15 July 2002) with the indication that the Bangladesh government does not consider them to be subject to reduction commitments.

<sup>662</sup> This is even more the case for exports of processed agricultural products, which evinced an even steeper decline than primary agricultural products. See C.A.F. Dowlah, 'Agriculture and the New WTO Round - Economic Analysis of Interests and Options for Bangladesh', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 31 December 2000, 15, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/NewDelhi.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/NewDelhi.doc), visited 7 on 7 July 2001.

<sup>663</sup> Greater Access to Trade Expansion Project, *A Pro-Poor Analysis of the Shrimp Sector in Bangladesh* (United States Agency for International Development Arlington), February 2006, 22, available at: [http://www.usaid.gov/our\\_work/cross-cutting\\_programs/wid/pubs/Bangladesh\\_Shrimp\\_Value\\_Chain\\_Feb\\_2006.pdf](http://www.usaid.gov/our_work/cross-cutting_programs/wid/pubs/Bangladesh_Shrimp_Value_Chain_Feb_2006.pdf), visited 13 January 2008. Bangladesh occupies the delta of the Ganges, Jamuna and Brahmaputra rivers.

<sup>664</sup> James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 1. Shrimp accounted for less than 1% of exports from Bangladesh in the early 1970s but increased to 4.9% of exports in 2004. Greater Access to Trade Expansion Project, *A Pro-Poor Analysis of the Shrimp Sector in Bangladesh* (United States Agency for International Development Arlington), February 2006, 22-23, available at: [http://www.usaid.gov/our\\_work/cross-cutting\\_programs/wid/pubs/Bangladesh\\_Shrimp\\_Value\\_Chain\\_Feb\\_2006.pdf](http://www.usaid.gov/our_work/cross-cutting_programs/wid/pubs/Bangladesh_Shrimp_Value_Chain_Feb_2006.pdf), visited 13 January 2008.

<sup>665</sup> Shrimp is the primary commodity exhibiting the most spectacular growth in post-independence Bangladesh. Mohammad Alauddin and M. Akhter Hamid, 'Shrimp Culture in Bangladesh with Emphasis on Social and Economic Aspects', in *Towards Sustainable Shrimp Culture in Thailand and the Region: Proceedings of a Workshop*, Paul Smith (ed.) (Australian Centre for International Agricultural Research, Canberra), 1999, 53-62, 53, available at: [http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/\\$file/PR90%20Chapter%2009.pdf](http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/$file/PR90%20Chapter%2009.pdf), visited on 12 May 2000. In 2000 shrimp exports exceeded exports of raw jute and jute products, accounting for about a quarter of exports (excluding ready-made garments) from Bangladesh. See Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 2, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>666</sup> Greater Access to Trade Expansion Project, *A Pro-Poor Analysis of the Shrimp Sector in Bangladesh* (United States Agency for International Development Arlington), February 2006, 9, available at: [http://www.usaid.gov/our\\_work/cross-cutting\\_programs/wid/pubs/Bangladesh\\_Shrimp\\_Value\\_Chain\\_Feb\\_2006.pdf](http://www.usaid.gov/our_work/cross-cutting_programs/wid/pubs/Bangladesh_Shrimp_Value_Chain_Feb_2006.pdf), visited 13 January 2008. Shrimp earns over US\$360 million in export revenue per year.

the industry.<sup>667</sup> Shrimp production by aquaculture is carried out solely for export purposes, producing five percent of global shrimp production.<sup>668</sup>

Nevertheless, shrimp culture remains rather unsophisticated,<sup>669</sup> which results in relatively low productivity and rejections of exports due to food-safety concerns, such as salmonella, bacterial and antibiotic contamination and residues of urea.<sup>670</sup> As a result, the global shrimp market is currently dominated by Thailand, Indonesia, China and Ecuador, countries that have successfully implemented innovations in production and processing.<sup>671</sup> A recent study by USAID in Bangladesh notes the urgent need to raise productivity and improve production methods in the shrimp sector.<sup>672</sup>

### 2.7.1.5 Summary of factual background

The above outline of factual background aims to provide an indication of the trade and health priorities in Bangladesh as the context within which the relevance of the *SPS Agreement* for its trade and health objectives can be understood.

While Bangladesh, despite its low level of economic resources, has managed to improve its human development situation, also with respect to health, significant challenges remain. These challenges relate to basic issues, including sanitation, malnutrition, primary health care and communicable diseases. Investment in the legislation and infrastructure necessary for effective food-safety regulation is not among the main priorities for public health spending in Bangladesh.

<sup>667</sup> *Ibid.* See also Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 2, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>668</sup> Shrimp aquaculture occurs in 9000 farms and produces 30 000 tons per year. Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 2, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>669</sup> Shrimp farmers have to rely on wild shrimp stock as there are only nine hatcheries in Bangladesh with limited capacity for producing fry. In addition, the shortage of artificial shrimp feed means that farmers mostly rely on natural feed with lower productivity. Most shrimp farmers use an improved version of traditional extensive shrimp farming, applying only a few elements of farming technologies. Only 1% of shrimp farms use a semi-intensive method of shrimp farming, involving a high density nursery phase before fry are transferred to shrimp fields. Intensive farming, requiring heavy feeding, removal of waste, water exchange and an aeration system, is very uncommon in Bangladesh. See Mohammad Alauddin and M. Akhter Hamid, 'Shrimp Culture in Bangladesh with Emphasis on Social and Economic Aspects', in *Towards Sustainable Shrimp Culture in Thailand and the Region: Proceedings of a Workshop*, Paul Smith (ed.) (Australian Centre for International Agricultural Research, Canberra), 1999, 53-62, 54-56, available at: [http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/\\$file/PR90%20Chapter%202009.pdf](http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/$file/PR90%20Chapter%202009.pdf), visited on 13 May 2000.

<sup>670</sup> Greater Access to Trade Expansion Project, *A Pro-Poor Analysis of the Shrimp Sector in Bangladesh* (United States Agency for International Development Arlington), February 2006, 17, available at: [http://www.usaid.gov/our\\_work/cross-cutting\\_programs/wid/pubs/Bangladesh\\_Shrimp\\_Value\\_Chain\\_Feb\\_2006.pdf](http://www.usaid.gov/our_work/cross-cutting_programs/wid/pubs/Bangladesh_Shrimp_Value_Chain_Feb_2006.pdf), visited 13 January 2008. Urea is an organic waste product used to accelerate shell-shedding by shrimp and to hasten their growth.

<sup>671</sup> *Ibid.*

<sup>672</sup> *Ibid.*, 14.

As a least-developed-country Member, Bangladesh's exports are concentrated in a small number of products. In particular, Bangladesh is highly dependent on clothing exports for its foreign revenue earnings. However, this sector is being subject to increasing competition since the integration of textiles and clothing into the multilateral free trade regime. The benefits that Bangladesh derives under the GSP schemes of various Members are threatened with erosion through progressive tariff reductions. It is therefore important that Bangladesh branches out into new export industries.

The growing shrimp industry is very important to Bangladesh's efforts to diversify away from its dependence on clothing exports, and to reduce the incidence of rural poverty. Shrimp are a high-value product with great potential for export earnings. Japan, the US and the EC are the main markets for shrimp, absorbing 90 percent of shrimp exports worldwide.<sup>673</sup> However, as fishery products are typically high-risk products from a food-safety perspective, these Members apply strict sanitary requirements to prevent such risks. The success of the budding shrimp export industry in Bangladesh is thus highly dependent on the ability of exporters to meet these requirements.

This is recognised by the Bangladeshi government, which has identified as the main market access problems that Bangladesh encounters, non-tariff barriers and in particular stringent quality and standards requirements,<sup>674</sup> both in the context of its trade policy review and during the technical needs assessment carried out in the context of the Integrated Framework for Trade Related Technical Assistance to Least Developed Countries.<sup>675</sup>

It is useful to examine Bangladesh's SPS system in order to establish its ability, on the one hand, to enact and enforce regulations to protect against SPS risks to human, animal and plant life or health in its territory, and, on the other, to meet or challenge the SPS requirements of its trading partners. This section will therefore proceed to give an overview of the SPS system currently in place in Bangladesh.

## 2.7.2 Bangladesh's SPS system

### 2.7.2.1 Food-safety system

Responsibility for food safety in Bangladesh rests with particular bodies within the Ministry of Health, the Ministry of Local Government and Rural Development and the Ministry of Industries.<sup>676</sup>

The Ministry of Health has a Department of Public Health and Extension, which carries out food-safety responsibilities. Food safety in Bangladesh is still governed by the *Pure*

<sup>673</sup> *Ibid.*, 22.

<sup>674</sup> See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Government*, WT/TPR/G/68, circulated on 3 April 2000, para. 26.

<sup>675</sup> The Integrated Framework is a collaborative effort of 6 core agencies, the IMF, ITC, UNCTAD, UNDP, the World Bank and the WTO. In this context, Bangladesh prepared an assessment of its trade-related technical assistance needs in 1997. A summary is provided in Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Annex II.1.

<sup>676</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section III para. 86.

*Food Ordinance* of 1959. However, this law was revised by the *Food Safety Ordinance* of 1994 to take account of Codex standards and guidelines.<sup>677</sup>

Bangladesh also imposes certain sanitary requirements to ensure the safety of food imports, as set out in the restricted list of the *Import Policy Order*.<sup>678</sup> These requirements may relate to certificates, prior permission or clearance from the relevant authorities or may relate to conditions that have to be met by the products themselves.

An example of certification requirements is, in case of importation of baby food, milk food and non-fat dried milk, Bangladesh requires a certificate from the competent authority of the exporting country, declaring that the food is fit for human consumption.<sup>679</sup> Similarly, a clearance certificate from the Bangladesh Atomic Energy Commission is required for imports of food, certifying that radioactivity does not exceed permissible levels.<sup>680</sup> Foreign certifications of radioactivity levels are also accepted.<sup>681</sup>

An example of a product requirement is the fact that imports of palm oil must pass a purity test conducted by the Bangladesh Council of Scientific and Industrial Research to be allowed on the market in Bangladesh.<sup>682</sup> In addition, imports of all food and beverages must clearly mention the date of manufacture and of expiry on each package or container,<sup>683</sup> and milk food products must indicate their ingredients, composition and expiry date.<sup>684</sup>

National standards for all products (except pharmaceuticals), including food and agricultural products, are set by the Bangladesh Standards and Testing Institute (BSTI), under the responsibility of the Ministry of Industries. It is the only national testing and certification body in Bangladesh.<sup>685</sup> This body also enforces compliance with standards and certifies the quality of products for import, export and domestic consumption.<sup>686</sup> The same testing and certification procedures apply to imports and domestic products.<sup>687</sup> The harmonisation of national requirements with international standards is one of the main policy

<sup>677</sup> FAO Commodities and Trade Division, *Agriculture, Trade and Food Security: Issues and Options in the WTO Negotiations from the Perspective of Developing Countries. Volume I: Issues and Options* (Food and Agriculture Organization, Geneva), 2000, Chapter 1, Section 2.4, available at: [www.fao.org/docrep/003/X4829e/X4829e00.htm](http://www.fao.org/docrep/003/X4829e/X4829e00.htm), visited on 29 June 2008.

<sup>678</sup> *Import Policy Order* 2003-2006. Under the *Import Policy Order*, some items are banned, while others may be imported subject to certain conditions. Banned items relate to religious and social practices in Bangladesh rather than to sanitary concerns. For example, pork and pork products and poppy seeds are banned. Restricted items may relate to health concerns. Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section III paras 63-65.

<sup>679</sup> *Import Policy Order* 1997-2002, para. 26(2). See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Table III.1.

<sup>680</sup> *Import Policy Order* 2003-2006, Section 26.2. Acceptable limits of radioactivity for milk products are set at 95Bq of CS-137 per kg, and for other food items at 50Bq of CS-137 per kg. Alcoholic beverages, spices and concentrated essences are exempt from radioactivity testing. See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Table AIII.4.

<sup>681</sup> *Ibid.*, Section III para. 87.

<sup>682</sup> *Import Policy Order* 2003-2006, Section 24.7. *Ibid.*, Table AIII.4.

<sup>683</sup> *Ibid.*

<sup>684</sup> *Ibid.*

<sup>685</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Government*, WT/TPR/G/68, circulated on 3 April 2000, para. 19.

<sup>686</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Section III para. 81.

<sup>687</sup> *Ibid.*, Section III para. 79.

objectives in the area of standards.<sup>688</sup> However, the government of Bangladesh has noted that the adoption of international standards is difficult for Bangladesh, due to the lack of domestic expertise and institutional structures for the adoption of these standards and due to the additional financial burden these standards place on its exporters.<sup>689</sup>

Despite the existence of its food-safety measures, Bangladesh has had negative experiences with unsafe food imports. These have been ascribed to inadequate regulation and inspection systems and to delays in updating national food-safety legislation.<sup>690</sup> In addition, the urgent need for training of government officials and the food industry in all aspects of food safety has been reported.<sup>691</sup>

The government of Bangladesh has raised its concern that, in view of the LDC status of Bangladesh and the associated stigma of lower SPS conditions, more stringent SPS measures may be applied to Bangladeshi agricultural exports than to those of other countries.<sup>692</sup> However, no information was provided of instances where this concern actually materialised. It seems likely that the same SPS product requirements would be applied by importing countries to products from Bangladesh as to those of other countries, but that the conformity assessment and testing requirements would be more rigorous, reflecting the lack of confidence in the SPS regime of Bangladesh. This is particularly the case in the absence of accreditation.

At the time of its previous Trade Policy Review in 2000, Bangladesh faced the problem that it lacked a laboratory accreditation scheme, with the result that no Bangladeshi laboratories were accredited.<sup>693</sup> In the absence of accredited laboratories, Bangladesh accepted the accreditation certificates issued by some multinationals operating in Bangladesh. In 2002, Bangladesh formed a committee to work on the establishment of a national accreditation body.<sup>694</sup> This body will be involved in the accreditation of laboratories, certification bodies and assessors.<sup>695</sup> In February 2006, Bangladesh notified the WTO Secretariat that the *Accreditation Act* of 2006 was being finalised.<sup>696</sup>

<sup>694</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/168, circulated on 9 August 2006, Part III para. 82.

<sup>695</sup> *Ibid.*

<sup>696</sup> *Ibid.*

Particular problems with food-safety requirements identified by Bangladesh are requirements relating to the HACCP system for frozen foods imports into the US and the quality and standards requirements in the EU.<sup>697</sup> Bangladesh has also indicated its concern that its exports of frozen food, dried fish, tea, vegetables and other traditional products may be affected by SPS measures.<sup>698</sup>

No mutual recognition agreements yet exist between Bangladesh and its trading partners with regard to standards, testing or certification. However, the government is currently pursuing such possibilities with the South Asian Association for Regional Cooperation (SAARC) countries as well as with India.<sup>699</sup>

An illustration of the effect of food-safety measures on Bangladeshi exports is provided by the case of the EU's import ban on frozen shrimp from Bangladesh in 1997, due to non-compliance with sanitary standards.

### 2.7.2.1.1 Food-safety measure affecting shrimp exports from Bangladesh

Sanitary facilities and training have lagged behind the rapid expansion of the shrimp industry, as a result of which Bangladesh has a reputation for poor-quality shrimp exports, not meeting international standards as set by the Codex Alimentarius Commission.<sup>700</sup> Like many other LDCs, Bangladesh experiences difficulties in meeting sanitary requirements.<sup>701</sup> In order to help Bangladesh address these problems of safety and quality in the shrimp sector so as to enable it to fully exploit its potential in this area, the FAO has conducted technical assistance programmes in Bangladesh since the early 1980s.<sup>702</sup> However, despite these initiatives, sanitary problems in the shrimp industry continued.

<sup>697</sup> See Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Government*, WT/TPR/G/68, circulated on 3 April 2000, para. 26.

<sup>698</sup> C.A.F. Dowlah, 'Agriculture and the New WTO Round - Economic Analysis of Interests and Options for Bangladesh', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 31 December 2000, 20, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/NewDelhi.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/NewDelhi.doc), visited on 7 July 2001.

<sup>699</sup> Trade Policy Review Body, *Trade Policy Review: Bangladesh – Report by the Secretariat*, WT/TPR/S/68, circulated on 3 April 2000, Part III para. 72.

<sup>700</sup> Due to this negative reputation and Bangladesh's small share of the world shrimp market, it is a price-taker rather than price-setter, and its frozen shrimp obtain lower-than-average prices for the Asian region. See James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 1.

<sup>701</sup> It is reported that these difficulties start at the pre-processing phase (harvesting, sorting, peeling) where conditions and facilities are inadequate to ensure hygienic handling of raw shrimp. At the processing stage, the lack of high quality water, weak infrastructure, poor transport facilities and irregular supply of electricity hinder the application of modern sanitary practices. Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 3, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>702</sup> In the early 1980s, the FAO assisted Bangladesh in the development of product standards, regulations and fish inspection schemes. Consequently Bangladesh promulgated the Fish and Fish Product Ordinance (Inspection and Quality Control) of 1983 and upgraded the laboratory for fish inspection and its staff in 1985. In 1996, the FAO implemented a project to help Bangladesh implement the HACCP system in fish and shrimp plants, by providing training to the public and private sector on HACCP procedures and informing

Bangladesh's shrimp export markets are primarily the EU and US,<sup>703</sup> both of which have strict sanitary requirements for shrimp imports. Following a determination in 1995 that Bangladesh's shrimp exports to the US do not meet US hygiene standards, these exports currently undergo automatic detention and examination by USDA authorities.<sup>704</sup> In the same year, an EU inspection of Bangladesh shrimp processing plants also found the hygiene levels to be below EU standards and that the water used in these plants was not chlorine free.<sup>705</sup> In 1997, a team of inspectors determined that very few processing plants met the HACCP requirements set by the EU. Not only were there concerns regarding infrastructure and hygiene in the processing plants, but also a lack of confidence in the quality controls carried out by the competent authority, the Department of Fisheries, in Bangladesh.<sup>706</sup>

Consequently an EU ban was imposed on shrimp exports from Bangladesh.<sup>707</sup> The ban had a serious impact on the shrimp industry. In the five months that the ban remained in place, it has been estimated that Bangladesh suffered losses of US\$ 14.7 million.<sup>708</sup> This

---

the government about requirements on major import markets. Finally, the Intergovernmental Organization for Marketing Information and Technical Advisory Services for Fishery Products in the Asia Pacific Region (INFOFISH), conducted a parallel Common Fund For Commodities/FAO project to promote the export of value added products, including training of industry and development of export opportunities. James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 1.

<sup>703</sup> In 2000, the EU absorbed 38.7% and the US 38.3% of shrimp exports from Bangladesh, and Japan followed with 11.2%. Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 2, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>704</sup> In 1997 alone, 143 shrimp shipments from Bangladesh were automatically detained. James C. Cato and C.A. Lima Dos Santos, 'Costs to Upgrade the Bangladesh Frozen Shrimp Processing Sector to Adequate Technical and Sanitary Standards and to Maintain a HACCP Program', presented at the *Conference on the Economics of HACCP: New Studies of Costs and Benefits*, Washington D.C.) 15-16 June 1998, 1, available at: [www.umass.edu/ne165/haccp1998/cato.html](http://www.umass.edu/ne165/haccp1998/cato.html), visited on 25 June 2007.

Akhter Hamid, 'Shrimp Culture in Bangladesh with Emphasis on Social and Economic Aspects', in *Towards Sustainable Shrimp Culture in Thailand and the Region: Proceedings of a Workshop*, Paul Smith (ed.) (Australian Centre for International Agricultural Research, Canberra), 1999, 53-62, 55, available at: [http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/\\$file/PR90%20Chapter%2009.pdf](http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/$file/PR90%20Chapter%2009.pdf), visited on 13 May 2000.

<sup>706</sup> James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 1. See also Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 2-3, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>707</sup> The ban was imposed on 30 July 1997.

<sup>708</sup> Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 4, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001. Rahman points to the result of a study by Cato and Lima dos Santos, which estimated the losses from the ban at US\$65.1 million. However, as Bangladesh was able to divert a large part of shrimp exports to the US and Japan, these potential losses were reduced to US\$17.7 million. J.C. Cato and C.A. Lima Dos Santos, 'European Union 1997 Seafood Safety Ban: The Economic Impact on

figure does not take into account the long-term losses due to loss of market share following market diversions, erosion in the price offered to exporters and loss of momentum of the shrimp industry.<sup>709</sup>

In response to the ban, concerted efforts were made to improve the quality and safety of shrimp exports.<sup>710</sup> In 1997 the *Fish Inspection and Quality Control Rules* were drafted on the basis of the relevant EC Directives.<sup>711</sup> Both the government of Bangladesh and the shrimp industry invested significant sums in order to ensure compliance with HACCP requirements for shrimp exports. In addition, special credit programmes were established and support was sought from international organisations.<sup>712</sup> Investments included repair and upgrading of plant infrastructure, new equipment and laboratories, recruitment and training of staff and sanitation audits.<sup>713</sup> The cost of these improvements is estimated at US\$18 million.<sup>714</sup> Maintaining the HACCP system costs an additional US\$2.4 million annually,<sup>715</sup> which represents 0.31 to 0.85 percent of the export earnings of the shrimp sector in 1997.<sup>716</sup>

<sup>711</sup> Committee on Sanitary and Phytosanitary Measures, *Implementation of the SPS Agreement. Information for the Workshop on 31 March 2006. Communication from Bangladesh*, G/SPS/GEN/676, circulated on 31 March 2006.

<sup>712</sup> Mustafizur Rahman, 'EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs', presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 4, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited on 6 March 2001.

<sup>713</sup> James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 1.

<sup>714</sup> This calculation is based on a survey of 19 shrimp processing plants in Bangladesh. Industry investment in upgrading of plants was calculated as US\$17.6 million and government investments in improving facilities such as laboratories and training personnel was calculated as US\$ 382 000. See James C. Cato and C.A. Lima Dos Santos, 'Costs to Upgrade the Bangladesh Frozen Shrimp Processing Sector to Adequate Technical and Sanitary Standards and to Maintain a HACCP Program', presented at the *Conference on the Economics of HACCP: New Studies of Costs and Benefits*, Washington D.C.) 15-16 June 1998, 1, available at: [www.umass.edu/ne165/haccp1998/cato.html](http://www.umass.edu/ne165/haccp1998/cato.html), visited on 25 June 2007.

<sup>715</sup> These costs are made up of US\$2.2 million in industry expenditures and US\$225 in government costs in connection with the monitoring of HACCP implementation. See *Ibid.*

<sup>716</sup> It is interesting to note that that this cost represents US\$0.015 to US\$0.04 per pound of shrimp, as compared to the cost for HACCP plans in US shrimp plants of US\$0.0009 per pound. Predictably, HACCP implementation in developing countries costs much more than in developed countries. *Ibid.*

Following these improvements, the EU ban was gradually lifted, as particular processing plants were judged to meet EU requirements.<sup>717</sup> Fishery and aquaculture exports to the EC from Bangladesh were required to come from the approved plants and to be accompanied by a prescribed health certificate from the competent authority in Bangladesh, designated to be the Department of Fisheries – Fish Inspection and Quality Control.<sup>718</sup> Shrimp exports from Bangladesh began to recover and, in 2000, were well on their way to reaching pre-ban levels.<sup>719</sup> However, it has been noted that the lost momentum of the shrimp industry has not yet been regained.<sup>720</sup>

Additionally, it is important to bear in mind the social consequences of strict sanitary requirements in the shrimp sector. They reinforce the bias that exists in favour of large shrimp farmers as opposed to single or household operations,<sup>721</sup> as only large farmers have the resources needed to make the investments demanded by the new requirements. Large commercial shrimp farmers are commonly ‘outsiders’, based in urban centres, who are influential with government bureaucracies and insensitive to local problems.<sup>722</sup> Unlike local farmers, they are not concerned with the social and environmental impact<sup>723</sup> of their activities on the local area. Many small farmers are forced to leave their land and receive very low rent from the large farmers.<sup>724</sup> In addition, large farmers tend to hire labourers from outside the area, rather than absorb surplus rural labour.<sup>725</sup> The economic benefits for local rural communities from shrimp farming have consequently become minimal

<sup>717</sup> The EU ban was conditionally lifted with regard to six processing plants from 1 January 1998. This increased to 11 plants in July 1998 and by 2002, 48 of the 65 plants licensed by the Bangladesh government to export shrimp, had received EU approval. James C. Cato and S. Subasinge, *Food Safety in Food Security and Food Trade: Case Study: The Shrimp Export Industry in Bangladesh* (International Food Policy Research Institute, Washington D.C.), September 2003, 2.

<sup>718</sup> These requirements were set out in a Commission Decision, which also listed the approved plants and provided the required certificate in Annex. Under the certificate, the health official must certify that the exports meet the requirements of EC Directives 91/493/EEC and 92/48/EEC, with regard to hygienic catching, handling, preparation, processing, freezing, thawing and storage; health controls; microbiological, parasitological, chemical and organoleptic checks; and that they do not come from species that are toxic or contain biotoxins. See European Commission, *Commission Decision of 13 February 1998 Laying Down Special Conditions Governing Imports of Fishery and Aquaculture Products Originating in Bangladesh*, (EC) 98/147/EC (European Commission, Brussels), 13 February 1998.

<sup>719</sup> Before the ban, in 1997, shrimp exports to the EU amounted to US\$128.9 million. This fell to US\$48.2 million in 1998 following the ban. In 1999, exports climbed to US\$89.3 million and reached US\$124.9 million in 2000. Mustafizur Rahman, ‘EU Ban on Shrimp Imports from Bangladesh: A Case Study on Market Access Problems Faced by LDCs’, presented at the *Workshop on a New WTO Round on Agriculture, SPS, and the Environment: Capturing the Benefits for South Asia* (World Bank, UNCTAD and SAARC Secretariat, New Delhi, India) 11-13 January 2001, 4, available at: [http://r0.unctad.org/trade\\_env/test1/meetings/standards/mustafizur.doc](http://r0.unctad.org/trade_env/test1/meetings/standards/mustafizur.doc), visited 6 March 2001.

<sup>720</sup> *Ibid.*

<sup>721</sup> Alauddin and Hamid point out that commercial shrimp farming arose in response to international demands and shrimp are currently grown primarily for the export market. Mohammad Alauddin and M. Akhter Hamid, ‘Shrimp Culture in Bangladesh with Emphasis on Social and Economic Aspects’, in *Towards Sustainable Shrimp Culture in Thailand and the Region: Proceedings of a Workshop*, Paul Smith (ed.) (Australian Centre for International Agricultural Research, Canberra), 1999, 53-62, 54-55, available at: [http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/\\$file/PR90%20Chapter%202009.pdf](http://www.aciar.gov.au/web.nsf/doc/JFRN-5J473M/$file/PR90%20Chapter%202009.pdf), visited on 13 May 2000.

<sup>722</sup> *Ibid.*, 57-58.

<sup>723</sup> Shrimp farming brings with it high environmental costs, including reduction in crop production (particularly rice), decrease in vegetation and destruction of mangrove forests. *Ibid.*, 53.

<sup>724</sup> *Ibid.*, 58.

<sup>725</sup> *Ibid.*, 59.

as profits flow to urban centres. As a result, conflicts have arisen between outsiders and locals.

### 2.7.2.2 Animal health system

Livestock and fisheries are growing sectors of agricultural production in Bangladesh, as mentioned above. Regulation of this sector is not limited to addressing food-safety risks, but involves also the protection of the health of aquatic and terrestrial animals. Responsibility for ensuring animal health in Bangladesh rests with the Ministry of Livestock and Fisheries, and the Livestock Directorate and Department of Fisheries under its authority.

All imports of chicks, hatching eggs and deep frozen semen of cattle must be accompanied by a sanitary certificate issued by the Livestock Directorate or the competent authority in the exporting country that the product is free from contagious diseases.<sup>726</sup> Deep frozen semen of oxen is banned.<sup>727</sup> In addition, imports of eggs or larvae of shrimps and prawns are banned in Bangladesh. New regulations on hatcheries and fish feed are being drafted.<sup>728</sup> The animal health measures imposed by Bangladesh are undermined by the prevalence of smuggling across the border with India.

Bangladesh also aims to ensure that its exports of livestock and fishery products meet sanitary requirements on their export markets, in order to avoid facing barriers to market access in the form of sanitary measures. For this reason, quality control licences from the BSTI are required prior to exportation of certain products.<sup>729</sup> In addition, health and quarantine certificates are required, respectively, for exports of frozen fish and exports of plant products.<sup>730</sup>

The government is taking steps to improve compliance with sanitary requirements, including by increasing awareness of exporters of such requirements by means of seminars and by modernising the BSTI. Nevertheless, failure to meet internationally acceptable standards has led to restrictions in market access for Bangladeshi products. Lack of facilities to ensure product quality is a significant obstacle faced by exporters.<sup>731</sup>

### 2.7.2.3 Plant health system

As mentioned above, crop production is the most important area of agricultural activity in Bangladesh, and significant for purposes of food security. Major crops, namely

equipped, two have been upgraded.<sup>738</sup> Nevertheless, the large amount of unofficial trade that takes place across the long border between Bangladesh and India means that the phytosanitary restrictions of Bangladesh are often bypassed, resulting in threats to plant health.

Bangladesh's main exports of plant products, namely tea, jute and jute products, have to date never been subject to phytosanitary barriers to trade. However, concerns have been raised that stricter EC measures may have adverse effects on Bangladeshi exports.<sup>739</sup>

### 2.7.3 Overall assessment of the SPS system of Bangladesh

The SPS system of Bangladesh has been categorised as extremely weak by a recent World Bank study.<sup>740</sup> Both the human resources and the technical capacity to deal with increasingly strict SPS requirements on the markets of its trading partners are inadequate.<sup>741</sup>

In addition, it has been noted that the current plant inspection and quarantine rules in Bangladesh are outdated and should be completely revised. In addition, Bangladesh should establish a list of important plant pests and diseases in its territory, something which is often required by importing countries. Finally, the necessity for cooperation and exchange of information between plant quarantine services in Bangladesh and neighbouring countries has been emphasised.<sup>742</sup> These improvements will require financial and technical assistance. Lack of information of Bangladeshi exporters of agricultural products (such as tea, jute, shrimps and frozen food and vegetables) regarding the SPS measures of importing countries has been identified as a problem in accessing the markets of industrialised countries.<sup>743</sup> Further, the government has observed that the lack of knowledge of WTO rules by exporters in Bangladesh prevents them from approaching the government in cases where their exports face market barriers in violation of the rules of the *SPS Agreement*.<sup>744</sup>

<sup>738</sup> These are the Chittagong sea port and the Benapole land border check-post.

## 2.8 Conclusion: The differences between SPS regulatory systems at different levels of development

The above discussion has illustrated the significant differences that exist between WTO Members with regard to SPS regulatory systems. These differences reflect the different levels of development of the relevant Members – there are clearly vast differences between the developed-country Member and the developing-country Members studied. However, it is important to note that these differences also exist *between developing-country Members* at different levels of development, as reflected by their GDP, level of human development, and export diversification. Clearly, some developing countries have been more successful than others have in upgrading their SPS systems and securing access to the markets of their trading partners.

In addition, it has been shown that differences are also prevalent between different sectors *within* certain countries. Some sectors are operating at high levels of SPS safety, while others remain underdeveloped in this regard. This reflects national priorities with regard to export promotion as well as technical and financial assistance received in a particular area. Most of the countries studied have in place relatively strong SPS controls over the most important SPS risks they face.<sup>745</sup> There is therefore clearly a need for a more nuanced understanding of the SPS problematique than to see it merely in terms of a developed country versus developing country issue.

Nevertheless, two general conclusions can be drawn regarding differences in SPS regimes according to level of development. First, the *level* of SPS protection exhibits marked differences, being substantially higher in more developed countries due to better technological capacity, higher consumer demands, and more developed regulatory infrastructure. Second, the *regulatory focus* differs. Less developed countries tend to rely on product requirements, which are enforced by means of testing and inspections by government authorities at the point of exit or entry. Product requirements are easier to comply with as they leave the means of compliance up to the producer and are based on objective, testable properties that can readily be ascertained. By contrast, developed countries are increasingly, especially in the area of food safety, moving towards *process* requirements, such as HACCP,<sup>746</sup> which require the producers themselves to take responsibility for ensuring that the entire chain, ‘from farm to fork’ meets certain standards of hygiene and safety. These process requirements entail a systems-wide approach to SPS issues, which necessitates significant technical expertise, supporting infrastructure and control systems.

These differences in SPS regimes have notable consequences for the impact both of SPS measures themselves and of the *SPS Agreement* on countries at different levels of development. First, various problems faced by developing countries with compliance with

---

<sup>745</sup> The report of the case studies of six developing countries carried out by the ITC and Commonwealth Secretariat has also come to this conclusion. See Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume I: Background Information, Findings from Case Studies and Technical Assistance Needs* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2003, 84. This report notes that it would be too simplistic to merely state that developing countries cannot meet SPS requirements. Instead ‘where SPS or TBT requirements threaten their economic interests, the countries are willing and able to take action.’ *Ibid.*

<sup>746</sup> The HACCP system is explained above, Part II, Section 1.3.

SPS measures in developed country markets have been identified in the country case studies above, by means of illustrative examples. These problems reflect the fact that the difficulty and costs of compliance are directly related to the extent of the gap between the existing domestic SPS regime and the SPS requirements in foreign markets. Several factors play a role here, such as weak domestic SPS regulation, inadequate public infrastructure, unreliable compliance assessment and certification, insufficient dissemination of information on SPS requirements abroad, and poor laboratory equipment and staff.

Second, the differences between countries at different stages of development have bearing on the way in which the *SPS Agreement* impacts on them. As will be seen in the discussion in subsequent chapters, the disciplines of this Agreement reflect 'best practices' in developed countries with regard to SPS regulation. The case studies above show that the reality in many developing countries is different. Thus compliance with the requirements in the *SPS Agreement* for SPS regulation, in terms of both scientific basis and procedural transparency, is more difficult and costly for less developed countries. In addition, institutional and scientific deficiencies affect the possibilities that less developed countries have to use the substantive rules and procedural mechanisms of the *SPS Agreement* to gain access to foreign markets.

The discussion of the international aspect of Australia's SPS system has shown that it has a highly effective and pro-active system in place to address potential SPS market barriers faced by its producers. Australia is therefore able to resolve SPS issues promptly, in many cases before they result in the imposition of SPS measures, thus avoiding economic harm to Australian operators. Such a system is absent in the middle- and low-income WTO Members discussed in this Chapter, and their approach to SPS barriers tends to be more reactive. As a result, their exporters bear heavy financial losses from product rejections while the SPS measure remains in place. Examples discussed in this Chapter that illustrate this point are the inability of Mauritian abattoirs to meet EC requirements for poultry and venison, resulting in a loss of market access to Reunion; and Jamaica's lack of resources to create a hot water treatment facility to eliminate fruit flies on mangoes, as required by the US, leading to a ban on its mango exports to the US. Even when adjustments are successfully made by the exporting Member to address the SPS problem, its industry may not always recover its original position on the market, as illustrated by the situation of the Bangladeshi shrimp industry discussed above.

However, it would be an over-generalisation to state that middle- and low-income Members are entirely incapable of meeting SPS requirements on their export markets, or of upgrading their SPS systems to protect their territories from SPS risks. A recent study, conducted by the International Trade Centre and the Commonwealth Secretariat in six developing countries, has indicated that both in areas where SPS requirements threaten their key economic interests and in areas where important SPS risks to their territories are at stake, developing countries have demonstrated a willingness and ability to take action.<sup>747</sup>

---

<sup>747</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries. Volume I: Background Information, Findings from Case Studies and Technical Assistance Needs* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2003. The report is discussed by Guyadhur, a Senior Adviser on Export Quality Management at the ITC. See Shyam K. Gujadhur, 'Technical Assistance for SPS Measures: Protect Health, Not Trade', *International Trade Forum* (3), 2002, 31-35, available at: <http://www.tradeforum.org/news/fullstory.php/aid/460/>

For example, as discussed in this Chapter, in order to ensure access for its canned ackee to the US market, one of its most important markets, Jamaica has undertaken an innovative implementation of a pre-clearance system. Mauritius has taken measures to keep sugarcane pests out of its territory, as this pest would entail significant phytosanitary risks for a crop crucial to the economy of this Member. Bangladesh has largely restructured its shrimp industry to meet EU food-safety requirements. These three Members have made concerted, and effective, efforts to resolve the SPS issues of particular export or import importance to them.

It is, nevertheless, important to note the central role played by technical and financial support from the importing Member in some of these initiatives.<sup>748</sup> It is unlikely that, without the necessary support, the exporting Member would have been able to resolve the SPS problems facing its industry. This puts those Members that face capacity constraints in the area of SPS regulation in a very dependent position. As bilateral technical assistance tends to be donor driven, and based on the trade interests of the donor country, this may lead to situations where the development priorities of the recipient country are disregarded. While certainly valuable in assisting exporting Members to overcome specific difficulties they face in the SPS area, such *ad hoc* technical assistance should not be seen as the magic bullet solution to the differences in SPS capacity, and the concomitant disparity in SPS requirements, of WTO Members at different levels of development. Instead, as will be discussed in Part V of this book, a new, integrated, predictable and coherent approach to technical assistance is needed, to ensure that it is successful in strengthening the SPS regime of the beneficiary Member in accordance with its particular needs and priorities.<sup>749</sup>

## CHAPTER 3

### International SPS standard-setting

Vast differences exist in national SPS regulatory systems, as seen from the discussion in Chapter 2. These differences can be ascribed to the divergent economic, ecological, institutional, cultural, social and legal contexts in which they occur. For example, a Member with a unique and vulnerable ecology and a largely pest-free status may have sophisticated quarantine requirements in place, whereas a Member whose territory is already teeming with pests may not regard this as a priority. Similarly, a Member with affluent, risk-averse citizens may choose to impose process requirements for food products, whereas a Member whose citizens face food shortages or risks from infectious diseases may focus its resources rather on poverty alleviation and basic sanitation. Diverging SPS requirements are thus a reflection of the diversity in both capacity and policy priorities that exists in different Members and can be seen as a natural outcome of the exercise of sovereign regulatory authority by their governments.

However, regulatory diversity has long been recognised to constitute a significant trade barrier. Differing SPS measures can act as non-tariff barriers to trade by subjecting producers to additional requirements on their export markets, beyond those that they have to meet in the country of production. When producers are further faced with a multiplicity of SPS requirements in the different export markets, meeting all these requirements will be even more burdensome and costly, thus reducing efficiency gains and preventing the realisation of economies of scale.<sup>1</sup> The promotion of harmonisation of SPS requirements aims to address this problem.<sup>2</sup>

Harmonisation initiatives in the area of SPS regulation have a long history. Hand-in-hand with the expansion of trade in food and agricultural products came the increasing awareness of the trade restrictive effect of divergent national SPS requirements and of the need to promote their harmonisation. Already in 1903, the International Dairy Federation

---

<sup>1</sup> Economies of scale refer to the phenomenon where increases in the scale of production (for example due to access to foreign markets) typically lead to a corresponding decrease in the costs of production per unit, since fixed costs are shared over a larger number of units. This is particularly the case when there are high fixed costs of production and small marginal costs. Where the product has to be adapted to different requirements on the various export markets, these economies of scale are reduced or lost.

<sup>2</sup> Some commentators distinguish two types of harmonisation, namely international standard setting and the recognition of the equivalence of domestic and foreign standards. See, for example, Public Citizen, *Harmonization Handbook: Accountable Governance in the Era of Globalization: The WTO, NAFTA, and International Harmonization of Standards* (Public Citizen, Washington D.C.), 2000, 3. However, it is argued here that the recognition of the equivalence of different standards is a way to diminish the trade-restrictive effect of divergent SPS requirements by preventing these divergences from constituting reasons to restrict importation, while not harmonising them. The technique of equivalence, unlike harmonisation, does not lead to the application of uniform regulatory standards. Instead, members of the free trade regime are obliged, under certain conditions, to accept the regulations of other members as equivalent to their own even if they differ in content, provided that they achieve the same regulatory objectives. Thus members cannot prohibit or restrict imports based on differences in regulatory standards. The following discussion will accordingly limit itself to those uniform standards drafted on international level. Therefore, equivalence agreements and mutual recognition agreements will not be discussed in here, but instead in Part IV, Section 1.1 below. This accords with the typology used in the *SPS Agreement*, where the term ‘harmonization’ is used to refer only to the first category of initiatives, while the second type falls under the heading of ‘equivalence’.

drew up standards for international trade in milk and milk products.<sup>3</sup> Other commodity organisations took similar initiatives. In the 1930s, under the auspices of the International Institute for Agriculture, several conventions establishing uniform rules for particular commodities were adopted.<sup>4</sup> This trend has grown beyond efforts by specific commodity interest groups. After the Second World War, regional initiatives to harmonise food regulations were launched, such as the development of a Latin American Food Code and the *Codex Alimentarius Europeus*.<sup>5</sup> Currently, free trade regimes, such as the European Community,<sup>6</sup> North American Free Trade Agreement (NAFTA) and the WTO, promote harmonisation as part of their trade liberalisation disciplines.

Harmonisation of SPS regulation within free trade regimes relies upon international standard setting to generate norms. International standard setting refers to the process of establishment of a single regulatory standard to be applied by all members of the particular free trade system. This harmonised standard can be set by the decision-making bodies of the free trade organisation itself, as in the case of the EC. Alternatively, the standard can be set by existing international standard-setting organisations that are independent of the trade regime but expressly referred to by the relevant rules thereof, as in the case of the WTO and NAFTA.

The harmonisation of SPS requirements around international standards has good reasons behind it. However, it also has significant failings which give cause for concern. It is useful to address both aspects of this issue, in order to be able to evaluate the reference

---

<sup>3</sup> Peter W.B. Phillips, 'Food Safety, Trade Policy and International Institutions', in *Governing Food: Science, Safety and Trade*, Peter W.B. Phillips and Robert Wolfe (eds.) (McGill-Queen's University Press, Montreal), 2001, 27-48, 29.

<sup>4</sup> The International Institute for Agriculture (IIA) was the forerunner of the UN Food and Agriculture Organization (FAO). Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 14. Mariëlle Masson-Matthee mentions the following examples of conventions adopted under the IIA: the *Brussels Convention for the Marking of Eggs*, adopted 10 December 1931 and the *Rome Convention on the Unification of Sampling and Analysis Methods for Cheese*, adopted 26 April 1934. She also notes that proposals on the initiative of the International Dairy Federation with regard to various milk products were presented for adoption in 1939 but their adoption was hindered by the outbreak of the Second World War.

<sup>5</sup> *Ibid.*, 15. Masson-Matthee notes that the *Codex Alimentarius Europeus* was based on the earlier *Codex Alimentarius Austriacus*, the 1897 food code of the Austro-Hungarian empire. In 1958, an initiative of the International Commission on Agricultural Industries and the Permanent Bureau of Analytical Chemistry led to the creation of the Council of the Codex Alimentarius Europeus with the mandate to establish a European food code. This Council later proposed that, in order to expand participation, the FAO should take over its work. This eventually led to the proposal by the FAO in 1961 for the establishment of the Codex Alimentarius Commission, discussed further below, Part II, Section 3.2.1.

<sup>6</sup> The success of the harmonisation of regulations in promoting free trade is evinced by the experience of the European Community, where the promulgation of common standards applicable to all Member States in various areas of consumer and environmental protection, together with the mutual recognition of standards among Member States, have facilitated the free movement of goods and thus the creation of the Single Market in Europe. Product safety regulation at European Community level provides a good example of this strategy. The European Community replaced national regulations setting product safety standards with sophisticated regulatory frameworks at European Community level, 'which have now reached the point of almost comprehensively covering the whole range of technical goods and other products'. Christian Joerges, 'Scientific Expertise in Social Regulation and the European Court of Justice: Legal Frameworks for Denationalized Governance Structures', in *Integrating Scientific Expertise into Regulatory Decision-Making: National Traditions and European Innovations*, Christian Joerges, et al. (eds.) (Nomos, Baden-Baden), 1997, 295-323, 298.

to harmonisation around international standards in the *SPS Agreement*<sup>7</sup> and its effect on Members at different levels of development. This chapter therefore starts, in a first *general* section, by examining the reasons behind the promotion of harmonisation of SPS regulation around international standards. This is addressed from a law-and-economics perspective, as was done when examining the reasons for national SPS regulation in Chapter 2. Thereafter, the failings of harmonisation are discussed, with a particular focus on the procedural problems inherent in international standard setting. This general section aims to provide the conceptual background for the more concrete discussion in the section that follows.

The following section of this Chapter comprises a more *specific* discussion of international standard setting in practice, by examining the three international standard setting bodies referred to in the *SPS Agreement*. This provides a necessary factual context for the discussion of the harmonisation provisions of the *SPS Agreement* in Part III of this book. WTO Members are obliged, under Article 3.4 of the *SPS Agreement*, to participate in the work of the relevant international standard-setting organisations, to the extent that their resources permit, and to promote the development and periodic review of the SPS standards set in these organisations. However, this provision itself recognises that resources are a limiting factor regarding the participation of Members in international standard-setting organisations. The extent to which resource constraints impact on the ability of WTO Members to influence the development and adoption of the international standards that will be used as benchmarks under the disciplines of the *SPS Agreement*, can best be understood by looking in some detail at the structure and functioning of the standard setting bodies involved.

Therefore, each of three international standard setting bodies expressly referred to in the *SPS Agreement* are addressed in turn in this section.<sup>8</sup> In particular, in a first subsection, the mandate of each of these bodies is set out to establish its scope of activities. Second, the institutional structure of the relevant body is explained, with reference to the tasks and composition of the various organs involved. The rules on membership and observer status of each of the standard-setting body at issue are set out in a third subsection in order to determine the scope for participation by the relevant actors, including countries at different levels of development, and various interest groups. The current composition of the membership of the relevant standard-setting body is noted here, with reference to WTO Members at different levels of development. In keeping with the approach taken elsewhere in this book, income level is used as a convenient indicator of level of economic development in order to be able to systematise and present the information available.<sup>9</sup>

---

<sup>7</sup> This reference is discussed in detail below, Part III, Chapter 4.

<sup>8</sup> Note that the *SPS Agreement* provides the possibility, in Annex A.3(d), in respect of ‘matters not covered’ by the three international standard-setting bodies expressly mentioned in the Agreement, for the SPS Committee to identify appropriate standards promulgated by other organisations open for membership to all WTO Members. However, the SPS Committee has not yet done so. As a result, the discussion of standard setting in this Chapter is limited to those three organisations currently of relevance under the *SPS Agreement*. On Annex A.3(d), see below, Part III, Section 4.1.1.

<sup>9</sup> Income level is indicated, as done elsewhere in this book, on the basis of the 2007 World Bank classification of countries by income level. See the World Bank classification, as at 1 July 2007, available at: <http://siteresources.worldbank.org/DATASTATISTICS/Resources/CLASS.XLS>, visited on 18 December 2007.

However, this does not imply the view that the level of income or economic development of a country is fully indicative of its position on the development continuum.<sup>10</sup>

A fourth subsection explains the standard setting procedures of the international standard-setting body at issue. This is done with a view to making clear the problems that Members at lower levels of development may face in participating effectively in these procedures. Where available, information is provided on evaluations of standard-setting procedures carried out for the relevant body, identifying problematic aspects of these procedures. Initiatives to reform the standard-setting procedures are also identified where they exist.

The actual attendance and active participation of WTO Members at different levels of economic development in the standard-setting process in the international standard-setting body at issue is examined in a fifth subsection. Once again, the 2007 World Bank classification of countries by income level is used as an indicator of level of development.<sup>11</sup> The data examined in this regard is limited specifically to *WTO Members* rather than to *all* members of the international standard-setting body at issue. This is because the purpose of this Chapter is to establish the context for the discussion of the implications of the disciplines on harmonisation in the *SPS Agreement* for WTO Members at different levels of development. It is for these countries that the international standards set by the relevant standard-setting bodies have taken on new importance as benchmark standards under the *SPS Agreement*.

In most cases, to establish the levels of attendance of WTO Members at different income levels, the lists of participants at the most recent meetings of the various committees, expert groups and other bodies involved in the standard-setting process and for which data is available, are relied upon. Some indication of trends in the level of active participation of WTO Members by income level is derived from an examination of the number of their interventions in meetings of specific committees, where this information is available. Where publicly available, information on the extent to which WTO Members at different income levels have proposed new standards for elaboration by the relevant bodies is provided. All these statistics aim to sketch a picture of the current situation with regard to the participation of WTO Members at different levels of development in international standard setting.

While a serious attempt has been made to collect and systematise the data available, this section does not pretend to offer a precise calculation of the exact levels of attendance and active participation of WTO Members by income level. Such an endeavour is made impossible by the many gaps in the publicly available data, and the lack of statistical expertise of the author. Instead, this section only provides an *indication* of the approximate levels of attendance and participation of WTO Members.

The Chapter concludes by evaluating the current state of the international standard-setting procedures and the extent of developing country participation therein.

---

<sup>10</sup> As discussed in above in Chapter 2, and recognised in the UNDP's *Human Development Index*, various indicators of economic and social development must be taken into account in establishing the level of development of a country. See above, Part II, Section 2.2.

<sup>11</sup> Note that the 2007 classification is used throughout, even where data provided relates to a number of years. As a result, the limited number of cases where a Member may have moved from one income classification to another during the periods examined, is not taken into account in the presentation of data in this book.

### 3.1 General aspects of international standard setting

#### 3.1.1 Reasons for harmonisation of SPS regulation around international standards

Harmonisation may be seen as an attempt to address the difficulties that arise from the globalisation of trade in food and agricultural products, and the concomitant globalisation of health risks.

In law-and-economics terms, harmonisation may be regarded as a response to the problem of global public goods. As discussed in Chapter 2, public goods are characterised by ‘non-rivalry in consumption and non-excludability.’<sup>12</sup> When the externality effects of provision of the public good extend beyond national borders, it can be regarded as a *global* public good. This is the case, for example, for the public good of liberalised markets, which benefits not only the national economy, but also provides opportunities to foreign producers to expand their markets. It is likewise the case for the public good of safe products, which prevents risks both to domestic consumers and, if the product is traded, also to consumers in the importing country.

Regulations for SPS protection have externality effects on both trade and health beyond the national borders. They typically affect not only domestic producers and consumers but also foreign competitors and consumers.<sup>13</sup> The trade restrictive effect of the diversity of national SPS regulations has a significant impact on exporters of food and agricultural products. At the same time, the increasing globalisation of SPS health concerns has arisen from the growth in movement of food and agricultural products across borders, leading to risks from unsafe food imports and from the introduction and spread of pests and diseases by imported plants, animals or their products.

Despite the fact that they are affected by the externality effects of SPS regulation, foreign stakeholders have insufficient influence on the regulating government to counteract the influence of domestic interest groups. As a result regulators may undervalue the costs or benefits to foreign operators.<sup>14</sup> This results in inefficient provision of global public goods.<sup>15</sup>

---

<sup>12</sup> Peter Drahos, ‘The Regulation of Public Goods’, *Journal of International Economic Law* 7 (2), 2004, 321-339, 321. More simply put, this means that consumption of the good by one person does not leave less available for other persons to consume, and it is impossible or too costly to exclude those who do not pay from the benefit of the good. See further on public goods the discussion above, Part II, Section 1.2.

<sup>13</sup> Alessandra Casella notes that ‘standards may be linked to public goods that are defined not in physical space, but in economic space: the standards we consume may depend more on the products we buy than on the place where we live.’ Alessandra Casella, ‘Free Trade and Evolving Standards’, in *Fair Trade and Harmonisation: Prerequisites for Free Trade?*, Jagdish N. Bhagwati and Robert E. Hudec (eds.), vol. 1 (MIT Press, Cambridge), 1997, 119-156, 136.

<sup>14</sup> Robert Keohane, ‘Global Governance and Democratic Accountability’, in *Taming Globalization: Frontiers of Governance*, David Held and Mathias Koenig-Archibugi (ed.) (Polity Press, Cambridge), 2003, 130-159, 150-151.

<sup>15</sup> This point was also made above, Part II, Section 1.2. See Howard F. Chang, *Risk Regulation, Endogenous Public Concerns, and the Hormones Dispute: Nothing to Fear but Fear Itself?*, Research Paper 03-25 (University of Pennsylvania Law School, Institute for Law and Economics, Pennsylvania), August 2003, 25, available at: [http://ssrn.com/abstract\\_id=432220](http://ssrn.com/abstract_id=432220), visited 12 June 2006. See also Robert Keohane, ‘Global Governance and Democratic Accountability’, in *Taming Globalization: Frontiers of Governance*, David Held

Therefore, the efficient supply of global public goods may necessitate international cooperation in the area of SPS regulation. Such cooperation, embodied in negotiations between national governments to elaborate international SPS standards, aims to ensure that the regulatory outcome takes account of costs and benefits at the global level and therefore leads to welfare maximisation globally.

### 3.1.2 Failings of harmonisation

The benefits aimed at by harmonisation of SPS requirements through international standard-setting are often not achieved. This failing may be ascribed to problems inherent in international standard-setting procedures. As noted by Razeen Sally:

...the global governance catchphrase - “global solutions for global problems” - assumes, wrongly, that most or all problem-solutions are global, to be dealt with by (often unaccountable and unrepresentative) members of the “international community”. It is this *unconditional* embrace of global governance that is both glib and illiberal.<sup>16</sup>

One important problem with international harmonisation of regulatory standards, not only in the SPS area but also more broadly, is the fact that the standards on which such harmonisation is based cannot truly reflect global public choice. This is because of ‘the nature of global regulatory standard-setting processes.’<sup>17</sup> It is useful to look at these processes and the interests that underlie them in more detail.

There is no global government provider of global public goods that weighs up costs and benefits to all stakeholders. Instead, as Peter Drahos points out, harmonised standards are developed by imperfect international institutions, whose standard-setting procedures involve ‘contests of principles between complex alliances of state and non-state actors with different mechanisms at their disposal.’<sup>18</sup> As at national level, power plays a role in this process, and international regulators are subject to capture by interest groups.<sup>19</sup> There is much political power of multinational food and agrochemical companies behind the drive towards international harmonisation of standards. This power is used to influence the positions of states in the standard-setting process, in order to achieve outcomes of benefit to such companies. Global public goods may consequently be underprovided due to the fact that the relative power of actors within international institutions shapes their provision and distribution. Actors such as countries at lower levels of development and consumer interest groups are often underrepresented in international standard-setting bodies, or lack

Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, 341.

the resources to effectively promote their interests.<sup>20</sup> Those countries and industry interest groups that do have the financial, technical and human resources to participate effectively in the glut of committees where the standard-setting work is done, ‘end up defining the level of public goods’<sup>21</sup> provided by harmonised standards. High-income WTO Members have become adept at using the international standard setting process to pursue their industry interests.<sup>22</sup> It has been noted that in industrialised countries ‘international standards have followed rather than shaped national standards’.<sup>23</sup> This is often due, in large part, to the strength of their existing regulatory systems.<sup>24</sup>

In fact, much critical attention has been focused on the standard-setting process in the international standard-setting bodies and the problems that WTO Members at lower levels of development face with regard to effective participation therein.<sup>25</sup> The constraints that limit the ability of these Members to promote their interests in the international standard-setting process are manifold.<sup>26</sup> First, lack of resources often leads to inadequate at-

<sup>20</sup> This comment was made by India in the run up to the Seattle Ministerial Conference meeting in 1999. General Council, *Preparations for the 1999 Ministerial Conference. Proposals Regarding the Agreement on Sanitary and Phytosanitary Measures in Terms of Paragraph 9(a)(1) of the Geneva Ministerial Declaration. Communication from India*, WT/GC/W/202, circulated on 14 June 1999, para. 1.

<sup>21</sup> Peter Drahos, ‘The Regulation of Public Goods’, *Journal of International Economic Law* 7 (2), 2004, 321-339, 338. Drahos notes that this is one reason why big business is such an influential actor in food standards regulation, *inter alia*. In addition, Drahos points to the fact that some states and businesses can draw upon mechanisms of economic coercion not available to other actors. Here one can think of the threat of withdrawal of financial or technical assistance to developing countries that do not support the donor state’s position in standard-setting bodies.

<sup>22</sup> Mattli and Büthe cite the following early statement of the US Federal Trade Commission with regard to international standards and the power struggles that underlie them: ‘[A]lthough the considerations of the standard tend to be expressed in rather technical language, behind this façade of engineering jargon, what is actually happening is an economic fight, often of the most savage type imaginable because the states are so high.’ US Federal Trade Commission, *Standards and Certification: Proposed Rules and Staff Report* (Washington D.C.) 1978, 94, cited in Walter Mattli and Tim Büthe, ‘Setting International Standards: Technological Rationality or Primacy of Power’, *World Politics* 56 (1), 2003, 1-42, 1.

<sup>23</sup> David G. Victor, ‘Risk Management and the World Trading System: Regulating International Trade Distortions Caused by National Sanitary and Phytosanitary Policies’, in *Incorporating Science, Economics, and Sociology in Developing Sanitary and Phytosanitary Standards in International Trade: Proceedings of a Conference*, National Research Council Board on Agriculture and Natural Resources (ed.) (National Academy Press, Washington D.C.), 2000, 118-169, 133, available at: [www.nap.edu/openbook/0309070902/html/199.html](http://www.nap.edu/openbook/0309070902/html/199.html), visited on 25 June 2007. David Victor makes this point specifically with regard to the standards of the Codex Alimentarius Commission, but it can be extended generally to international standards. A useful example is provided by the discussion by Sara Poli of the way in which the EC defends its interests within the international standard-setting process of the Codex Alimentarius Commission. Sara Poli, ‘The European Community and the Adoption of International Food Safety Standards within the Codex Alimentarius Commission’, *European Law Journal* 10 (5), 2004, 613-630.

<sup>24</sup> Walter Mattli and Tim Büthe posit (with reference to technical standards set by the International Organization for Standardization and the International Electro-technical Commission) that historical institutional legacies in national systems ‘play a critical though largely accidental role’ determining who sets the international standards agenda (the ‘first-movers’) and who bears the cost of switching to the international standards (the ‘second movers’). Walter Mattli and Tim Büthe, ‘Setting International Standards: Technological Rationality or Primacy of Power’, *World Politics* 56 (1), 2003, 1-42, 4.

<sup>25</sup> The issue of *effective participation* should be distinguished from that of *membership* in the international standard-setting organisations. In fact, a large majority of WTO Members, including most developing countries, are members of Codex, the OIE and the IPPC. The WTO Secretariat has compiled a list in this regard. See Committee on Sanitary and Phytosanitary Measures, *Membership in WTO and International Standard-Setting Bodies*, G/SPS/GEN/49/Rev.7, circulated on 26 July 2006.

<sup>26</sup> For a discussion of these constraints as they relate specifically to the CAC, see Mariëlle Masson-Mathee, *The*

tendance by WTO Members at lower levels of development of meetings of the standard setting bodies, particularly of the subsidiary committees where the real standard-setting work is done. As a result the opportunities for these Members to influence the standard-setting process are limited. Second, even when delegates are sent to the relevant meetings, the lack of mechanisms for coordination between government departments and for consultation with stakeholders at national level means that positions of these Members at meetings of the standard setting bodies are often ill-informed. Third, the lack of regulatory experience and infrastructure of some of these Members may make it difficult for their delegates to evaluate the implications of the standards being discussed. Fourth, in many Members at lower levels of development, weak SPS capacity makes it difficult to collect the scientific data necessary to provide adequate input into the standard-setting process. As a result, the standards that are set may not reflect the specific conditions in these Members, including dietary practices, pest status, disease prevalence etc.

This pitfall of harmonisation is reflected in the outcome of international standard setting procedures. International standards often do not take account of developing country preferences and resource constraints.<sup>27</sup> Instead, the harmonisation process can be described as a best-practices approach whereby developed country regulatory practices 'are compared and debated at organization meetings, after which the most attractive ones are selected and then recommended to regulators throughout the globe.'<sup>28</sup>

While this has the positive result of allowing developing countries to benefit from the regulatory experience and scientific expertise of developed countries, and of spreading high-quality standards across the world, it has a down side as well. The deficient participation and influence of developing countries in elaborating the harmonised standards often means that the resulting standards are inappropriate for their situations, technically or financially unachievable for them or absent in areas most useful for them.<sup>29</sup> Examples of areas of particular interest to certain developing countries where standards are lacking

---

*Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 244.

<sup>27</sup> In this regard, David Leebron calls harmonisation a 'Procrustean response' to international trade, making an apt analogy with the myth of Procrustes. Procrustes tied all travellers to his bed: if they were shorter than the bed, he stretched their limbs to make them fit; if they were longer than the bed he lopped off the excess length of their limbs. David W. Leebron, 'Lying Down with Procrustes: An Analysis of Harmonization Claims', in *Fair Trade and Harmonization: Prerequisites for Free Trade?*, Jagdish N. Bhagwati and Robert E. Hudec (eds.), vol. 1 (MIT Press, Cambridge), 1997, 41-117, 41 note 41.

<sup>28</sup> David Zaring, *Informal Procedure, Hard and Soft*, in *International Administration*, IILJ Working Paper 2004/6 (Institute for International Law and Justice, New York University School of Law, New York), 2004, 4, available at: <http://www.iilj.org/publications/documents/2004.6%20Zaring.pdf>, visited on 28 January 2008. Zaring makes this observation in the context of international harmonization in the area of financial regulation. However, it holds true more broadly, including in the SPS area. Sally has stated that harmonization initiatives with the WTO are, at worst, 'tantamount to an OECD standards harmonisation agenda.' Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 29, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008.

<sup>29</sup> Jonathan Macey criticizes this proselytisation achievement as being nakedly imperialistic. See Jonathan Macey, 'Regulatory Globalization as a Response to Regulatory Competition,' *Emory Law Journal* 52, no. 3, (2003), 1353-1379:1353-1354, as referred to by Zaring, David Zaring, *Informal Procedure, Hard and Soft*, in *International Administration*, IILJ Working Paper 2004/6 (Institute for International Law and Justice, New York University School of Law, New York), 2004, 4, available at: <http://www.iilj.org/publications/documents/2004.6%20Zaring.pdf>, visited on 28 January 2008.

are spices and exotic fruits. Critics have noted that international standard setting tends to focus on income-sensitive products, such as energy drinks, and that the risk management solutions reflected in the standards are resource-intensive.<sup>30</sup> Harmonisation, it is argued, has been harnessed by industry interests in developed countries to generate ‘complex, rigid and costly standards ... to realise their protectionist aims.’<sup>31</sup>

Such international standards are of little use to Members at lower levels of development. This is ironic when one bears in mind that one of the objectives of international harmonisation was to provide those developing countries that lack the capacity to develop their own SPS regulations with standards they can usefully draw upon. Spencer Henson notes that: ‘[d]eveloping countries regard international standards as a resource-efficient approach to establishing technical regulations at the national level, which reflect current scientific knowledge and facilitate international trade.’<sup>32</sup> He therefore emphasises the serious consequences of the inability of developing countries to participate effectively in international standard setting for the appropriateness of the resultant standards for developing countries.<sup>33</sup> This problem has led to limited use of international standards by the very countries for which harmonisation was expected to hold the most benefits. As stated in the WTO’s 2005 *World Trade Report*:

Contrary to expectations, countries with scarce resources and limited capacity do not necessarily have the largest share of adopted international standards. In fact, resource constraints seem to restrict poor countries’ integration into the international standardization system as much if not more than they restrict their own standardization activities.<sup>34</sup>

Aside from the failings of harmonisation that arise from the process of international standard setting, other concerns have been raised that are inherent to the nature of harmonisation itself. It is noted that the ‘one-size-fits-all’ approach inherent in harmonisation ignores the fact that regulatory policies and institutions differ for good reasons. They

<sup>30</sup> Donna Roberts *et al.*, ‘Sanitary and Phytosanitary Barriers to Agricultural Trade: Progress, Prospects and Implications for Developing Countries’, in *Agriculture and the New Trade Agenda - Creating a Global Trading Environment for Development*, M.D. Ingo and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, note 29.

<sup>31</sup> Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 28, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008. Sally sees this as ‘an attempt to iron out asymmetries in other countries’ domestic institutions and raise their costs out of line with comparative advantages’, which has an effect the same as classic protectionism.

<sup>32</sup> Spencer Henson *et al.*, *Review of Developing Country Needs and Involvement in International Standards Setting Bodies* (Centre for Food Economics Research, Department of Agricultural and Food Economics, University of Reading, 2001, para. 37, available at: <http://www.dfid.gov.uk/pubs/files/issb.pdf>, visited on 12 May 2008.

<sup>33</sup> *Ibid.*

<sup>34</sup> WTO Secretariat, *World Trade Report 2005: Exploring the Links between Trade, Standards and the WTO* (World Trade Organization, Geneva), 30 June 2005, 87, available at: [http://www.wto.org/english/res\\_e/booksp\\_e/anrep\\_e/world\\_trade\\_report05\\_e.pdf](http://www.wto.org/english/res_e/booksp_e/anrep_e/world_trade_report05_e.pdf), visited on 4 June 2007. This report points out that due to the costly nature of effective participation in the international standard-setting process, as well as of setting up the necessary infrastructure, it may be less resource intensive for a developing WTO Member to develop its own national standards in isolation, or to simply adopt the standards of its main trading partner. An example given is that of Namibia, where the manufacturing sector relies upon South African standards.

reflect varying circumstances, including comparative costs which differ with level of development.<sup>35</sup> They also reflect legitimate differences in local conditions and consumer preferences. Sally argues that harmonisation ‘pollutes’ the international trading system by intruding too far into regulatory competence.<sup>36</sup> Similarly, Mayeda regards international harmonisation as ‘largely an ineffective tool for dealing with development issues’ due to its failure to recognise the need for countries to adapt their legislation and institutions to their own domestic situations.<sup>37</sup>

Despite these flaws, harmonisation of standards is growing in importance and will ‘require developing countries to rethink the ways in which they regulate for the provision of public goods.’<sup>38</sup> There are new limits on the regulatory choices available to developing countries. This is particularly the case for SPS regulation now that the disciplines of the *SPS Agreement* provide a strong incentive for WTO Members, particularly those at lower levels of development, to align their requirements with international standards.<sup>39</sup> This calls for an examination of the international standard-setting processes generating such standards and the extent of the influence of WTO Members at different levels of development therein.

### 3.2 International standard setting process

In several respects, the WTO’s *SPS Agreement* draws on the experience of the EC in the area of harmonisation of standards. Like in the EC, harmonisation under the *SPS Agreement* is achieved by relying on the scientific expertise of technical commissions.<sup>40</sup>

---

<sup>35</sup> Razeen Sally, *Whither the World Trading System? Trade Policy Reform, the WTO and Prospects for the New Round*, No. 76 (Timbro, Stockholm), 2002, 29, available at: <http://www.timbro.se/pdf/whither.pdf>, visited on 28 January 2008. Sally argues that harmonisation ‘slams the door on healthy, competitive, bottom-up national experiments with policies and institutions tailored to differing circumstances.’ *Ibid.*

<sup>36</sup> *Ibid.*

<sup>37</sup> Graham Mayeda, ‘Developing Disharmony? The SPS and TBT Agreements and the Impact of Harmonization on Developing Countries’, *Journal of International Economic Law* 7 (4), 2004, 737-764, 740. It is useful to note here that the harmonisation disciplines of the *SPS Agreement* do not oblige Members always to adopt international standards, but instead they provide a possibility for deviation from international standards under specific conditions. These disciplines are discussed below, Part III, Section 4.2.

<sup>38</sup> Peter Drahos, ‘The Regulation of Public Goods’, *Journal of International Economic Law* 7 (2), 2004, 321-339, 337. Drahos makes this point with regard to harmonized standards for excludability in the context of intellectual property protection under the TRIPS. However, it holds true also for SPS standards since the coming into force of the *SPS Agreement*.

<sup>39</sup> David Vogel claims that the *SPS* and *TBT Agreements* ‘reflect the political strength of internationally oriented firms, who increasingly favor international standards.’ David Vogel, ‘Food Safety and International Trade’, in *Trading Up: Consumer and Environmental Regulation in a Global Economy* (Harvard University Press, Cambridge/London), 1995, 150-195, 190.

<sup>40</sup> *Ibid.*, 189. Vogel likens the Codex Alimentarius Commission, to which the *SPS Agreement* refers for standard setting in the area of food safety, with the EC’s Scientific Commission on Foodstuffs. David Vogel, ‘Food Safety and International Trade’, in *Trading Up: Consumer and Environmental Regulation in a Global Economy* (Harvard University Press, Cambridge/London), 1995, 150-195, 190. However, it should be remembered that while the Scientific Commission on Foodstuffs is an EC body, the Codex is an independent organisation, over which the WTO has no say. Unlike in the EC where scientific advice from its advisory committees is considered by EC decision-making organs and could result in binding legislative action taken by these organs creating common standards, the results of activities of Codex committees are embodied in voluntary standards adopted by the Codex Commission, independently of WTO decision-making processes.

In addition, both the *SPS Agreement* and the EC Treaty allow countries to set standards higher than the harmonised ones,<sup>41</sup> but they subject this right to international scrutiny in terms of certain criteria, in order to prevent abuse.<sup>42</sup>

However, there are significant differences in the way in which the standards underlying harmonisation attempts at EC and WTO level are set. The most obvious of these is due to the EC's ability, as a body with supranational powers conferred on it by its Member States, to promulgate binding rules. It is thus able, using the normal decision-making processes available to Community institutions, to harmonise national measures in certain areas, including that of SPS, and to bind Member States to follow these common standards.<sup>43</sup> On the contrary, the WTO has no such supranational regulatory authority. Further, it lacks the institutional capacity, including the existence of scientific committees, to draw up SPS standards. An additional difficulty is that decisions in the WTO are taken by all its Members, almost always by consensus. While it is theoretically possible for the Members to make decisions containing binding harmonised standards under the auspices of the WTO, the likelihood of reaching consensus on such decisions between countries with interests as diverse as have the Members of the WTO in the areas of agriculture and health, is extremely remote.<sup>44</sup> Even were this unlikely scenario to materialise, the cumbersome

---

Although the WTO SPS Committee has a mandate to maintain close contact with the relevant international organisations, in particular the Codex Alimentarius Commission, the International Office of Epizootics and the International Plant Protection Convention, in order to obtain the best technical and scientific advice (Article 12.2 of the *SPS Agreement*) and may ask these organisations to examine specific matters regarding a standard, guideline or recommendation (Article 12.6 of the *SPS Agreement*), it has no control over the workings of these standard-setting bodies.

<sup>41</sup> See Article 3.3 of the *SPS Agreement* and Article 153(5) of the *EC Treaty*. David Vogel, 'Food Safety and International Trade', in *Trading Up: Consumer and Environmental Regulation in a Global Economy* (Harvard University Press, Cambridge/London), 1995, 150-195, 189.

<sup>42</sup> Under the *SPS Agreement*, these criteria are exclusively scientific and come down to the requirement of a risk assessment to justify the divergent measure. Under EC law, in cases where harmonisation is non-exhaustive (setting minimum standards only), stricter measures can be justified in terms of Article 30 of the *EC Treaty* or the mandatory requirement exception (developed in the case law), both of which require the proportionality of the measure to its health objective. One element of this proportionality test is the requirement of support from international scientific research (see for example Case 178/84 *Commission v Germany (Reinheitsgebot)* [1987] ECR 1227 at 1274). In cases of exhaustive harmonisation, recourse to Article 30 and the mandatory requirement exception is no longer possible. For an in-depth study of the use of scientific disciplines in the EC, see Christian Joerges, 'Scientific Expertise in Social Regulation and the European Court of Justice: Legal Frameworks for Denationalized Governance Structures', in *Integrating Scientific Expertise into Regulatory Decision-Making: National Traditions and European Innovations*, Christian Joerges, et al. (eds.) (Nomos, Baden-Baden), 1997, 295-323.

<sup>43</sup> It can do this in two ways as provided in the *EC Treaty*. Firstly, in terms of Article 95(1) of the *EC Treaty*, it may adopt harmonisation measures in the context of the completion of the internal market. Secondly, under Article 153(3)(b) it can take specific action to support and supplement Member States' policies in respect of the protection of health, safety and economic interests of consumers or to provide them with adequate information. The *Amsterdam Treaty* amended the title on Public Health in the *EC Treaty* to include the power in Article 152(4)(b) to use the co-decision procedure for the adoption of measures in the veterinary and phytosanitary areas which have as their direct objective the protection of public health. Both the former types of measures are also adopted using the co-decision procedure, which entails qualified majority voting in the Council and an equal say for the European Parliament in the decision-making process. Under the title on Agriculture, Article 37 gives the EC the power to harmonise legislation in respect of animal and plant health, as well as zootechnical and botanical legislation (as decided in ECJ Case 68/86 *United Kingdom v. Council* [1988] ECR 855).

<sup>44</sup> This should not create the impression that the lack of institutional scientific capacity and the consensus practice mean that the WTO is incapable of making decisions on SPS issues. Such decisions can be, and are, taken

process of achieving consensus for decision making in the WTO would mean that standards would soon become outdated and prompt response to new health concerns would be impossible.<sup>45</sup>

For these reasons, the WTO looks to other international bodies to set the harmonised standards that are used as benchmarks in the provisions of the relevant agreements. The *SPS Agreement* specifically references three international standard-setting bodies,<sup>46</sup> namely, in the area of food safety, the Codex Alimentarius Commission (CAC); in the area of animal health, the International Office of Epizootics (OIE), now called the World Organisation for Animal Health;<sup>47</sup> and in the area of plant health, the Secretariat of the International Plant Protection Convention (IPPC).<sup>48</sup> These three bodies are recognised as the three leading international bodies for the drafting of SPS standards and the coordination of information on SPS matters.<sup>49</sup>

The CAC, OIE and IPPC (also known as ‘the three sisters’), were established in an era where regulatory cooperation in the area of SPS risks was seen as a technical, rather than politically-charged, exercise. As a result, the procedural rules for standard setting were flexible and broad, reflecting the informal, cooperative nature of the standard-setting process. The secretariats of these bodies were small and their budgets minimal. In

---

in the SPS Committee by delegates of WTO Members with technical expertise regarding SPS matters, as is discussed further below, Part IV, Section 2.1. However, the constraints mentioned have the effect of making the SPS Committee poorly suited, in practice, for setting harmonised SPS standards.

<sup>45</sup> The same problem of adaptation to rapidly changing SPS risks would arise if an attempt was made to negotiate a WTO agreement containing harmonised SPS standards, similar to the *TRIPS Agreement* which lays down harmonised standards of intellectual property protection by WTO Members, incorporating and supplementing existing standards drawn up by the World Intellectual Property Organisation. An additional problem is that, unlike the *TRIPS Agreement*, which contains positive obligations for minimum standards of protection, an agreement harmonising SPS requirements within the context of trade liberalisation would have to contain maximum standards of protection. This would entail an unacceptable limitation on the regulatory autonomy of Members in choosing the level of SPS protection that they will ensure on their territories.

<sup>46</sup> These three international bodies are expressly named in Annex A.3(a)-(c) of the *SPS Agreement*, under the definition of “international standards, guidelines and recommendations”. They are the only three standard-setting bodies mentioned by name in the *SPS Agreement*. Annex A3(d) refers, for matters not covered by the three mentioned organisations, to ‘appropriate standards, guidelines and recommendations promulgated by other relevant international organizations open for membership to all Members, as identified by the Committee.’ Various provisions in the *SPS Agreement* refer to ‘relevant international organizations’ which can be assumed to include the Codex, OIE and IPPC. Although the *SPS Agreement* calls them ‘international organizations’, strictly speaking only the OIE is an international organization in the legal sense of the word. The CAC is merely the body established jointly by the FAO and WHO to administer their Food Standards Programme. The IPPC Secretariat is the executive body responsible for the administration of the IPPC, a multilateral treaty. For this reason, the term ‘international standard-setting bodies’, rather than ‘international organisations’ will be used in this book to refer collectively to the CAC, OIE, IPPC Secretariat and other relevant international standard-setting bodies.

<sup>47</sup> As this organization is based in Paris, it was mostly referred to by its French name *Office International des Epizooties*. Thus its acronym is OIE. This acronym has been maintained despite the fact that the organisation has recently changed its name to the World Organisation for Animal Health.

<sup>48</sup> Although standard setting in the area of plant health is carried out by the bodies set up under the auspices of the Secretariat of the IPPC, in cooperation with regional plant protection organisations operating within the framework of the IPPC, the acronym IPPC is commonly used to refer to these bodies.

<sup>49</sup> Terence P. Stewart and David S. Johanson, ‘The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics’, *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 28 and fn 24.

addition, the national delegates participating in the standard-setting bodies were generally government-employed scientists or technocrats, rather than diplomats or private sector representatives.

The CAC, OIE and IPPC consequently operated in relative obscurity and their decisions were not the subject of much political concern.<sup>50</sup> This was primarily due to the fact that adoption of the standards they set was purely voluntary. Now, the *SPS Agreement* has given added significance to the international standards set by the CAC, OIE and IPPC. Although still not making them formally binding,<sup>51</sup> it has increased the stakes of WTO Members in these standards.<sup>52</sup> The promotion of the adoption of the harmonised standards by the *SPS Agreement* has increased the importance and visibility of these international standard-setting bodies.<sup>53</sup> New attention is being focused on international standard setting by states, industry and consumer groups and the result has been a politicisation of their activities. These bodies are now adjusting to their new role vis-à-vis the international trading system, resulting in significant changes in their policies and functioning.<sup>54</sup>

While relying on the standards set by the relevant international bodies, the *SPS Agreement* does not lay down any procedural requirements for the setting of such standards. The standard-setting bodies referred to in the *SPS Agreement* have widely differing membership, decision-making structures and rules about public participation and transparency. In addition, they set a range of different kinds of norms, ranging from detailed technical product standards to process guidelines and codes of practice. However, the standards set in these bodies are given equal status, as benchmarks against which Members' SPS requirements are assessed, by the rules of the *SPS Agreement*. The sole criterion is whether

<sup>50</sup> *Ibid.*, 28.

<sup>51</sup> Reinhard Quick and Andreas Blüthner, 'Has the Appellate Body Erred? An Appraisal and Criticism of the Ruling in the WTO *Hormones Case*', *Journal of International Economic Law* 2 (4), 1999, 603-639, 613. Quick and Blüthner criticise the view of some authors that voluntary international standards have become binding on states due to the provisions of the *SPS Agreement*, thus changing their status retroactively. They argue that these standards remain mere recommendations without legal consequences of their own. International standards merely inform and further define the relevant provisions of the *SPS Agreement*. Quick and Blüthner also deny that the relevant standards now have *de facto* or indirect legal effect, submitting that only the provisions of the *SPS Agreement* themselves give rise to any obligations for Members. However, this does not mean that it can be denied that the *SPS Agreement* has given a new significance to international standards set by the relevant bodies. There is new pressure to adopt harmonised standards, which did not exist previously. The standards themselves remain formally non-binding, but the rules contained in the *SPS Agreement* which refer to these standards are binding and encourage (while not mandating) their adoption, as discussed below, Part III, Section 4.2. The consequences of deviating from international standards are significant. *Contra*, see Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 159-164. Masson-Matthee argues convincingly that international standards set by the bodies referred to in the *SPS Agreement* have become *de facto* binding.

<sup>52</sup> The disciplines regarding harmonisation of SPS measures around international standards are contained in Article 3 of the *SPS Agreement* and are discussed below, Part III, Section 4.2.

<sup>53</sup> On the effects of the *SPS Agreement* on the Codex Alimentarius Commission, see H. Micheal Wehr, 'Update on Issues before the Codex Alimentarius', *Food and Drug Law Journal* 52, 1997, 531-536.

<sup>54</sup> Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 29.

the relevant standard was set by an international standard-setting body referenced in the *SPS Agreement* or identified as relevant by the SPS Committee.

A closer look is now taken at the structure and functioning of these three standard-setting bodies, in order to provide the context within which to evaluate the effect of the *SPS Agreement's* reference to their standards on market access and health protection in WTO Members.

### 3.2.1 Codex Alimentarius Commission

In the area of food safety, the *SPS Agreement* refers to the standards, guidelines and recommendations 'established by the Codex Alimentarius Commission relating to food additives, veterinary drug and pesticide residues, contaminants, methods of analysis and sampling, and codes and guidelines of hygienic practice'.<sup>55</sup> As its standards relate to food safety and quality and thus to human health, a subject of great political and public concern, the CAC is the most controversial of the three international standard-setting bodies referred to in the *SPS Agreement*.

The origins of the CAC lie in an initiative of the FAO to address the need for internationally accepted food standards in order to protect both consumers and producers across the world.<sup>56</sup> Based on its recognition of the important role of the World Health Organization in the health aspects of work on food standards, the FAO proposed that a mechanism for cooperation between the FAO and WHO in the area of food standards be established.<sup>57</sup> A Joint FAO/WHO Conference on Food Standards was held in 1962 to discuss this proposal. It resulted in the establishment of the Joint FAO/WHO Food Standards Programme, to be administered by a Joint FAO/WHO Codex Alimentarius Commission.<sup>58</sup> The CAC was formally established by a resolution of the FAO in 1961<sup>59</sup> and of the World Health Assembly of the WHO in 1963.<sup>60</sup> These two UN Specialised Agencies also adopted the statutes and rules of procedure of the CAC.<sup>61</sup> It is therefore not an independent interna-

<sup>55</sup> Annex A.3(a) of the *SPS Agreement*.

<sup>58</sup> *Report of the Joint FAO/WHO Conference on Food Standards*, ALINORM 62/8, Geneva, 1-5 October 1962, para. g. See also Mariëlle Mason-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 15-16.

<sup>59</sup> FAO Conference, *Resolution No. 12/61*, adopted at the 11th Session of the FAO Conference, 4-24 November 1961, para. 263. The FAO was established in 1945, and is the main UN agency for agriculture, forestry, fisheries and rural development.

<sup>60</sup> World Health Assembly, *Resolution 16.42*, adopted at the 16th Session World Health Assembly, Geneva, 7-23 May 1963, Off. Rec. World Health Organization 124, 74. The WHO was established in 1948, and is the directing and coordinating authority for health within the UN system.

<sup>61</sup> Food and Agriculture Organization and World Health Organization, *Understanding the Codex Alimentarius* (United Nations, Rome), 2005, 9, available at: <http://www.fao.org/docrep/008/y7867e/y7867e00.HTM>, visited on 28 July 2006. The *Statutes of the Codex Alimentarius Commission* form the legal basis of the work of the CAC and provide its mandate or terms of reference. The *Rules of Procedure* set out the formal working procedures of the CAC. The *Statutes of the Codex Alimentarius Commission* were revised in 1966 and 2006. The *Rules of Procedure* have been amended several times, most recently in 2006.

tional organisation, but instead a joint inter-governmental body of the FAO and WHO.<sup>62</sup> The CAC headquarters are located in Rome, at the offices of the FAO.

### 3.2.1.1 Mandate

According to its statutes, the CAC is responsible for making proposals to the Directors-General of the FAO and the WHO on all matters pertaining to the implementation of the Joint FAO/WHO Food Standards Programme.<sup>63</sup> The latter's purpose is defined to include the dual function of 'protecting the health of the consumers and ensuring fair practices in the food trade.'<sup>64</sup> In addition, the CAC has the objectives of coordinating international work on food standards, and of initiating, elaborating, finalising and amending food standards.<sup>65</sup> In order to achieve its aims, the CAC is specifically mandated to develop food standards as well as multilateral good practice standards on issues such as labelling, the composition of food products, additives, and inspections.

To date, the CAC has set 278 standards, 65 guidelines and related texts and 63 codes of practice.<sup>66</sup> These range from maximum residue levels for specific pesticides and veterinary drugs in food,<sup>67</sup> to codes of practice on various products<sup>68</sup> and guidelines on inspection and certification systems.<sup>69</sup> This collection of standards, codes of practice, guidelines and other related texts is known as the *Codex Alimentarius* (Food Code). As stated in the *General Principles of the Codex Alimentarius*:

The Codex Alimentarius is a collection of internationally adopted food standards presented in a uniform manner. These food standards aim at protecting consumers' health and ensuring fair practices in the food trade. The Codex Alimentarius also includes provisions of an advisory nature in the form of codes of practice, guidelines and other recommended measures intended to assist in achieving the purposes of the Codex Alimentarius. The publication of the Codex Alimentarius is intended to guide and promote the elaboration and establishment of definitions and requirements for foods to assist in their harmonization and in doing so to facilitate international trade.<sup>70</sup>

<sup>62</sup> See further on this point Mariëlle Mason-Mathee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 18-21.

<sup>63</sup> Article 1 of the *Statutes of the Codex Alimentarius Commission* published in Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

<sup>64</sup> Article 1(a) of the *Statutes of the Codex Alimentarius Commission*.

<sup>65</sup> Article 1(b)-(e) of the *Statutes of the Codex Alimentarius Commission*.

<sup>66</sup> See Committee on Sanitary and Phytosanitary Measures, *List of Codex Alimentarius Commission Standards, Guidelines, Codes of Practice and Other Texts in Force as of 4 March 2008*, G/SPS/GEN/828, circulated on 19 March 2008.

<sup>67</sup> *Maximum Residue Limits for Veterinary Drugs in Food*, CAC/MRL 2-2006, and the *Maximum Residue Limits (MRLs) for Pesticides*, CAC/MRL 1-2001.

<sup>68</sup> For example the *Code of Hygienic Practice for Refrigerated Packaged Foods with Extended Shelf-Life*, CAC/RCP 46-1999 and *Recommended International Code of Practice for the Processing and Handling of Quick Frozen Foods*, CAC/RCP 8-1976.

<sup>69</sup> For example the *Principles for Food Import and Export Certification and Inspection*, CAC/GL 20-1995 and *Guideline Procedures for the Visual Inspection of Lots of Canned Foods*, CAC/GL 17-1993.

<sup>70</sup> Principle 1 of the *General Principles of the Codex Alimentarius*, published in Joint FAO/WHO Food Standards

The competing mandates in the areas of trade and consumer health of the Food Standards Programme have been criticised as making the CAC poorly suited to setting global food-safety standards.<sup>71</sup> Unlike national health administrations, the CAC has no over-arching objective of public health protection. Instead, it constantly balances its public health objectives with the need to promote international trade. The CAC is best seen as an intergovernmental body promoting trade in food products by setting minimum health and quality standards which countries, especially developing countries, can use to facilitate the acceptance of their products on international markets. Many developed countries routinely set higher standards.<sup>72</sup>

### 3.2.1.2 Institutional structure

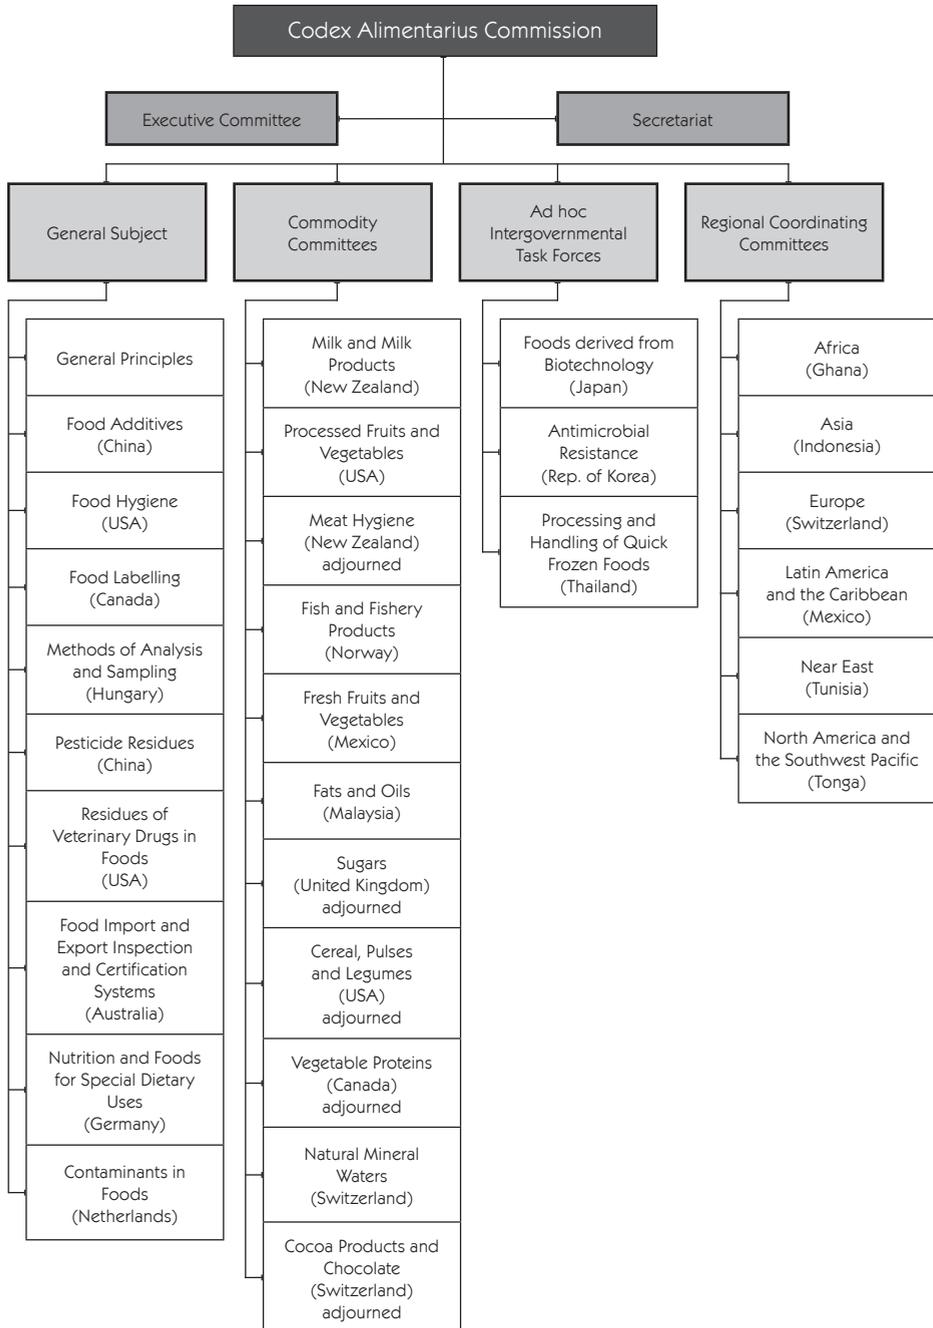

The Codex Alimentarius Commission has a complex institutional structure, due to its nature as a subsidiary body of the FAO and WHO jointly. These two international organisations are responsible for the creation of an institutional framework for the conduct of their Joint Food Standards Programme. The framework they have established consists of the CAC and its subsidiary bodies which function under the responsibility of the CAC. In addition, the FAO and WHO have assigned tasks to joint FAO/WHO bodies that are independent of the CAC but fall under the direct authority of the FAO and WHO. These are the joint FAO/WHO scientific expert bodies and expert meetings.

---

Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, 30, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 June 2008. The *General Principles of the Codex Alimentarius* define the scope and purpose of CAC standards.

<sup>71</sup> See Lucinda Sikes, 'FDA's Consideration of Codex Alimentarius Standards in Light of International Trade Agreements', *Food and Drug Law Journal* 53, 1998, 327-335, 328.

<sup>72</sup> According to Vogel, both the US and the EC have recognised that the CAC cannot be relied upon to set safety standards for the protection of consumers. David Vogel, 'Food Safety and International Trade', in *Trading Up: Consumer and Environmental Regulation in a Global Economy* (Harvard University Press, Cambridge/London), 1995, 150-195, 191.

**Figure 1: Institutional Structure of the Codex Alimentarius Commission**

Source: Codex Alimentarius Commission, *Procedural Manual, 17th ed., 2007*, updated in accordance with Codex Alimentarius Commission, *Report of the Thirtieth Session, 2-7 July 2007, ALINORM 07/30/REP* (Food and Agriculture Organization and World Health Organization, Rome).

The Codex Alimentarius Commission is the main decision-making organ of the Joint FAO/WHO Food Standards Programme. It is the plenary body, and meets in regular annual sessions lasting about a week, and in additional sessions as the need arises.<sup>73</sup> As a subsidiary body of the FAO and WHO, the CAC depends on these two organisations for the delegation of competences to it.<sup>74</sup> According to the competences it has been given, the CAC decides on the initiation of work on the elaboration of a standard, and adopts draft and final standards. It also adopts and amends its own rules of procedure.<sup>75</sup>

The executive organ of the CAC between sessions of the plenary Commission is the Executive Committee.<sup>76</sup> It is composed of the Chairperson and three Vice-Chairpersons of the Commission, the Coordinators of the six regional Coordinating Committees and seven additional members elected by the Commission from among its members, one each coming from Africa, Asia, Europe, Latin America and the Caribbean, Near East, and North America and the South-West Pacific.<sup>77</sup> The task of the Executive Committee is to make proposals to the Commission regarding general orientation, strategic planning, and programming of its work, to study special problems that may arise and to assist in the management of the Commission's programme of standards development, namely by conducting a critical review of proposals to undertake work and monitoring the progress of standards development.<sup>78</sup>

The CAC is given the discretion to establish subsidiary bodies as the need arises.<sup>79</sup> Currently, there are 27 different Codex committees that carry out the risk management aspects of the preparation of standards.<sup>80</sup> These fall into three categories: General Subject Committees,<sup>81</sup> regional Coordinating Committees,<sup>82</sup> and Commodity Committees.<sup>83</sup> In

---

<sup>73</sup> Rule VI.1 of the *Rules of Procedure*.

<sup>74</sup> The FAO and WHO have delegated competences to the CAC by means of their adoption of the *Statutes of the Codex Alimentarius Commission* and the *Rules of Procedure*, which expressly set out the powers of the CAC with regard to the implementation of the Joint FAO/WHO Food Standards Programme. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>75</sup> Rule XII.1 of the *Rules of Procedure*. This competence has been given to the CAC and is not subject to the approval of the FAO and WHO.

<sup>76</sup> Article 6 of the *Statutes of the Codex Alimentarius Commission* provide for the establishment of an Executive Committee whose composition 'should ensure an adequate representation of the various geographical areas of the world to which the Members of the Commission belong.'

<sup>77</sup> Rule V.1 of the *Rules of Procedure*. It is interesting to note that, due to the increasing number of delegates brought by some Executive Committee members to meetings of this organ, in 1989 the Commission adopted an understanding to Rule V (then Rule IV) of the *Rules of Procedure*, limiting the number of advisors that may accompany a delegate to the Executive Committee to no more than two. Codex Alimentarius Commission, *Report of the Eighteenth Session*, 3-12 July 1998, ALINORM 89/40, para. 183. See also Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 32-33.

<sup>78</sup> Rule V.2 of the *Rules of Procedure*.

<sup>79</sup> Article 7 of the *Statutes of the Codex Alimentarius Commission* and Rule XI.1 of the *Rules of Procedure*.

<sup>80</sup> Although there are 27 subsidiary committees at present, only 22 of these are currently active. Others have been adjourned *sine die*. Codex Alimentarius Commission, *Report of the Thirtieth Session*, ALINORM 07/30/REP (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, Appendix X, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>81</sup> The General Subject committees are established under Rule XI.1(b)(i) of the *Rules of Procedure*.

<sup>82</sup> The six regional Coordinating Committees are established under Rule XI.1(b)(ii) of the *Rules of Procedure*.

<sup>83</sup> The Commodity Committees are established under Rule XI.1(b)(i) of the *Rules of Procedure*.

addition, to increase flexibility and enable the CAC to respond to the demand for standards across an increasing range of subjects, in 1999 the CAC decided to create a new kind of subsidiary body, namely *ad hoc* Intergovernmental Task Forces.<sup>84</sup>

The General Subject Committees work on issue-related subjects, such as food additives, contaminants, food hygiene, food labelling, pesticide residues, general principles, residues of veterinary drugs in food, food import and export inspection and certification systems etc. These committees are also called horizontal committees because their work applies across the board to various commodities and regions.<sup>85</sup> They are open to all Codex members and observers. There are currently ten General Subject Committees.

The Commodity Committees are divided according to food product categories, such as meat hygiene, milk and milk products, tropical fresh fruits and vegetables etc. Commodity Committees convene as necessary, and may go into recess or even be abolished when the CAC decides that their work has been completed. New commodity committees may be created as the need arises. Commodity Committees are open for participation by all Codex members and observers. As of July 2007, there are six Commodity Committees that meet regularly, and another five work through correspondence or have been adjourned.<sup>86</sup>

The six regional Coordinating Committees comprise Africa, Asia, Europe, Latin America and the Caribbean, Near East and North America and the Southwest Pacific. They work, *inter alia*, at ensuring that the work of the CAC is responsive to regional interests and to the concerns of developing countries. Regional Coordinating Committees are open for participation by all Codex members that are part of the relevant region. Normally they meet every two years. They have the mandate to develop regional standards for food products 'moving exclusively or almost exclusively in intra-regional trade.'<sup>87</sup>

*Ad hoc* Intergovernmental Task Forces have very limited terms of reference and are established for a fixed time period.<sup>88</sup> As of July 2007, five *ad hoc* Intergovernmental Task Forces have been established, dealing with animal feeding, fruit and vegetable juices, foods derived from biotechnology, antimicrobial resistance and the handling and processing of quick frozen foods. Of these only the last three are currently active. Like other Codex bodies aside from the Executive Committee, *ad hoc* Intergovernmental Task Forces are open for participation to all Codex members and observers.

---

<sup>84</sup> *Ad hoc* Intergovernmental Task Forces are established under Rule XI.1(a) of the *Rules of Procedure*.

<sup>85</sup> Food and Agriculture Organization and World Health Organization, *Understanding the Codex Alimentarius* (United Nations, Rome), 2005, 17, available at: <http://www.fao.org/docrep/008/y7867e/y7867e00.HTM>, visited on 28 July 2006.

<sup>86</sup> *Ibid.*, 18.

<sup>87</sup> See paragraph (d) of the *Terms of Reference* of each of the various regional Coordinating Committees. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 181-181, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008. Currently there is only one regional standard, the European standard on chantarelle (Codex Stan 40-1981). All other regional standards have been deleted or converted into worldwide standards.

<sup>88</sup> Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, 146-151, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

These committees and task forces meet as many times as is necessary to prepare and update standards. There may be as many as 20 committee meetings in one year. Each committee and task force has a designated host country,<sup>89</sup> which is responsible for the costs of servicing, maintaining and administering the committee and for providing its chairperson.<sup>90</sup> Due to many developing countries' lack of resources to bear these costs, host countries are overwhelmingly developed countries.<sup>91</sup> This is of relevance because committees and task forces generally meet in the designated host country.<sup>92</sup>

The CAC and its subsidiary bodies are serviced by a Secretariat that is seriously understaffed.<sup>93</sup> Although the Codex Secretariat is formally part of the FAO and is located at the FAO headquarters in Rome, its staff is currently dedicated only to work on CAC matters.<sup>94</sup> They prepare and attend all CAC and Codex committee meetings.

---

<sup>89</sup> The regional Coordinating Committees have no permanent host country but are hosted *ad hoc* by different countries in the region appointed as coordinators by the Commission.

<sup>90</sup> In respect of each committee, the CAC designates a host country which has indicated its willingness to accept financial and all other responsibility for the relevant committee, including appointing its chairperson from among its own nationals, and providing a secretariat and all other conference services (translation, interpretation, document reproduction etc.). Host countries for each committee are designated or confirmed at each regular session of the CAC. See the *Guidelines to Host Governments of Codex Committees and Ad Hoc Intergovernmental Task Forces* in Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, Section II.

<sup>91</sup> Seven of the 10 General Subject Committees are hosted by high-income countries, as are 9 of the 11 Commodity Committees and two of the three Intergovernmental Task Forces. As mentioned above, the hosts of the Regional Coordinating Committees vary for each meeting. Three of the remaining committees are hosted by upper-middle-income countries, namely Hungary (Codex Committee on Methods of Analysis and Sampling), Malaysia (Codex Committee on Fats and Oils) and Mexico (Codex Committee on Fresh Fruit and Vegetables). The remaining CAC committees are task force hosted by lower-middle-income countries, namely China (Codex Committee on Food Additives and Codex Committee on Pesticide Residues), and Thailand (Intergovernmental Task Force on Processing and Handling of Quick Frozen Foods). No low-income countries host Codex committees or task forces. Codex Alimentarius Commission, *Report of the Thirtieth Session*, ALINORM 07/30/REP (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, Appendix X, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>92</sup> It is interesting to note that in its 29<sup>th</sup> Session, the CAC decided to divide the work of the Codex Committee on Food Additives and Contaminants (previously hosted by the Netherlands) among two new committees, the Codex Committee on Food Additives and the Codex Committee on Contaminants in Food. China was designated as the host country for the former committee. Both Brazil and the Netherlands indicated their interest in hosting the latter committee. The CAC took the decision, by secret ballot, to designate the Netherlands as host country. In response, Brazil commented in the meeting on the fact that the majority of CAC committees are still hosted by developed countries and that a better geographic balance should be achieved in the future. See Codex Alimentarius Commission, *Report of the Twenty-Ninth Session* ALINORM 06/29/41 (Joint FAO/WHO Food Standards Programme, Geneva), 3-7 July 2006, paras 229-232.

<sup>93</sup> The host country is consulted by the FAO and WHO Directors-General before they determine where and when a session of that committee will be convened. In practice, sessions are held in the host country itself. With regard to a proposal to introduce a system of co-hosting of committee meetings so that some meetings are held in developing countries, see below, Part II, Section 3.2.1.5.

<sup>94</sup> The Codex Secretariat is composed of the Secretary and 10 other staff members (mostly food standards officers). The Secretariat has no legal officers.

<sup>94</sup> The Codex Secretariat was established under Rule III.5 of the *Rules of Procedure*. It is formally part of the Food and Nutrition Division of the Economic and Social Department of the FAO. Its staff is therefore appointed by the FAO and fall under its responsibility. Previously this meant that the Codex Secretariat not only worked on CAC matters but also had tasks in relation to the FAO. Currently the Secretariat staff works only on CAC matters. Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 33-34. See

As noted above, the institutional framework relevant to the work of CAC includes joint FAO/WHO bodies that operate under the responsibility of the parent organisations, independently of the CAC. The most important of these are the joint FAO/WHO expert committees and *ad hoc* expert consultations, which provide input on technical and scientific matters to the Codex committees. These bodies include formally established expert bodies with a scheduled programme of work, namely the Joint FAO/WHO Meetings on Pesticide Residues (JMPR)<sup>95</sup> and JECFA,<sup>96</sup> both of which have for many years generated internationally acclaimed data widely used by governments, industries and research facilities. Also included are regularly convened expert meetings on a particular topic, such as the Joint FAO/WHO Expert Meetings on Microbiological Risk Assessment (JEMRA).<sup>97</sup> Finally, *ad hoc* expert consultations may be convened to address a specific topic, for example foods derived from biotechnology. These expert bodies or meetings are completely independent of the CAC, in accordance with the principle of ensuring independence of scientific risk analysis from the practical realities of risk management decisions. They are composed of prominent scientists acting in an independent capacity.<sup>98</sup> These scientists are drawn from rosters of experts. The expert bodies that meet regularly maintain their own rosters of experts, which apply for a specified number of years after which a new call for experts is issued.<sup>99</sup> For other expert meetings and *ad hoc* consultations, short-term rosters of experts are developed for the specific meeting. Experts are selected for inclusion on the rosters by a selection panel of FAO and WHO representatives and two external experts. All experts responding to a call for experts that meet the specific requirements (expertise, experience, availability, etc) in the call for experts and that agree to sign a declaration of interests to ensure independence and objectivity, are placed on the relevant roster of experts subject to the approval of the FAO and WHO.<sup>100</sup>

The work of the joint FAO/WHO expert bodies is financed through the regular programme budgets of the FAO and WHO as well as by extra-budgetary resources. The FAO and WHO bear the costs of convening meetings, the travel and subsistence of experts,<sup>101</sup>

---

also Codex Alimentarius Commission, *Conclusions and Recommendations of the Joint FAO/WHO Evaluation of the Codex Alimentarius and Other FAO and WHO Work on Food Standards*, ALINORM 03/25/3 (Joint FAO/WHO Food Standards Programme, Rome), December 2002, paras 101-104.

<sup>95</sup> The JMPR was established in 1963 to assess pesticide residues in food. Its members are internationally recognised specialists. *FAO/WHO Framework for the Provision of Scientific Advice on Food Safety and Nutrition (to Codex and Member Countries)* (Food and Agriculture Organization and World Health Organization, Rome/Geneva), 2007, 7, available at: [http://www.fao.org/ag/agn/agns/files/Final\\_Draft\\_EnglishFramework.pdf](http://www.fao.org/ag/agn/agns/files/Final_Draft_EnglishFramework.pdf), visited on 1 February 2008.

<sup>96</sup> The JECFA was established in 1956, originally to assess the safety of food additives but its mandate has been extended to include contaminants, toxins and residues of veterinary drugs in food. The membership of its meetings varies depending on the subject matter. *Ibid.*

<sup>97</sup> JEMRA was established in 2000 to assess microbiological hazards in food. It comprises a series of regular meetings. *Ibid.*

<sup>98</sup> Other sources of scientific input into the Codex process are international organisations, such as the Organisation for Animal Health (OIE) and the International Atomic Energy Agency (IAEA), which provide scientific advice.

<sup>99</sup> For example, the JECFA roster of experts applies for a 5-year period.

<sup>100</sup> *FAO/WHO Framework for the Provision of Scientific Advice on Food Safety and Nutrition (to Codex and Member Countries)* (Food and Agriculture Organization and World Health Organization, Rome/Geneva), 2007, 16-17, available at: [http://www.fao.org/ag/agn/agns/files/Final\\_Draft\\_EnglishFramework.pdf](http://www.fao.org/ag/agn/agns/files/Final_Draft_EnglishFramework.pdf), visited on 1 February 2008.

<sup>101</sup> Experts are not remunerated for their work.

the preparation of working papers and the publication of the results.<sup>102</sup> Extra-budgetary contributions by donor governments are usually linked to specific activities. Difficulties have been experienced due to increasing demand for scientific advice, which necessitates additional resources in order to continue to fully respond in a timely manner with high quality scientific advice. However, the FAO and WHO face decreasing regular budget resources and extra-budgetary contributions. In 2003, the FAO and WHO agreed to convene a ‘consultative process’ to review the provision of scientific advice to the CAC and member countries, to improve the quality, quantity and timeliness of this advice.<sup>103</sup> As one of the outcomes of this consultative process, at the Thirtieth Session of the CAC in July 2007, the FAO and WHO launched the Global Initiative for Food-Related Scientific Advice (GIFSA).<sup>104</sup> This initiative is a response to the growing demand for scientific advice as challenges in the fields of food safety and nutrition continue to emerge. It aims to ensure the sustainable funding of the FAO/WHO programme on the provision of scientific advice to the CAC and its member countries by establishing a mechanism to facilitate the provision of extra-budgetary resources for scientific advice activities. Contributions will be accepted from governments, organisations and foundations in accordance with FAO and WHO rules.<sup>105</sup>

### 3.2.1.3 Members and observers

Only States and regional economic integration organisations (REIOs)<sup>106</sup> can be members of the CAC. Membership is open to all FAO and WHO members and associate members

---

<sup>102</sup> *FAO/WHO Framework for the Provision of Scientific Advice on Food Safety and Nutrition (to Codex and Member Countries)* (Food and Agriculture Organization and World Health Organization, Rome/Geneva), 2007, 9, available at: [http://www.fao.org/ag/agn/agns/files/Final\\_Draft\\_EnglishFramework.pdf](http://www.fao.org/ag/agn/agns/files/Final_Draft_EnglishFramework.pdf), visited on 1 February 2008.

<sup>103</sup> This decision was taken on the basis of the general review of Codex procedures discussed at the Twenty-Fifth (Extraordinary) Session of the CAC in 2003. Codex Alimentarius Commission, *Report of the Twenty-Fifth (Extraordinary) Session*, ALINORM 03/25/5 (Joint FAO/WHO Food Standards Programme, Rome), 13-15 February 2003.

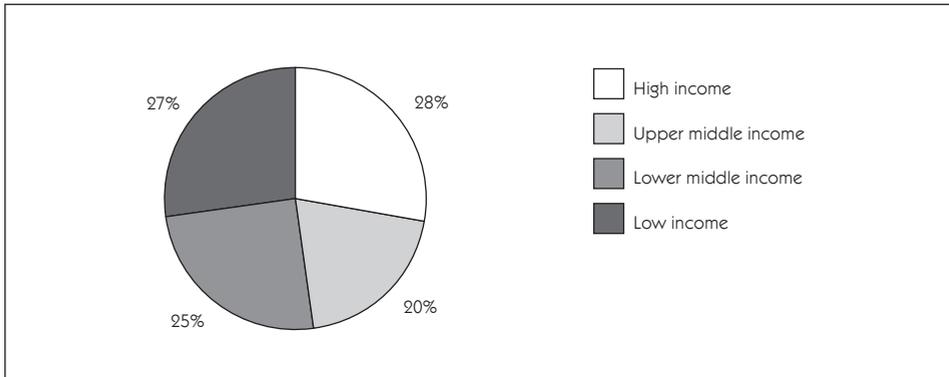

<sup>104</sup> This launch occurred at a side-event of the Thirtieth Session of the CAC. Codex Alimentarius Commission, *Report of the Thirtieth Session*, ALINORM 07/30/REP (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, para. 126, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>105</sup> The WHO and FAO will maintain two separate accounts. A committee will be created to manage the GIFSA, and procedures developed to ensure the independent and transparent allocation of GIFSA resources, taking into consideration the criteria for prioritisation of activities already agreed by Codex, FAO and WHO and the specific needs of FAO and WHO member countries. *Conclusions of the Consultative Process on the Provision of Scientific Advice and Global Initiative for Food-Related Scientific Advice (GIFSA)*, (Food and Agriculture Organization and World Health Organization, Rome) 6 July 2007, Annex 2, available at: [http://www.fao.org/ag/agn/agns/files/GIFSA\\_SideEvent\\_July2007.pdf](http://www.fao.org/ag/agn/agns/files/GIFSA_SideEvent_July2007.pdf), visited on 12 June 2008.

<sup>106</sup> REIO membership was made possible following a change to the CAC *Procedural Manual* adopted in 2003 by the 26<sup>th</sup> Session of the CAC. Codex Alimentarius Commission, *Report of the Twenty-Sixth Session*, ALINORM 03/41 (Joint FAO/WHO Food Standards Programme, Rome), 30 June - 7 July 2003, paras 22-24. Rule I(3) provides that membership of the CAC shall also comprise REIOs members of either the FAO or WHO that notify the Director General of either of these two organisations of their desire to be considered Members of the CAC. According to Rule II.1 of the Rules of Procedure, a REIO member shall exercise its membership rights alternately with its Member States, according to their respective competences. Rule II(5) requires that the division of competences between the REIO and its Member States be made known in writing before any meeting of the CAC or its subsidiary bodies, with regard to any specific question to be considered in the meeting. Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural*

(including REIOs) that have notified the Director-General of the FAO or WHO of their desire to be considered Members of the CAC.<sup>107</sup> Currently the only REIO that is a member of the CAC is the European Community.

**Graph 1: Members of the Codex Alimentarius Commission that are WTO Members, by Income Level, 2007**

By the end of 2007, the CAC had 176 members,<sup>108</sup> of which 145 were also Members of the WTO.<sup>109</sup> Of these, 28 percent (41) are high-income Members, 20 percent (29) are upper-middle-income Members, 24 percent (38) are lower-middle-income Members and 28 percent (39) are low-income Members.

*Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

<sup>107</sup> Rule I of the *Rules of Procedure*. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 6, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>108</sup> Note that this number includes the European Communities as a Member Organization. Committee on Sanitary and Phytosanitary Measures, *Membership in WTO and International Standard - Setting Bodies: Note by the Secretariat*, G/SPS/GEN/49/Rev.8, circulated on 9 October 2007. The data from this document has been updated to include Bosnia Herzegovina which subsequently became a member of the CAC. Cape Verde and Ukraine (both lower-middle-income countries), which acceded to the WTO in 2008, are also CAC members. However, as the data presented here relates to 2007, they are not taken into account.

<sup>109</sup> Note that three WTO Members are not States but are customs territories (Hong Kong, China; Macao, China; and Chinese Taipei). These WTO Members are not members of the CAC in their own right. Instead, China, which includes both mainland China and these separate customs territories, participates in CAC activities. Aside from these three customs territories, the only other WTO Members that are not members of the CAC are Djibouti, Liechtenstein and the Maldives.

In addition, non-member States, international non-governmental organisations,<sup>110</sup> and international or regional governmental organisations<sup>111</sup> may be granted observer status to participate in meetings of the CAC and its subsidiary committees.<sup>112</sup> They may deliver position papers and make presentations, but they may not vote or participate in decision making. In practice, many observers are active and often influential participants at meetings. A wide range of observers are currently recognised at the CAC.<sup>113</sup> International inter-governmental observers include the WTO, the OECD, ASEAN and the Caribbean Community as well as a number of UN bodies such as UNCTAD, the UNDP and UNEP. International non-governmental organisations with observer status include primary producer organisations (such as the International Peanut Forum), processor organisations (for example the International Dairy Federation and the International Bottled Water Association), standards organisations (for example, the International Organization for Standardization and the Comisión Panamericana de Normas Técnicas), and consumer interest groups (such as Consumers International and Greenpeace International). Currently no states that are not CAC members have observer status.

There are two exceptions to the participation of observers in Codex meetings, namely with regard to meetings of the Codex Executive Committee and meetings of the FAO/WHO scientific committees on whose reports the standard-setting process is based. Such

---

<sup>110</sup> According to para. 3 of the *Principles Concerning the Participation of International Non-Governmental Organizations in the Work of the Codex Alimentarius Commission*, International non-governmental organizations are eligible for observer status if (i) they have consultative status, specialized consultative status or liaison status with the FAO; (ii) they have official relations with the WHO; or (iii) they are international in structure and scope of activity; representative of the specialized field of interest in which they operate; concerned with matters covering a part or all of the field of activity of the CAC; have aims and purposes in conformity with the Statutes of the CAC; have a permanent directing body and Secretariat, authorized representatives and systematic procedures and machinery for communicating with its membership in various countries; and have been established at least three years before they apply for observer status. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 34, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>111</sup> The observer status of international intergovernmental organisations is the responsibility of the FAO and WHO and is governed by the relevant provisions of the Constitutions of FAO or WHO, as well as by the applicable regulations of FAO or WHO on relations with intergovernmental organizations. Rule IX:5 of the *Rules of Procedure*.

<sup>112</sup> The Directors General of the FAO or WHO may invite international non-governmental organisations to participate as observers, in terms of Rule IX:4 of the *Rules of Procedure*. The role of non-governmental organisations and international governmental organisations in the activities of the CAC is governed by the *Guidelines on Cooperation between the Codex Alimentarius Commission and International Intergovernmental Organizations in the Elaboration of Standards and Related Texts* and the *Principles Concerning the Participation of International Non-Governmental Organizations in the Work of the Codex Alimentarius Commission*. See Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 12th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2001, 32-34 and 35-41. Observers may put forward their views at any stage of a meeting except the final decision. Food and Agriculture Organization and World Health Organization, *Understanding the Codex Alimentarius* (United Nations, Rome), 2005, 15, available at: <http://www.fao.org/docrep/008/y7867e/y7867e00.HTM>, visited on 28 July 2006.

<sup>113</sup> The CAC has recognised 219 observers, including 62 international intergovernmental organisations and 157 international non-governmental organisations. Currently there are no CAC observers that are states. The list of observers is published on the CAC website, available at: <http://www.codexalimentarius.net/web/organizations.jsp>, visited on 28 January 2008. See also Mariëlle Mason-Mathee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 27.

meetings are closed to non-members. Furthermore, the CAC makes certain decisions in closed sessions by secret ballot.<sup>114</sup>

### 3.2.1.4 Standard-setting procedures

The Codex Alimentarius Commission meets annually,<sup>115</sup> either in Rome or Geneva, in regular session,<sup>116</sup> *inter alia* to establish whether there is a need for a new or revised standard and to arrange for it to be drafted.

The right of initiative to propose that a new standard be drafted or an existing standard be revised is not set out in the CAC *Procedural Manual*. In practice, such initiatives may come from a CAC member country or a Codex committee, or in some cases from an international nongovernmental organisation.<sup>117</sup>

A uniform 8-step procedure, set out in the *Procedures for the Elaboration of Codex Standards and Related Texts*, is followed for the elaboration of all Codex texts, including standards, codes of practice, guidelines and related texts.<sup>118</sup> During this procedure, the standards or other texts are elaborated by Codex committees on the advice of the independent scientific expert committees and reviewed twice by members and other interested parties at the regular sessions of the CAC.

At step 1 of this procedure, the CAC decides (after considering the outcome of the critical review of the proposal for a new standard by the Executive Committee against CAC priorities and criteria) to undertake the development of a new standard or the review of an existing standard.<sup>119</sup> It also decides what subsidiary body must undertake the work.

<sup>114</sup> Sikes refers to the example of the decision on MRLs for hormones, taken by secret ballot in the 1995 meeting of the CAC. See Lucinda Sikes, 'FDA's Consideration of Codex Alimentarius Standards in Light of International Trade Agreements', *Food and Drug Law Journal* 53, 1998, 327-335, 329. See also Consumers International. *Position of Consumers International for the Twenty-Second Session of the Codex Alimentarius Commission Re: Involvement of Non-Governmental Organizations in the Work of the Codex Alimentarius Commission* June 1997 (position paper).

<sup>115</sup> Until 2003, the CAC regular sessions were biannual. However, due to the increased workload since the coming into force of the *SPS Agreement*, the frequency of the regular sessions has been increased to yearly, with the possibility of additional (extraordinary) sessions as may be considered necessary by the Directors-General of the FAO and WHO, in consultation with the Chairperson of the Executive Committee of the CAC. See Rule VI of the Rules of Procedure in Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, 10.

<sup>116</sup> From its founding until December 2007, the CAC has held 30 regular sessions and one extraordinary session. The latter was for purposes of the discussion of the results of the evaluation process, which is discussed further below, Part II, Section 3.2.1.5.

<sup>117</sup> Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 249.

<sup>118</sup> The *Procedures for the Elaboration of Codex Standards and Related Texts* are contained in the *Procedural Manual*. Previously different procedures were in place for different types of standards. These procedures were comprehensively revised in 1993 to provide a uniform procedure for the elaboration of all Codex texts. The new procedure was revised again in 2004 to introduce the strategic planning process and critical review. Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, 23-25. For a thorough analysis of the legitimacy of the CAC standard-setting procedure, see Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 228-260.

<sup>119</sup> A decision to elaborate a standard may also be made by a subsidiary body of the CAC (after taking into

Step 2 of this procedure is where the Codex Secretariat arranges for the preparation of the draft proposed standard. Although not explicitly stated in the *Procedures Manual*, in practice this task is usually assigned to an individual CAC member or observer (usually the member or observer that initiated the standard).<sup>120</sup> The draft is prepared taking into account the input from the FAO/WHO expert committees. At step 3, the draft is sent by the Codex Secretariat to all CAC members and interested parties for comment. Step 4 involves the review by the relevant committee of all the comments received and, if necessary, the preparation of a new draft. The proposed draft standard is submitted to both the Executive Committee and the regular session of the CAC at step 5 for adoption as a draft standard, in which case it may go through to finalisation. In taking a decision at this step, the CAC will take into account the outcome of the critical review of the Executive Committee. At step 6 the standard is again sent to all members and interested parties for comments. The subsidiary committee finalises the draft standard on the basis of the comments received at step 7. At step 8, the finalised standard is again submitted to both the Executive Committee and the regular session of the CAC. After a final round of comments, and taking into account the critical review of the Executive Committee, the CAC decides whether to adopt the draft as a final Codex standard. If so, it is published by the Codex Secretariat as part of the *Codex Alimentarius*. It is also possible for the CAC to identify standards to be elaborated by means of an accelerated procedure. In such cases a 5-step process is followed, with the standards being submitted to the regular session of the CAC for adoption at step 5, instead of at step 8.<sup>121</sup>

Previously, the 8-step procedure made specific provision for substantive comments and amendments to be submitted with regard to a standard at step 8, and set out guidelines for how such comments should be dealt with.<sup>122</sup> This aimed to allow all CAC members, including those that had not participated in earlier stages of the standard-setting process, to participate fully in the development of each standard. However, this enabled members to limit their participation to the late stages of the standard setting process and to delay the adoption of a standard through their late interventions. In 2006, the CAC decided to delete these guidelines.<sup>123</sup> Currently, if substantive comments are submitted at a late stage,

---

account the outcome of the critical review), subject to subsequent approval by the Commission at the earliest possible opportunity. Where regional standards are at issue, the Commission must base its decision on the proposal of the majority of members of the region involved. Part III of the *Procedures for the Elaboration of Codex Standards and Related Texts*.

<sup>120</sup> Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 76.

<sup>121</sup> This accelerated procedure is set out in the *Procedures for the Elaboration of Codex Standards and Related Texts*, Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, 25-26.

<sup>122</sup> According to this guideline, amendments proposed at step 8 could only be adopted immediately by the Commission if they were only editorial in nature. Substantive amendments had to be referred back to the committee level. Submission of proposals for significant amendments had to be made in writing sufficiently in advance of the Committee meeting to give all members time to consider the amendments. These procedures were contained in the *Guide to the Consideration of Standards at Step 8 of the Procedure for the Elaboration of Codex Standards including Consideration of any Statements Relating to Economic Impact*, in the 14<sup>th</sup> edition of the *Procedural Manual* 2004, 27. See Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 237-238.

<sup>123</sup> Codex Alimentarius Commission, *Report of the Twenty-Ninth Session ALINORM 06/29/41* (Joint FAO/WHO Food Standards Programme, Geneva), 3-7 July 2006, para. 23.

the standard is nevertheless adopted at step 8 as it is, and a decision is taken to revise the standard immediately.<sup>124</sup> A standard will only be referred back to step 6 for reconsideration by the relevant committee if there is a failure to reach consensus.<sup>125</sup>

The standards elaborated through this 8-step process are science-based. This was expressly stated in the *Statements of Principle relating to the Role of Food Safety Risk Assessment*, adopted in 1997.<sup>126</sup> The latter provide, *inter alia*, that Codex food safety standards should be based on a risk assessment, as appropriate to the circumstances,<sup>127</sup> and that such risk assessment should be soundly based on science,<sup>128</sup> should be documented in a transparent manner,<sup>129</sup> and should use available quantitative information to the greatest extent possible.<sup>130</sup> In addition, the *Statements of Principle* provide that there should be a functional separation of risk assessment and risk management.<sup>131</sup> In 2003, the CAC adopted a comprehensive statement of *Working Principles for Risk Analysis for Application in the Framework of the Codex Alimentarius*, which was incorporated into the *Procedural Manual*.<sup>132</sup> According to these *Working Principles*, the responsibility for risk management lies with the CAC and its subsidiary bodies, while the responsibility for risk assessment lies with the joint FAO/WHO expert bodies and consultations.

The joint FAO/WHO expert bodies, including JECFA, JMRA and JMPR, as well as *ad hoc* expert consultations provide scientific input to Codex committees in response to specific requests for information.<sup>133</sup> They are governed by the general rules and procedures adopted by the governing bodies of the FAO and WHO,<sup>134</sup> and by more specific terms

---

<sup>124</sup> Mariëlle Masson-Mathee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 240.

<sup>125</sup> On the problematic nature of consensus decision making by the Commission, see further below in this Section. See also *ibid.*, 230-241.

<sup>126</sup> The *Statements of Principle relating to the Role of Food Safety Risk Assessment* were adopted by the CAC in 1997 at its 22<sup>nd</sup> Session (ALINORM 97/37) and were incorporated into the *Procedural Manual* in the Appendix on *General Decisions of the Commission*. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 196, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>127</sup> Principle 1 of the *Statements of Principle relating to the Role of Food Safety Risk Assessment*.

<sup>128</sup> Principle 2 of the *Statements of Principle relating to the Role of Food Safety Risk Assessment*.

<sup>129</sup> Principle 2 of the *Statements of Principle relating to the Role of Food Safety Risk Assessment*. This principle further provides that risk assessments should incorporate the four steps of the risk assessment process.

<sup>130</sup> Principle 4 of the *Statements of Principle relating to the Role of Food Safety Risk Assessment*.

<sup>131</sup> Principle 3 of the *Statements of Principle relating to the Role of Food Safety Risk Assessment*. This Principle further recognises, however, that some interactions between risk assessment and risk management are essential for a pragmatic approach. On the concepts of risk assessment and risk management see further above, Part II, Section 1.5 and below, Part III, Chapter 5 (introductory paragraphs).

<sup>132</sup> The *Working Principles for Risk Analysis for Application in the Framework of the Codex Alimentarius* was adopted by the CAC at its 26<sup>th</sup> Session in 2003 (ALINORM 03/41) and is to be found in Section III of the *Procedural Manual*. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 112-118, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>133</sup> It is useful to note that the FAO/WHO expert bodies also have the task of providing scientific advice, upon request, to members of the FAO or WHO. However, a large part of their work is dedicated to Codex activities.

<sup>134</sup> Article VI of the FAO Constitution provides the authority to establish committees and working parties on matters pertaining to the FAO's purpose. It has further developed the *Principles and Procedures which should Govern Conventions and Agreements Concluded under Articles XIV and XV of the Constitution and Commissions and Committees established under Article VI of the Constitution*, 1967. Similarly Article 38 of the WHO's Constitution gives the WHO Executive Board the competence to establish committees to serve

of reference and rules of procedure adopted for each body.<sup>135</sup> These differ from expert body to expert body. However, there are some common elements to their basic working principles. In particular, in 2004 six core principles for the provision of scientific advice were agreed by the FAO and WHO.<sup>136</sup> These are (1) the soundness or scientific excellence of both the experts and the scientific process; (2) the responsibility or accountability of experts for their views; (3) the objectivity of the experts and advice provided; (4) the fairness of the scientific process; (5) the transparency of the process whereby advice is formulated; and (6) the inclusiveness of the process through regard to minority scientific opinion and maintenance of geographical and socioeconomic balance, but not to the extent that scientific integrity is compromised.

Requests for scientific advice are prioritised in consultation with the CAC, member countries and other international organisations in order to make the best use of the available resources and expertise. Requests from the CAC are prioritised on the basis of the following four criteria: the objectives defined in the CAC Strategic Plan; the clear definition of the scope and objective of the request; the significance of urgency of the request to CAC standard-setting work, taking into account the health and/or trade relevance of the issue and the needs of developing countries; and the availability of scientific knowledge or data to conduct the risk assessment.<sup>137</sup> The latter criterion has been criticised by some members, referring to the difficulties experienced by developing countries in obtaining or producing data to carry out risk assessments. In this respect, the Executive Committee pointed out that the criterion was meant to reflect the fact that in the absence of sufficient data it would be difficult for FAO and WHO to organise expert meetings to conduct the risk assessment.<sup>138</sup>

The joint FAO/WHO expert bodies conduct risk assessments on the basis of the risk assessment policies issued to them by the relevant Codex committee and the best available scientific data, which is sought by means of a ‘call for data’ for a particular expert meeting. This data is taken from a variety of sources, including government agencies, national and regional research institutes and the industries producing food, additives, pesticides, veterinary drugs, chemicals and pharmaceuticals. The data may take the form of peer reviews publications or unpublished proprietary data submitted to the FAO/WHO

---

purposes within the competence of the WHO. It has established *Regulations for Expert Advisory Panels and Committees*.

<sup>135</sup> For a full list of the various documents containing the guidelines, terms of reference and rules of procedure of the expert bodies, see *FAO/WHO Framework for the Provision of Scientific Advice on Food Safety and Nutrition (to Codex and Member Countries)* (Food and Agriculture Organization and World Health Organization, Rome/Geneva), 2007, Annex B, available at: [http://www.fao.org/ag/agn/agns/files/Final\\_Draft\\_EnglishFramework.pdf](http://www.fao.org/ag/agn/agns/files/Final_Draft_EnglishFramework.pdf), visited on 1 February 2008.

<sup>136</sup> *Report of the Joint FAO/WHO Workshop on the Provision of Scientific Advice to Codex and Member Countries, Held on 27-29 January 2004* (Food and Agriculture Organization and World Health Organization, Geneva), 2004, available at: [http://www.who.int/foodsafety/codex/en/workshop\\_report.pdf](http://www.who.int/foodsafety/codex/en/workshop_report.pdf), visited on 20 June 2008.

<sup>137</sup> These criteria were agreed in 2005 by the Executive Committee of the CAC, and adopted in 2005 by the CAC. Codex Alimentarius Commission, *Report of the Twenty-Eighth Session*, ALINORM 05/28/41 (Joint FAO/WHO Food Standards Programme, Rome), 4 - 9 July 2005, para. 75, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 14 May 2008.

<sup>138</sup> Executive Committee of the Codex Alimentarius Commission, *Report of the Fifty-Fifth Session*, ALINORM 05/28/3, (Joint FAO/WHO Food Standards Programme, Rome), 9-11 February 2005, para. 72.

Secretariat. Efforts are made to ensure that the data reflects the current state of scientific knowledge and is of high quality. The data is collected and reviewed by the expert body involved to generate a risk assessment. Where the quality and quantity of data does not permit a risk assessment, an expert evaluation of the available scientific data forms the basis of the scientific advice provided.<sup>139</sup> Limitations in data and assumptions made in the scientific advice must be clearly described in the final report.<sup>140</sup> The scientific advice issued by an expert body reflects the conclusions of all the experts present at a particular meeting. In exceptional cases where experts cannot reach agreement on the conclusions, the dissenting opinions and the reasons there for are recorded in the report.<sup>141</sup>

As mentioned above, in 2001, the Twenty-Fourth Session of the CAC requested a review of the status and procedures of the joint FAO/WHO expert bodies.<sup>142</sup> This led, in 2003, to the initiation of a 'consultative process' to consider ways to improve the transparency, timeliness, efficiency, integrity and sustainability of the provision of scientific advice by FAO/WHO scientific committees. One of the outcomes of this process was a framework document setting out the current practices and procedures in the provision of scientific advice by the FAO and WHO, published in 2007.<sup>143</sup> This aims to make more transparent the current procedures.

Another of the outcomes of the consultative process is the definition of new approaches to enhance the participation of experts and the use of data from developing countries in the elaboration of international scientific advice.<sup>144</sup> The FAO and WHO are currently reviewing recommendations to further strengthen the global nature of scientific advice. The three priority areas identified are: greater inclusion of data from developing countries; enhancement of the potential for experts from developing countries to be selected as members and have an effective participation in these meetings; and means to enhance the enabling environment at national, regional and international levels.

On the basis of the risk assessment and risk management process described above, standards are elaborated for adoption by the CAC. There are three types of standards: commodity standards, which define what qualifies as a particular commodity; residue standards, which set acceptable maximum residue levels for pesticides, veterinary drugs and additives; and codes of conduct, guidelines and other recommended measures including good

<sup>144</sup> *Enhancing Developing Country Participation in FAO/WHO Scientific Advice Activities. Report of a Joint FAO/WHO Meeting*, FAO Food and Nutrition Paper 88 (Food and Agriculture Organization and World Health Organization, Rome), December 2006, available at: <ftp://ftp.fao.org/docrep/fao/meeting/010/j7630e.pdf>, visited on 4 October 2006.

practice standards for issues such as risk assessment and the use of veterinary drugs.<sup>145</sup> Once the standards, guidelines or recommendations have been adopted by the CAC, they form part of what is known as the *Codex Alimentarius* (Food Code).<sup>146</sup> The adopted standards constitute voluntary standards.<sup>147</sup>

The coming into force of the *SPS Agreement* has given these standards a new status, not envisaged when CAC structures and procedures were designed. While the standards are still not binding, deviation from them makes national measures susceptible to challenge in terms of the *SPS Agreement's* science-based disciplines.<sup>148</sup> They thus constitute a benchmark against which SPS measures are judged. Measures meeting this benchmark are presumptively WTO consistent. As a result, increased attention has been focused on CAC standards and the procedures by which they are set.

One question that has arisen regards the extent to which the different nature of CAC standards, guidelines and other recommendations would be taken into account under the *SPS Agreement*. In 1997, the CAC Secretariat was asked by members to submit a written request for clarification from the chair of the SPS Committee on this point.<sup>149</sup> The Chair of the SPS Committee, after informal consultations, drafted a response which was adopted, after revision,<sup>150</sup> by the SPS Committee in April 1998 and sent to the CAC.<sup>151</sup> This response, after indicating that the SPS Committee cannot formally interpret the *SPS*

<sup>145</sup> This categorisation is made by Victor, in David G. Victor, 'The Sanitary and Phytosanitary Agreement of the World Trade Organization: An Assessment after Five Years', *Journal of International Law and Politics* 32 (4), 2000, 865-938, 886.

<sup>146</sup> The Codex Alimentarius is defined as 'a collection of internationally adopted food standards presented in a uniform manner' which 'aim at protecting consumers' health and ensuring fair practices in the food trade.' *General Principles of the Codex Alimentarius*, para. 1, in Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, 31. These *General Principles* were drafted by the Codex Committee on General Principles, adopted by the 3rd Session of the CAC in 1965, and amended by the 6th Session of the CAC in 1969. Codex Alimentarius Commission, *Report of the Sixth Session* (Joint FAO/WHO Food Standards Programme, Geneva), 4 - 14 March 1969, para. 16 and Appendix IV, available at: <http://www.fao.org/docrep/meeting/005/87246e/87246e00.htm>, visited on 14 May 2008.

<sup>147</sup> Originally, an acceptance procedure was set out in the *General Principles of the Codex Alimentarius*, paras 4.A and 5.A, according to which CAC members could indicate their intention to be bound by a particular standard (full acceptance), to be bound with some reservations regarding the operative date (target acceptance), to be bound with some qualifications (acceptance with minor deviations). Members could also refuse to accept the standard in its entirety, as provided for in *General Principles of the Codex Alimentarius*, paras 4.B and 5.B. Sami Shubber, 'The Codex Alimentarius Commission under International Law', *International and Comparative Law Quarterly* 21, 1972, 631-655, 649. The acceptance procedure was abolished by the 28<sup>th</sup> Session of the CAC. Codex Alimentarius Commission, *Report of the Twenty-Eighth Session*, ALINORM 05/28/41 (Joint FAO/WHO Food Standards Programme, Rome), 4 - 9 July 2005, para. 36, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 14 May 2008.

<sup>148</sup> The harmonisation disciplines of the *SPS Agreement* are discussed below, Part III, Chapter 4.

<sup>149</sup> Codex Alimentarius Commission, *Report of the Twenty-Second Session* (Joint FAO/WHO Food Standards Programme, Geneva), 23-28 June 1997, para. 172. The letter from the CAC to the SPS Committee was circulated as Committee on Sanitary and Phytosanitary Measures, *Clarification of References to Codex Texts - Request from the Codex Alimentarius Commission*, G/SPS/W/84, circulated on 8 October 1997.

<sup>150</sup> Committee on Sanitary and Phytosanitary Measures, *Clarification of References to Codex Texts: Draft Response to the Codex Alimentarius Commission. Note by the Chairman. Revision*, G/SPS/W/86/Rev.1, circulated on 13 March 1998.

<sup>151</sup> Committee on Sanitary and Phytosanitary Measures, *Summary of the Meeting Held on 12-13 March 1998*, G/SPS/R/10, circulated on 30 April 1998, para. 50.

*Agreement*, noted that the *SPS Agreement* does not differentiate between different categories of CAC norms such as standards, guidelines and recommendations. It further indicated that WTO Members are under no legal obligation to apply CAC standards, guidelines or recommendations. In addition, it noted that the substantive content of a text rather than its category would determine how it would be applied and how a Member could show that its measure was based thereon.<sup>152</sup> Finally, with regard to the question of the status of regional standards under the *SPS Agreement*, the SPS Committee stated that regional CAC standards were not included in the definition of ‘international standards’ in the *SPS Agreement*. It noted that such standards were meant to apply only within a given geographic region.<sup>153</sup> However, the fact that scientifically sound regional standards could become the foundation for the creation of international standards was recognised.

In 1998, referring to this response of the SPS Committee, the Executive Committee of the CAC agreed that: ‘the work of Codex should move forward without concern arising from misunderstandings or misinterpretations as to how Codex standards and related texts might be used.’<sup>154</sup> However, it suggested that the Committee on General Principles should examine the possibility of developing a set of ‘appropriate preambular statements’ to explain the intent of different categories of Codex texts.<sup>155</sup>

The standards developed by the CAC subsidiary committees are based on scientific risk assessments obtained from the FAO/WHO expert bodies as described above. However, as all risk management decisions, the standards elaborated by the CAC committees are not purely based on risk assessment but reflect also the policy choices of the participating members. This has become a problematic issue since the coming into force of the *SPS Agreement* and has led to members fighting out their trade conflicts in the standard setting process. The politicisation of standard setting in the CAC is illustrated by the events surrounding the setting of safety standards for hormone-residues, at issue in *EC - Hormones*.<sup>156</sup> In June 1987, the JECFA determined Acceptable Daily Intake (ADI) and MRLs for Zeranol and Trenbolone (two synthetic hormones) in beef and found that it was unnecessary to do the same for endogenous hormones as the residues from the use thereof as growth promoters in accordance with good veterinary practice ‘are unlikely to pose a hazard to human health.’<sup>157</sup> The Codex Committee on Residues of Veterinary Drugs in Food (CRVDF) agreed with the recommendations of the JECFA and proceeded to advance the adoption of the relevant MRLs through the normal 8-step procedure followed in the CAC.<sup>158</sup> At the following meeting of the CAC in July 1991, the question of

<sup>152</sup> For example, the SPS Committee noted that specific numeric value of an MRL provides a higher degree of precision than a guideline or other Codex text.

<sup>153</sup> Codex Alimentarius Commission, *Report of the Twenty-Second Session* (Joint FAO/WHO Food Standards Programme, Geneva), 23-28 June 1997, para. 168.

<sup>154</sup> Executive Committee, *Report of the Forty-Fifth Session*, ALINORM 99/3, 3-5 June 1998 (Codex Alimentarius Commission, Rome) para. 44.

<sup>155</sup> Executive Committee, *Report of the Forty-Fifth Session*, ALINORM 99/3, 3-5 June 1998 (Codex Alimentarius Commission, Rome) para. 44.

<sup>156</sup> These events are outlined in Dale E. McNeil, ‘The First Case under the WTO’s Sanitary and Phytosanitary Agreement: The European Union’s Hormone Ban’, *Virginia Journal of International Law* 39, 1998, 89-134, 108-109.

<sup>157</sup> FAO/WHO Joint Expert Committee on Food Additives. *Summary and Conclusions: Thirty-Second Meeting*, Rome, 15-23 June 1987.

<sup>158</sup> Committee on Residues of Veterinary Drugs in Food, Session of 1990 where the CRVDF agreed to advance

the adoption of these MRLs for the relevant five hormones was fiercely debated. The EC argued that factors other than science are to be taken into account when setting health standards. The CAC decided to ignore the advice of its own scientific committee and a vote was taken not to adopt the MRLs.

In 1995, the question of adoption of the MRLs for hormones was again at issue, only seven months after the coming into force of the *SPS Agreement*.<sup>159</sup> Following intense discussion, the US proposed that a secret vote be held on these standards. This proposal was approved and the MRLs were adopted by a vote of 33 to 29, with 7 abstentions.<sup>160</sup> However, the International Observer from the EC criticised the decision to take a secret vote as this deviated from the goal of transparency in CAC procedures and brought into question the validity of Codex standards.<sup>161</sup> It became clear that the added importance of Codex standards were leading to increased politicisation of its standard-setting process. The adopted standards no longer represented a broad consensus on the safety of the relevant products but were controversial results of the struggle of interests within the CAC.

In 1995, in reaction to the politicised voting on the standards for the hormones at issue in the dispute between the EC and the US,<sup>162</sup> the CAC developed the *Statements of Principle Concerning the Role of Science in the Codex Decision-Making Process and the Extent to which Other Factors are Taken into Account*.<sup>163</sup> These *Statements of Principle* state:

---

these MRLs at the CAC meeting in July 1991.

<sup>159</sup> These events are described in Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 42.

<sup>160</sup> Codex Alimentarius Commission, *Report of the Twenty-First Session*, ALINORM 95/37 (Joint FAO/WHO Food Standards Programme, Rome), 3 - 8 July 1995, 45, available at: <http://www.fao.org/docrep/meeting/005/v7950e/v7950e00.htm>, visited on 13 May 2008.

<sup>161</sup> *Ibid.*, 46. The EC Observer also stated that the EC might reconsider its participation in the CAC, but the delegations of the Netherlands, the UK, Sweden, Spain and Finland dissociated themselves from parts or all of these remarks.

<sup>162</sup> The first attempt to adopt standards for the relevant hormones, as recommended by the Codex Committee on Residues of Veterinary Drugs in Food on the basis of scientific analysis carried out by the JECFA, was opposed by the EC. According to the EC, factors other than science must be taken into account in setting standards. A vote was taken, the outcome of which was 12 in favour of adoption; 27 against adoption; and 9 abstentions. This vote resulted in the non-adoption of the relevant standards. Codex Alimentarius Commission, *Report of the Nineteenth Session*, ALINORM 91/40 (Joint FAO/WHO Food Standards Programme, Rome), 1-10 July 1991, paras 161-162, available at: <http://www.fao.org/docrep/meeting/005/t0490e/t0490e00.htm>, visited on 13 May 2008. The role of CAC standards in the *EC - Hormones* dispute is discussed further below, Part III, Sections 4.1.2 and 4.2.

<sup>163</sup> These Statements of Principle were adopted by the 21<sup>st</sup> Session of the CAC in 1995 and were incorporated into the Procedural Manual, in the Appendix on *General Decisions of the Commission*. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 194-195, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008. As discussed by Donna Roberts, in the debate leading to this text, the EC and US both sought to establish criteria that favoured their industry interests. The US (and its allies) supported the view that standards should be based only on science. In contrast the EC (and its allies) proposed a 'need' criterion for new technologies (such as growth hormones). The result was compromise language stating that standards shall be based on principle of sound science but where appropriate CAC will consider other legitimate factors. Donna Roberts *et al.*, 'Sanitary and Phytosanitary Barriers to Agricultural Trade: Progress, Prospects and Implications for Developing Countries', in *Agriculture and the New Trade Agenda - Creating a Global Trading Environment for Development*, M.D. Ingco and L.A. Winters (eds.) (Cambridge University Press, Cambridge), 2004, 329-358, 341-342.

1. The food standards, guidelines and other recommendations of Codex Alimentarius shall be based on the principle of sound scientific analysis and evidence, involving a thorough review of all relevant information, in order that the standards assure the quality and safety of the food supply.
2. When elaborating and deciding upon food standards Codex Alimentarius will have regard, where appropriate, to *other legitimate factors* relevant for the health protection of consumers and for the promotion of fair practices in food trade.
3. In this regard it is noted that food labelling plays an important role in furthering both of these objectives.
4. When the situation arises that members of Codex agree on the necessary level of protection of public health but hold differing views about other considerations, members may abstain from acceptance of the relevant standard *without necessarily preventing the decision by Codex*.<sup>164</sup> (emphasis added).

In order to ensure that the consideration of ‘other factors’ does not affect the scientific basis of a risk assessment, these *Statements of Principle* further call for respect of the functional separation of risk assessment from risk management. As the other relevant factors referred to in the *Statements of Principle* were not defined, a call was made for the elaboration and clarification of the phrase ‘other legitimate factors relevant for the health protection of consumers’<sup>165</sup> This question was addressed in Thirteenth Session of Codex Committee on General Principles and the results of this discussion were adopted by the CAC in 2001,<sup>166</sup> and are included as an appendix to the Procedural Manual.<sup>167</sup> According to the criteria laid down in this decision, any ‘other relevant factors’ which have world-wide relevance are potentially legitimate in setting Codex standards, but they should be clearly identified and should not affect the scientific basis for the standard. In addition, ‘other relevant factors’ which are explicitly mentioned in these criteria are the constraints of production and processing methods and transport and storage, especially in developing countries, which can affect the feasibility of different risk management options. A notable aspect of the principles laid down in this decision is the fact that provision is made for the adoption of standards where agreement cannot be reached on the non-scientific considerations. Clearly, the greater the recognition of the role of policy considerations in standard setting, the more openly governments can openly base their different views regarding the appropriate standard on non-science factors. This makes agreement between CAC members even more difficult than when differences had to be argued on the basis of scientific

---

<sup>164</sup> Codex Alimentarius Commission, *Report of the Twenty-First Session*, ALINORM 95/37 (Joint FAO/WHO Food Standards Programme, Rome), 3 - 8 July 1995, Appendix II, available at: <http://www.fao.org/docrep/meeting/005/v7950e/v7950e00.htm>, visited on 13 May 2008. These were incorporated into the Procedural Manual in the Appendix on *General Decisions of the Commission*. Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 194, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

<sup>165</sup> Codex Alimentarius Commission, *The Application of Risk Analysis Principles in Codex*, ALINORM 97/7 (Joint FAO/WHO Food Standards Programme, 16 May 1997).

<sup>166</sup> Codex Alimentarius Commission, *Report of the Twenty-Fourth Session*, ALINORM 01/41 (Joint FAO/WHO Food Standards Programme, Geneva), 2-7 July 2001, 98.

<sup>167</sup> Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, Appendix.

findings alone. Thus the possibility is created that a member may abstain, while allowing the standard to be adopted nevertheless. While this might be a sensible solution to the reality of the differing policy objectives of members in a situation where the standards are merely voluntary norms, the new role of CAC standards following the coming into force of the *SPS Agreement* makes this rule of questionable wisdom. Its effect will be to create standards on the basis of certain members' value-based choices, which will set the norm against which all WTO Members' measures will be judged for presumptive validity.

Other concerns raised after the coming into force of the *SPS Agreement* regard the appropriateness of the procedures for standard setting in the CAC, and the legitimacy of the resulting standards.<sup>168</sup> One contentious element of CAC procedures for standard setting relates to decision making. Most decisions of the CAC and its subsidiary committees are taken by consensus. If consensus cannot be reached, the decision can be taken by majority vote,<sup>169</sup> though this rarely happens at committee level. During meetings of the CAC, however, decisions were previously occasionally taken by majority vote when consensus was lacking, and this situation occurred more frequently after the coming into force of the *SPS Agreement*.<sup>170</sup> Two well-known examples of this are the controversial standards for bottled mineral waters and maximum residue levels of hormones in beef. The hormone standards was hard-fought due to their relevance in the *EC - Hormones* dispute between the US and EC. The decision that no maximum residue level was necessary in this case because hormone residues in beef are safe, when hormones are administered in accordance with good veterinary practice, was adopted by 33 votes in favour with 29 votes against and 9 abstentions. The revised standard for mineral waters, which reflected the traditional European method of ensuring water purity,<sup>171</sup> was adopted by 33 votes in favour, with 31 against and 10 abstentions.<sup>172</sup> All EC Member States and most other

<sup>168</sup> It has been pointed out that the commitment of developed countries embodied in Article 10.4 of the *SPS Agreement*, to encourage and facilitate the participation by developing countries in international standard-setting organisations has turned out to be hollow. Kevin C. Kennedy, 'Resolving International Sanitary and Phytosanitary Disputes in the WTO: Lessons and Future Directions', *Food and Drug Law Journal* 55 (1), 2000, 81-104. See further on Article 10.4 of the *SPS Agreement* below, Part V, Section 2.4.

<sup>169</sup> Rule XII(2) of the Rules of Procedure. Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005. See also Natalie Avery *et al.*, *Cracking the Codex; an Analysis of Who Sets World Food Standards* (National Food Alliance, London), 1993, 7.

<sup>170</sup> Since the adoption of the *SPS Agreement*, the Codex has been subject to increasing politicisation of its decision-making processes as its members try to capture the setting of standards to reflect their own health or trade priorities. This has had the initial consequence of increasing the number of non-consensus decisions as member countries were unwilling to back down and agree to standards which have implications for the disciplines their SPS measures are exposed to under the multilateral trade regime. Codex members thus tried to use the Codex processes to attain their national economic goals, rather than to establish minimum safety standards. Stewart and Johanson noted in 1998 that the number of non-consensus decisions had increased since the adoption of the *SPS Agreement*. Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 45.

<sup>171</sup> Traditionally, European mineral water producers ensure its purity by bottling it at the source. On the other hand, other countries such as the US and Japan use antimicrobial agents, a procedure prohibited by the proposed standard. *Ibid.*, 44.

<sup>172</sup> Codex Alimentarius Commission, *Report of the Twenty - Second Session*, ALINORM 97/3 (Joint FAO/WHO Food Standards Programme, Geneva), 23 - 28 June 1997, paras 89-90, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=97>, visited on 14 May 2008.

European countries voted in favour, leading to suspicions regarding the influence of the EC on the voting behaviour of countries then seeking admission to the EC.<sup>173</sup> Following the vote, several delegations expressed concerns about the safety of this standard<sup>174</sup> and emphasised that the CAC should try to reach important decisions by consensus of its members.<sup>175</sup> However, this appeal had little effect and the number of non-consensus decisions in the CAC increased.

As a result of the controversy following these standards, the adoption of standards by means of voting led to criticism and to a re-evaluation of the standard-setting procedure. The CAC has now committed itself to make every effort to adopt standards by consensus rather than voting.<sup>176</sup> However, reaching consensus, particularly on sensitive issues, has become increasingly difficult due to the current awareness of the trade implications of CAC standards. To address this problem, the CAC adopted a decision, at its 26<sup>th</sup> Session in 2003, recommending measures to facilitate consensus.<sup>177</sup>

A problematic aspect of the process of standard setting by the CAC, especially relevant to the study in this book, is the great divergence in the extent to which countries at different levels of development participate in the various stages of this process. As is the case for risk regulation on national level, the standard-setting process in the CAC includes risk assessment, risk management and risk communication aspects.<sup>178</sup> These elements of risk analysis are subject to the same inherently subjective elements and policy choices on

---

<sup>173</sup> Japan requested that the vote be taken by secret ballot, but this proposal was rejected by a show of hands. Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 45.

<sup>174</sup> For example, Japan pointed to the fact that certain conditions, presumably including water quality, vary throughout the world. It is thus possible that the European method would not necessarily guarantee the safety of mineral water bottled elsewhere. The adoption of the European method, reflected in the Codex standard, by other countries may thus give cause for concern.

<sup>175</sup> Codex Alimentarius Commission, *Report of the Twenty - Second Session*, ALINORM 97/3 (Joint FAO/WHO Food Standards Programme, Geneva), 23 - 28 June 1997, paras. 45 and 93, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=97>, visited on 14 May 2008. The issue of non-consensus decision making in the CAC when adopting the standard for hormones was raised by the EC before the Panels in *EC-Hormones*. See further below, Part III, Section 4.1.2.

<sup>176</sup> At the 23<sup>rd</sup> Session of the CAC, the decision-making procedure for the adoption and amendment of standards (then Rule X of the Rules of Procedure) was amended to stress the need for consensus in the adoption of standards and related texts, stating that voting may only be resorted to if every effort to reach consensus has failed. See Codex Alimentarius Commission, *Report of the Twenty-Third Session*, ALINORM 99/37 (Joint FAO/WHO Food Standards Programme, Rome), 28 June - 3 July 1999. Now this rule is contained in Article XII.2 of the Rules of Procedure. Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, 16, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

<sup>177</sup> These recommended measures are now included in the Appendix to the Procedural Manual containing general decisions of the CAC. Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, 167, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

<sup>178</sup> That these three 'distinct but closely linked' components of risk analysis are an integral part of the overall risk analysis to be conducted by the CAC is recognised in the *Working Principles for Risk Analysis for Application in the Framework of the Codex Alimentarius* at para. 5. See Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual*, 15th ed. (Food and Agriculture Organization and World Health Organization, Rome), 2005, 101.

international level as are present on national level.<sup>179</sup> These subjective elements are given content by the actors in the risk assessment and risk management stages so that the resulting standards reflect their interests. It is therefore worthwhile to examine in more detail the degree of participation of WTO Members at different levels of development in the risk analysis process at the CAC.

### 3.2.1.5 Participation in standard setting

In theory, all CAC members can participate in CAC activities and send delegations to any Codex committee in which they want to take part. However, in practice, the multiplicity of committees and meetings, together with the fact that they are most often held in developed host countries, makes it costly to be actively involved in their standard setting activities. As a result, the most active participation in the plethora of Codex committees is by developed country members. Countries at lower levels of development face constraints with regard to the financial resources and the technical expertise needed to participate in all the numerous Codex committees.<sup>180</sup> They thus often restrict their participation to the annual regular sessions of the CAC and possibly certain committees of particular relevance to their export products. This means that, in the majority of CAC standards, the input of countries at lower levels of development is lacking. As noted in the 2002 report of the FAO/WHO evaluation of the CAC:

[P]oorer countries and, to a lesser extent, those with limited importance for trade, have too little involvement and influence. Many countries outside of North America, Australasia and the European Union feel that it is difficult to make their voices heard in Codex. Governments in low-income countries do not always consider attendance at Codex meetings a high enough priority among many pressing demands for resources.<sup>181</sup>

Most developing-country WTO Members that do attend CAC meetings give highest priority to attending the regular sessions of the CAC, where decisions are taken on the initiation of work on standards, the adoption of draft standards which can proceed to finalisation and the adoption of final standards.<sup>182</sup> These Members cannot effectively ensure that their interests are reflected in Codex standards since, at these stages, fundamental changes are not easy to make. Nevertheless, an examination of attendance of meetings of various Codex bodies by WTO Members at different income levels shows that the CAC regular sessions are best attended by middle- and low- income Members.

---

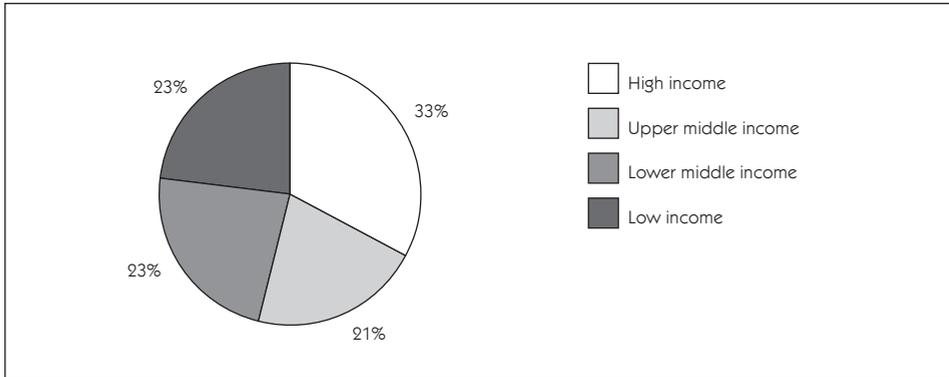

<sup>179</sup> See the discussion on risk analysis, below, Part III, Chapter 5.

<sup>180</sup> In fact, developing countries indicated in the context of the FAO/WHO evaluation of the CAC in 2002, that their limited financial resources are 'overwhelmingly' the most important hindrance to their full participation in CAC activities. Codex Alimentarius Commission, *Conclusions and Recommendations of the Joint FAO/WHO Evaluation of the Codex Alimentarius and Other FAO and WHO Work on Food Standards*, ALINORM 03/25/3 (Joint FAO/WHO Food Standards Programme, Rome), December 2002, para 139.

<sup>181</sup> *Ibid.*, para. 138.

<sup>182</sup> Stuart A. Slorach, *Enquiry Concerning the FAO/WHO Project and Trust Fund for Enhanced Participation in Codex ("Codex Trust Fund")* (Swedish International Development Cooperation Agency, Stockholm), 12 October 2007, 11, available at: [http://www.who.int/foodsafety/codex/Slorach\\_report.pdf](http://www.who.int/foodsafety/codex/Slorach_report.pdf), visited on 10 June 2008.

**Graph 2: Codex Alimentarius Commission Thirtieth Session:  
Attendance by WTO Members by Income Level, 2007**

The spread across income levels of WTO Members that attended the Commission's regular session in 2007 closely resembles that of the membership of the CAC.<sup>183</sup> This session was attended by 108 CAC members that are also WTO Members. Of these WTO Members, 33 percent were high-income Members, 21 percent were upper-middle-income Members, 23 percent were lower-middle-income Members and 21 percent were low-income Members.<sup>184</sup>

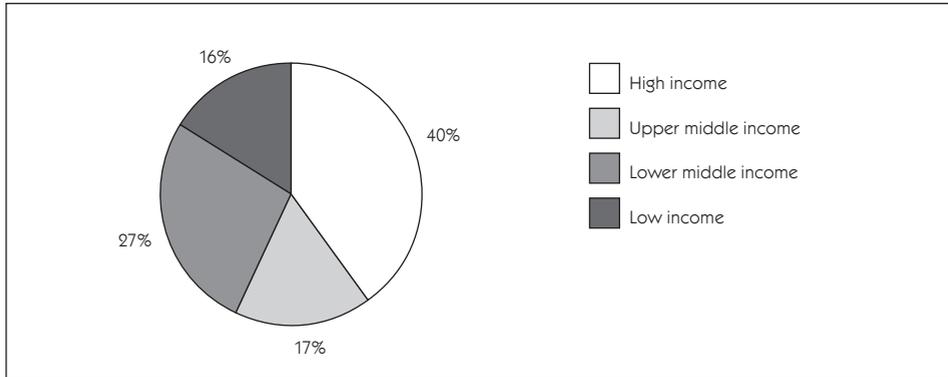

However, mere representation at the meeting cannot give a full picture of the extent to which the interests of Members at different income levels are promoted at the meeting. One factor that must be taken into account is the size of Members' delegations. National delegations to the CAC usually comprise senior government officials with expertise in the area of food trade,<sup>185</sup> assisted by representatives of industry and sometimes consumer organisations or academics.

<sup>183</sup> See above, Part II, Section 3.2.1.3, Graph 1.

<sup>184</sup> These numbers are based on the list of delegates contained in the Report of the Thirtieth Session of the CAC in 2007. Only those CAC members that are also WTO Members are taken into account in this calculation. For purposes of the categorisation of WTO Members by income level, the 2007 World Bank classification of economies used throughout this book is relied upon. According to the Report of the Thirtieth Session, 35 high-income Members, 23 upper-middle-income Members, 25 lower-middle-income Members and 25 low-income Members attended the meeting. Codex Alimentarius Commission, *Report of the Thirtieth Session, ALINORM 07/30/REP* (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, Appendix I, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

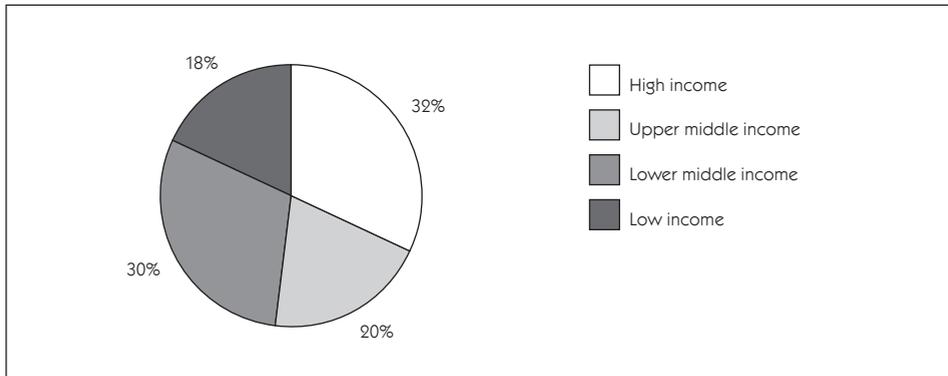

<sup>185</sup> National delegates to Codex committees should, as far as possible, serve in a continuing capacity and be specialists in the respective fields of the committees, as stated in Rule XI.4 of the *Rules of Procedure*. See Codex Alimentarius Commission, *Procedural Manual, Seventeenth Edition* (Joint FAO/WHO Food Standards Programme, Rome), 2007, 15, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_17e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_17e.pdf), visited on 21 February 2008.

**Graph 3: Codex Alimentarius Commission Thirtieth Session: Delegates of WTO Members by Income Level, 2007**

The size of delegations that WTO Members send to CAC sessions vary widely across income levels. Of the 427 delegates of WTO Members present at the regular session of the CAC in 2007, 40 percent were on the delegations of high-income Members, 17 percent were on delegations of upper-middle-income Members, 27 percent were on delegations of lower-middle-income Members and 16 percent were on delegations of low-income Members.<sup>186</sup>

**Graph 4: Codex Alimentarius Commission Thirtieth Session: Average Number of Delegates per WTO Member by Income Level, 2007**

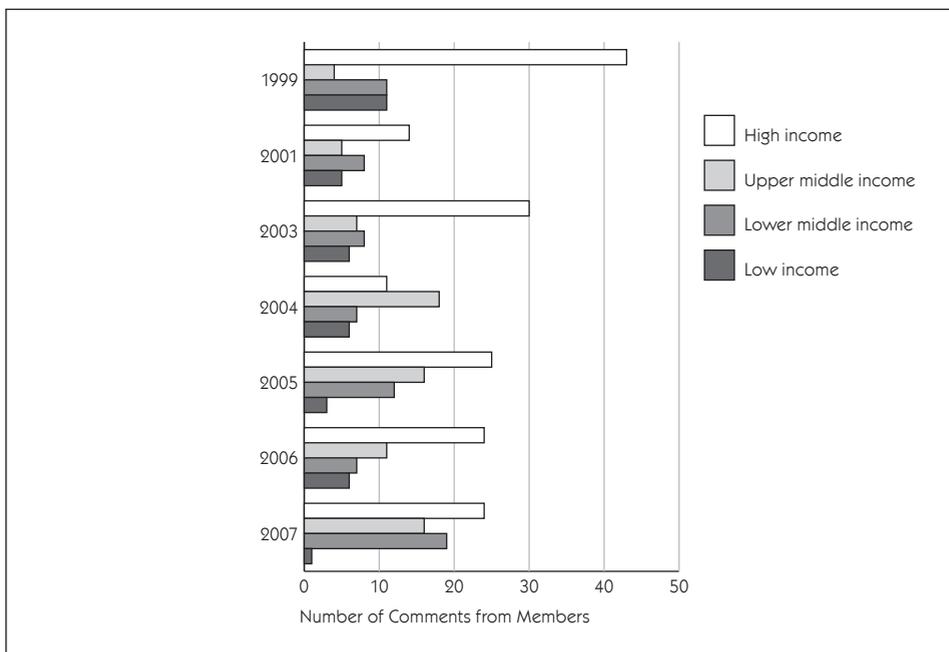

Examining the size of delegations against the number of WTO Members attending the meeting, it is possible to determine the average number of delegates per Member by income level. The average number of delegates per WTO Member represented at the 2007

<sup>186</sup> Of all the delegates of WTO Members attending the 30<sup>th</sup> Session of the CAC, 171 were delegates of high-income Members, 27 were delegates of upper-middle-income Members, 115 were delegates of lower-middle-income Members (of which 22 were on the Chinese delegation), and 69 were delegates of low-income Members. Codex Alimentarius Commission, *Report of the Thirtieth Session, ALINORM 07/30/REP* (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, Appendix I, available at: <http://www.codex-alimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

session of the CAC was 4.88 for high-income Members, 3.1 for upper-middle-income Members 4.6 for lower-middle-income Members, and 2.76 for low-income Members.<sup>187</sup> The surprisingly high average number of delegates for lower-middle-income Members is partly due to the fact that China sent 22 delegates to this meeting. Without China, the average number of delegates sent by lower-middle-income Members to this meeting would be 3.87.

Attendance of meetings cannot be equated with active participation. Not all WTO Members represented at the regular sessions of the CAC voice their views on the matters under discussion. It is therefore elucidating to examine the degree to which Members at different levels of development actually participate in the discussions at CAC sessions.

**Graph 5: Codex Alimentarius Commission:  
Participation of WTO Members by Income Level, 1999-2007**

An examination of the comments made during CAC sessions from 1999 to 2007 shows that traditionally, high-income WTO Members have been more active participants than middle- and low-income Members. However, this situation has been improving over the years. In 2007 the participation by upper- and lower- middle income Members has almost equalled that of high-income Members.<sup>188</sup> The participation by low-income Members is still poor.

<sup>187</sup> This calculation is made on the basis of the attendance list. Codex Alimentarius Commission, *Report of the Thirtieth Session*, ALINORM 07/30/REP (Joint FAO/WHO Food Standards Programme, Rome), 2 - 7 July 2007, Appendix I, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

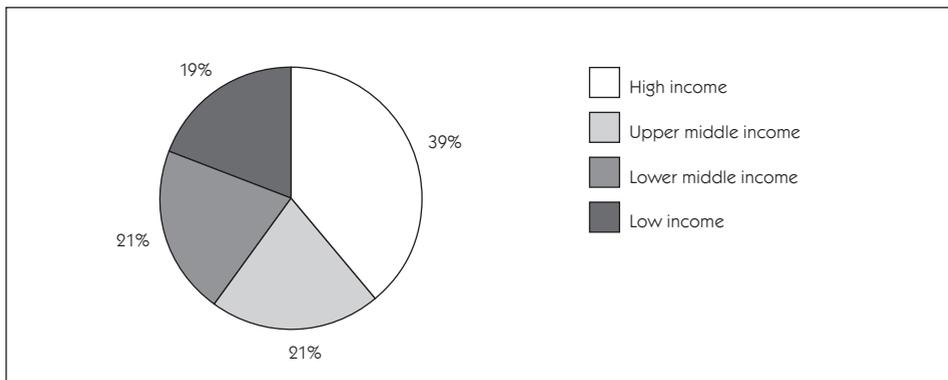

<sup>188</sup> Of course, bearing in mind that there are many more upper- and lower-middle income Members than

As has become clear from the discussion of the standard-setting procedures in the CAC, participation in the regular sessions of the CAC is by far not enough to ensure effective input into the standard-setting process. Instead, much more influence can be exerted if a Member participates actively in the initial stages of the elaboration of a standard. The initial preparation of proposed draft standards is increasingly assigned to individual CAC members or working groups, most often composed of the members or observers that submitted the proposal to elaborate the relevant standard. These are largely developed-country CAC members and industry associations. As noted by Diahanna Post:

Once a carefully tailored draft reaches the full committee for discussion, it is in theory open for discussion, but in fact the working group members are often extremely reluctant to reopen the debate on the draft. They argue that the draft reflects a well-thought-out consensus on the part of the working group members. In part this reflects the difficulty of trying to negotiate international standards by committee. But regardless of whether the intention is to exclude opinions, the result is that a handful of countries, usually those that can afford to devote staff time to drafting Codex standards in between committee meetings, dominate the framing of the standard.<sup>189</sup>

It is therefore elucidating to examine the origin of proposals for new standards and the assignment of the task of drafting proposed standards in more detail.

**Graph 6: Codex Alimentarius Commission: Participation in Drafting Groups for New Standards of WTO Members by Income Level, 2001-2007**

Between 2001 and 2007, an estimated 41 proposals for new standards within the framework of the Codex Alimentarius were presented by WTO Members.<sup>190</sup> Of these propos-

high-income Members that are CAC members, this improvement does not mean translate to an almost equal level of participation in relative terms.

<sup>189</sup> Diahanna L. Post, 'Standards and Regulatory Capitalism: The Diffusion of Food Safety Standards in Developing Countries', *The ANNALS of the American Academy of Political and Social Science* (598), 2005, 168-183, 171, available at: <http://ann.sagepub.com/cgi/reprint/598/1/168>, visited on 12 June 2008.

<sup>190</sup> The number of proposals for new standards has been calculated using the information provided in the documents referred to in the agendas of Codex Alimentarius Commission meetings, under the agenda item 'List of proposals for the elaboration of new Standards and Related Texts'. However, the agendas of the meetings

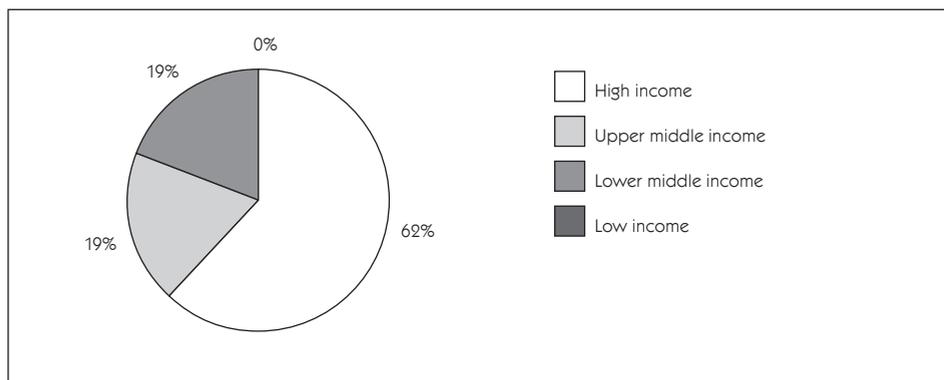

als, 24 were proposed and prepared by WTO Members individually and 17 proposals were either proposed by one WTO Member and further developed and drafted by

---

held in 2003 and 2004 are not available on the CAC website. Therefore proposals that may have been made in those years are not taken into account in this calculation. To identify the WTO Members involved in proposing or drafting the proposed standards, regard was had to the various Codex committee documents referred to in the document containing the 'List of Proposals'. Among the CAC members to whom the initial drafting of the proposed standard has been assigned, the country that originally proposed the new standard is not always indicated in the relevant committee reports. It is therefore only possible to divide by income level the WTO Members that were involved in the group of countries assigned the task to draft the initial version of the standard. The documents used are the following: Codex Alimentarius Commission, *Consideration of Codex Standards and Related Texts. Part III: Proposals to Elaborate New Standards and/or Related Texts*, ALINORM 01/21, Part III (Joint FAO/WHO Food Standards Programme, Geneva), 2 - 7 July 2001, available at: <ftp://ftp.fao.org/codex/ALINORM01/al0121ce.pdf>, visited on 20 February 2008., Codex Committee on Food Hygiene, *Report of the Thirty-Third Session*, ALINORM 01/13A (Joint FAO/WHO Food Standards Programme, Washington), 23 - 28 October 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 1 April 2008., Codex Committee on Food Import and Export Inspection and Certification Systems, *Report of the Ninth Session*, ALINORM 01/30A (Joint FAO/WHO Food Standards Programme, Perth), 11-15 December 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 1 April 2008., Codex Committee on Processed Fruits and Vegetables, *Report of the Twentieth Session*, ALINORM 01/27 (Joint FAO/WHO Food Standards Programme, Washington), 11-15 September 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 2 April 2008., Codex Alimentarius Commission, *List of Proposals for the Elaboration for the New Standards and the Related Texts and for the Discontinuation of Work*, ALINORM 05/28/8 (Joint FAO/WHO Food Standards Programme, Rome), 4 - 9 July 2005, available at: [ftp://ftp.fao.org/codex/cac/cac28/al28\\_08e.pdf](ftp://ftp.fao.org/codex/cac/cac28/al28_08e.pdf), visited on 20 February 2008., FAO/WHO Coordinating Committee for Asia, *Report of the Fourteenth Session*, ALINORM 05/28/15 (Joint FAO/WHO Food Standards Programme, Jeju-Do), 7-10 September 2004, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 1 April 2008., Codex Ad Hoc Intergovernmental Task Force on Foods Derived from Biotechnology, *Report of the Fifth Session*, ALINORM 06/29/34 (Joint FAO/WHO Food Standards Programme, Chiba), 19-23 September 2005, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 1 April 2008., Codex Committee on Fresh Fruits and Vegetables, *Report of the Twelfth Session*, ALINORM 05/28/35 (Joint FAO/WHO Food Standards Programme, Mexico City), 16-20 May 2005, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 1 April 2008., Codex Committee on Fats and Oils, *Report of the Nineteenth Session*, ALINORM 05/28/17 (Joint FAO/WHO Standards Food Programme, London), 21-25 February 2005, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 1 April 2008., Codex Committee on Fish and Fishery Products, *Report of the Seventy-Seventh Session*, ALINORM 05/28/18 (Joint FAO/WHO Food Standards Programme, Cape Town), 28 February - 4 March 2005, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 1 April 2008., Codex Committee on Food Additives and Contaminants, *Report of the Thirty-Seventh Session*, ALINORM 05/28/12 (Joint FAO/WHO Food Standards Programme, The Hague), 25-29 April 2005, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=05>, visited on 1 April 2008., Codex Alimentarius Commission, *List of Proposals for the Elaboration of New Standards and Related Texts (Including Project Documents Submitted) and for the Discontinuation of Work*, ALINORM 06/29/8 (Joint FAO/WHO Food Standards Programme, Geneva), 3 - 7 July 2006, available at: [ftp://ftp.fao.org/codex/CAC/CAC29/al29\\_08e.pdf](ftp://ftp.fao.org/codex/CAC/CAC29/al29_08e.pdf), visited on 20 February 2008., Codex Committee on Food Additives and Contaminants, *Report of the Thirty-Eighth Session*, ALINORM 06/29/12 (Joint FAO/WHO Food Standards Programme, The Hague), 24-28 April 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 1 April 2008., Codex Committee on Food Labelling, *Report of the Thirty-Fourth Session*, ALINORM 06/29/22 (Joint FAO/WHO Food Standards Programme, Ottawa), 1-5 May 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 1 April 2008., Codex Committee on Methods of Analysis and Sampling, *Report of the Twenty-Seventh Session*, ALINORM 06/29/23 (Joint FAO/WHO Food Standards Programme, Budapest), 15-19 May 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 1 April 2008., Codex Alimentarius Commission, *List of Proposals for the Elaboration of New Standards and Related Texts (Including Project Documents Submitted) and for the Discontinuation of Work*, ALINORM 07/30/8 (Joint FAO/WHO Food Standards Programme, Rome), 2-7 July 2007, available at: [ftp://ftp.fao.org/codex/CAC/CAC30/al30\\_08e.pdf](ftp://ftp.fao.org/codex/CAC/CAC30/al30_08e.pdf), visited on 20 February 2008.

a group of Members or proposed and drafted by a group of Members. In total, 53 WTO Members participated in making proposals for new standards, either jointly or individually.<sup>191</sup> Of these, 39 percent (21) were high-income WTO Members, 21 percent (11) were upper-middle-income WTO Members, 21 percent (11) were lower-middle-income WTO Members and 19 percent (10) were low-income WTO Members.<sup>192</sup>

**Graph 7: Codex Alimentarius Commission: Leadership of Drafting Group for New Standards of WTO Members by Income Level, 2001-2007**

An analysis of the assignment of leadership of the group tasked with drafting the proposed standards between 2001 and 2007 shows that 62 percent of the proposed draft standards have been drawn up under the authority of a high-income WTO Member.<sup>193</sup> Upper-middle-income and lower-middle-income WTO Members have each been assigned leadership roles in only 19 percent of the cases.<sup>194</sup> No leadership roles have been assigned to

<sup>191</sup> Several of these WTO Members participated in drafting more than one proposed standard. The only non-WTO Member that has participated in drafting groups for new standards in the period studied is Iran.

<sup>192</sup> WTO Members participating in the proposal and draft of new standards were: Angola, Argentina, Australia, Austria, Belgium, Brazil, Canada, Chile, China, Costa Rica, Cuba, Denmark, Egypt, the European Communities, Fiji, Finland, France, Gabon, The Gambia, Georgia, Germany, Ghana, India, Indonesia, Ireland, Italy, Jamaica, Japan, Kenya, the Republic of Korea, Madagascar, Malaysia, Mexico, Mongolia, The Netherlands, New Zealand, Norway, Pakistan, Panama, Philippines, Poland, South Africa, Spain, Sweden, Switzerland, Tanzania, Thailand, Tonga, Turkey, Uganda, the UK, the US and Vietnam.

<sup>193</sup> Masson-Matthee drew a similar conclusion from an examination of the assignment of the task of drafting in 2000 and 2002. Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 245.

<sup>194</sup> This information has been drawn from the following documents: Codex Alimentarius Commission, *Consideration of Codex Standards and Related Texts. Part III: Proposals to Elaborate New Standards and/or Related Texts*, ALINORM 01/21, Part III (Joint FAO/WHO Food Standards Programme, Geneva), 2 - 7 July 2001, available at: <ftp://ftp.fao.org/codex/ALINORM01/al0121ce.pdf>, visited on 20 February 2008., Codex Committee on Food Hygiene, *Report of the Thirty-Third Session*, ALINORM 01/13A (Joint FAO/WHO Food Standards Programme, Washington), 23 - 28 October 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 1 April 2008., Codex Committee on Food Import and Export Inspection and Certification Systems, *Report of the Ninth Session*, ALINORM 01/30A (Joint FAO/WHO Food Standards Programme, Perth), 11-15 December 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 1 April 2008., Codex Committee on Processed Fruits and Vegetables, *Report of the Twentieth Session*, ALINORM 01/27 (Joint FAO/WHO Food Standards Programme, Washington), 11-15 September 2000, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=01>, visited on 2 April 2008., Codex Alimentarius Commission, *List of Proposals for the Elaboration for the New Standards*

low-income Members. In 1999, a recommendation was adopted by the CAC to appoint a developing-country member as co-author of position papers of which the main author is a developed-country CAC member.<sup>195</sup> However, this recommendation does not seem to have been put into practice.

At the level of subsidiary committees, where the technical discussion on a draft proposed standard takes place and thus participation can be effective, participation of middle- and low-income Members has typically been low.<sup>196</sup> This is problematic, since it is at these committees that risk management decisions are made, taking into account scientific evaluations of risk as well as policy considerations, to develop a particular standard which will be forwarded to the CAC. Value judgments and policy choices form an acknowl-

<sup>195</sup> Codex Alimentarius Commission, *Report of the 23<sup>rd</sup> Session*, 28 June-3 July 1989 (FAO/WHO, Rome) ALINORM 99/37, para. 56(f).

<sup>196</sup> In a very thorough study conducted in 1993 by the National Food Alliance, a UK non-governmental organisation, of participation in the 19<sup>th</sup> session of the CAC, it was found that 55% of committee participants on national delegations came from Western Europe and North America, outnumbering the aggregate of participants from Africa, Asia, Latin America, Eastern and Central Europe, the South West Pacific and the Caribbean (see Natalie Avery *et al.*, *Cracking the Codex: an Analysis of Who Sets World Food Standards* (National Food Alliance, London), 1993, 1. The situation today can be illustrated by an analysis of participation at the most recent meetings of the five currently active Codex Commodity Committees.

edged and necessary part of risk management decisions. They result in the chosen levels of protection embodied in the standards elaborated in Codex committees and adopted by the CAC. On national level, risk management decisions are taken after balancing competing interests on national level and result in standards reflecting national preferences and economic realities. On the contrary, as explained above,<sup>197</sup> risk management decisions on international level do not reflect truly global preferences. Instead, they are based on the preferences and policy choices of those members participating effectively in the relevant Codex committee.

Attendance of committee meetings is overwhelmingly by developed country Members. A 2007 study with regard to funding requests to attend Codex meetings has shown that where developing-country members wish to attend committee meetings, they tend to prioritise specific committees, particularly the General Subject committees where general principles are developed for use across commodities.<sup>198</sup> The greatest attendance by members at lower levels of development is at meetings of the General Subject Committees on General Principles, Food Hygiene and Food Labelling. Some of these members also prioritise the General Subject committees in Pesticide Residues, Food Additives and Contaminants and Nutrition and Foods for Special Dietary Uses. This study notes that the priority given to the Committee on General Principles by developing-country members is difficult to understand, as it deals mainly with procedural questions.<sup>199</sup>

A look at attendance of the most recent meetings of the General Subject Committees by WTO Members is useful.

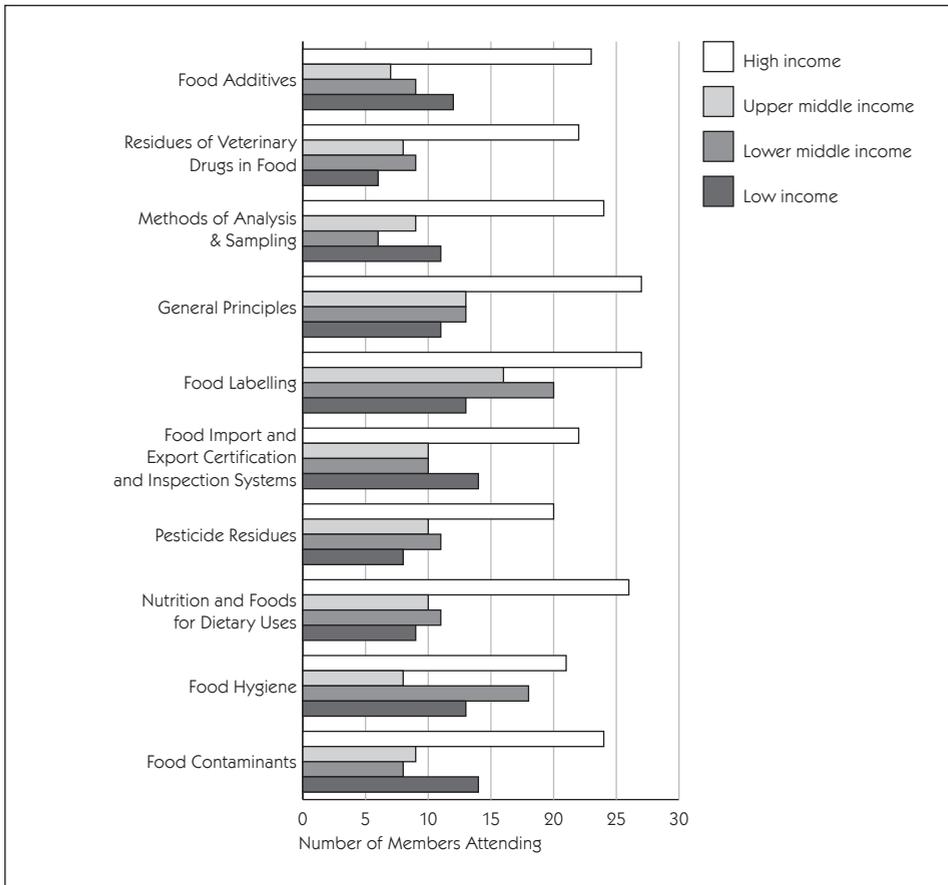

---

<sup>197</sup> With regard to the role of power in generating global public goods, see above, Part II, Section 1.2.

<sup>198</sup> Stuart A. Slorach, *Enquiry Concerning the FAO/WHO Project and Trust Fund for Enhanced Participation in Codex ("Codex Trust Fund")* (Swedish International Development Cooperation Agency, Stockholm), 12 October 2007, available at: [http://www.who.int/foodsafety/codex/Slorach\\_report.pdf](http://www.who.int/foodsafety/codex/Slorach_report.pdf), visited on 10 June 2008. This study evaluates the Codex Trust Fund for Enhanced Participation in Codex, and therefore focuses on requests for funding from this Trust Fund, submitted by Codex members who need support to attend Codex meetings.

<sup>199</sup> *Ibid.*, 12. The study speculates that reasons for the particular interest in attendance of the Committee on General Principles could be the fact that it provides the best opportunity to meet delegates from many other CAC members. In addition, the fact that recent meetings of this Committee have discussed the Codex Code of Ethics for Food Trade might have played a role, as this Code is important to developing-country members with poor import control systems which risk being used to dump low quality or unsafe food from developed-country members.

**Graph 8: Codex General Subject Committees:  
Attendance by WTO Members by Income Level, 2007**

At these most recent meetings of the General Subject Committees, 42 percent of WTO Members attending were high-income Members. Upper-middle-income Members made up 18 percent and lower-middle-income Members 20 percent of the Members attending. Low-income Members made up another 20 percent of the Members attending.<sup>200</sup> Greatest

<sup>200</sup> These figures were drawn from an examination of the lists of participants at the most recent Codex General Subject Committee meetings as of 8 February 2008. At the 39<sup>th</sup> Session of the Codex Committee on Food Additives held on 24-28 April 2007, 23 high-income, 7 upper-middle-income, 9 lower-middle-income and 12 low-income WTO Members were present. Codex Committee on Food Additives, *Report of the Thirty-Ninth Session*, ALINORM 07/30/12 Rev. (Joint FAO/WHO Food Standards Programme, Beijing), 24-28 April 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 17<sup>th</sup> Session of the Codex Committee on Residues of Veterinary Drugs in Food held on 3-7 September 2007, 22 high-income, 8 upper-middle-income, 9 lower-middle-income and 6 low-income WTO Members were present. Codex Committee on Residues of Veterinary Drugs in Foods, *Report of the Seventeenth Session*, ALINORM 08/31/31 (Joint FAO/WHO Food Standards Programme, Breckenridge, Colorado), 3-7 September 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 27<sup>th</sup> Session of the Codex Committee on Methods of Analysis and Sampling held on 5-9 March 2007, 24 high-income, 9 upper-middle-income, 6 lower-middle-income and 11 low-income WTO

attendance by non-high-income Members was at the Committees on Food Labelling, Food Hygiene and General Principles.

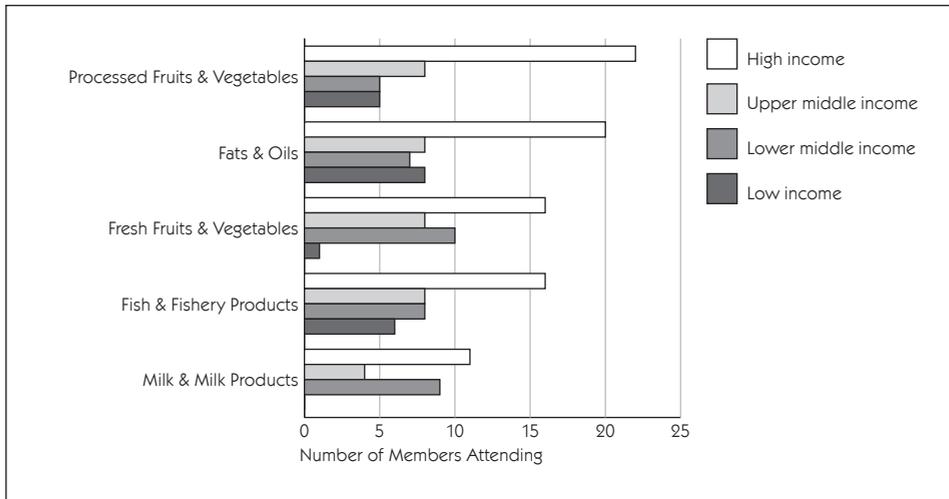

The 2007 study mentioned above notes that there is relatively little interest by developing-country members in attendance of Commodity Committee meetings where standards for specific commodities are developed. An exception to this is the Committee on Fish and Fishery Products.<sup>201</sup> The current situation is illustrated by an examination of participation by WTO Members at the most recent meeting of each of the Codex Commodity Committees.

---

Members were present. Codex Committee on Methods of Analysis and Sampling, *Report of the Twenty-Eighth Session*, ALINORM 07/30/23 (Joint FAO/WHO Food Standards Programme, Budapest), 5-9 March 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 24<sup>th</sup> Session of the Codex Committee on General Principles held on 2 -6 April 2007, 27 high-income, 13 upper-middle-income, 13 lower-middle-income and 11 low-income WTO Members were present. Codex Committee on General Principles, *Report of the Twenty-Fourth Session*, ALINORM 07/30/33 (Joint FAO/WHO Food Standards Programme, Paris), 2-6 April 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 39<sup>th</sup> Session of the Codex Committee on Pesticide Residues held on 7- 12 May 2007, 20 high-income, 10 upper-middle-income, 11 lower-middle-income and 8 low-income WTO Members were present. Codex Committee on Pesticide Residues, *Report of the Thirty-Ninth Session*, ALINORM 07/30/24 - Rev. 1 (Joint FAO/WHO Food Standards Programme, Beijing), 7 - 12 May 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 16<sup>th</sup> Session of the Codex Committee on Food Import and Export Inspection and Certification Systems, held on 26 – 30 November 2007, 22 high-income, 10 upper-middle-income, 10 lower-middle-income and 14 low-income WTO Members were present. Codex Committee on Food Import and Export Inspection and Certification Systems, *Report of the Sixteenth Session* ALINORM 08/31/30 (Joint FAO/WHO Food Standards Programme, Surfers Paradise, Queensland), 26 -30 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 39<sup>th</sup> Session of the Codex Committee on Food Hygiene, held on 30 October - 4 November 2007, 21 high-income, 8 upper-middle-income, 18 lower-middle-income and 13 low-income WTO Members were present. Codex Committee on Food Hygiene, *Report of the Thirty-Ninth Session*, ALINORM 08/31/13 (Joint FAO/WHO Food Standards Programme, New Delhi), 30 October - 4 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 29<sup>th</sup> Session of the Codex Committee on Nutrition and Foods for Special Dietary Uses, held on 12- 16 November 2007, 26 high-income, 10 upper-middle-income, 11 lower-middle-income and 9 low-income WTO Members attended. Codex Committee on Nutrition and Foods for Special Dietary Uses, *Report of the Twenty-Ninth Session*, ALINORM 08/31/26 (Joint FAO/WHO Food Standards Programme, Bad Neuenahr-Ahrweiler), 12 - 16 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 35<sup>th</sup> Session of the Codex Committee on Food Labelling, held on 30 April - 4 May 2007, 27 high-income, 16 upper-middle-income, 20 lower-middle-income and 13 low-income WTO Members were present. Codex Committee on Food Labelling, *Report of the Thirty-Fifth Session*, ALINORM 07/30/22 (Joint FAO/WHO Food Standards Programme, Ottawa), 30 April-4 May 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 1<sup>st</sup> Session of the Codex Committee on Contaminants in Food, held on 16 – 20 April 2007, 24 high-income, 9 upper-middle-income, 8 lower-middle-income and 14 low-income WTO Members were present. Codex Committee on Contaminants in Foods, *Report of the First Session*, ALINORM 07/30/41 (Joint FAO/WHO Food Standards Programme, Beijing), 16-20 April 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>201</sup> Stuart A. Slorach, *Enquiry Concerning the FAO/WHO Project and Trust Fund for Enhanced Participation in Codex ("Codex Trust Fund")* (Swedish International Development Cooperation Agency, Stockholm), 12 October 2007, 12, available at: [http://www.who.int/foodsafety/codex/Slorach\\_report.pdf](http://www.who.int/foodsafety/codex/Slorach_report.pdf), visited on 10 June 2008.

**Graph 9: Codex Commodity Committees: Attendance by WTO Members by Income Level, 2006-2007**

Although middle- and low-income WTO Members make up 71.7 percent of the membership of the CAC, only 52.8 percent of the Members represented at the Commodity Committee meetings were middle- and low-income Members.<sup>202</sup> By contrast, high-income Members accounted for 47.2 percent of WTO Members represented at the Commodity Committee meetings.<sup>203</sup> The greatest attendance of non-high-income Members was at the

<sup>202</sup> Of the middle- and low-income WTO Members attending Commodity Committee meetings, 20% were upper-middle-income Members, 21.7% were lower-middle-income Members and 11.1% were lower-income country Members.

<sup>203</sup> These figures were drawn from an examination of the lists of participants at the most recent Codex Commodity Committee meetings as of 8 February 2007. Participation of Members at different income levels varies at the different Commodity Committees depending on the importance of the commodity, and the standards on the agenda, for the trade of the countries involved. At the 7<sup>th</sup> Session of the Codex Committee on Milk and Milk Products, held on 27 March – 1 April 2006, 22 high-income, 8 upper-middle-income, 5 lower-middle-income and 5 low-income WTO Members attended. Codex Committee on Milk and Milk Products, *Report of the Seventh Session*, ALINORM 06/29/11 (Joint FAO/WHO Food Standards Programme, Queenstown), 27 March-1 April 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 8 February 2008.. At the 28<sup>th</sup> Session of the Codex Committee on Fish and Fishery Products held on 18– 22 September 2006, 20 high-income, 8 upper-middle-income, 7 lower-middle-income and 8 low-income WTO Members were represented. Codex Committee on Fish and Fishery Products, *Report of the Twenty-Eighth Session*, ALINORM 07/30/18 (Joint FAO/WHO Food Standards Programme, Beijing), 18 - 20 September 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.. At the 12<sup>th</sup> Session of the Codex Committee on Fresh Fruits and Vegetables held on 25 -29 September 2006, 16 high-income, 8 upper-middle-income, 10 lower-middle-income and 1 low-income WTO Members were represented. Codex Committee on Fresh Fruits and Vegetables, *Report of the Thirteenth Session*, ALINORM 07/30/35 (Joint FAO/WHO Food Standards Programme, Mexico City), 25-29 September 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 19<sup>th</sup> Session of the Codex Committee on Fats and Oils, held on 19-23 February 2007, 16 high-income, 8 upper-middle-income, 8 lower-middle-income and 6 low-income WTO Members were represented. Codex Committee on Fats and Oils, *Report of the Twentieth Session*, ALINORM 07/30/17 (Joint FAO/WHO Food Standards Programme, London), 19-23 February 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. Finally, at the 23<sup>rd</sup> Session of the Codex Committee on Processed Fruits and Vegetables, held on 16 – 21 October 2006, 11 high-income, 4 upper-middle-income, 9

Committee on Fish and Fishery Products. While a correlation between the Codex meetings attended and the food trade interests of members has been identified, this is not the case for all members. The correlation is the strongest in those members who rely on food exports for their economic development.<sup>204</sup>

The size and make-up of national delegations sent to Codex meetings deserves further attention. Member governments may send delegations of any size to Codex meetings,<sup>205</sup> but only one member of a delegation is designated the ‘official delegate’ and has the sole right to vote.<sup>206</sup> The rest of the delegation acts as advisors to the official delegate.<sup>207</sup> National delegations of WTO Members that are at higher levels of development are typically large and include a significant number of representatives from the agricultural, food and pharmaceutical sectors, as well as a few consumer and food-safety interest groups.<sup>208</sup> Thus the positions taken by the official delegate of these Members within the CAC are well-informed with regard to their industry interests and can therefore effectively promote these interests in the standard-setting process.

---

lower-middle-income and 0 low-income WTO Members were represented. Codex Committee on Processed Fruits and Vegetables, *Report of the Twenty-Third Session*, ALINORM 07/30/27 (Joint FAO/WHO Food Standards Programme, Arlington, Washington D.C.), 16-21 October 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>204</sup> Stuart A. Slorach, *Enquiry Concerning the FAO/WHO Project and Trust Fund for Enhanced Participation in Codex (“Codex Trust Fund”)* (Swedish International Development Cooperation Agency, Stockholm), 12 October 2007, 17-18, available at: [http://www.who.int/foodsafety/codex/Slorach\\_report.pdf](http://www.who.int/foodsafety/codex/Slorach_report.pdf), visited on 10 June 2008.

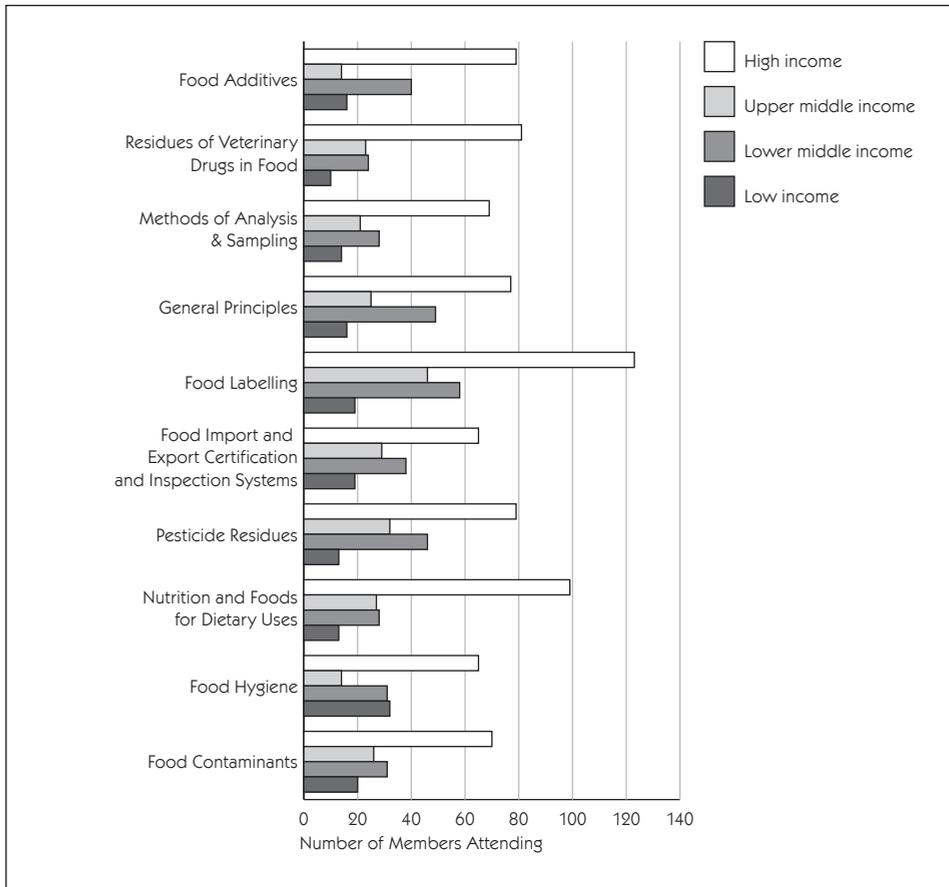

<sup>205</sup> The membership of these delegations is not restricted and can consist of government officials, academics, and representatives of corporations, industry groups, consumer organisations or professional organisations.

codexalimentarius.net/web/archives.jsp?year=08, visited on 8 February 2008. At the 27<sup>th</sup> Session of the Codex Committee on Methods of Analysis and Sampling held on 5-9 March 2007, of the 132 delegates of WTO Members attending the meeting, 52,3% (69) were on high-income Members' delegations, 15,9% (21) were on upper-middle-income Members' delegations, 21,2% (28) were on lower-middle income Members' delegations and 10,6% (14) were on low-income Members' delegations. Codex Committee on Methods of Analysis and Sampling, *Report of the Twenty-Eighth Session, ALINORM 07/30/23* (Joint FAO/WHO Food Standards Programme, Budapest), 5-9 March 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 24<sup>th</sup> Session of the Codex Committee on General Principles held on 2-6 April 2007, of the 167 delegates of WTO Members, attending the meeting, 46,1,3% (77) were on high-income Members' delegations, 15% (25) were on upper-middle-income Members' delegations, 29,3% (49) were on lower-middle income Members' delegations and 9,6% (16) were on low-income Members' delegations. Codex Committee on General Principles, *Report of the Twenty-Fourth Session, ALINORM 07/30/33* (Joint FAO/WHO Food Standards Programme, Paris), 2-6 April 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 39<sup>th</sup> Session of the Codex Committee on Pesticide Residues held on 7- 12 May 2007, of the 170 delegates of WTO Members present, 46,5% (79) were on high-income Members' delegations, 18,8% (32) were on upper-middle-income Members' delegations, 27,1% (46) were on lower-middle income Members' delegations and 7,6% (13) were on low-income Members' delegations. Codex Committee on Pesticide Residues, *Report of the Thirty-Ninth Session, ALINORM 07/30/24 - Rev. 1* (Joint FAO/WHO Food Standards Programme, Beijing), 7 - 12 May 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 16<sup>th</sup> Session of the Codex Committee on Food Import and Export Inspection and Certification Systems, held on 26 - 30 November 2007, of the 154 delegates of WTO Members present, 44,2% (68) were on high-income Members' delegations, 18,8% (29) were on upper-middle-income Members' delegations, 24,7% (38) were on lower-middle income Members' delegations and 12,3% (19) were on low-income Members' delegations. Codex Committee on Food Import and Export Inspection and Certification Systems, *Report of the Sixteenth Session ALINORM 08/31/30* (Joint FAO/WHO Food Standards Programme, Surfers Paradise, Queensland), 26 -30 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 39<sup>th</sup> Session of the Codex Committee on Food Hygiene, held on 30 October - 4 November 2007, of the 142 delegates of WTO Members present 45,8% (65) were on high-income Members' delegations, 9,9% (14) were on upper-middle-income Members' delegations, 21,8% (31) were on lower-middle income Members' delegations and 22,5% (32) were on low-income Members' delegations. Codex Committee on Food Hygiene, *Report of the Thirty-Ninth Session, ALINORM 08/31/13* (Joint FAO/WHO Food Standards Programme, New Delhi), 30 October - 4 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 29<sup>th</sup> Session of the Codex Committee on Nutrition and Foods for Special Dietary Uses, held on 12- 16 November 2007, of the 167 delegates of WTO Members present 59,3% (99) were on high-income Members' delegations, 16,2% (27) were on upper-middle-income Members' delegations, 16,8% (28) were on lower-middle income Members' delegations and 7,8% (13) were on low-income Members' delegations. Codex Committee on Nutrition and Foods for Special Dietary Uses, *Report of the Twenty-Ninth Session, ALINORM 08/31/26* (Joint FAO/WHO Food Standards Programme, Bad Neuenahr-Ahrweiler), 12 - 16 November 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=08>, visited on 8 February 2008. At the 35<sup>th</sup> Session of the Codex Committee on Food Labelling, held on 30 April - 4 May 2007, of the 246 delegates of WTO Members present, 50% (123) were on high-income Members' delegations, 18,7% (46) were on upper-middle-income Members' delegations, 23,6% (58) were on lower-middle income Members' delegations and 7,7% (19) were on low-income Members' delegations. Codex Committee on Food Labelling, *Report of the Thirty-Fifth Session, ALINORM 07/30/22* (Joint FAO/WHO Food Standards Programme, Ottawa), 30 April-4 May 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. At the 1<sup>st</sup> Session of the Codex Committee on Contaminants in Food, held on 16 - 20 April 2007, of the 147 delegates of WTO Members present, 47,6% (70) were on high-income Members' delegations, 17,7% (26) were on upper-middle-income Members' delegations, 21,1% (31) were on lower-middle income Members' delegations and 13,6% (20) were on low-income Members' delegations. Codex Committee on Contaminants in Foods, *Report of the First Session, ALINORM 07/30/41* (Joint FAO/WHO Food Standards Programme, Beijing), 16-20 April 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

**Graph 11: Codex Commodity Committees: Attendance by Delegates of WTO Members by Income Level, 2006-2007**

At the most recent Codex Commodity Committee meetings, the delegates of high-income Members accounted for 49 percent of the delegates of WTO Members attending. The delegates of upper-middle-income Members and lower-middle income Members made up only 19 percent and 25 percent, respectively, of the delegates of WTO Members at these meetings. The remaining 7 percent were delegates from low-income Members. Most non-high-income WTO Member delegates attended the Committee on Fish and Fishery Products.<sup>210</sup>

<sup>210</sup> This data is drawn from the lists of participants at the most recent Codex Commodity Committee meetings as of 8 February 2007. Of the total of 111 delegates of WTO Members that attended the 7th Session of the Codex Committee on Milk and Milk Products, held on 27 March – 1 April 2006, 69,4% (77) were on high-income Members' delegations, 10,8% (12) on upper-middle-income Members' delegations, 12,6% (14) on lower-middle-income Members' delegations and 7,2% (8) on low-income Members' delegations. Codex Committee on Milk and Milk Products, Report of the Seventh Session, ALINORM 06/29/11 (Joint FAO/WHO Food Standards Programme, Queenstown), 27 March-1 April 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=06>, visited on 8 February 2008. Of the total of 135 delegates at the 28th Session of the Codex Committee on Fish and Fishery Products held on 18– 22 September 2006, 45,9% (62) were on the delegations of high-income Members, 13,3% (18) on delegations of upper-middle-income Members, 26,7% (36) on delegations of lower-middle-income Members delegations, and 14,1% (19) on delegations of low-income Members. Codex Committee on Fish and Fishery Products, Report of the Twenty-Eighth Session, ALINORM 07/30/18 (Joint FAO/WHO Food Standards Programme, Beijing), 18 - 20 September 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. Of the 82 delegates of WTO Members present at the 12th Session of the Codex Committee on Fresh Fruits and Vegetables held on 25 -29 September 2006, 43,9% (36) were on the delegations of high-income Members, 32,6% (27) were on the delegations of upper-middle-income Members, 19,5% (16) were on the delegations of lower-middle-income Members and 3,7% (3) were on the delegations of low-income Members. Codex Committee on Fresh Fruits and Vegetables, Report of the Thirteenth Session, ALINORM 07/30/35 (Joint FAO/WHO Foods Standards Programme, Mexico City), 25-29 September 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. Of the 113 delegates of WTO Members present at the 19th Session of the Codex Committee on Fats and Oils, held on 19-23 February 2007, 38,9% (44) were on the delegations of high-income Members, 24,8% (28) were on the delegations of upper-middle-income Members, 29,2% (33) were on the delegations of lower-middle-income

One reason for the limited attendance of Codex subsidiary committee meetings by Members at lower levels of development is the fact that committee meetings are most often held in the country that is the host of that committee. Since the host country bears the costs and carries the administrative tasks corresponding to the committees work, hosts tend to be developed country members of the CAC. A proposal was made in 2001, to introduce a system of co-hosting committees by pairing developed and developing countries as hosts.<sup>211</sup> This proposal has not been adopted, but instead the *Procedural Manual* has been amended by the addition of the hortatory statement that the host country ‘should consider arrangements for holding Codex sessions in developing countries.’<sup>212</sup> The advantage of doing so is that while the developed country host member bears the costs of the committee meeting, the location of the meeting is moved to a developing country thereby facilitating participation by other developing country members in that region.<sup>213</sup> In addition, by providing the developing country member involved with hands-on experience in hosting a committee meeting, capacity is built in that member, which facilitates its more active participation in future committee meetings. To date six host countries (The Netherlands, the US, Canada, Norway, Australia and Germany) have held committee meetings in developing countries, with respect to sixteen sessions of nine committees, some of which took place before the amendment.<sup>214</sup> This initiative is likely to have

---

Members and 7,1% (8) were on the delegations of low-income Members. Codex Committee on Fats and Oils, Report of the Twentieth Session, ALINORM 07/30/17 (Joint FAO/WHO Food Standards Programme, London), 19-23 February 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. Finally, of the 62 delegates of WTO Members present at the 23rd Session of the Codex Committee on Processed Fruits and Vegetables, held on 16 – 21 October 2006, 40,3% (25) were on the delegations of high-income Members, 19,4% (12 ) were on the delegations of upper-middle-income Members, 40,3% (25) were on the delegations of lower-middle-income Members and logically none were on the delegations of low-income Members. Codex Committee on Processed Fruits and Vegetables, Report of the Twenty-Third Session, ALINORM 07/30/27 (Joint FAO/WHO Food Standards Programme, Arlington, Washington D.C.), 16-21 October 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>211</sup> This proposal was made at the 24<sup>th</sup> Session of the CAC. Codex Alimentarius Commission, *Report of the Twenty-Fourth Session*, ALINORM 01/41 (Joint FAO/WHO Food Standards Programme, Geneva), 2-7 July 2001, para. 63.

<sup>212</sup> See the *Guidelines to Host Governments of Codex Committees and Ad Hoc Intergovernmental Task Forces* in Joint FAO/WHO Food Standards Programme, *Codex Alimentarius Commission: Procedural Manual* (Food and Agriculture Organization and World Health Organization, Rome), 2006, 49, available at: [ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual\\_16e.pdf](ftp://ftp.fao.org/codex/Publications/ProcManuals/Manual_16e.pdf), visited on 21 February 2008.

<sup>213</sup> However, participation by developing countries from other regions is made more difficult by this arrangement due to the weaker transportation infrastructure that reduces accessibility. Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 246.

<sup>214</sup> The Netherlands held the 28<sup>th</sup> session of the Codex Committee on Food Additives and Contaminants in Manila, the Philippines, in 1996, its 32<sup>nd</sup> session in Beijing, China in 2000, and its 35<sup>th</sup> session in Arusha, Tanzania in 2003. In 2007, after this committee had been split into the Codex Committee on Food Additives (hosted by China) and the Codex Committee on Contaminants in Food (hosted by the Netherlands), the Netherlands held the 1st session of the latter committee in Beijing, China. The Netherlands, which hosted the Codex Committee on Pesticide Residues until China became the host in 2005, held the 25<sup>th</sup> session of this committee in Havana, Cuba in 1993, the 36<sup>th</sup> session of this committee in New Delhi, India in 2004 and the 38<sup>th</sup> in Fortaleza, Brazil in 2006. The US has held the 34<sup>th</sup> session of the Codex Committee on Food Hygiene in Bangkok, Thailand in 2001, its 37<sup>th</sup> session in Buenos Aires, Argentina, in 2005 and its 39<sup>th</sup> Session in New Delhi, India in 2007. In 1996, the US held the 10<sup>th</sup> session of the Codex Committee on Residues of Veterinary Drugs in Foods in San Jose, Costa Rica and its 16<sup>th</sup> Session in Cancún, Mexico in 2006. Canada held the 33<sup>rd</sup> session of the Codex Committee on Food Labelling in Kota Kinabalu, Malaysia in 2005. In 2005, Norway

contributed to the fact that China is now the official host of two Codex committees, the Codex Committee on Food Additives and the Codex Committee on Pesticide Residues.

Attendance of meetings of the regional Coordinating Committees by low- and middle-income WTO Members is relatively higher than at meetings of the CAC itself.<sup>215</sup> This

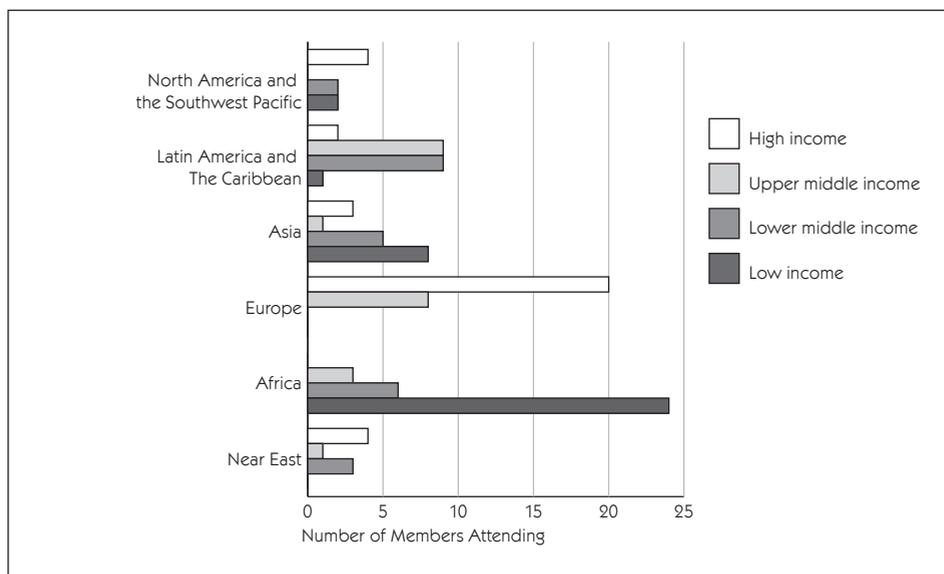

---

held the 27<sup>th</sup> session of the Codex Committee on Fish and Fishery Products in Cape Town, South Africa and the 28<sup>th</sup> Session of this Committee in Beijing, China in 2006. Australia, which hosts the Codex Committee on Food Import and Export Certification and Inspection Systems, held the 15<sup>th</sup> Session of this Committee in Mar del Plata, Argentina in 2006. Germany, which costs the Codex Committee on Nutrition and Foods for Special Dietary Uses, held the 28<sup>th</sup> Session of this Committee in Chiang Mai, Thailand in 2006.

<sup>215</sup> The FAO/WHO Coordinating Committee for North America and the South West Pacific has 13 members of which 8 are also WTO Members. At the 9<sup>th</sup> Session of the FAO/WHO Coordinating Committee for North America and the South West Pacific on 10-13 October 2006, 4 high-income, 0 upper-middle-income, 2 lower-middle-income and 2 low-income WTO Members were present. They were represented by 13 delegates of which 61,5% (8) were on high-income Members' delegations, logically none were on upper-middle-income Members' delegations, 23,1% (3) were on lower-middle income Members' delegations and 15,4% (2) were on low-income Members' delegations. FAO/WHO Coordinating Committee for North America and South West Pacific, *Report of the Ninth Session*, ALINORM 07/30/32 (Joint FAO/WHO Food Standards Programme, Apia), 10-13 October 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. The FAO/WHO Coordinating Committee for Latin America and the Caribbean has 33 members of which 32 are also WTO Members. At the 15<sup>th</sup> Session of the FAO/WHO Coordinating Committee for Latin America and the Caribbean on 13-17 November 2006, 2 high-income, 9 upper-middle-income, 9 lower-middle-income and 1 low-income WTO Members were present. They were represented by 66 delegates of which 3% (2) were delegates of high-income Members, 66,7% (44) were delegates of upper-middle-income Members, (of which 54,5% (24) were on the delegation of Argentina, which hosted the meeting) 28,8% (19) were delegates of lower-middle-income Members and 1,5% (1) were delegates of low-income Members. FAO/WHO Coordinating Committee for Latin America and the Caribbean, *Report of the Fifteenth Session*, ALINORM 07/30/36 (Joint FAO/WHO Food Standards Programme, Mar del Plata), 13 - 17 November 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. The FAO/WHO Coordinating Committee for Asia has 22 members of which 19 are also WTO Members. At the 15<sup>th</sup> Session of the FAO/WHO Coordinating Committee for Asia on 21-24 November 2006, 3 high-income, 1 upper-middle-income, 5 lower-middle-income and 8 low-income WTO Members were present. They were represented by 69 delegates of which 43,5% (30) were delegates of high-income Members, 4,3% (3) were delegates of upper-middle-income Members, 33,3% (23) were delegates of lower-middle-income Members and 18,8% (13) were delegates of low-income Members. FAO/WHO Coordinating Committee for Asia, *Report of the Fifteenth Session*, ALINORM 07/30/15 (Joint FAO/WHO Food Standards Programme, Seoul), 21 - 24 November 2006, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008. The FAO/WHO Coordinating Committee for Europe has 46 members of which 40 are also WTO Members (one is a member organization, the EC). At the 25<sup>th</sup> Session of the FAO/WHO Coordinating Committee for Europe on 15 -18 January 2007, 20 high-income, 8 upper-middle-income, and no lower-middle-income or low-income WTO Members were present. They were represented by 44 delegates of which 72,7% (32) were delegates of high-income Members, 27,3% (12) were delegates of upper-middle-income Members, none were delegates of lower-middle-income or low-income Members. FAO/WHO Coordinating Committee for Europe, *Report of the Twenty-Fifth Session*, ALINORM 07/30/19 (Joint FAO/WHO Food Standards Programme Vilnius), 15-18 January 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 1 March 2008. The FAO/WHO Coordinating Committee for Africa has 44 members of which 38 are also WTO Members. At the 17<sup>th</sup> Session of the FAO/WHO Coordinating Committee for Africa on 23 -29 January 2007, no high-income, 3 upper-middle-income, 6 lower-middle-income and 24 low-income WTO Members were present. They were represented by 75 delegates of which, logically, none were delegates of high-income Members, 6,7% (5) were delegates of upper-middle-income Members, 32% (24) were delegates of lower-middle-income Members and 61,3% (46) were delegates of low-income Members. FAO/WHO Coordinating Committee for Africa, *Report of the Seventeenth Session*, ALINORM 07/30/28 (Joint FAO/WHO Food Standards Programme, Rabat), 23-26 January 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February. The FAO/WHO Coordinating Committee for the Near East Region has 17 members of which 9 are also WTO Members. At the 4<sup>th</sup> Session of the FAO/WHO Coordinating Committee for the Near East Region

is particularly the case for the Regional Committee for Africa, where some low-income Members participate in Codex meetings only at the regional level.<sup>216</sup>

**Graph 12: Codex Regional Committees:  
Attendance by WTO Members by Income Level, 2006-2007**

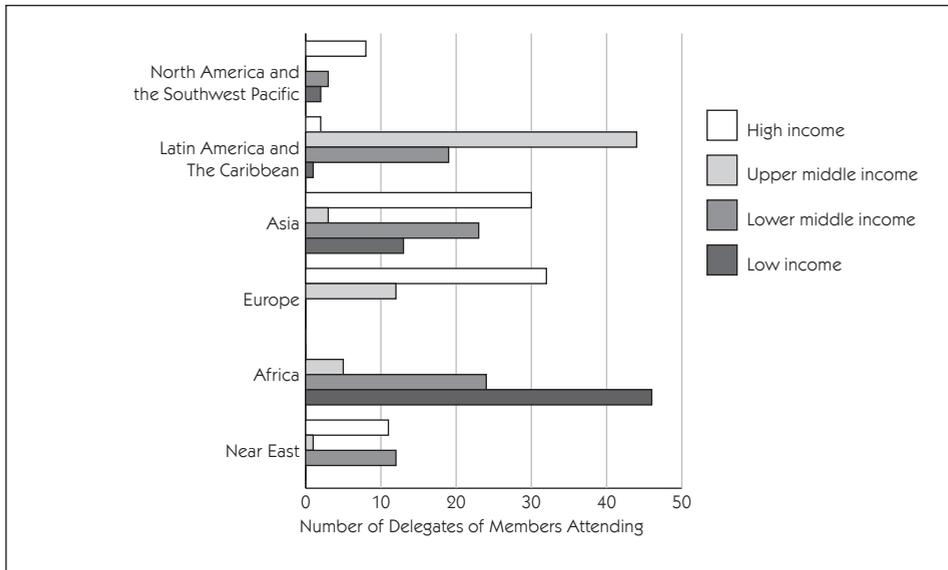

The number of delegates of WTO Members attending the regional Coordinating Committees also shows the priority given to the regional Coordinating Committee for Africa by low-income African Members. The same is true for other non high-income Members in various regions.

on 26 February -1 March 2007, 4 high-income, 1 upper-middle-income, 3 lower-middle-income and 0 low-income WTO Members were present. They were represented by 24 delegates of which 45,8% (11) were delegates of high-income Members, 4,2% (1) were delegates of upper-middle-income Members, 50%(12) were delegates of lower-middle-income Members and 0 were delegates of low-income Members. FAO/WHO Coordinating Committee for the near East Region, *Report of the Fourth Session, ALINORM 07/30/40* (Joint FAO/WHO Food Standards Programme, Amman), 26 February - 1 March 2007, available at: <http://www.codexalimentarius.net/web/archives.jsp?year=07>, visited on 8 February 2008.

<sup>216</sup> This was concluded in the report of the evaluation of the CAC and other FAO/WHO food standards work that was conducted in 2002 by an independent team and independent expert panel. See *Report of the Evaluation of the Codex Alimentarius and Other FAO and WHO Food Standards Work* (Food and Agriculture Organization and World Health Organization, Rome), 15 November 2002, para. 111, available at: <http://www.fao.org/docrep/meeting/005/y7871e/y7871e00.htm>, visited on 4 August 2006.

**Graph 13: Codex Regional Committees: Attendance by Delegates of WTO Members by Income Level, 2006-2007**

In general, due to lower travel costs within regions, more delegates are sent to regional Coordinating Committee meetings. However, although regional Coordinating Committees could fulfil a useful role in developing standards for products of interest for intra-regional trade, their standards are of less importance as they are not used as benchmark standards under the *SPS Agreement*.<sup>217</sup> In fact, currently no regional standards are being developed and almost all existing regional standards have been revoked or converted into worldwide standards.<sup>218</sup> The work of the regional Coordinating Committees is currently focused on recommending to the CAC the development of worldwide standards for products of interest to the region, and fulfilling a coordinating role among their members. In addition, these committees facilitate capacity building activities in the region.<sup>219</sup>

However, in practice the regional Coordinating Committees are not very effective. Concerns have been raised that some of the regions are too large and too diverse to

<sup>217</sup> The 2002 report of the FAO/WHO evaluation of the CAC notes that regional standards have become less relevant since the coming into force of the *SPS Agreement*. Codex Alimentarius Commission, *Conclusions and Recommendations of the Joint FAO/WHO Evaluation of the Codex Alimentarius and Other FAO and WHO Work on Food Standards*, ALINORM 03/25/3 (Joint FAO/WHO Food Standards Programme, Rome), December 2002, para. 112.

<sup>218</sup> One proposal for a regional standard is under discussion, namely a ginseng standard for the Asian region. However, there is some opposition to the idea by members who point out that ginseng is also grown outside Asia and that a worldwide standard covering all varieties is therefore more appropriate. This example is described in Mariëlle Masson-Matthee, *The Codex Alimentarius Commission and Its Standards*, Doctoral Thesis, Maastricht University, Faculty of Law (T.M.C. Asser Press, Maastricht), 2007, 57.

<sup>219</sup> This fact is noted in Codex Alimentarius Commission, *Conclusions and Recommendations of the Joint FAO/WHO Evaluation of the Codex Alimentarius and Other FAO and WHO Work on Food Standards*, ALINORM 03/25/3 (Joint FAO/WHO Food Standards Programme, Rome), December 2002, para. 113.

permit effective cooperation.<sup>220</sup> In addition, insufficient resources are allocated to regional Coordinating Committees to allow regional representatives and coordinators to work between sessions of these committees. Further, initiatives elaborated in regional Coordinating Committees do not receive sufficient support in CAC sessions.<sup>221</sup> In view of the potential created by the higher participation of middle- and low-income members in regional Coordinating Committees than in other Codex committees, the report of the 2002 FAO/WHO evaluation of the CAC recommends a review of their mandate, structure and work.<sup>222</sup> In particular, it is suggested that sub-regional groupings be created, on the basis of economically and geographically coherent groups; that a regional coordinator represent each region at meetings of the CAC Executive Committee and that his participation and coordination activities be funded if he is from a developing country; that, in developing regions, capacity-building be systematically discussed at meetings and that seminars and workshops be combined with regional meetings.<sup>223</sup>

As noted before, an examination of attendance of meetings does not provide the full picture with regard to the degree of effective participation of countries. It is also necessary to examine the extent to which Members at different levels of development participate in discussions in some of the various committees. A precondition for active participation particularly in committees where commodity standards are being developed, is sufficient technical expertise to assess the standards being discussed and evaluate their potential impact at national level. It is also important to build a national position through consultations with national stakeholders. Often this capacity is lacking in Members at lower levels of development.

An illustration of the trends in the extent of participation by Members is provided by looking in detail at the reports of the meetings of a sample of four Codex committees in the period 1999-2007. Two General Subject Committees and two Commodity Committees have been selected for this purpose. The chosen committees include those in both categories that are most frequently prioritised for attendance by developing-country Members.

---

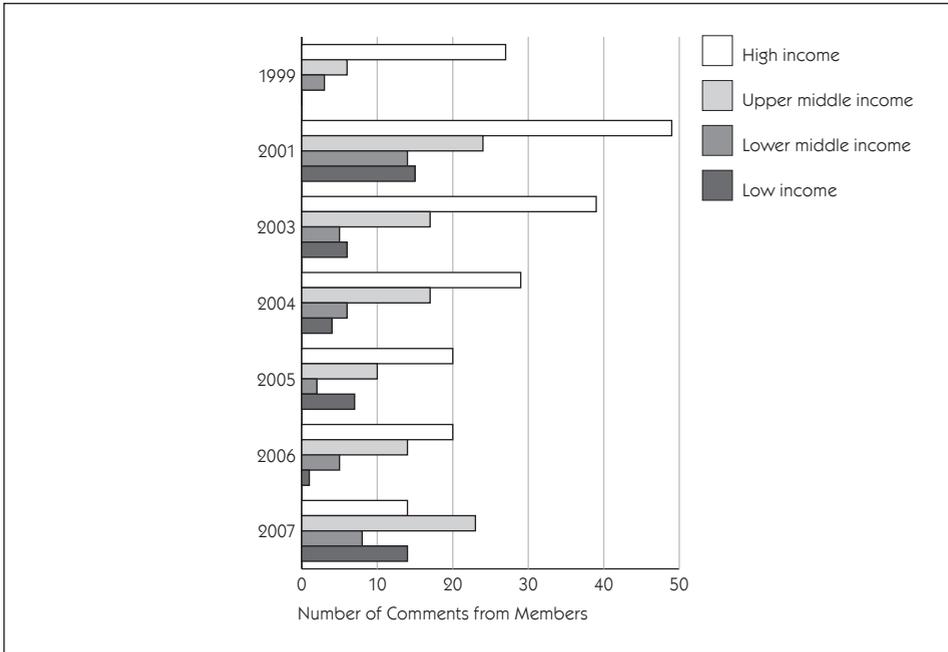

<sup>220</sup> *Ibid.*, para. 114.

<sup>221</sup> *Ibid.*

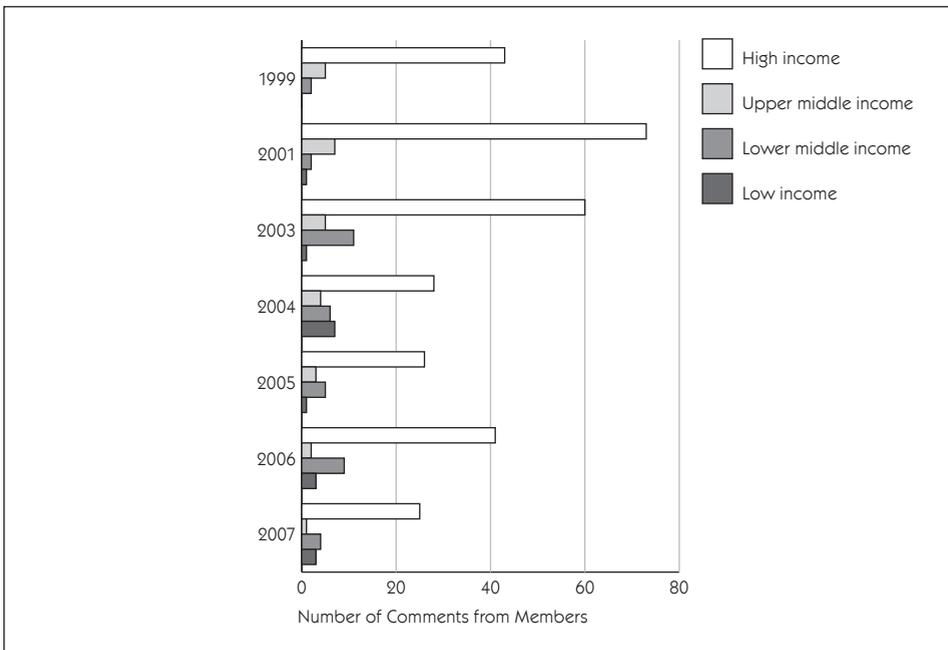

<sup>222</sup> *Ibid.*, Recommendation 17.

<sup>223</sup> *Ibid.*, para. 115.

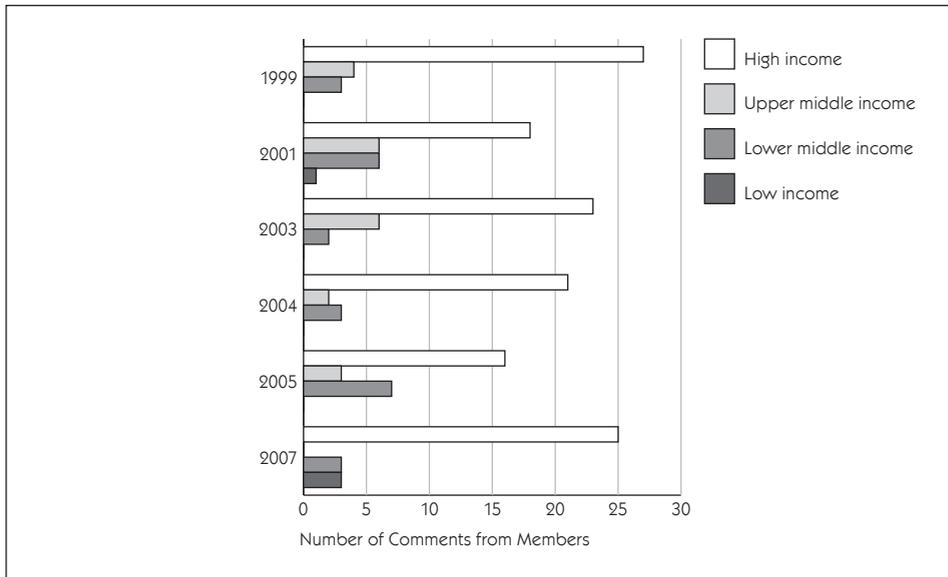

**Graph 14: Codex Committee on General Principles:  
Participation of WTO Members by Income Level, 1999-2007**

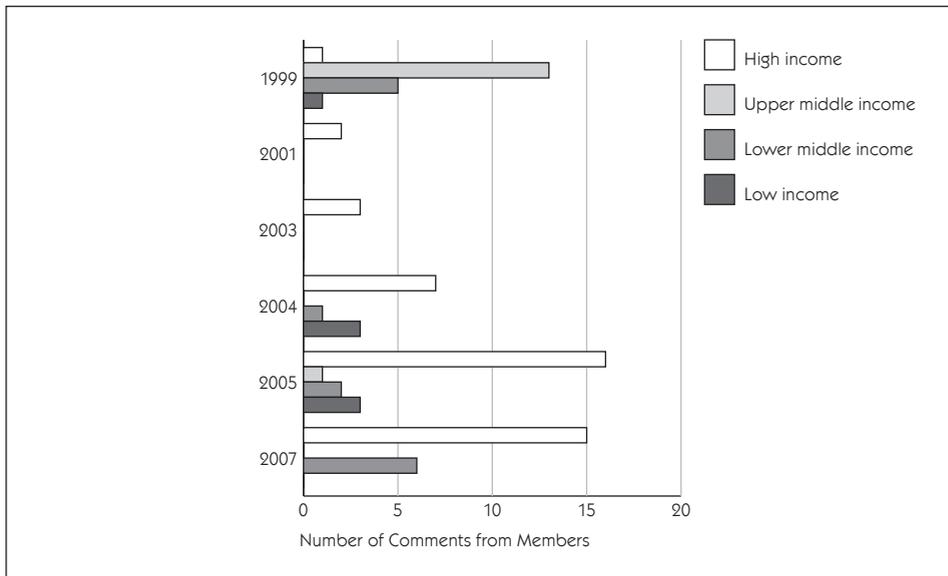

**Graph 15: Codex Committee on Pesticides Residues:  
Participation of WTO Members by Income Level, 1999-2007**

**Graph 16: Codex Committee on Fish and Fishery Products: Participation of WTO Members by Income Level, 1999-2007**

**Graph 17: Codex Committee on Fresh Fruits and Vegetables: Participation of WTO Members by Income Level, 1999-2007**

This analysis shows the very low level of active participation by WTO Members at lower income levels relative to high-income Members, in the work of the selected Codex Committees. The 2002 report of the FAO/WHO evaluation of the CAC has pointed out in

this respect that possibly more important than facilitating attendance of meetings by developing country members is facilitating the enhancement of national capacity.<sup>224</sup> Without improved national capacity, increased attendance is unlikely to lead to effective and active participation by Members at lower levels of development.

In an effort to promote developing country participation on Codex standard-setting work, the FAO and WHO developed training package in 2005.<sup>225</sup> In February 2006, the FAO and WHO issued an information guide for first-time delegates to Codex meetings.<sup>226</sup> This guide aims to assist delegates by referring them to the rules of procedure, providing information on how to obtain the relevant documents for a meeting, explaining the format of meetings and how interventions should be made, and setting out the procedure whereby the report of the meeting is drawn up and adopted. While it is too soon to tell how effective these initiatives will be, there does seem to be an improvement in the active participation of middle- and low-income Members in 2007 in the Committee on General Principles and of upper-middle income Members in the Committee on Fresh Fruits and Vegetables.

As stated above, the scientific input for the standards developed by Codex committees is provided by the joint FAO/WHO expert committees and expert meetings. Logically, as is the case for risk assessments on national level, the conclusions reached by risk assessments carried out by the FAO/WHO expert committees advising the Codex committees, are neither universally valid nor free of subjective elements. Instead, they incorporate assumptions and choices reflecting science policy.<sup>227</sup> The selection of experts to participate in these expert committees therefore has consequences for the approach taken in science policy decisions. While experts act in their individual capacities and not as representatives of their governments in FAO/WHO committees, they bring with them their particular national experiences and attitudes to risk, which affect their approach to science policy decisions. Since the coming into force of the *SPS Agreement*, increasing care is taken in the selection of experts in order to ensure the credibility and acceptability of their conclusions and recommendations.<sup>228</sup> As noted above, the experts participating in the various JECFA and JMPR expert meetings are drawn from rosters of experts maintained by the FAO and WHO.<sup>229</sup> A look is therefore now taken at the composition of these rosters.

<sup>226</sup> Codex Alimentarius Commission, *Information Guide for First-Time Delegates to a Codex Session* (Joint FAO/WHO Food Standards Programme, Geneva), February 2006, available at: [ftp://ftp.fao.org/codex/Information\\_for\\_delegates/Info\\_leaflet\\_en.pdf](ftp://ftp.fao.org/codex/Information_for_delegates/Info_leaflet_en.pdf), visited on 25 July 2006.

<sup>227</sup> For further information regarding the concept of science policy, see the discussion above, Part II, Section 1.5.

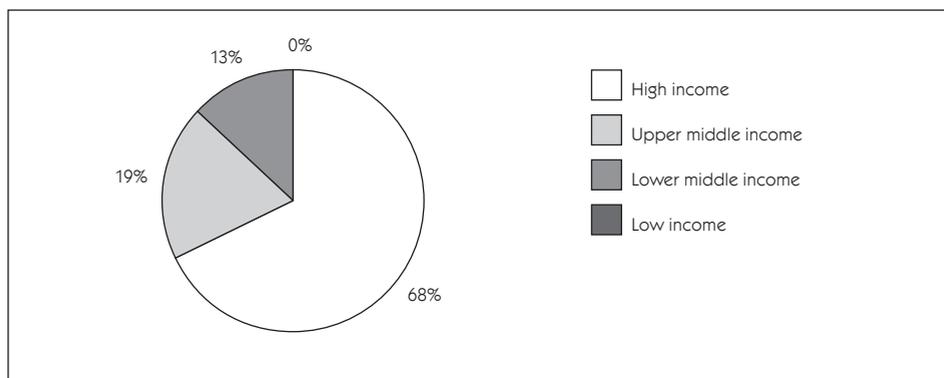

<sup>228</sup> In 1999, the criticism was made that the FAO/WHO scientific committees were predominantly staffed by US and Canadian regulatory officials and industry consultants with no expertise in public health issues. See Samuel S. Epstein, *Codex Alimentarius Decided to Support Rbgh Moratorium* (Cancer Prevention Coalition, 18 August 1999, available at: [www.psrast.org/bghcodex.htm](http://www.psrast.org/bghcodex.htm), visited on 28 January 2008). Efforts have been taken by the FAO and WHO to address these concerns by laying down guidelines for the selection of experts. The members of the expert committees must be pre-eminent in their specialty, command the highest respect of their scientific peers, and be impartial and objective. They are appointed in their individual capacities rather than as representatives of governments or organisations.

<sup>229</sup> The selection procedures vary slightly for each specific scientific body, but they have key elements in common. A public 'call for experts' is issued by the FAO and WHO and widely disseminated (through their

**Graph 18: JECFA: WTO Members in Rosters of Experts by Income Level, 2007-2011**

**Graph 19: JMPR: WTO Members in Roster of Experts by Income Level, 2004-2010**

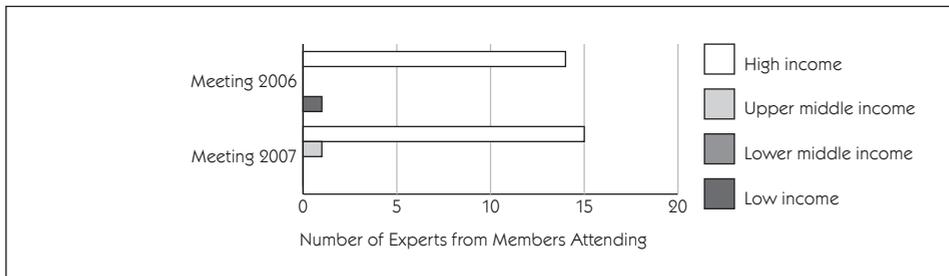

websites, various scientific journals, electronic mailing lists etc.) to invite experts from all over the world and in a wide range of disciplines to be considered in the selection process. The applications are reviewed by a selection panel of independent experts and the secretariat of the relevant scientific body to determine if they meet the essential requirements and selection criteria outlined in the call for experts (for example, the selection criteria for the JEMRA relate to technical expertise and professional recognition; publications in the relevant area; and the ability to participate in group discussions and draft clear and concise reports). The Directors-General of the FAO and WHO review and approve the proposed lists of experts and a roster of qualified experts is published on the FAO and WHO websites. Experts are appointed by the FAO and WHO from these rosters to participate in expert meetings, consultations etc. In order to ensure the independence of scientific advice, selected experts must submit a declaration of interests which is scrutinized by the Joint FAO/WHO Secretariats of the scientific bodies to determine if the declared interest could constitute a conflict with regard to the issues being considered. They inform the Chairperson of the meeting of their conclusions and a joint decision is taken regarding whether the particular expert should participate in the discussion and decision-making on the relevant agenda item. See Food and Agriculture Organization and World Health Organization, *Understanding the Codex Alimentarius* (United Nations, Rome), 2005, 21-24, available at: <http://www.fao.org/docrep/008/y7867e/y7867e00.HTM>, visited on 28 July 2006; Codex Alimentarius Commission, *Scientific Advice to Codex and FAO/WHO Member Countries (Submitted by FAO and WHO). Selection of Experts and Working Procedures of the Expert Committees and Expert Consultations: 2002-2003*, CAC/26 INF/4 (Food and Agriculture Organization and World Health Organization, Rome), 30 June - 7 July 2003.

The most recent rosters of experts of the JECFA and JMPR are overwhelmingly composed of experts from high-income WTO Members.<sup>230</sup> This has been attributed in part to the fact that the calls for experts are not always successful in reaching sufficient experts from developing countries. The study conducted in the context of the ‘consultative process’ on this issue has recommended that better use be made of national and regional sources of information on available experts.<sup>231</sup>

While the WHO and FAO bear the costs of experts’ attendance of meetings and efforts are made to select experts reflecting geographical diversity, in practice the majority of experts serving in expert meetings or consultations tend to be from high-income countries.<sup>232</sup> This can be seen from an examination attendance by experts from WTO Members of two selected meetings, in 2006 and 2007, of the following joint FAO/WHO expert bodies.

**Graph 20: JECFA Meetings: Attendance by Experts from WTO Members by Income Level, 2006-2007**

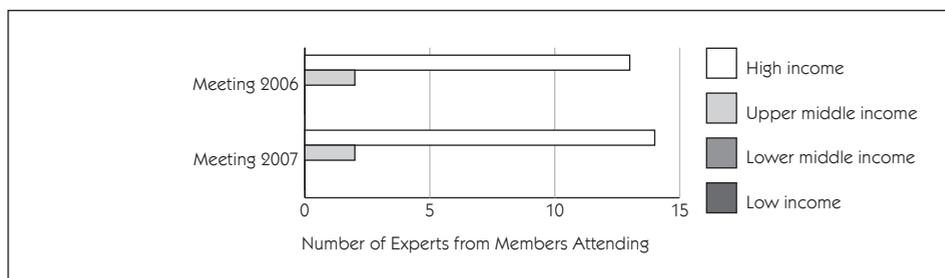

<sup>230</sup> The roster of experts for the JEMRA is not available online, so no data on this roster could be included here.

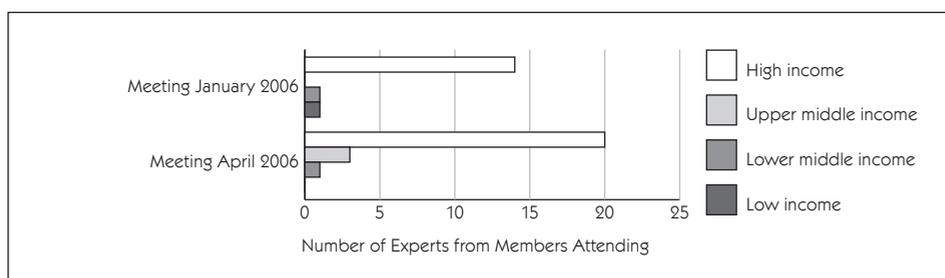

<sup>231</sup> *Enhancing Developing Country Participation in FAO/WHO Scientific Advice Activities. Report of a Joint FAO/WHO Meeting*, FAO Food and Nutrition Paper 88 (Food and Agriculture Organization and World Health Organization, Rome), December 2006, 11, available at: <ftp://ftp.fao.org/docrep/fao/meeting/010/j7630e.pdf>, visited on 4 October 2006.

<sup>232</sup> For the 2007-2011 period, the three FAO rosters of experts (on food additives contaminants and natural toxicants, exposure assessment of food chemicals, and residues of veterinary drugs in food) from which participants for JECFA meetings on those topics are drawn, contain a total of 74 experts, of which 70 come from WTO Members. Of these, 48 come from high-income Members, 16 from upper-middle-income Members, 2 from lower-middle-income Members and 4 from low-income Members. The 2004-2010 FAO roster from which experts for JMPR meetings are drawn contains 16 experts, of which 11 are from high-income Members, 3 are from upper-middle-income Members and 2 are from lower-middle-income Members. Note that although the data presented here regarding the JMPR roster of experts comprises the whole period of 2004-2010, JMPR experts participate in one of two overlapping periods, either 2004-2008 or 2006-2010.

**Graph 21: JMPR Meetings: Attendance by Experts from WTO Members by Income Level, 2006-2007**

**Graph 22: JMRA Meetings: Attendance by Experts from WTO Members by Income Level, 2006**

In addition, the fact that the meetings of these committees and expert consultations are closed is a cause for concern. It leads to a lack of transparency regarding the science policy choices and assumptions made in the risk assessment process.

Insufficient developing country participation and lack of transparency were among the main concerns raised in the context of the review of the status and procedures of the FAO/WHO expert bodies in the 'consultative process' mentioned above.<sup>233</sup> As already mentioned, one outcome of this process was a study, published in 2006, assessing the constraints faced by developing countries in participating in the scientific process underlying the standard-setting procedure and setting out recommendations for new approaches and mechanisms to enhance developing country participation in FAO/WHO scientific advice activities.<sup>234</sup> Some of the problems faced by developing countries identified in this study are a lack of understanding of the need to provide data in response to FAO/WHO calls for data, and of the types of data required; deficiencies in the infrastructure and

<sup>233</sup> One of the elements of the consultative process initiated to respond to this request was a joint FAO/WHO workshop. For the report of this workshop and its recommendations, see *Report of the Joint FAO/WHO Workshop on the Provision of Scientific Advice to Codex and Member Countries, Held on 27-29 January 2004* (Food and Agriculture Organization and World Health Organization, Geneva), 2004, available at: [http://www.who.int/foodsafety/codex/en/workshop\\_report.pdf](http://www.who.int/foodsafety/codex/en/workshop_report.pdf), visited on 20 June 2008.

<sup>234</sup> *Enhancing Developing Country Participation in FAO/WHO Scientific Advice Activities. Report of a Joint FAO/WHO Meeting*, FAO Food and Nutrition Paper 88 (Food and Agriculture Organization and World Health Organization, Rome), December 2006, available at: <ftp://ftp.fao.org/docrep/fao/meeting/010/j7630e.pdf>, visited on 4 October 2006.

mechanisms in developing countries to generate and collate the required data; and limited facilities, personnel and operating funds.<sup>235</sup> It was recommended that capacity building programmes be initiated to strengthen the capacities of national experts to participate in expert meetings. In addition ‘twinning’ agreements between an experienced country and a less experienced country on an official level were proposed to familiarise developing country scientists with the work of the expert bodies and to share knowledge on data collection, proper sampling, methods of analysis and quality assurance.<sup>236</sup> The FAO and WHO are currently reviewing these recommendations.

The implications of the inadequate participation of less developed Members in CAC standard-setting procedures should not be underestimated. As noted by Diahanna Post:

[R]egulatory capitalism in the form of Codex standards is not a disinterested, objective form of regulation. Rather, it is shaped by powerful countries and actors. ... The role of politics and power in forming highly technical standards often goes unnoticed. Yet how and by whom the standards are shaped—and for what purposes—has ethical and distributive consequences.<sup>237</sup>

### 3.2.2 International Office of Epizootics/World Organisation for Animal Health

For animal health and zoonoses,<sup>238</sup> the *SPS Agreement* refers to the standards, guidelines and recommendations ‘developed under the auspices of the International Office of Epizootics’.<sup>239</sup>

The International Office of Epizootics (OIE), now called the World Organisation for Animal Health is an international intergovernmental organisation, created by the *International Agreement for the Creation of an Office International des Epizooties* of 25 January 1924.<sup>240</sup> Its original objective was to prevent the spread of diseases in animals and animal products through international trade. The impetus for its creation lay in the incursions of rinderpest into Europe in the 1920s.<sup>241</sup>

<sup>235</sup> *Ibid.*, 7.

<sup>236</sup> *Ibid.*, 16-17.

<sup>237</sup> Diahanna L. Post, ‘Standards and Regulatory Capitalism: The Diffusion of Food Safety Standards in Developing Countries’, *The ANNALS of the American Academy of Political and Social Science* (598), 2005, 168-183, 180, available at: <http://ann.sagepub.com/cgi/reprint/598/1/168>, visited on 12 June 2008.

<sup>238</sup> The word zoonosis means any disease or infection that is naturally transmissible from animals to humans.

<sup>239</sup> See Annex 3A.3(b) of the *SPS Agreement*.

<sup>240</sup> Due to its historical origins, the majority (19 out of a total of 28) of the signatories to the *International Agreement for the Creation of an Office International des Epizooties*, signed in Paris on 25 January 1924, were European countries. The 28 original signatories were the Argentine Republic, Belgium, Brazil, Bulgaria, Denmark, Egypt, Spain, Finland, France, Great Britain, Greece, Guatemala, Hungary, Italy, Luxemburg, Morocco, Mexico, the Principality of Monaco, the Netherlands, Peru, Poland, Portugal, Romania, Siam, Sweden, Switzerland, the Czechoslovak Republic, and Tunisia.

<sup>241</sup> In particular, the spread of Rinderpest in Belgium in 1920 created the impetus for this initiative. This information is drawn from the page entitled ‘A short history of the International Office des Epizooties’ on the OIE website, available at: [http://www.oie.int/eng/oie/en\\_histoire.htm](http://www.oie.int/eng/oie/en_histoire.htm), visited on 5 February 2008. Rinderpest is a highly fatal viral disease of domestic cattle, buffaloes and yaks, and may also affect sheep, goats and some breeds of pigs and a large variety of wildlife species. Historically the virus was widely distributed throughout Europe, Africa, Asia and West Asia, but never became established in either the Americas or Australia/New Zealand.

The OIE is headquartered in Paris. Unlike the CAC and the IPPC, the OIE does not fall under the auspices of the FAO and it is not part of the UN system.<sup>242</sup> However, it does cooperate with the FAO and WHO on animal health issues that relate to their respective mandates.<sup>243</sup>

### 3.2.2.1 Mandate

The OIE is the world's oldest animal health organisation and has extensive experience with setting voluntary international animal health standards.<sup>244</sup> Its mandate covers the promotion of the transparency of animal disease status world-wide; the collection, analysis and dissemination of veterinary scientific information; the strengthening of international coordination and cooperation in the control of animal diseases; the promotion of safety of world trade by developing sanitary standards for international trade in animals and animal products; and the improvement of the legal framework and resources of Veterinary Services.<sup>245</sup>

In fulfilment of its standard-setting mandate, the OIE has developed standards and guidelines, which are to be found in the *International Terrestrial Animal Health Code*<sup>246</sup> and the *International Aquatic Animal Health Code*<sup>247</sup> (the *Health Codes*). These are regularly revised. Strictly speaking, the standards and guidelines laid down in each Code are only applicable with regard to the diseases listed therein.<sup>248</sup> Standards regarding diagnostic tests and vaccines are also adopted by the OIE, for both terrestrial and aquatic animals and are incorporated into the *Manual of Diagnostic Tests and Vaccines for Terrestrial Animals* and the *Manual of Diagnostic Tests for Aquatic Animals* (the *Diagnostic Manuals*).<sup>249</sup>

<sup>242</sup> After the UN established the FAO (in 1946) and WHO (in 1948), the question arose whether the continued existence of the OIE was justified, in view of the overlapping mandates of the UN specialized agencies with those of the OIE. The possibility of dissolving the OIE was discussed in 1946 and 1951, but due to the opposition of many OIE member countries this was never done. The OIE signed an official agreement with the FAO in 1952 and with the WHO in 1960. This information is drawn from the page entitled 'A short history of the International Office des Epizooties' on the OIE website, available at: [http://www.oie.int/eng/oie/en\\_histoire.htm](http://www.oie.int/eng/oie/en_histoire.htm), visited on 5 February 2008.

<sup>246</sup> OIE, *Terrestrial Animal Health Code*, 16<sup>th</sup> edition (2007) available at: [http://www.oie.int/eng/normes/mcode/en\\_sommaire.htm](http://www.oie.int/eng/normes/mcode/en_sommaire.htm), visited on 25 June 2007. This code applies to mammals, birds and bees, according to Article 1.1.1.1 thereof.

<sup>247</sup> OIE, *Aquatic Animal Health Code*, 10<sup>th</sup> edition (2007) available at: [http://www.oie.int/eng/normes/fcode/en\\_sommaire.htm](http://www.oie.int/eng/normes/fcode/en_sommaire.htm), visited on 25 June 2007. This code applies to fish, molluscs and crustaceans originating from aquaculture establishments or removed from the wild, for farming purposes, for release into the aquatic environment or for human consumption, according to Article 1.1.1.1 thereof.

<sup>248</sup> David G. Victor, 'The Sanitary and Phytosanitary Agreement of the World Trade Organization: An Assessment after Five Years', *Journal of International Law and Politics* 32 (4), 2000, 865-938, 893.

<sup>249</sup> OIE, *Manual of Diagnostic Tests and Vaccines for Terrestrial Animals*, 5<sup>th</sup> edition (2004) available at: [http://www.oie.int/eng/normes/mmanual/A\\_summry.htm](http://www.oie.int/eng/normes/mmanual/A_summry.htm) visited on 12 June 2008; and OIE, *Manual of Diagnostic Tests for Aquatic Animals*, 5<sup>th</sup> edition (2006) available at: [http://www.oie.int/eng/normes/fmanual/A\\_summry.htm](http://www.oie.int/eng/normes/fmanual/A_summry.htm), visited on 12 June 2008.

In 2001, the mandate of the OIE was extended to include animal welfare and food safety risks arising from animals.<sup>250</sup> The OIE was given the new name World Organisation for Animal Health in 2003, in view of its now-extended mandate, beyond the prevention and control of epizootic diseases, to cover all animal health issues and their public health implications that need to be addressed on a regional or global scale.<sup>251</sup> However, the original name is still often used and the official acronym for this organisation remains OIE.

In view of the potential for overlap between the new food-safety mandate of the OIE and the work of the CAC, the OIE has established an effective mechanism, which includes participation of WHO and CAC representatives, responsible for coordination of OIE activities with those of the CAC.<sup>252</sup>

### 3.2.2.2 Institutional structure

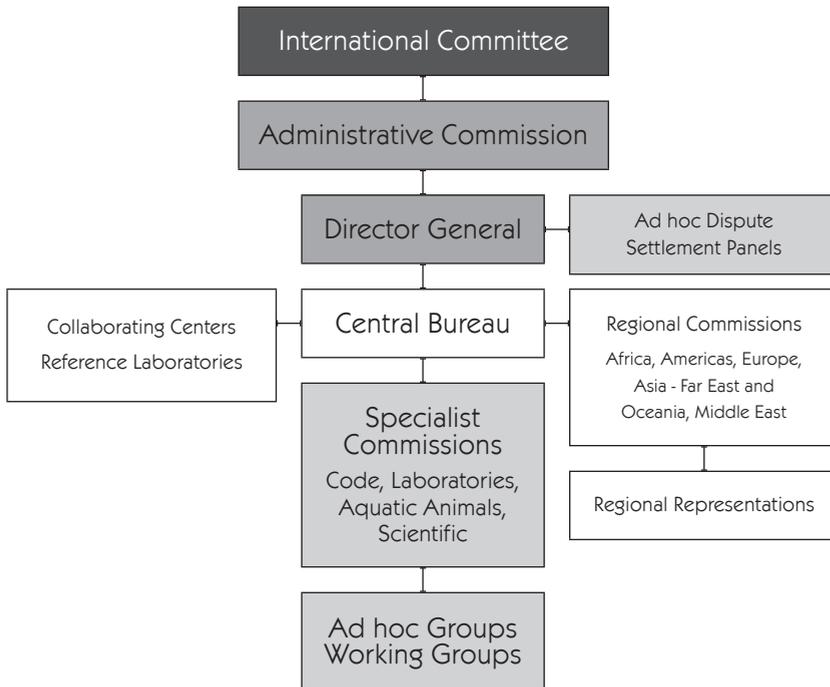

The OIE is an international intergovernmental organisation, with its own established institutional structure. Most of the bodies of the OIE have limited membership.

---

<sup>250</sup> These two new areas of work for the OIE were identified as priorities in the OIE's 2001-2005 Strategic Plan. An Ad hoc Group of Experts was convened by the OIE Director General for each of these areas, which made recommendations defining the role of the OIE in these two new areas, for discussion by the International Committee. The International Committee adopted resolutions based on these recommendations. Resolution XIV, Animal Welfare Mandate of the OIE and Resolution XV, Food Safety Mandate of the OIE, adopted by the *International Committee of the OIE* at its 70th General Session on 29-30 May 2002. See Bernard Vallat, *The New Mandates of the OIE* (International Office of Epizootics, Paris), November 2002, available at: [http://www.oie.int/eng/Edito/en\\_edito\\_nov02.htm](http://www.oie.int/eng/Edito/en_edito_nov02.htm), visited on 5 February 2008. Vallat has been the Director-General of the OIE since 2001.

<sup>251</sup> This was done in 2003, when the International Committee of the OIE adopted Resolution XVI authorising the OIE Director General and statutory bodies to use, in all circumstances, alongside the official name of the OIE, the common name 'World Organisation for Animal Health'. See Resolution XVI, *Use of a Common Name for the Office International des Epizooties*, adopted by the International Committee of the OIE on 23 May 2003. This resolution is contained in: International Committee of the OIE, *Final Report of the 71st General Session, 71/GS/FR* (OIE, Paris), 18-23 May 2003, available at: [ftp://ftp.oie.int/A\\_RFinal\\_2003%20wp.pdf](ftp://ftp.oie.int/A_RFinal_2003%20wp.pdf), visited on 24 August 2006.

<sup>252</sup> More specifically, as noted by Scott, the OIE has created a Working Group on Animal Production Food Safety, in which CAC and WHO representatives participate. This Working Group has set out a work programme for OIE standards on food-safety issues relating to animal production focused on the farm level (i.e. pre-slaughter issues and those relating to issues before the first transformation of animal products) and has prioritised the development of procedures for common or linked CAC and OIE standards. Joanne Scott, *The WTO Agreement on Sanitary and Phytosanitary Measures: A Commentary*, Oxford Commentaries on the GATT/WTO Agreements (Oxford University Press, Oxford), 2007, 250.

**Figure 2: Institutional Structure of the World Organisation for Animal Health**

Source: OIE website, available at: [http://www.oie.int/eng/OIE/organisation/en\\_structure.htm?e1d1](http://www.oie.int/eng/OIE/organisation/en_structure.htm?e1d1), visited on 5 February 2008.

The highest authority of the OIE is the International Committee (IC), which is composed of the permanent delegates<sup>253</sup> representing all member countries. It meets in Paris in May of each year in a General Session lasting five days.<sup>254</sup> The primary tasks of the IC are the adoption of international standards in the field of animal health, especially for international trade and the adoption of resolutions on the control of the major animal diseases.<sup>255</sup> Almost all delegates to the General Session are veterinarians. They are required by the OIE to be technically competent to discuss and adopt decisions within the area of activity of the OIE. Decisions may be taken on the basis of a simple majority if a quorum of more than half the delegates is present<sup>256</sup> and voting follows the principle of ‘one country one

<sup>253</sup> Delegates may be accompanied by one alternate and one or several observers and rapporteurs, according to Article 2 of the *General Rules* of the OIE.

<sup>254</sup> Articles 2 and 45 of the *General Rules* of the OIE.

<sup>255</sup> See the homepage of the IC of the OIE available at [http://www.oie.int/eng/OIE/organisation/en\\_CI.htm](http://www.oie.int/eng/OIE/organisation/en_CI.htm), visited on 6 February 2008. The International Committee also has the tasks of the election of the members of the governing bodies of the OIE ((President and Vice-President of the IC, Members of the Administrative Commission, Regional and Specialist Commissions), the appointment of the Director General as well as the examination and approval of the annual report of activities and the financial report of the Director General and the annual budget of the OIE.

<sup>256</sup> Article 6 of the *General Rules* of the OIE.

vote<sup>257</sup>. In practice, the adoption of animal health standards forwarded to the IC by the Specialist Commissions are adopted unless more than ten members are opposed.<sup>258</sup>

The OIE also has an Administrative Commission, which is composed of nine delegates,<sup>259</sup> namely the President of the IC, its Vice-President, the immediate Past-President, two Auditors and four representatives of OIE member countries elected by the IC. In electing the members of the Administrative Commission, the IC must take into account the need for even geographical representation and each of the regional groups must necessarily be represented. The Administrative Commission is chaired by the President of the IC. It meets twice a year in Paris to discuss technical and administrative matters (particularly the budget and the work programme of the OIE) and to prepare the work of the IC.<sup>260</sup> In the intervals between the General Sessions, it represents the IC.

Five Regional Commissions have been established Commissions for Africa; the Americas; Asia, the Far East and Oceania; Europe and the Middle East.<sup>261</sup> These aim to promote co-operation and study specific problems on a regional level. Each Commission organises a regional conference (usually biannually) in one of the countries in the region to address technical issues and coordinate regional cooperation regarding the control of animal diseases.<sup>262</sup> Regional Commissions prepare and submit reports and recommendations to the IC.<sup>263</sup> In addition, the OIE maintains regional representations in Africa, the Americas, Asia-Pacific, Eastern Europe and the Middle East. These Representations aim to provide regionally adapted services to members in order to strengthen the surveillance and control of animal diseases in the region.<sup>264</sup>

The IC also has the authority to establish Specialist Commissions,<sup>265</sup> *ad hoc*, in order to examine problems of epidemiology and control of animal diseases and issues of harmo-

---

<sup>257</sup> International organisations with which the OIE has concluded agreements are invited to participate in the scientific and technical sessions of the International Committee and their representatives may take the floor during sessions but have no voting rights. Article 2 of the *General Rules* of the OIE.

<sup>264</sup> This information is found on the page for 'Regional Representations' on the OIE website, available at: [http://www.oie.int/eng/OIE/organisation/en\\_CR.htm](http://www.oie.int/eng/OIE/organisation/en_CR.htm), visited on 12 June 2008.

<sup>265</sup> Under the power granted to the IC under Article 18 of the *General Rules* of the OIE, four Specialist Commissions were established in 2003 to replace the previously existing Specialist Commissions (while ensuring continuity in their operation). This decision was motivated by the 'need for a general redefinition

nisation of international regulations in this area.<sup>266</sup> Currently, the following Specialist Commissions are in existence: the Terrestrial Animal Health Standards Commission (Code Commission),<sup>267</sup> the Biological Standards Commission (Laboratories Commission),<sup>268</sup> the Aquatic Animal Health Standards Commission (Aquatic Animals Commission),<sup>269</sup>

---

of the purpose and mode of operation of the Specialist Commissions, to take into account the evolution and the extension of the missions of the OIE and the necessary changes in the conditions under which it acts.' See Resolution XVII, *New Terms of Reference for the Specialist Commissions of the Office International des Epizooties*, adopted by the International Committee of the OIE on 22 May 2003. This Resolution is contained in: International Committee of the OIE, *Final Report of the 71st General Session, 71/GS/FR* (OIE, Paris), 18-23 May 2003, available at: [ftp://ftp.oie.int/A\\_Final\\_2003%20wp.pdf](ftp://ftp.oie.int/A_Final_2003%20wp.pdf), visited on 24 August 2006.

<sup>266</sup> According to Article 19 of the *General Rules* of the OIE, these Commissions are limited in time to the period necessary to address the specific problem. However, as the current four Specialist Commissions are responsible for revising and updating the Health Codes and Diagnostic Manuals and for evaluating the pest or disease free status of member countries, their mandates are not time-limited.

<sup>267</sup> The Code Commission replaces the Animal Health Code Commission, founded in 1960. It is responsible for seeing to it that the Terrestrial Code reflects the current state of scientific knowledge. It is composed of six members, who must be veterinarians with a broad knowledge of the major animal diseases, experience and expertise in the animal health aspects of international trade in animals and animal products, and an understanding and practical experience of the relevant international trading rules. They are elected by the International Committee and are drawn from all OIE regions (as on September 2007, the members came from France, Germany, New Zealand, Brazil, Zimbabwe and Sudan). The Code Commission meets several times a year to draft new articles of the Terrestrial Code, or revise existing articles in the light of scientific advances. It works with internationally renowned specialists and seeks the views of members' delegates through the circulation of draft and revised texts. The new or revised articles it elaborates are forwarded to the OIE General Session for adoption, after which they are incorporated into the Terrestrial Code. See the *Terms of Reference, Internal Rules and Qualifications of Members of the Terrestrial Animal Health Code Commission*, adopted by the OIE International Committee by Resolution No. XVII of 22 May 2003, available at: [http://www.oie.int/tahsc/eng/en\\_tahsc.htm](http://www.oie.int/tahsc/eng/en_tahsc.htm).

<sup>268</sup> The Laboratories Commission replaces the Foot and Mouth Disease and other Epizootics Commission, which was founded in 1949. It is composed of five members (increased from 3 members by Resolution XIX adopted by the International Committee on 26 May 2006 due to the increased workload). The members are elected by the International Committee taking account of the need for geographically balanced representation (as of January 2007, the members came from the UK, US, Morocco, India and Russia). Members must be recognised specialists in the field of infectious terrestrial animal diseases diagnosis and/or prevention, particularly in laboratory methods and operations. They must have international experience and specialized training in the area of laboratory diagnosis and/or immunological prevention of infectious animal diseases. The Laboratories Commission establishes or approves methods for diagnosing diseases of mammals, birds and bees and for testing biological products, such as vaccines, used for control purposes. It oversees the production of the *Manual of Diagnostic Tests for Aquatic Animals*. Furthermore, it selects OIE Reference Laboratories for terrestrial animal diseases, and promotes the preparation and distribution of standard reagents for diagnostic testing. See the *Terms of Reference, Internal Rules and Qualifications of Members of the Biological Standards Commission*, adopted by the OIE International Committee by Resolution No. XVII of 22 May 2003, available at: [http://www.oie.int/bsc/eng/en\\_bsc.htm](http://www.oie.int/bsc/eng/en_bsc.htm), visited 25 June 2007.

<sup>269</sup> The Aquatic Animals Commission replaces the Fish Diseases Commission, which was founded in 1960. It is composed of five members, drawn from all OIE regions (as of October 2007, the members come from Australia, UK, Chile, Italy and Uganda). The members are elected by the International Committee. They must be internationally recognised specialists in the fields of methods for surveillance, diagnosis and prevention of infectious aquatic animal diseases and have extensive international experience, at the regional or global level, of aquatic animal infectious disease surveillance, diagnosis, control and disease prevention methods. The Aquatic Animals Commission is responsible for ensuring that both the Aquatic Animal Health Code and the Diagnostic Manual for Aquatic Animal Diseases reflect the current state of scientific knowledge, by proposing revisions and additions to these standards. It meets at least once a year, and consults with other OIE Specialist Commissions as well as relevant experts in the elaboration of new or revised texts. See the *Terms of Reference, Internal Rules and Qualifications of Members of the Aquatic Animal Health Standards Commission*, adopted by the OIE International Committee by Resolution No. XVII of 22 May

and the Scientific Commission for Animal Diseases (Scientific Commission).<sup>270</sup> These Specialist Commissions are composed of five or six expert members, elected by the IC taking into account the need for fair geographical representation. During the discussion on the terms of reference of these Commissions, concerns raised by developing countries regarding the requirements that the expert members of these Commissions be ‘international specialists’ in the relevant field and have ‘specialised training.’ It was argued that these requirements could have the effect of excluding developing country scientists who may have the necessary expertise but might not be internationally recognised or have received specialised training. However, it was also emphasised that there is a need for Specialist Commission members to be experts with the necessary scientific competence so that the results of their deliberations will be recognised by the international community. Consequently, the requirements were modified to replace the term ‘specialised training’ with ‘appropriate experience’ and the Director General clarified that an ‘international specialist’ would be understood to include scientists with experience in more than one country or in a region or scientists with relevant international publications.<sup>271</sup>

The elaboration of standards, in the form of new or revised articles or chapters in the *Health Codes* or *Diagnostic Manuals*, takes place in the Specialist Commissions. They meet at least once a year and may periodically hold a conference of specialists to evaluate scientific developments, or hold a meeting composed of delegates of members and specialists to examine urgent problems arising from the occurrence and spread of a particular disease or diseases.<sup>272</sup>

Aside from the above-mentioned bodies, there are also three permanent Working Groups,<sup>273</sup> which are established by the Director-General for an indefinite period and meet to review progress in their field and take steps to ensure that all members quickly benefit from this progress.<sup>274</sup> *Ad hoc* groups can also be established to address specific

---

2003, available at: [http://www.oie.int/aac/eng/en\\_fdc.htm](http://www.oie.int/aac/eng/en_fdc.htm), visited on 25 June 2007.

<sup>270</sup> The Scientific Commission replaces the Standards Commission which was founded in 1946. It is composed of five specialised members, elected by the International Committee, with due regard to geographical representation (as of January 2007 the members come from Italy, Argentina, Denmark, Japan, and Tunisia). Members must be veterinarians with post-graduate training and practical experience in a field relevant to the control of infectious diseases of animals, who have a publication record appropriate to an international specialist in the field. The Scientific Commission is responsible for identifying the most appropriate strategies and measures for disease prevention and control. It also examines member countries’ submissions regarding their animal health status for those countries that wish to be included on the OIE list of countries ‘free’ of certain diseases. See the Terms of Reference, Internal Rules and Qualifications of Members of the Scientific Commission for Animal Diseases adopted by the OIE International Committee by Resolution No. XVII of 22 May 2003, available at: [http://www.oie.int/scad/eng/en\\_scad.htm](http://www.oie.int/scad/eng/en_scad.htm), visited 25 June 2007.

<sup>271</sup> International Committee of the OIE, *Final Report of the 71st General Session*, 71/GS/FR (OIE, Paris), 18-23 May 2003, para. 371, available at: [ftp://ftp.oie.int/A\\_RFinal\\_2003%20wp.pdf](ftp://ftp.oie.int/A_RFinal_2003%20wp.pdf), visited on 24 August 2006.

<sup>272</sup> Approval of the Committee or, in cases of emergency, of the Administrative Commission is required for these conferences or meetings (see Article 25 of the *General Rules* of the OIE).

<sup>273</sup> Currently there are Working Groups on Wildlife Diseases, Animal Welfare and Animal Production Food Safety. These Working Groups have six members, who are specialists, recognised at international level and selected for their competence (Article 4 of the *Mandates and Internal Rules for Working Groups and Ad Hoc Groups, Reference Laboratories, Collaboration Centres*, adopted by the OIE International Committee on 28 May 1993 (Resolution No. XII of 28 May 1993).

<sup>274</sup> Para. I of the First Part of the *Mandates and Internal Rules for Working Groups and Ad Hoc Groups, Reference Laboratories, Collaboration Centres*, adopted by the OIE International Committee on 28 May 1993 (Resolution No. XII of 28 May 1993).

issues. The members of both these types of groups should reflect broad regional representation and scientific diversity.

In addition, the OIE has Reference Laboratories and Collaboration Centres, both of which provide members with scientific and technical advice and assistance on issues of disease surveillance and control.<sup>275</sup> In particular, a Reference Laboratory functions as a centre of expertise and standardisation of diagnostic techniques for the particular disease assigned to it.<sup>276</sup> Each laboratory has an expert, responsible to the OIE and its members, who is a leading and active researcher. The expert helps the Reference Laboratory to provide scientific and technical assistance and expert advice on the surveillance and control of the disease for which the Reference Laboratory is responsible. Collaborating Centres are centres of expertise in a particular area of competence relating to the management of general questions on animal health issues (for example epidemiology, risk analysis, etc.).<sup>277</sup> In their designated field of competence, they must provide their expertise internationally.<sup>278</sup> The OIE has a global network of 171 Reference Laboratories with 146 experts covering 93 diseases/topics in 30 countries, and 24 Collaborating Centres covering 22 topics in 14 countries.<sup>279</sup>

The OIE is serviced by a Central Bureau, headed by its Director-General, which has the task of providing the secretariat for the annual General Session of the IC, meetings of the Commissions and technical meetings organised at the OIE. It also assists the secretariats of regional and specialised conferences. In addition, the Central Bureau implements and coordinates information, technical cooperation and scientific activities, which the International Committee has decided upon.<sup>280</sup>

---

<sup>275</sup> See V. Welte, 'Introduction to the Office International Des Epizooties (OIE)', in *Multilateral Trade Negotiations on Agriculture: A Resource Manual. Agreement on the Application of Sanitary and Phytosanitary Measures (SPS) and Agreements on Technical Barriers to Trade (TBT)*, Food and Agriculture Organization (ed.), vol. III (Food and Agriculture Organization, Rome), 2000, 13, available at: [www.fao.org/docrep/003/x7354e/X7354e01.htm](http://www.fao.org/docrep/003/x7354e/X7354e01.htm) visited on 21 June 2001.

<sup>276</sup> Applications for the title of Reference Laboratory of the OIE must be submitted to the Director General by the delegate of the member country to which the laboratory belongs or by the corresponding Regional Commission. The Director General forwards the applications to the administrative Commission which makes its selection solely on the basis of the scientific and technical competence of the candidate establishment. The applications of laboratories selected by the Administrative Commission are sent to the IC for approval. See Articles 1-3 of the Internal Rules, contained in the *Mandates and Internal Rules for Working Groups and Ad Hoc Groups, Reference Laboratories, Collaboration Centres*, adopted by the OIE International Committee on 28 May 1993 (Resolution No. XII of 28 May 1993). Australia operates an OIE Reference Laboratory.

<sup>277</sup> Para. I of the Second and Third Parts of the *Mandates and Internal Rules for Working Groups and Ad Hoc Groups, Reference Laboratories, Collaboration Centres*, adopted by the OIE International Committee on 28 May 1993 (Resolution No. XII of 28 May 1993).

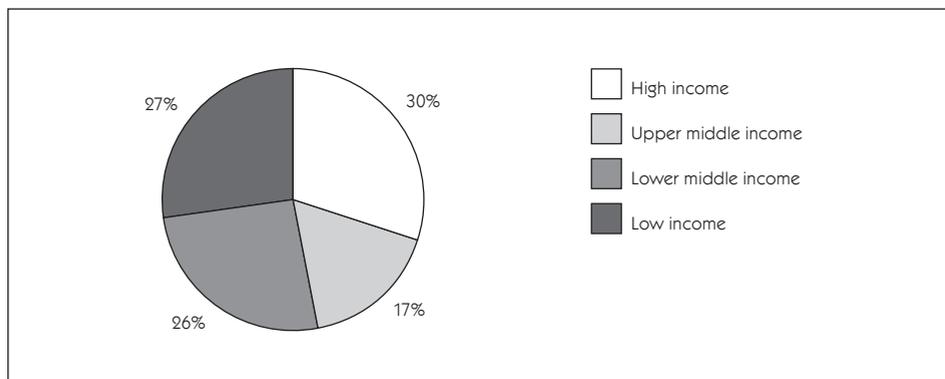

<sup>278</sup> The information on OIE Collaborating Centres is found on the 'Collaborating Centres' page of the OIE website available at: [http://www.oie.int/eng/OIE/organisation/en\\_CC.htm?e1d8](http://www.oie.int/eng/OIE/organisation/en_CC.htm?e1d8), visited on 12 June 2008.

### 3.2.2.3 Members and observers

**Graph 23: Members of the OIE that are WTO Members by Income Level, 2007**

In December 2007 OIE had 172 members,<sup>281</sup> of which 139 were also WTO Members.<sup>282</sup> Of these, 29 percent (41) are high-income Members, 17 percent (24) are upper-middle-income Members, 27 percent (37) are lower-middle-income Members and 27 percent (37) are low-income Members. Membership of the OIE is not limited to sovereign states, but includes also members from non-sovereign regions, such as Chinese Taipei.<sup>283</sup> The European Community is not a member of the OIE in its own right. However, all of its 27 Member States are OIE members.

The OIE maintains permanent relationships with 35 regional and international organisations. International organisations with which the OIE has concluded agreements are invited to participate in the scientific and technical sessions of the International Committee. Their representatives may take the floor during sessions but have no voting rights.<sup>284</sup> Each of these international organisations may make a presentation at an IC session every two years, except the CAC, WTO, FAO, WHO, World Bank and World Veterinary Organisation, which may make yearly presentations. Regional organisations may only make presentations in the OIE Regional Commissions.

<sup>281</sup> See OIE Members, available at: [http://www.oie.int/eng/OIE/PM/en\\_PM.htm?e1d1](http://www.oie.int/eng/OIE/PM/en_PM.htm?e1d1), visited on 14 February 2008.

<sup>282</sup> Committee on Sanitary and Phytosanitary Measures, *Membership in WTO and International Standard-Setting Bodies. Note by the Secretariat. Revision, G/SPS/GEN/49/Rev.8*, circulated on 9 October 2007. The data from this document has been updated to include Liechtenstein, Montenegro and the Maldives.

<sup>283</sup> Both China and Chinese Taipei are OIE members. When China's right and obligations as a sovereign state member of the OIE were restored in 2007, the continued participation of Chinese Taipei as a non-sovereign regional member was affirmed. Resolution No. XX: *Restoration of the Exercise of the Legal Rights and Obligations of the People's Republic of China to the World Organisation for Animal Health*, contained in World Organisation for Animal Health, *Final Report of the 75<sup>th</sup> General Session*, 75 GS-FR, 20-25 May 2007, (OIE, Paris), 134.

<sup>284</sup> Article 2 of the *General Rules* of the OIE.

### 3.2.2.4 Standard-setting procedure

The standard setting procedure of the OIE is characterised by its flexibility. Proposals for new or revised standards for inclusion in the *Health Codes* or *Diagnostic Manuals* can come from a variety of sources, including OIE bodies, OIE members, individual experts and international organisations. If the OIE decides to undertake work on the proposed standard, the Director-General decides which Specialist Commission will be entrusted with this task. A member may offer to develop an initial draft of a new or revised standard on the grounds of work done by its national experts on the relevant disease or procedure.

The Director-General determines the membership and terms of reference of the *ad hoc* group or permanent Working Group that will carry out the technical work. The Director-General aims to ensure broad regional representation and a diversity of expertise in the *ad hoc* groups or Working Groups he sets up. As a basis for the work of these groups, the Director-General may commission a supporting document to be drafted by an expert with the latest scientific information. Once the relevant *ad hoc* group or Working Group has developed a draft standard, it is reviewed by the responsible Specialist Commission.

Thereafter, comments are solicited from OIE member delegates through the circulation of draft texts. One of the problems facing the four Specialist Commissions was the lack of comments from members on draft standards other than those being proposed for immediate adoption. In order to improve this aspect of the standard-setting process, in the context of the implementation of its new Strategic Plan, the OIE has taken steps to facilitate the provision of comments by members' delegates and other interested parties. To do so, it has revised the timetable for meetings of both the Code Commission and the Aquatic Animals Commission to provide additional time for the examination of their proposals by members and interested organisations.<sup>285</sup> Under the new time table, each of these Commissions would meet each year in August/September and again in March.<sup>286</sup> Except in urgent cases, the process for adoption of proposals will take two years, instead of one year as was previously the case.<sup>287</sup>

---

<sup>285</sup> The revised timetable provides that each of these two Specialist Commissions will meet each year once in August/September and another time in March. At the August/September meeting the relevant Commission will examine the comments of members and organizations received and take them into account in the elaboration of proposals for new or revised Code chapters and appendices. The reports of these meetings will contain, aside from the reports of working groups and ad hoc expert groups that formed the basis of the proposed standards, two types of texts for comments by members: the proposals being submitted for adoption at the next General Session of the IC; and drafts of ongoing work which may be submitted for adoption at a later General Session of the IC. These meeting reports will be circulated to members and posted on the OIE website in the three official languages. At the following meeting in March, the relevant Commission will review the comments received on the reports and may amend some of the proposals so that they can be put forward for adoption at the IC General Session in May. Other proposals may be discussed and held over for further work. The reports of these meetings will once again be circulated to members and posted on the OIE website. At the General Session of the IC, delegates of members may make comments and suggest improvements to the proposals at the time they are proposed for adoption. International Office of Epizootics, *Widening Consultation Mechanisms in the Development of OIE Standards*. Press Release 3 October 2005, available at: [http://www.oie.int/eng/press/en\\_051003.htm](http://www.oie.int/eng/press/en_051003.htm), 'visited on' 24 August 2006.

<sup>286</sup> OIE, *The OIE International Standards* (World Organisation for Animal Health, Paris), 2007, available at: <http://www.oie.int/eng/normes/guide%20to%20OIE%20intl%20standards%20v6.pdf>, visited on 1 June 2008.

<sup>287</sup> International Office of Epizootics, *Widening Consultation Mechanisms in the Development of OIE Standards*. Press Release 3 October 2005, available at: [http://www.oie.int/eng/press/en\\_051003.htm](http://www.oie.int/eng/press/en_051003.htm), 'visited on' 24

Also, in 2005, as part of the implementation of its Fourth Strategic Plan, the OIE took some initiatives to improve the transparency of the standard-setting process in order to ensure that standards have the best possible scientific basis and widest possible support.<sup>288</sup> While the OIE does not solicit comments other than from delegates of members, the increased transparency in its work has attracted comments from organisations with an interest in the work of the OIE.<sup>289</sup> The OIE does not refuse such comments as they may be a valuable source of information, but continues to give the greatest weight to the comments of members' delegates. The comments received are reviewed by the Working Group or *ad hoc* group experts and the Specialist Commissions at their biannual meetings.<sup>290</sup> They amend the proposal as appropriate and circulate the new draft to OIE members for comments.<sup>291</sup> If the comments indicate widespread support for the draft standard, the Specialist Commission will submit it to the IC for adoption. If not, a further round of technical work followed by comments is undertaken.

Each OIE member has an official delegate, normally the Chief Veterinary Officer, who is responsible for coordinating that member's participation in the OIE. Industry groups, organisations and experts who want to participate in the OIE standard-setting process are encouraged to do so through the official delegate.<sup>292</sup> It is the delegates, acting as members of the IC in its General Session, who take the final decisions regarding adoption of the proposed texts. As noted above, standards are adopted in practice by consensus or in the absence of consensus a standard may be adopted if not more than ten members are opposed.<sup>293</sup>

Once adopted by the IC, the standards and guidelines are voluntary and are primarily to be found in the two *Health Codes*. Both these *Health Codes* currently refer explicitly to the *SPS Agreement*.<sup>294</sup> They provide risk assessment guidelines for countries, requiring them to conduct transparent risk assessments, based on the best available scientific infor-

---

August 2006.

<sup>288</sup> The OIE now publishes all documents of the Specialist Commissions on its website, and includes as appendices the accepted reports from the relevant working groups or *ad hoc* groups.

<sup>289</sup> While it accepts the comments of non-members, the OIE encourages them to submit their comments through their respective member delegate in order to ensure that they receive full consideration. The OIE also encourages member delegates to consult the relevant stakeholders and non-governmental organisations in their countries in the process of formulating their comments on proposed OIE texts. However, the OIE recognizes the difficulties that international non-governmental organisations face when trying to channel their comments through multiple OIE member delegates. World Organisation for Animal Health, *Transparency in the OIE Standard-Setting Process* (OIE, Paris), 2005, available at: [http://www.oie.int/eng/oie/transparency%20\\_eng.pdf](http://www.oie.int/eng/oie/transparency%20_eng.pdf), visited on 5 February 2008.

<sup>290</sup> Reports of the Specialist Commissions normally incorporate the Working Group reports in their entirety, and explain how the various comments were taken into account. These reports are published on the OIE website.

<sup>291</sup> OIE, *The OIE International Standards* (World Organisation for Animal Health, Paris), 2007, available at: <http://www.oie.int/eng/normes/guide%20to%20OIE%20intl%20standards%20v6.pdf>, visited on 1 June 2008.

<sup>292</sup> However, there is no prohibition on submission of information directly to the OIE. *Ibid.*, 4.

<sup>293</sup> Joanne Scott, *The WTO Agreement on Sanitary and Phytosanitary Measures: A Commentary*, Oxford Commentaries on the GATT/WTO Agreements (Oxford University Press, Oxford), 2007, 249.

<sup>294</sup> See Article 1.3.1.2 of the *International Animal Health Code*, and Article 1.4.1.2 of the *International Aquatic Animal Health Code*.

mation and current scientific thinking. They recommend the adoption of OIE standards as risk management measures.<sup>295</sup>

The *Health Codes* contain disease-specific chapters, setting out the optimal measures to prevent the introduction of the relevant disease into the importing country.<sup>296</sup> These are set out according to categories of notifiable diseases. In the *International Animal Health Code*, these are designated as List A diseases and List B diseases,<sup>297</sup> both of which are considered of socio-economic or public health importance and are significant for international trade in animals. List A diseases have more serious public health or socio-economic importance and have the potential for very serious and rapid spread.<sup>298</sup> For each disease, criteria are laid down according to which a country be regarded free of the disease or have a region in its territory regarded free of the disease. In certain cases,<sup>299</sup> countries must submit evidence to the OIE that the criteria are met, on approval of which they will be included in the list of disease-free countries with regard to the particular disease. For each disease, standards are laid down regarding what an importing country should require when importing from countries considered free of the particular disease, as well as when importing from countries regarded as infected by the disease. In addition, various guidelines and standards are set out regarding aspects of trade in animals such as requirements for the transportation of animals, the management of quarantine stations at border posts, border inspections, certification procedures etc.

Unlike the case with the IPPC, discussed below, radical revision of the OIE was not necessitated by the coming into force of the *SPS Agreement*.<sup>300</sup> Prior to the Uruguay Round, the OIE was already active in the setting of voluntary international standards and was

<sup>295</sup> For example, with regard to risk management, the OIE *International Aquatic Animal Health Code* states as follows:

1. Risk management is the process of deciding upon and implementing measures to achieve the Member Country's appropriate level of protection, whilst at the same time ensuring that negative effects on trade are minimised. The objective is to manage risk appropriately to ensure that a balance is achieved between a country's desire to minimise the likelihood or frequency of disease incursions and their consequences and its desire to import *commodities* and fulfil its obligations under international trade agreements.
2. The international standards of the OIE are the preferred choice of sanitary measures for risk management. The application of these sanitary measures should be in accordance with the intentions of the standards or other recommendations of the *SPS Agreement*. See Article 1.4.2.5 of the *International Aquatic Animal Health Code*. There is an almost identical provision in Article 1.3.2.5 of the OIE *International Animal Health Code*.

<sup>296</sup> These chapters set out in general for each disease: a description of the disease; a list of commodities that do not require disease-specific measures; a list of commodities that do require the measures set out in the chapter, with the inference that no additional measures are required; a list of the factors that should be considered in assessing the risk presented by the exporting country for that disease; a list of requirements to be met by a country or region to achieve a specified disease status (e.g. disease-free status with vaccination, moderate risk etc); and recommended health measures for commonly traded commodities.

<sup>297</sup> This distinction is not made in the *International Aquatic Animal Health Code* which refers only to notifiable diseases, which are considered to be of socio-economic and/or public health importance within countries and that are significant in the *international trade in aquatic animals and aquatic animal products* and "other significant diseases" which are not required to be notified (Article 1.1.1.1 of the *International Aquatic Animal Health Code*).

<sup>298</sup> Article 1.1.1.1 of the *International Animal Health Code*.

<sup>299</sup> For example, with regard to foot and mouth disease.

<sup>300</sup> Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 50.

institutionally capable of fulfilling its added role under the *SPS Agreement*. The OIE did take account of the coming into force of the *SPS Agreement* by means of an agreement<sup>301</sup> formalising its relationship with the WTO, whereby the two organisations undertook to consult on issues of mutual interest, to regularly exchange relevant information, to be invited to and participate in relevant meetings held by one another and to co-operate in the provision of technical assistance to developing countries.<sup>302</sup>

In contrast to the situation with the CAC, the increased status of the OIE due to the establishment of its standards as benchmarks under the *SPS Agreement* initially did not lead to much controversy or public attention. This can be ascribed to the fact that the standards set by the OIE relate to animal health, a much less politically sensitive issue than the human health standards set by the CAC.<sup>303</sup> However, by 2005, due to the increasing pressure to comply with OIE standards as a prerequisite for market access, OIE member countries felt the need to address the trade significance of these standards. In addition, animal health measures came to the fore as the main subject of challenges at SPS Committee meetings. In 2005, the SPS Committee reported that 40 percent<sup>304</sup> of all specific trade concerns raised by WTO Members at meetings of the SPS Committee related to areas covered by the OIE, namely animal health issues and zoonoses (animal diseases that can be transmitted to humans).<sup>305</sup>

As a result of these developments, the OIE is now addressing the implications of its standards for trade. It circulated a questionnaire among its member countries in order to evaluate, on the basis of their perceptions and experiences in applying both the OIE Health Codes and the *SPS Agreement*, whether these rules facilitate or hinder trade in animal products.<sup>306</sup> Developing countries have expressed concerns with regard to the costs of implementation of OIE standards. In addition, sixty-six percent of respondents to the questionnaire indicated their belief that OIE standards favour industrialised countries.

---

<sup>301</sup> This agreement is embodied in an exchange of letters (see Committee on Sanitary and Phytosanitary Measures, *Draft Agreement between the World Trade Organization and the Office International Des Epizooties*, G/SPS/W/61, circulated on 22 May 1996.). It was approved by the International Committee of the OIE in May 1997 and by the General Council of the WTO in October 1997.

<sup>302</sup> Terence P. Stewart and David S. Johanson, 'The *SPS Agreement* of the World Trade Organization and International Organizations: The Roles of the Codex Alimentarius Commission, the International Plant Protection Convention, and the International Office of Epizootics', *Syracuse Journal of International Law and Commerce* 26, 1998, 27-53, 50.

<sup>303</sup> *Ibid.*

<sup>304</sup> This figure was established by the WTO Secretariat, which maintains statistics on these issues. It was published in the report of the SPS Committee's second review of the operation of the *SPS Agreement*, discussed further below, Part IV, Section 2.1.4. See Committee on Sanitary and Phytosanitary Measures, *Review of the Operation and Implementation of the Agreement on the Application of Sanitary and Phytosanitary Measures. Report Adopted by the Committee on 30 June 2005*, G/SPS/36, circulated on 11 July 2005, para. 84.

<sup>305</sup> For example, Bovine Spongiform Encephalopathy (commonly known as 'mad-cow disease'), which may cause Creutzfeldt-Jakob disease in humans.

<sup>306</sup> See the report on the outcome of this questionnaire, which received 106 responses, in Gideon Brückner, *Implementation of OIE Standards in the Framework of the SPS Agreement*, 73 SG/9 (World Organization for Animal Health, Paris), 22-27 May 2005, available at: [http://www.oie.int/downld/SG/2005/A\\_73%20SG\\_9.pdf](http://www.oie.int/downld/SG/2005/A_73%20SG_9.pdf), visited 12 September 2005. Brückner notes that some responses differed depending on the status of the relevant country as exporting/importing, developed/developing and industrialised/non-industrialised. He recommended that these differences in response be considered and incorporated into the OIE Strategic Plan where necessary.

On 26 May 2005, following a report on the outcome of the questionnaire survey,<sup>307</sup> the IC adopted a resolution entitled *Implementation of OIE Standards in the Framework of the SPS Agreement*.<sup>308</sup> In this resolution, the IC addresses the challenges and opportunities with regard to participation in international trade for developing countries that adopt OIE standards. The resolution calls on the OIE to facilitate capacity building and training of animal health officials to actively participate in the development and implementation of OIE standards.<sup>309</sup> Further, the OIE Director General is instructed to request the Code Commission to take developing country needs and circumstances into account in the development of standards, and to establish a uniform format for standards to facilitate their implementation and make them more understandable.<sup>310</sup> The Director General must further instruct the relevant OIE Commissions to include in the standards, where possible, descriptions of risk mitigation procedures to make animal products safe for trade, and to list which products can be traded without restriction for each specific disease.<sup>311</sup> Further, the OIE is instructed to request the WTO to grant observer status before the SPS Committee to regional organisations in order to ensure some form of representation of countries lacking the capacity or expertise to ensure continuity of representation in SPS Committee meetings.<sup>312</sup> In addition, the OIE is mandated to work with the WTO on examining how OIE animal welfare standards can be taken into account. The outcome of the latter examination will be reported to the International Committee for further discussion.<sup>313</sup> Finally, the OIE is called upon to consider, in collaboration with relevant partners, methods to support the evaluation of veterinary services and an independent audit system for such services, functioning under the auspices of the OIE, to assist members in evaluating their national veterinary services in order to identify problems of compliance with OIE standards as well as areas where investments are needed.<sup>314</sup>

### 3.2.2.5 Participation in standard-setting

The OIE takes efforts to ensure the participation of all members in its activities. It does so by funding the participation of Chief Veterinary officers of all members at meetings of the IC. As over two thirds of the 172 OIE members are developing countries, the OIE gives

---

<sup>307</sup> See *ibid.*

<sup>308</sup> Resolution XXVII adopted by the International Committee on 26 May 2005. It is contained in International Committee of the OIE, *Final Report of the 73rd General Session, 73/GS/FR* (OIE, Paris), 22-27 May 2005, 179-180, available at: [http://www.oie.int/downld/SG/2005/A\\_RF\\_2005.pdf](http://www.oie.int/downld/SG/2005/A_RF_2005.pdf), visited on 5 February 2008.

<sup>309</sup> *Ibid.*, Resolution No. XXVII, point 1.

<sup>310</sup> *Ibid.*, Resolution No. XXVII, points 2 and 3.

<sup>311</sup> *Ibid.*, Resolution No. XXVII, point 4.

<sup>312</sup> *Ibid.*, Resolution No. XXVII, point 5.

<sup>313</sup> *Ibid.*, Resolution No. XXVII point 6. The proviso that the result of the discussions would be remitted to the IC for its assessment was added due to Australia's comment, during the discussions on this resolution, that it opposed any attempt to bring animal welfare issues under the *SPS Agreement*. Australia correctly pointed out that such issues fall outside the scope of this Agreement. See the report of this discussion in International Committee of the OIE, *Final Report of the 73rd General Session, 73/GS/FR* (OIE, Paris), 22-27 May 2005, para. 50, available at: [http://www.oie.int/downld/SG/2005/A\\_RF\\_2005.pdf](http://www.oie.int/downld/SG/2005/A_RF_2005.pdf), visited on 5 February 2008. See further on the substantive scope of application of the *SPS Agreement* below, Part III, Section 2.1.

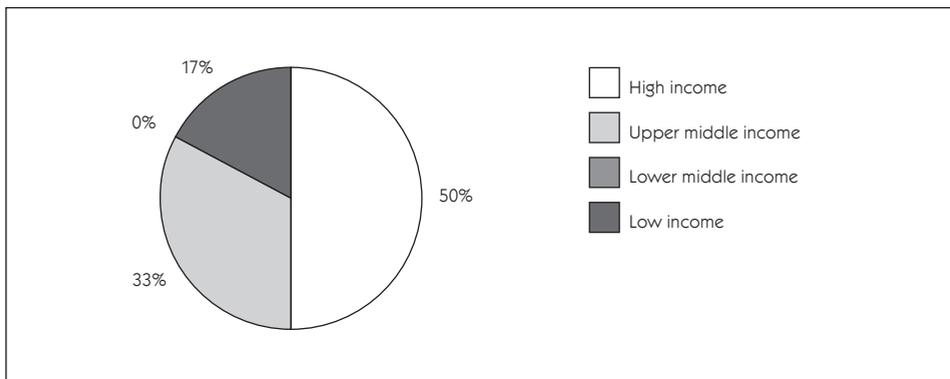

<sup>314</sup> International Committee of the OIE, *Final Report of the 73rd General Session, 73/GS/FR* (OIE, Paris), 22-27 May 2005, Resolution No. XXVII point 7, available at: [http://www.oie.int/downld/SG/2005/A\\_RF\\_2005.pdf](http://www.oie.int/downld/SG/2005/A_RF_2005.pdf), visited on 5 February 2008.

significant attention to capacity building to help its members implement OIE standards.<sup>315</sup> The capacity building work of the OIE includes conferences and workshops at national, regional and global level.

The Seventy-Fifth General Session of the International Committee of the OIE was attended by 159 members. In addition, observers from five non-member countries and 47 international or regional organisations, institutions or federations attended the meeting.<sup>316</sup> As there is no list of participants to the meetings of the IC, it is not possible to determine how many Members at different levels of economic development sent delegates to recent meetings, and what the relative size of the delegations were.

The nine-member Administrative Commission of the OIE is required to reflect geographical representation and to necessarily include a representative of each of the regional groups of the OIE. In 2008, the Members of the Scientific Commission that are WTO Members were predominantly from high-income and upper-middle-income Members.<sup>317</sup>

**Graph 24: OIE Administrative Commission: Administrative Commission Members that are WTO Members by Income Level, 2008**

The four Specialist Commissions of the OIE are composed of limited groups of delegates of members, as set out above. The division of the members of these Specialist Commissions that are WTO Members by income level in 2007 shows a predominance of high-income Members in these Commissions.<sup>318</sup>

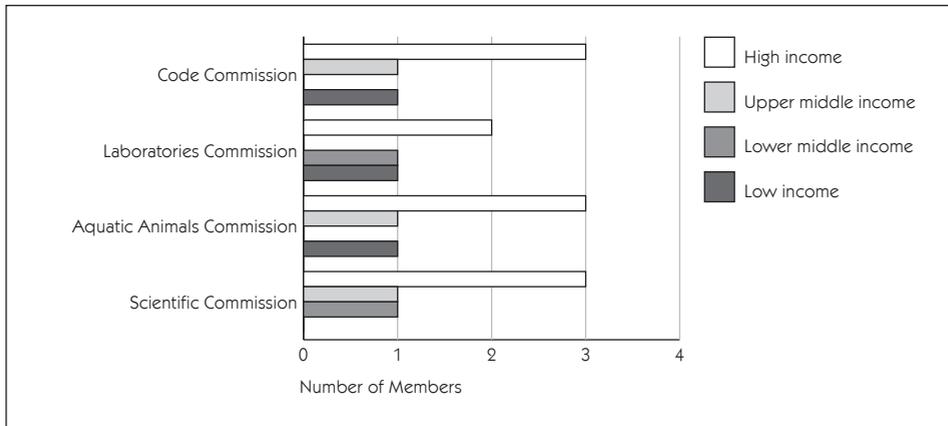

<sup>315</sup> Committee on Sanitary and Phytosanitary Measures, *Capacity-Building Tools and Activities. Communication from the World Organization for Animal Health (OIE)*, G/SPS/GEN/830, circulated on 27 March 2008, para. 3.

<sup>316</sup> International Committee of the OIE, *Final Report of the Seventy-Fifth General Session, 75/GS/FR* (World Organisation for Animal Health, Paris), 20-25 May 2007, paras 2-3.

<sup>317</sup> The three lower-middle-income members of the Administrative Commission in 2008 were all from non-WTO Members. These were the members from Bhutan, Algeria and Syria. The members of the Administrative Commission are provided on the page for the Administrative Commission of the OIE website, available at: [http://www.oie.int/eng/OIE/organisation/en\\_CA.htm](http://www.oie.int/eng/OIE/organisation/en_CA.htm), visited on 28 June 2008.

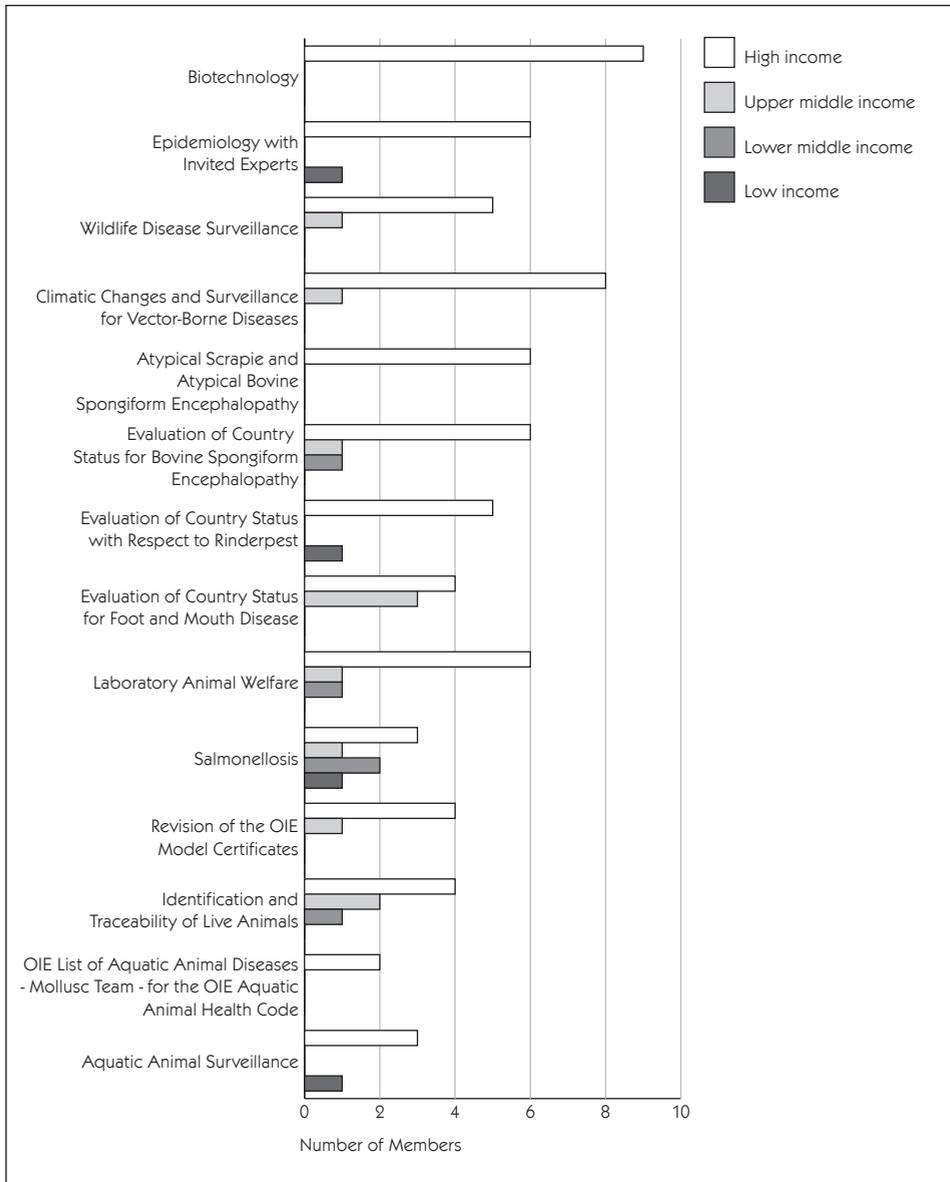

<sup>318</sup> The members of the four specialist Commissions are listed on the pages for each Specialist Commission on the OIE website, available at: [http://www.oie.int/eng/OIE/organisation/en\\_CS.htm](http://www.oie.int/eng/OIE/organisation/en_CS.htm), visited on 29 June 2008.

**Graph 25: OIE Specialist Commission Members that are WTO Members by Income Level, 2007**

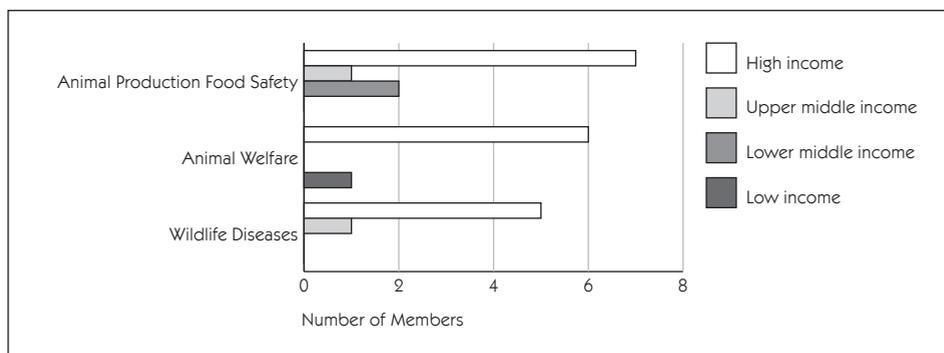

As stated above, the composition of the three Working Groups and several *ad hoc* groups is determined by the Director-General, and endorsed annually by the IC, on the basis of broad regional representation and scientific diversity. Nevertheless, the primary consideration in selection of members is the level scientific excellence of the experts.

**Graph 26: OIE Ad Hoc Groups: Ad Hoc Group Members that are WTO Members by Income Level, 2008**

**Graph 27: OIE Working Groups: Working Group Members that are WTO Members by Income Level, 2007-2008**

An examination of the most recent meetings of these technical expert groups evinces that by far most of their Members that are WTO Members are from high-income countries.<sup>319</sup>

### 3.2.3 The Secretariat of the International Plant Protection Convention and the Commission on Phytosanitary Measures

In the area of plant health, the *SPS Agreement* refers to the standards, guidelines and recommendations ‘developed under the auspices of the Secretariat of the International Plant Protection Convention in cooperation with regional organisations operating within the framework of the International Plant Protection Convention’.<sup>320</sup>

The IPPC is the only one of the ‘three sisters’ that is in fact an international convention rather than a standard-setting body in the legal sense. This is why the *SPS Agreement* refers to its Secretariat and the regional organisations operating within its framework for the development of standards.<sup>321</sup> The origins of the IPPC can be traced back to the *Phylloxera*

<sup>319</sup> The information on membership of the OIE Working Groups is taken from the most recent reports of the meetings of each Working Group. OIE Working Group on Animal Production Food Safety, *Report of the Seventh Meeting*, 76 SG/12/CS1 B (World Organisation for Animal Health, Paris), 6–8 November 2007; OIE Working Group on Animal Welfare, *Report of the Sixth Meeting*, (World Organisation for Animal Health, Paris), 5–7 September 2007; and OIE Working Group on Wildlife Diseases, *Report to 76th General Session of the International Committee*, 76 SG/13/GT (World Organisation for Animal Health, Paris), 28–31 January 2008. The information on membership of the OIE *ad hoc* groups is taken from the lists of participants in OIE *ad hoc* groups provided in the most recent reports of the four Scientific Commissions. Aquatic Animal Health Standards Commission, *Report of the Meeting*, 76 SG/12/CS4 B (World Organization for Animal Health, Paris), 3–7 March 2008; Biological Standards Commission, *Report of the Meeting*, 76 SG/12/CS2 B (World Organization for Animal Health, Paris), 22–24 January 2008; Scientific Commission for Animal Diseases, *Report of the Meeting*, 76 SG/12/CS3 C (World Organization for Animal Health, Paris), 19–21 February 2008; Terrestrial Animal Health Standards Commission, *Report of the Meeting*, 76 SG/12/CS1 B (World Organization for Animal Health, Paris), 10–14 March 2008.

<sup>320</sup> See Annex A.3(b) of the *SPS Agreement*.

<sup>321</sup> Although the *SPS Agreement* refers to the Secretariat of the IPPC, the institutional structure of the IPPC has developed considerably since the coming into force of the *SPS Agreement*, as discussed below. In this book, in keeping with the current practice at the SPS Committee the abbreviation ‘IPPC’ will be used to refer to the international standard-setting body that currently adopts phytosanitary standards. However, it should be born in mind that at present, standards adopted under the auspices of the IPPC are in fact adopted by the Commission on Phytosanitary Measures (CPM).

*Convention* of 1881,<sup>322</sup> where 12 countries agreed on regulatory measures for grapevines. This was the first initiative to formalise international cooperation in the area of plant protection, and led to the recognition of the need to extend this cooperation to address other plant pests and to include all countries.<sup>323</sup>

Such broader cooperation was embodied in the *International Convention for the Protection of Plants*,<sup>324</sup> which never came into force but was later superseded by the IPPC,<sup>325</sup> adopted by the FAO at its Sixth Session in 1951.<sup>326</sup> It came into force in April 1952, after ratification by three signatories.<sup>327</sup> The IPPC was amended in 1979.<sup>328</sup> A second, wide-ranging amendment was undertaken to 'deal with the new reality of the formation of the WTO, and the adoption of the Agreement on the Application of Sanitary and Phytosanitary Measures.'<sup>329</sup> This amendment is embodied in the *International Plant Protection Convention, New Revised Text* (commonly known as the *New Revised Text* of 1997), which was approved by the FAO Conference in 1997 and came into force in October 2005.<sup>330</sup>

---

<sup>322</sup> International Convention respecting Measures to be taken against the Phylloxera Vastatrix signed on 3 November 1881, and the additional Convention signed at Berne on 15 April 1889.

<sup>323</sup> IPPC Secretariat, *A Summary of the IPPC* (International Plant Protection Convention, Rome), 30 June 2006, 1, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/14258\\_IPPC\\_History\\_Member\\_.doc?filename=1152100003077\\_Handout00\\_IPPC\\_History\\_Member\\_-610767244.doc&refID=14258](https://www.ippc.int/servlet/BinaryDownloaderServlet/14258_IPPC_History_Member_.doc?filename=1152100003077_Handout00_IPPC_History_Member_-610767244.doc&refID=14258), visited on 28 July 2006.

<sup>324</sup> The International Convention for the Protection of Plants was drafted in 1929 at the International Conference for Plant Protection, held in Rome. The consideration of the draft text of this convention was delayed considerably due to the Second World War. In 1947, it was brought to the attention of governments meeting in the then-recently created UN Food and Agriculture Organization (FAO). This led to the drafting of the International Plant Protection Convention.

<sup>325</sup> *International Plant Protection Convention* (IPPC), 6 December 1951, 150 U.N.T.S. 67. According to Article 10 thereof, the IPPC superseded all previous international agreements for the protection of plants, namely the *Phylloxera Convention* of 1881, the *Berne Convention* of 1889 and the draft *International Convention for the Protection of Plants* of 1929.

<sup>326</sup> The IPPC was deposited with the Director-General of the FAO.

<sup>327</sup> The first three signatories were Ceylon, Spain and Chile. IPPC Secretariat, *A Summary of the IPPC* (International Plant Protection Convention, Rome), 30 June 2006, 1, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/14258\\_IPPC\\_History\\_Member\\_.doc?filename=1152100003077\\_Handout00\\_IPPC\\_History\\_Member\\_-610767244.doc&refID=14258](https://www.ippc.int/servlet/BinaryDownloaderServlet/14258_IPPC_History_Member_.doc?filename=1152100003077_Handout00_IPPC_History_Member_-610767244.doc&refID=14258), visited on 28 July 2006.

<sup>328</sup> This amendment came into force with respect to all contracting parties on 4 April 1991, after ratification by two-thirds of the contracting parties according to Article 13.4 of the IPPC.

<sup>329</sup> This statement was made by the Assistant Director-General of the FAO at the first session of the Commission for Phytosanitary Measures in April 2006. See International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, 2, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006. Note also that the preamble to the *New Revised Text* of 1997 expressly states that the contracting parties note 'the agreements concluded as a result of the Uruguay Round of Multilateral trade Negotiations, including the Agreement on the Application of Sanitary and Phytosanitary Measures'.

<sup>330</sup> *International Plant Protection Convention, New Revised Text*, approved by the FAO Conference at its 29th Session, November 1997. This amendment came into force on 2 October 2005, 30 days after ratification by two thirds of the contracting parties according to Article XII.4 of the IPPC. At the 7<sup>th</sup> Session of the ICPM, it was noted that entry into force of the *New Revised Text* of 1997 would apply to all contracting parties, including those that had not accepted the *New Revised Text* at the time of entry into force.

### 3.2.3.1 Mandate

The primary aim of the IPPC to secure common and effective action to prevent the introduction and spread of plant pests and diseases,<sup>331</sup> and to promote appropriate measures for their control.<sup>332</sup> According to the preamble of *New Revised Text* of the IPPC, the contracting parties:

[recognise] the necessity of international cooperation in controlling pests of plants and plant products and in preventing their spread, and especially their introduction into endangered areas; ...[desire] to ensure close coordination of measures directed to these ends; [desire] to provide a framework for the development and application of harmonized phytosanitary measures and the elaboration of international standards to that effect;<sup>333</sup>

More concretely, Article I.1 of the *New Revised Text* provides that the contracting parties agree to adopt the legislative, technical or administrative measures set out in the *New Revised Text* of the IPPC and supplementary agreements.<sup>334</sup> Article X of the *New Revised Text* states that contracting parties agree to cooperate in the development of international standards, according to the procedures adopted by the Commission on Phytosanitary Measures. Contracting parties are only permitted to impose phytosanitary measures in respect of quarantine pests and regulated non-quarantine pests<sup>335</sup> as defined in the *New Revised Text* – measures in respect of other pests, known as ‘non-regulated pests’, are prohibited.<sup>336</sup>

In 2007, the Commission on Phytosanitary Measures, which is the governing body of the IPPC formulated its Mission Statement as:

Cooperation between nations in protecting the world’s cultivated and natural plant resources from the spread and introduction of pests of plants, while minimizing interference with the international movement of goods and people.<sup>337</sup>

International co-operation for the protection of plants remains the main objective of the IPPC and its coverage therefore extends beyond cultivated plants to include natural or

<sup>331</sup> Plant pests are defined in Article II.1 of the *New Revised Text* of 1997 as including pathogenic agents, and thus plant diseases are covered as well.

<sup>332</sup> Article I.1 of the *New Revised Text* of 1997.

<sup>333</sup> Preamble to the *New Revised Text* of 1997 of the IPPC. The preamble of the IPPC of 1979 was practically identical, except that it used the word ‘usefulness’ instead of ‘necessity’ and referred to ‘introduction across national boundaries’ instead of ‘introduction into endangered areas’.

<sup>334</sup> Supplementary agreements are agreements concluded, in accordance with the principles and provisions of the IPPC, for the purpose of addressing special problems of plant protection. They may, for example, be applicable to specific regions, specific pests, specific plants or specific means of transportation (see Article XVI of the *New Revised Text* of 1997, previously Article 3 of the IPPC of 1979).

<sup>335</sup> Regulated non-quarantine pests are defined in Article II.2 of the *New Revised Text* as non-quarantine pests ‘whose presence in plants for planting affects the intended use of those plants with an economically unacceptable impact’ and which are therefore regulated within the territory of the importing contracting party.

<sup>336</sup> Article VI.2 of the *New Revised Text*.

<sup>337</sup> Commission on Phytosanitary Measures, *Business Plan 2007-2011* (International Plant Protection Convention, Rome), 29 March 2007, 12, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184265\\_CPMBusinessPlan.pdf?filename=1180093785157\\_Latest\\_Business\\_Plan\\_\\_\\_Revised-1196537010.pdf&refID=184265](https://www.ippc.int/servlet/BinaryDownloaderServlet/184265_CPMBusinessPlan.pdf?filename=1180093785157_Latest_Business_Plan___Revised-1196537010.pdf&refID=184265), visited on 2 April 2008.

wild flora. However, the main use of phytosanitary measures in most countries has been in the protection of agriculture, horticulture and forestry from the introduction and spread of pests and diseases. Thus the work of the IPPC is mainly focused on quarantine pests relevant to international trade.<sup>338</sup> Nevertheless, it has been recognised that IPPC principles are equally valid for the protection of wild flora and biodiversity, and mechanisms to address environmental issues, such as invasive alien species, have been developed.<sup>339</sup> The role of the IPPC in relation to the protection of marine plants remains to be clarified.

The IPPC has seven ‘medium term goals’, identified as part of the Business Plan adopted by its governing body, the Commission on Phytosanitary Measures (CPM), in 2007.<sup>340</sup> These are: the development, adoption and implementation of international standards for phytosanitary measures (ISPMs); information exchange; the provision of dispute settlement mechanisms; the development of the phytosanitary capacity of contracting parties through promoting the provision of technical assistance; the maintenance of an effective and efficient administrative framework; the promotion of the IPPC and cooperation with relevant international organisations; and the review of the status of plant protection in the world.

Much of the activity of the IPPC bodies centres on the first medium-term goal, namely standard setting. In November 1993, the first ISPM was adopted by the newly-created IPPC Secretariat. Currently, Article X of the *New Revised Text* provides for the adoption of international standards by the CPM. As of 1 June 2007, 29 ISPMs have been adopted and a further six are under consultation. While early ISPMs dealt with general

---

<sup>338</sup> Quarantine pests are defined in Article II.1 of the *New Revised Text* as pests ‘of potential economic importance to the area endangered thereby and not yet present there, or present but not widely distributed and being officially controlled.’

<sup>339</sup> The issue of invasive alien species is also addressed by the Convention on Biological Diversity (CBD). Therefore the importance of strong cooperation between the IPPC and the CBD has been explicitly recognised. International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, Appendix XVI, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006. The 2007 report of the independent evaluation team established to evaluate the operation and institutions of the IPPC notes that in evaluation interviews, issues related to the interface between the IPPC and the *Convention on Biological Diversity* were mentioned as areas where the IPPC should focus more attention in standard setting. Risks associated with movement of articles capable of vectoring plant pests of environmental concern were argued to be areas where IPPC standards are needed. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, paras 32-33, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Report.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Report.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>340</sup> International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008. The seven ‘medium term goals’ incorporate the six ‘strategic directions’ identified by the CPM as part of its Strategic Plan adopted at its First Session in 2006 but add one item, namely the review of the status of plant protection in the world. The six ‘strategic directions’ are contained in International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, Appendix XVI, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006.

or cross-cutting phytosanitary issues such as pest risk analysis,<sup>341</sup> the establishment of pest-free areas,<sup>342</sup> pest eradication guidelines<sup>343</sup> and a glossary of phytosanitary terms,<sup>344</sup> recent ISPMs are more specific to particular phytosanitary problems, such as modes of transmission of risks (e.g. wood packaging material),<sup>345</sup> pests (e.g. fruit flies),<sup>346</sup> risk mitigation measures (e.g. irradiation)<sup>347</sup> and diagnostic protocols for regulated pests.<sup>348</sup> The *New Revised Text* is a legally binding agreement for all its contracting parties, but the standards and guidelines set by the CPM are not legally binding. Article X of the *New Revised Text* provides that contracting parties ‘should’ take these standards into account when undertaking activities related to the IPPC.

The second medium term goal, namely information exchange, is achieved through the provision by contracting parties of the information required in the *New Revised Text*,<sup>349</sup> and the maintenance by the IPPC Secretariat of an internet portal, known as the International Phytosanitary Portal (IPP), to enhance the accessibility of phytosanitary information.<sup>350</sup>

<sup>341</sup> Framework of Pest Risk Analysis, ISPM 2 (1995), revised in 2007.

<sup>342</sup> Requirements for the Establishment of Pest Free Areas, ISPM 4 (1995).

<sup>343</sup> Guidelines for Pest Eradication Programmes, ISPM 9 (1998).

<sup>344</sup> Glossary of Phytosanitary Terms, ISPM 5 (1996), updated regularly.

<sup>345</sup> Guidelines for Regulating Wood Packaging Material in International Trade, ISPM 15 (2002), modified in 2006 (Annex 1).

<sup>346</sup> Establishment of Pest Free Areas for Fruit Flies (Tephritidae), ISPM 26 (2006).

<sup>347</sup> Guidelines for the Use of Irradiation as a Phytosanitary Measure, ISPM 18 (2003).

<sup>348</sup> Diagnostic Protocols for Regulated Pests, ISPM 27 (2006). This development from cross-cutting to specific phytosanitary standards is discussed in the 2007 report of the independent evaluation team established to evaluate the operation and institutions of the IPPC. The report notes that the increasing movement towards specific standards, which apply to specific crops, plants and ecological zones, will require particular attention to the relevance of the specific standards to salient phytosanitary issues and trade demands in a manner that is equitable to the contracting parties. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, paras 26 and 29-30, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>349</sup> Contracting parties are required to provide pest reports (Articles IV.2(b) and VIII.1(a) of the *New Revised Text*), information on their phytosanitary restrictions, prohibitions and requirements (Article VII.2(b) of the *New Revised Text*), information on emergency actions (Article VII.6 of the *New Revised Text*), their lists of regulated pests (Article VII.2(i) of the *New Revised Text*), a description of their NPPOs (Article IV.4 of the *New Revised Text*), and the contact details of their official IPPC Contact Points (Article VIII.2 of the *New Revised Text*).

<sup>350</sup> The IPP, established through a decision of the Third Session of the ICPM in 2001, is the official website of the IPPC. The IPP facilitates information exchange by providing a single forum where contracting parties can comply with their reporting obligations under the *New Revised Text*. Officially nominated persons (known as ‘editors’) from NPPOs, RPPOs and the IPPC Secretariat are responsible for entering information onto and maintaining the IPP. Ten IPP training workshops had been conducted by June 2007, resulting in the training of 288 NPPO editors from 135 contracting parties and 18 RPPO editors. This has led to a significant increase in the amount of information available on the IPP. An IPP Support Group was created in 2001 by the ICPM to provide guidance to the IPPC Secretariat in the implementation and maintenance of the IPP. International Plant Protection Convention, *Procedural Manual* (Food and Agriculture Organization, Rome), 1 June 2007, 87, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/159931\\_Procedural\\_manual\\_20.pdf?filename=1188388585480\\_ProceduralManual2007.pdf&refID=159931](https://www.ippc.int/servlet/BinaryDownloaderServlet/159931_Procedural_manual_20.pdf?filename=1188388585480_ProceduralManual2007.pdf&refID=159931), visited on 10 March 2008. Committee on Sanitary and Phytosanitary Measures, *Summary of the Work of the International Plant Protection Convention (IPPC) October 2007-February 2008. Communication from the IPPC Secretariat*, G/SPS/GEN/833, circulated on 26 March 2008, para. 10. The IPP is available at: [www.ippc.int](http://www.ippc.int), visited on 8 March 2008.

Another of the medium term goals of the IPPC mentioned above is building the phytosanitary capacity of its contracting parties. Under Article XX of the IPPC, contracting parties agree to promote the provision of technical assistance to other contracting parties, especially to those that are developing contracting parties so as to build capacity for the implementation of the IPPC. Capacity building programmes to date have focused on the implementation of the obligations under the IPPC and of ISPMs. The IPPC Secretariat has administered the delivery of technical assistance to developing contracting parties of the IPPC to the amount of approximately US\$ 20 million over five years through the FAO Technical Cooperation Programme and US\$ 2 million through trust funds.<sup>351</sup> Further, expertise has been made available by the IPPC Secretariat and NPPO volunteers to assist in implementation. An important achievement in the area of capacity building has been the establishment and use of the Phytosanitary Capacity Evaluation (PCE) tool. This tool has made a significant contribution to determining the needs of NPPOs with regard to national phytosanitary systems and national strategic plans, and has been useful in the formulation of donor funded projects including unilateral trust funds and in the delivery of technical assistance to developing countries.<sup>352</sup>

The medium term goal of the review of the state of plant protection in the world has not yet been the subject of work under the IPPC.<sup>353</sup> Unlike the OIE (in the area of animal health), the bodies of the IPPC do not undertake any action with regard to collecting and compiling information on the incidence and spread of plant pests and diseases. This has been criticised in the report of the independent evaluation of the IPPC in 2007, noting that the IPPC is a unique forum for the evaluation of phytosanitary issues at the global level.<sup>354</sup>

### 3.2.3.2 Institutional structure

While originally, the IPPC was administered only by a Secretariat and was implemented by Regional Plant Protection Organisations, the administrative framework of the IPPC has since evolved to accommodate the new increased workload and the change in the status of its standards following the coming into force of the *SPS Agreement*. Several administrative bodies have been created to carry out the functions under the IPPC, under the authority of the governing body known as the Commission on Phytosanitary Measures.

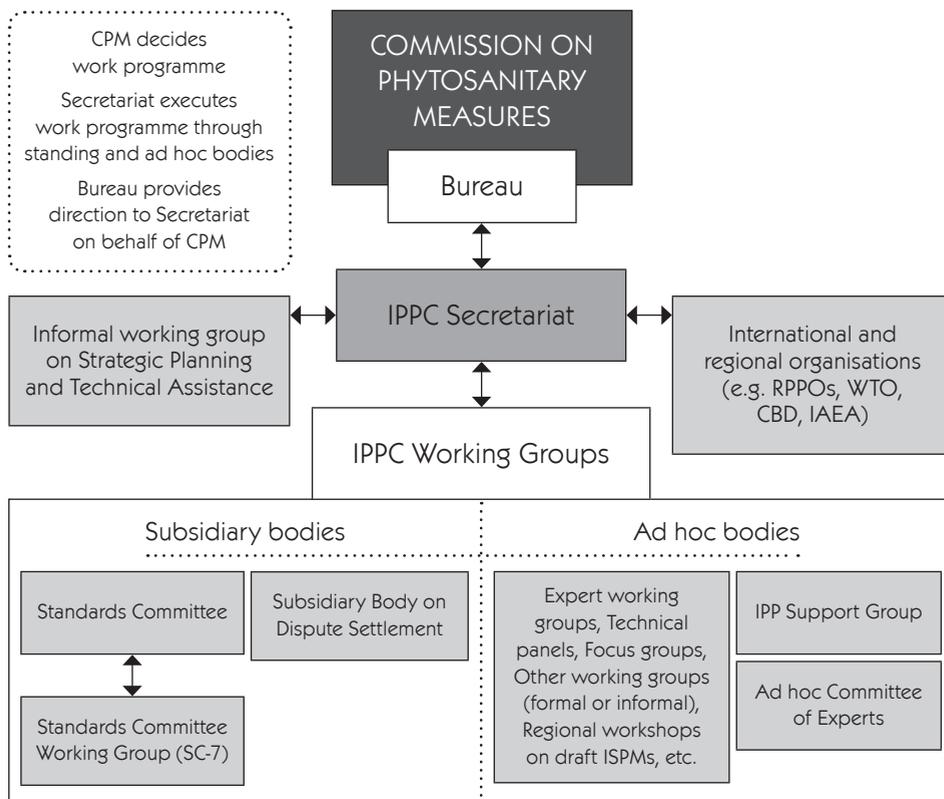

---

<sup>351</sup> Commission on Phytosanitary Measures, *Business Plan 2007-2011* (International Plant Protection Convention, Rome), 29 March 2007, 9, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184265\\_CPMBusinessPlan.pdf?filename=1180093785157\\_Latest\\_Business\\_Plan\\_\\_\\_Revised-1196537010.pdf&refID=184265](https://www.ippc.int/servlet/BinaryDownloaderServlet/184265_CPMBusinessPlan.pdf?filename=1180093785157_Latest_Business_Plan___Revised-1196537010.pdf&refID=184265), visited on 2 April 2008.

**Figure 3: Institutional Structure of the Commission on Phytosanitary Measures**

Source: *International Plant Protection Convention, Procedural Manual, Food and Agriculture Organization, Rome, 1 June 2007, Annex 7.*<sup>355</sup>

In 1992, as a result of its then-expected new standard-setting role under the *SPS Agreement*, the IPPC was provided with its own secretariat by the FAO,<sup>356</sup> within the FAO Plant Protection Service.<sup>357</sup> While it is no longer the case that the administration of the IPPC is entirely in the hands of its Secretariat, the IPPC Secretariat continues to

<sup>355</sup> International Plant Protection Convention, *Procedural Manual* (Food and Agriculture Organization, Rome), 1 June 2007, Annex 7, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/159931\\_Procedural\\_manual\\_20.pdf?filename=1188388585480\\_ProceduralManual2007.pdf&refID=159931](https://www.ippc.int/servlet/BinaryDownloaderServlet/159931_Procedural_manual_20.pdf?filename=1188388585480_ProceduralManual2007.pdf&refID=159931), visited on 10 March 2008.

<sup>356</sup> The IPPC Secretariat is still appointed by the FAO's Director-General through the FAO selection and recruitment procedures. The Secretary of the IPPC Secretariat is also the chief of the FAO Plant Protection Service and only devotes 20% of his time to the IPPC. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 163, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>357</sup> Until 1992, the IPPC was administered directly by the FAO and implemented through the co-operation of national member governments and Regional Plant Protection Organisations.

play an important role. The IPPC Secretariat has a broad mandate. It implements the policies and activities of the CPM and co-ordinates the work-programme, in particular the elaboration of international phytosanitary standards.<sup>358</sup> Unlike the Secretariats of the CAC and the OIE, the IPPC Secretariat plays a substantive role in standard-setting.<sup>359</sup> Further it facilitates the provision of technical assistance (whether provided through the FAO Secretariat, bilaterally or through appropriate international organisations).<sup>360</sup> A third task of the Secretariat is the dissemination of information required by the IPPC and the facilitation of information exchange between contracting parties. The IPPC Secretariat is funded by the FAO and located at the FAO headquarters in Rome. It is composed of 11 persons, a Secretary, a Coordinator and nine professional officers. It is supported by two administrative staff members.<sup>361</sup> Contracting parties supplement the permanent staff of the Secretariat by providing staff through the Visiting Scientist and Associate Professional Officer (APO) programmes.<sup>362</sup>

A concern has been raised in the reviews of the IPPC with regard to the inadequate size of the IPPC Secretariat. In view of its substantive role in standard-setting, the fact that the IPPC Secretariat is short-staffed is particularly problematic.<sup>363</sup> The secondment of staff by contracting parties to the Secretariat does not solve this problem, and leads to a bias in the composition of this influential body towards high-income contracting parties, that are in

---

<sup>358</sup> This information is provided on the page on the IPPC Secretariat on the IPPC website, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzMzMjY2PWVuJjMzPSomMzc9a29z>, visited on 26 March 2008.

<sup>359</sup> In short, the IPPC Secretariat can initiate a new ISPM, it collaborates with the steward in drafting standard specifications, it consults with the Chair of the SC before a draft standard is submitted for consultation, and in the case of standards in the fast-track procedure, it resolves issues raised by comments on the standards before the draft and comments are submitted to the SC. The role of the IPPC Secretariat in standard setting is set out in more detail below, Part II, Section 3.2.3.4.

<sup>360</sup> Article XII of the *New Revised Text* of 1997.

<sup>361</sup> The composition of the IPPC Secretariat as of 1 June 2007 is set out in International Plant Protection Convention, *Procedural Manual* (Food and Agriculture Organization, Rome), 1 June 2007, Annex 10, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/159931\\_Procedural\\_manual\\_20.pdf?filename=1188388585480\\_ProceduralManual2007.pdf&refID=159931](https://www.ippc.int/servlet/BinaryDownloaderServlet/159931_Procedural_manual_20.pdf?filename=1188388585480_ProceduralManual2007.pdf&refID=159931), visited on 10 March 2008.

<sup>362</sup> The 2007 report of the IPPC Secretariat notes that the US supplied two APOs (for standard setting and information exchange), Japan supplied one APO and Canada supplied one visiting scientist to supplement its staff. However, the Secretariat reported that the areas of information exchange and improved phytosanitary capacity were still under-staffed and that problems could be experienced in those areas in fulfilling the requirements of the IPPC Operational Plan. Commission on Phytosanitary Measures, *Report by the Secretariat*, CPM 2007/21 (Food and Agriculture Organization, Rome), 26–30 March 2007, para. 43, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/177435\\_CPM2007\\_21.pdf?filename=1169452364803\\_CPM2007\\_21r.pdf&refID=177435](https://www.ippc.int/servlet/BinaryDownloaderServlet/177435_CPM2007_21.pdf?filename=1169452364803_CPM2007_21r.pdf&refID=177435), visited on 27 March 2008.

<sup>363</sup> At the second session of the CPM, the Chairperson Mr Kedera noted that the lack of staff in the IPPC Secretariat and uncertainties about future improvements to this situation were becoming chronic problems. International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, para. 14, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008. The extraordinarily heavy workload of the IPPC Secretariat was noted with concern in the report of the independent evaluation of the IPPC in 2007. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 162, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

a position to make such secondments. It has been proposed that the position of Secretary of the IPPC become a full time position and that the permanent professional staff of the Secretariat be increased from 1.5 person years to 6 (or alternatively 4) person years.<sup>364</sup>

As noted above, several new bodies have been established to carry out the functions laid down in the IPPC. The *New Revised Text* provides for the establishment of a CPM within the framework of the FAO,<sup>365</sup> which is the new governing body of the IPPC.<sup>366</sup> It is composed of all the contracting parties to the IPPC. Contracting parties are represented in the Commission by delegates, selected by their governments.<sup>367</sup> The CPM meets in annual sessions to implement the objectives of the IPPC, in particular to set the priorities for the adoption of international phytosanitary standards and to adopt such standards.<sup>368</sup> It is assisted by the IPPC Secretariat.<sup>369</sup> The contracting parties in the CPM are required to make every effort to reach agreement on all matters by consensus, although voting is possible as a last resort.<sup>370</sup> In such cases, decisions are taken by a two-thirds majority of the contracting parties present and voting.<sup>371</sup> Since October 2005, when the *New Revised Text* entered into force, the CPM has met twice, once in 2006 and once in 2007.<sup>372</sup> At its First Session, the CPM elected Mr Kedera (Kenya) as its Chairperson.<sup>373</sup>

<sup>364</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, 167, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008. The Independent Evaluation proposed 4 person years, whereas in its analysis of the recommendations of the Independent Evaluation, the SPTA proposed 6 person years as its assumed that less work would be done on a voluntary basis, contrary to the assumption of the Independent Evaluation. International Plant Protection Convention, *Report of the Second Meeting of the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* (Food and Agriculture Organization, Rome), 1-5 October 2007, para. 28, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 27 March 2008.

<sup>365</sup> Article XI of the *New Revised Text* of 1997.

<sup>366</sup> Pending the coming into force of the *New Revised Text*, the FAO established an Interim Commission on Phytosanitary Measures (ICPM), which met in four sessions (First Session, 3-6 November 1998; Second Session, 4-8 October 1999; Third Session, 2-6 April 2001; Fourth Session, 11-15 March 2002). All sessions were held in Rome. In 1999 the ICPM adopted new standard-setting procedures.

<sup>367</sup> According to Article XI.4 of the *New Revised Text* of 1997, each party may be represented by a single delegate. An alternate as well as experts and advisers may accompany the delegate and take part in the proceedings but may not vote (unless the alternate is authorised to replace the delegate).

<sup>368</sup> The Commission may also be convened in Special Sessions.

<sup>369</sup> Articles XI.2(a) and (b) and XII.3 of the *New Revised Text* of 1997. The CPM and IPPC Secretariat have additional tasks that are listed in Articles XI and XII.

<sup>370</sup> Article XI.5 of the *New Revised Text* of 1997.

<sup>371</sup> Article XI.5 of the *New Revised Text* of 1997.

<sup>372</sup> International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006; International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008.

<sup>373</sup> International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, para. 189, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006).

The CPM is headed by a Bureau, which has the task of working with the IPPC Secretariat throughout the year in executing the CPM's work programme. The Bureau chairs CPM Sessions and decides, together with the IPPC Secretariat and Standards Committee, on the selection of experts to participate in Expert Working Groups (EWG) and Technical Panels (TP). It also attends working group meetings and extraordinary meetings of the Standards Committee. The Bureau is currently composed of three persons, namely the Chairperson and two Vice-Chairpersons of the CPM. However, some contracting parties raised concerns with regard to the fact that such a small group of persons is authorised to take such important decisions for the CPM.<sup>374</sup> As a result, in 2007, the CPM adopted an amendment to its rules of procedures, to expand the membership of the Bureau to seven persons. The CPM, at its next session in 2008, must therefore elect a Chairperson and not more than two Vice-Chairpersons and four other persons from among the delegates to form a Bureau of seven persons, so that each FAO region is represented.<sup>375</sup> The term of office would be for two years and the main purpose would be to provide guidance to the CPM on the strategic direction and financial and operational management of its activities.<sup>376</sup>

In 2001, an informal working group was created to formulate recommendations on topics and priorities, including changes in the existing priorities and on procedures for identifying topics and priorities.<sup>377</sup> This body became known the Informal Working Group on Strategic Planning and Technical Assistance (SPTA).<sup>378</sup> The SPTA meets at least

---

pdf?filename=1151505665852\_CPM\_1\_report.pdf&refID=133571, visited on 28 July 2006. Mr Kedera was previously the Chairperson of the ICPM until its replacement by the CPM.

<sup>374</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 148, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>375</sup> The phrase 'from among the delegates' is understood to mean that the members of the Bureau have to be present at the CPM session where the election takes place in order to be elected. This is because members of the Bureau should be familiar with the discussions and decisions made at the annual sessions of the CPM. This first election of a 7 member Bureau will take place at the Third Session of the CPM in April 2008.

<sup>376</sup> These items were introduced into Rule II.1 of the *Rules of Procedure of the CPM*. The meetings of the Bureau will not be open-ended and the Bureau will set its own rules of procedure.

<sup>377</sup> Third Interim Commission on Phytosanitary Measures, *Report of the Third Interim Commission on Phytosanitary Measures*, ICPM 01/REPORT (Food and Agriculture Organization, Rome), 2-6 April 2001, para. 4, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/14320\\_ICPM\\_Report\\_2001\\_\\_E.PDF?filename=1079019159579\\_ICPM3e.PDF&refID=14320](https://www.ippc.int/servlet/BinaryDownloaderServlet/14320_ICPM_Report_2001__E.PDF?filename=1079019159579_ICPM3e.PDF&refID=14320), visited on 2 April 2008. This body is the successor to the Technical Consultation on Strategic Planning, which was created in 1999 as an informal working group of interested contracting parties to develop a strategic plan for the ICPM. It met in 2000 and 2001. Interim Commission on Phytosanitary Measures, *Report of the Second Interim Commission on Phytosanitary Measures*, ICPM-2(1999)/Report (Food and Agriculture Organization, Rome), 4-8 October 1999, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/13804\\_ICPM\\_Report\\_1999\\_\\_E.PDF?filename=/publications/13804.Report\\_of\\_the\\_Second\\_Meeting\\_of\\_the\\_ICPM\\_1999.2001-3-27.PDF&refID=13804](https://www.ippc.int/servlet/BinaryDownloaderServlet/13804_ICPM_Report_1999__E.PDF?filename=/publications/13804.Report_of_the_Second_Meeting_of_the_ICPM_1999.2001-3-27.PDF&refID=13804), visited on 10 March 2008.

<sup>378</sup> The first meeting of the SPTA under its new name was in 2002. In 2004, the ICPM recognised concerns that this important body had no rules of procedure and that its composition tended to be unbalanced. In 2005, the ICPM adopted interim terms of reference for the SPTA, setting out its functions. The final *Terms of Reference and Rules of Procedure for the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* were adopted in 2007. International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, Appendix 9, available at: <https://www.ippc.int/>

once a year, at least 4 months before the CPM session. Its composition is open-ended, comprising a core group of the Bureau of the CPM,<sup>379</sup> the chairpersons of the Standards Committee and the Subsidiary Body on Dispute Settlement and other interested persons from contracting parties.<sup>380</sup> The SPTA undertakes specific tasks related to planning and prioritising the work programme of the CPM and making recommendations to the CPM or its subsidiary bodies in this regard. These tasks include planning and prioritising work with regard to topics for new ISPMs, technical assistance, information exchange, funding issues and liaising with international organisations. The SPTA strives for consensus on all issues regarding its advice or recommendations to the CPM or subsidiary bodies. If consensus cannot be reached, the CPM or subsidiary body is informed of the situation.<sup>381</sup> While formally speaking the SPTA is only an advisory body, it is widely recognised that it has been very influential in the IPPC, including in decision making by the CPM.<sup>382</sup> Due to its informal nature, there are concerns regarding lack of transparency in the work of the SPTA.<sup>383</sup> Also, the relationship between the SPTA and the new expanded Bureau is not clear. As a result, proposals have been made with regard to turning the SPTA into a formal body or combining the functions of the SPTA and the Bureau in a single body. However, it has been agreed to keep the SPTA as an informal body until the effectiveness of the new Bureau can be evaluated.<sup>384</sup>

---

ervlet/BinaryDownloaderServlet/184215\_CPM\_2\_report.pdf?filename=1179929463410\_CPM\_2\_report.pdf&refID=184215, visited on 20 February 2008.

<sup>379</sup> In 2006, the CPM decided that the composition of the SPTA should be formalised, to consist of a core group composed of the enlarged 7-person Bureau (i.e. the Chairperson and two Vice-Chairpersons of the CPM and a representative from each of the remaining 4 FAO regions); the Chairpersons of the SBDS and SC and other interested persons from the contracting parties. International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, para. 105, available at: [https://www.ippc.int/ervlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/ervlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006. In 2007, the CPM decided that the SPTA should remain informal and its membership remain open-ended so that all IPPC contracting parties could participate in its work on an equal basis. It was agreed that the composition of the SPTA in 2007 should be the same as in 2006, namely the core group of 7 members made up of the expanded Bureau, the chairpersons of the subsidiary bodies (SBDS and SC) and other interested persons from the contracting parties. International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, paras 103-104, available at: [https://www.ippc.int/ervlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/ervlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008.

<sup>380</sup> Paragraph 3 of the *Terms of Reference of the SPTA*. The Standards Committee and the Subsidiary Body on Dispute Settlement are discussed below, in this same Section.

<sup>381</sup> Rule 4 of the *Rules of Procedure for the SPTA*.

<sup>382</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 151, available at: [https://www.ippc.int/ervlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/ervlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>383</sup> *Ibid.*

<sup>384</sup> The SPTA itself discussed proposals from the Bureau regarding whether the SPTA should remain open-ended and whether it should become a formal body. It was agreed that the working group should be kept informal until such a time that the effectiveness of the enlarged Bureau could be evaluated. In order to maintain the open-ended nature of the SPTA it was recommended that its membership include the Bureau, the Chairpersons of the two subsidiary bodies and other interested persons from the contracting parties. No observers would be allowed and all representatives would have equal status.

Aside from these policy-oriented bodies, the IPPC has a variety of expert bodies of limited membership. These are responsible for carrying out the more technical tasks set out in the IPPC. The members of such bodies act in their capacity as experts rather than as representatives of contracting parties. To ensure the technical integrity and impartiality of the work carried out within the framework of the IPPC, the members of these bodies are required declare any interests that could constitute a real, potential or apparent conflict of interest.<sup>385</sup> Acting as a representative of a national government does not, however, constitute a conflict of interest.

The CPM has established two standing subsidiary bodies, namely the Subsidiary Body on Dispute Settlement and the Standards Committee.<sup>386</sup> The Subsidiary Body on Dispute Settlement (SBDS), was created to administer the IPPC dispute settlement procedures.<sup>387</sup> The SBDS has 7 members, from each of the FAO regions. The members must have experience in phytosanitary systems, be familiar with the IPPC and its standards, have experience with legislation and regulations, and preferably have some form of dispute settlement or conflict resolution experience or knowledge. These members serve 2-year terms, renewable twice. Under the authority of the SBDS, the FAO Director-General may establish *ad hoc* committees of experts, upon request by the parties to a dispute, to examine the issue in dispute.<sup>388</sup>

The second subsidiary body of the CPM, the Standards Committee (SC), oversees and manages the standard-setting process of the IPPC, but does not itself draft standards.<sup>389</sup>

---

<sup>385</sup> The *Declaration of Interests for Experts within the Framework of the IPPC* is contained in International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, Appendix 12, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008.

<sup>386</sup> Rule IX of the *Rules of Procedure of the CPM* provides that the CPM may establish such subsidiary bodies as it deems necessary for the fulfilment of its functions and shall determine their terms of reference.

<sup>387</sup> The *Terms of Reference and Rules of Procedure for the Subsidiary Body on Dispute Settlement* are to be found in International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, Appendix V, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006. The SBDS replaces the interim Subsidiary Body on Dispute Settlement that was in place pending the entry into force of the *New Revised Text*.

<sup>388</sup> On the dispute settlement procedures administered by the SBDS and the practice to date, see below, Part IV, Section 2.2.6.

<sup>389</sup> In 1993, prior to the establishment of the Standards Committee, the Committee of Experts on Phytosanitary Measures (CEPM) was formed and interim standard-setting procedures were adopted. In 2000, the CEPM was replaced by the Interim Standards Committee (ISC), composed of phytosanitary experts from around the world. In yearly meetings, it examined and provided its views on the documents prepared by the Secretariat. In 2002, Standards Committee (SC) was created as the standard setting body of the Interim Commission on Phytosanitary Measures (pending the entry into force of the *New Revised Text*). Thereafter, at its first session in April 2006, the CPM took over the SC as its standard-setting body, and adopted its terms of reference and rules of procedure. R. Griffin, 'Introduction to the International Plant Protection Convention (IPPC)', in *Multilateral Trade Negotiations on Agriculture: A Resource Manual. Agreement on the Application of Sanitary and Phytosanitary Measures (SPS) and Agreements on Technical Barriers to Trade (TBT)*, Food and Agriculture Organization (ed.), vol. III (Food and Agriculture Organization, Rome), 2000, 28, available at: [www.fao.org/docrep/003/x7354e/X7354e01.htm](http://www.fao.org/docrep/003/x7354e/X7354e01.htm) visited on 21 June 2001. See also International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, para.

Its main objective is to expeditiously prepare draft ISPMs that have been identified by the CPM as priority standards, for adoption by the CPM.<sup>390</sup> It is also responsible for selecting members of EWG and TP as well as stewards.<sup>391</sup> The SC meets at least once a year.<sup>392</sup> The SC is composed of 25 members drawn from each of the seven FAO regions,<sup>393</sup> in order to ensure that it includes a ‘diversity of global views’ on any subject it deals with.<sup>394</sup> The choice of experts on a regional basis is founded on the pragmatic consideration that a range of views can best produce internationally acceptable standards.<sup>395</sup> Members of the SC act as individual experts, not as country representatives, but their views are expected to be characteristic of the region they come from. They should be senior officials of NPPOs, designated by contracting parties. In addition they should have qualifications in a scientific biological discipline (or equivalent) in plant protection, and have experience and skills in the practical operation and administration of a national or international phytosanitary system and the application of phytosanitary measures related to international trade.<sup>396</sup> In addition, SC members must be able to dedicate the time necessary to participate in SC meetings in a regular and systematic way. However, in practice, the existing rules are not

189, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006.

<sup>390</sup> Paragraph 2 of the *Terms of Reference for the Standards Committee*. The SC, in particular, ensures that draft standards fulfil the specification for the standard, fall within the scope of the IPPC’s mandate, are technically based, have scientific integrity, follow the principles and policy of the CPM, are presented in the required format for standards and are written in clear, simple and precise language. See para. 2 of the *Guidelines on the Duties of Members of the Standards Committee*, approved by the Standards Committee in November 2006.

<sup>391</sup> Expert Working Groups, Technical Panels and stewards are discussed below, in this same Section.

<sup>392</sup> Rule 5 of the *Rules of Procedure of the Standards Committee*. Depending on the workload and available resources, the SC or the IPPC Secretariat, in consultation with the Bureau, may request additional meetings of the SC. In practice, normally the SC meets biannually, in May and November of each year.

<sup>393</sup> The distribution for each region will be Africa (4), Asia (4), Europe (4), Latin America and the Caribbean (4), Near East (4), North America (2), and Southwest Pacific (3). Each FAO region may lay down its own procedures for selecting its members of the SC. The selected members are confirmed by the CPM. Members of the SC serve for terms of three years and may not serve more than two terms, unless a region requests the CPM for an exemption. Rules 1 and 3 of the *Rules of Procedure of the Standards Committee* contained in International Plant Protection Convention, *Terms of Reference and Rules of Procedure for the Standards Committee*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 2006, Appendix III, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/142427\\_TORs\\_ROPs\\_SC.doc?filename=1155309920830\\_CPM\\_1\\_Terms\\_of\\_reference\\_and\\_R-221799051.doc&refID=142427](https://www.ippc.int/servlet/BinaryDownloaderServlet/142427_TORs_ROPs_SC.doc?filename=1155309920830_CPM_1_Terms_of_reference_and_R-221799051.doc&refID=142427), visited on 10 March 2008. Note that the process for selection of SC members was criticised as being insufficiently transparent and rigorous by the independent evaluation team established to evaluate the operation and institutional arrangements of the IPPC. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 52, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>394</sup> Para. 2 of the *Guidelines on the Duties of Members of the Standards Committee*, approved by the Standards Committee in November 2006. This provision states that the views of SC members encompass the views of different geographic regions of the world, developed and developing countries, tropical and temperate regions, continental and island nations, highly and sparsely populated countries, countries with intensive agricultural or forestry interests etc.

<sup>395</sup> See para. 2 of the *Guidelines on the Duties of Members of the Standards Committee*, approved by the Standards Committee in November 2006.

<sup>396</sup> Rule 1 of the *Rules of Procedure of the Standards Committee* contained in *Terms of Reference and Rules of Procedure for the Standards Committee*, CPM-1 (2006)/Report, Appendix III, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/142427\\_TORs\\_ROPs\\_SC.doc?filename=1155309920830\\_CPM\\_1\\_Terms\\_of\\_reference\\_and\\_R-221799051.doc&refID=142427](https://www.ippc.int/servlet/BinaryDownloaderServlet/142427_TORs_ROPs_SC.doc?filename=1155309920830_CPM_1_Terms_of_reference_and_R-221799051.doc&refID=142427), visited on 10 March 2008.

rigorously applied in selecting SC members.<sup>397</sup> As a result, the members of the SC often do not have sufficient technical knowledge.<sup>398</sup> The SC met twice in 2006, sending five draft ISPMs and several proposed amendments to the Glossary of Phytosanitary Terms for country consultation, during which over 2300 comments were received.<sup>399</sup>

Aside from the standing subsidiary bodies, the CPM is assisted by *ad hoc* working groups established by the SC. The SC has the competence to establish temporary or permanent working groups and drafting groups, as required, whose members are selected by the SC from among its own members.<sup>400</sup> One of these working groups, composed of 7 members and called the SC-7, has been given a key role in the standard-setting process. The seven members of the SC-7 are selected by the SC members from each FAO region, and they, in turn, select their own chair.<sup>401</sup> No observers are permitted at SC-7 meetings.<sup>402</sup> However, the stewards of the draft ISPMs to be discussed at an SC-7 meeting are invited to attend.<sup>403</sup> The SC-7 meets to review and discuss country comments on draft ISPMs and prepare revised drafts to be considered by the SC.

The SC has also established EWGs and TPs to undertake the drafting of standards. An EWG is an *ad hoc* expert drafting body established to draft a particular standard, whereas a Technical Panel is a standing expert drafting body, established to work in a particular area. An EWG should have six to ten members, which represent a wide geographic area and include proportional developing country representation. Regardless of the composition of the EWG, it should allow a delegate from the host country to participate and should have a member from the SC, normally the steward assigned for that standard.

---

<sup>397</sup> This criticism was made by the independent evaluation team tasked with the evaluation of the operation and institutions of the IPPC in 2006 to 2007. It recommended that the RPOs be given a greater role in the identification of appropriate candidates for SC membership. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 52, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>398</sup> *Ibid.*

<sup>399</sup> International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, para. 20, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008.

<sup>400</sup> Para. 3 of the *Terms of Reference for the Standards Committee*.

<sup>401</sup> In 2006, the SC agreed that if a member of the SC-7 is unable to attend a meeting of the SC-7, he/she can be replaced by another SC member from the same region, chosen through consultation between the original SC-7 member and the other SC members from that region. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), May 2006, para. 64, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/137751\\_SC\\_report\\_May\\_2006.pdf?filename=1153319150093\\_Report\\_SC\\_2006\\_May\\_FINAL\\_with\\_ISPMs.pdf&refID=137751](https://www.ippc.int/servlet/BinaryDownloaderServlet/137751_SC_report_May_2006.pdf?filename=1153319150093_Report_SC_2006_May_FINAL_with_ISPMs.pdf&refID=137751), visited on 27 March 2008.

<sup>402</sup> In 2007, the SPTA discussed the issue of allowing observers to the SC-7. At this meeting the IPPC Secretariat indicated that it was unable to fund observers, and that therefore opening the SC-7 to observers would mean that only countries with sufficient resources would be able to participate as observers, thereby possibly biasing the meetings. In addition, the IPPC Secretariat noted that the presence of observers would make the SC-7 meeting, which is intended to be small, much larger. International Plant Protection Convention, *Report of the Second Meeting of the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* (Food and Agriculture Organization, Rome), 1-5 October 2007, para. 93, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 27 March 2008.

<sup>403</sup> The role of stewards is discussed below, in this same Section.

EWG members should have the necessary qualifications (including scientific expertise or phytosanitary risk management experience) and be able to participate in and contribute to the EWG proceedings.<sup>404</sup> Nominations for EWG members by NPPOs, RPPOs or contracting party governments are requested when the work programme or specifications for the relevant standard are adopted by the CPM.<sup>405</sup> The SC selects the EWG members and submits a list to the CPM Bureau and IPPC Secretariat for confirmation.<sup>406</sup> The participation of those EWG members that are from developed countries should be funded, wherever possible, by their governments or employers.<sup>407</sup> Any member of the CPM Bureau may attend the EWG meeting. While industry representatives or others may be invited to provide expertise, they may not participate as members and no observers should be allowed.<sup>408</sup>

Technical Panels, as stated above, are standing bodies that may be established by the SC and operate under its authority. They work in specific areas to assist in the standard-setting work of the SC, in particular with regard to drafting standards under the 'fast-track' or 'special' procedure discussed below,<sup>409</sup> and providing advice on the request of the SC within their areas of expertise.<sup>410</sup> There are currently five Technical Panels, on diagnostic protocols for specific pests, pest free areas and systems approaches for fruit flies, phytosanitary treatments, forest quarantine and the Glossary of Phytosanitary Terms. The advantage of Technical Panels over EWGs is that the former provide for continuity in the members involved in drafting a series of related standards. The membership of Technical Panels follows the same rules as for Expert Working Groups. They have six to ten members, representing a wide geographic area, including the proportional representation of developing countries. Technical Panel members may also be representatives of other organisations, including RPPOs.<sup>411</sup> Members of Technical Panels should have the necessary expertise and experience in the subject matter of the relevant panel, and should be able to participate in and contribute to the proceedings.<sup>412</sup> They serve for an undefined peri-

---

<sup>404</sup> Para. 2 of the *Guidelines for the Composition and Organization of Expert Working Groups*, contained in Interim Commission on Phytosanitary Measures, *Report of the Fifth Interim Commission on Phytosanitary Measures*, ICPM-5(2003)/Report (Food and Agriculture Organization, Rome), 7-11 April 2003, Appendix XV, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21899\\_ICPM5\\_2003\\_en.pdf.pdf?filename=1053957860772\\_ICPM5Report\\_final\\_en.pdf&refID=21899](https://www.ippc.int/servlet/BinaryDownloaderServlet/21899_ICPM5_2003_en.pdf.pdf?filename=1053957860772_ICPM5Report_final_en.pdf&refID=21899), visited on 10 March 2008.

<sup>405</sup> Para. 3 of the *Guidelines for the Composition and Organization of Expert Working Groups*.

<sup>406</sup> *Ibid.*

<sup>407</sup> Para. 4 of the *Guidelines for the Composition and Organization of Expert Working Groups*.

<sup>408</sup> Rule 10 of the *Rules of Procedure for Technical Panels*, approved by the Standards Committee in November 2006.

<sup>409</sup> See below, Part II, Section 3.2.3.4.

<sup>410</sup> Para. 3 of the *Terms of Reference for Technical Panels*, approved by the Standards Committee in November 2006.

<sup>411</sup> For example, the Technical Panel on Forest Quarantine has a member from the International Forestry Quarantine Research Group, and the Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies has members from the FAO/IAEA Joint Division and from the North American Plant Protection Organization (NAPPO), and Technical Panel for the Glossary has a member from the Comité de Sanidad Vegetal del Cono Sur (COSAVE), one of the RPPOs. See further on RPPOs, below, Part II, Section 3.2.3.4.

<sup>412</sup> Rule 1 of the *Rules of Procedure for Technical Panels*.

od.<sup>413</sup> The SC may agree to invite experts to provide support to a Technical Panel, where necessary.<sup>414</sup>

Due to the need to establish stronger links between the SC and expert drafting groups (i.e., EWGs and Technical Panels), some of the duties involved in the preparation of standards have been entrusted to ‘stewards’ by the SC. These stewards are, if possible, members of the SC itself. They should be senior plant health officials or scientists who are familiar with the IPPC standard-setting procedures.<sup>415</sup> In the case of standards developed in the subject area of the Technical Panel, the Chair of the Technical Panel acts as the steward for the standards.<sup>416</sup> For standards not developed by Technical Panels, but rather by EWGs, the SC assigns a steward from among its members, if possible. The functions of a steward are described in detail in the *Guidelines for the role of a steward of an ISPM*. In brief, the role of a steward is to oversee the work of a Technical Panel or to assist with the development of a standard from the time of drafting of the standard specification to the adoption of the standard by the CPM.<sup>417</sup> The steward participates in the selection of experts for the expert drafting group, explains the standard-setting process and the specifications for the standard to the expert drafting group, assists in the development of discussion papers, assists the IPPC Secretariat in the organisation and running of the meeting, assists the IPPC Secretariat to complete the draft standard and prepare the meeting report, explains the main points of the draft standard to the SC and answers questions and assists the SC in analysing country comments on the draft standard.<sup>418</sup> Although the extent of involvement of a steward in the preparation of a standard varies with the com-

---

<sup>413</sup> Rule 3 of the *Rules of Procedure for Technical Panels*. The SC should regularly review and may change the membership of Technical Panels (for example due to changes in the scientific expertise needed or in the professional duties of experts) and may ‘disestablish’ a Technical Panel when it has completed the specific work assigned to it (see para. 7 of the Terms of Reference for Technical Panels).

<sup>414</sup> For example, in May 2007, the SC agreed that an expert with expertise in the trapping of the *Bactrocera* species of fruit fly be invited to participate in the next meeting of the Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies, as this Technical Panel had identified a lack of expertise on this issue among its members. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 30 April - 4 May 2007, paras 36-37, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzQwMiY2PWVuJjMzPSomMzc9a29z>, visited on 1 April 2008.

<sup>415</sup> Para. 2 of the Guidelines on the Role of a Steward of an ISPM, approved by the Standards Committee in November 2006. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), November 2006, Appendix 20, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/174127\\_SC\\_report\\_Nov\\_2006.pdf?filename=1164985290005\\_Report\\_SC\\_November\\_2006\\_FINAL\\_with\\_ISPMs.pdf&refID=174127](https://www.ippc.int/servlet/BinaryDownloaderServlet/174127_SC_report_Nov_2006.pdf?filename=1164985290005_Report_SC_November_2006_FINAL_with_ISPMs.pdf&refID=174127), visited on 27 March 2008.

<sup>416</sup> Provision of the establishment of Technical Panels was made at the Sixth Session of the ICPM in 2004. Interim Commission on Phytosanitary Measures, *Report of the Sixth Interim Commission on Phytosanitary Measures*, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004, Appendix IX, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008. In November 2006, the SC adopted the Terms of Reference and Rules of Procedure for Technical Panels. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), November 2006, Appendix 2, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/174127\\_SC\\_report\\_Nov\\_2006.pdf?filename=1164985290005\\_Report\\_SC\\_November\\_2006\\_FINAL\\_with\\_ISPMs.pdf&refID=174127](https://www.ippc.int/servlet/BinaryDownloaderServlet/174127_SC_report_Nov_2006.pdf?filename=1164985290005_Report_SC_November_2006_FINAL_with_ISPMs.pdf&refID=174127), visited on 27 March 2008.

<sup>417</sup> Para. 3 of the *Guidelines on the Role of a Steward of an ISPM*.

<sup>418</sup> *Ibid.*

plexity of the standard, it is estimated that a steward needs to invest at least eight weeks of time in a single standard.<sup>419</sup>

The CPM and IPPC Secretariat are assisted in their work by Regional Plant Protection Organizations (RPPOs). RPPOs are intergovernmental organisations that function as co-ordinating bodies within their regions with regard to the areas covered by the IPPC.<sup>420</sup> They, *inter alia*, elaborate regional standards, encourage their members to cooperate in the preparation of: proposals for new or revised ISPMs, comments on specifications for new or revised ISPMs and comments on draft ISPMs received for consultation.<sup>421</sup> They also assist the CPM and IPPC Secretariat in elaborating international standards, for example by identifying regional standards that could be proposed as ISPMs, nominating experts for IPPC expert working groups and technical panels, acting as collaborators or hosts of standard-setting meetings.<sup>422</sup> In addition, technical consultations between the various RPPOs are held to promote the development and use of ISPMs and to encourage inter-regional cooperation in promoting harmonised phytosanitary measures.<sup>423</sup> There are currently nine RPPOs.<sup>424</sup> Regional workshops are held to assist contracting parties to have a better understanding of draft ISPMs.

---

<sup>419</sup> Para. 4 of the *Guidelines on the Role of a Steward of an ISPM*.

<sup>420</sup> Article IX of the *New Revised Text*.

<sup>421</sup> In 1999, the ICPM adopted recommendations laying down these tasks as part of the role of RPPOs in standard-setting. Interim Commission on Phytosanitary Measures, Report of the Second Interim Commission on Phytosanitary Measures, ICPM-2(1999)/Report (Food and Agriculture Organization, Rome), 4-8 October 1999, Appendix VII, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/13804\\_ICPM\\_Report\\_1999\\_\\_E.PDF?filename=/publications/13804.Report\\_of\\_the\\_Second\\_Meeting\\_of\\_the\\_ICPM\\_1999.2001-3-27.PDF&refID=13804](https://www.ippc.int/servlet/BinaryDownloaderServlet/13804_ICPM_Report_1999__E.PDF?filename=/publications/13804.Report_of_the_Second_Meeting_of_the_ICPM_1999.2001-3-27.PDF&refID=13804), visited on 10 March.

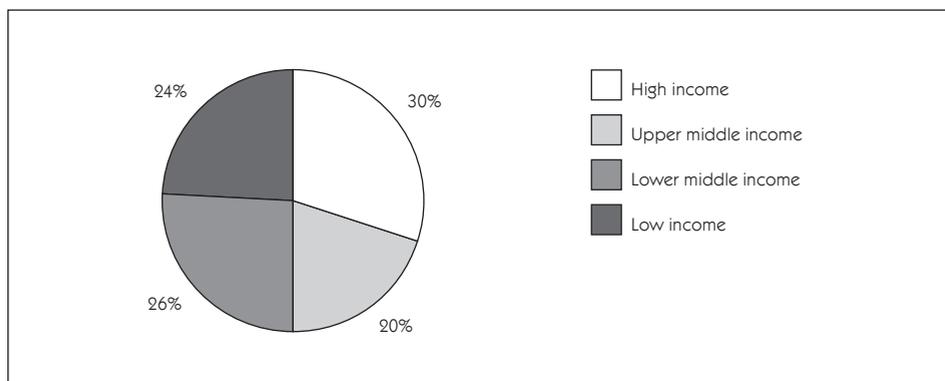

<sup>422</sup> These tasks are specified in Interim Commission on Phytosanitary Measures, Report of the Seventh Interim Commission on Phytosanitary Measures, ICPM-7(2005)/Report (Food and Agriculture Organization, Rome), 4-7 April 2005, Appendix XIX, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/75067\\_Report\\_ICPM7\\_E.pdf?filename=1132938412531\\_ICPM7\\_Report\\_En\\_REV\\_list\\_part.pdf&refID=75067](https://www.ippc.int/servlet/BinaryDownloaderServlet/75067_Report_ICPM7_E.pdf?filename=1132938412531_ICPM7_Report_En_REV_list_part.pdf&refID=75067), visited on 10 March 2008.

<sup>423</sup> Article IX.4 of the *New Revised Text*. Note that before the establishment of the ICPM, the mechanism of technical consultation of RPPOs was the only international forum for discussion on phytosanitary matters, and led to the development of the early ISPMs. Currently, the role and functions of the technical consultation are limited to those set out in Article IX.4, set out above, but its importance remains significant as it is the only opportunity for RPPOs to consult as a group and to exchange information. Developing-country RPPOs have stressed the importance of this opportunity. Interim Commission on Phytosanitary Measures, Report of the Fifth Interim Commission on Phytosanitary Measures, ICPM-5(2003)/Report (Food and Agriculture Organization, Rome), 7-11 April 2003, Appendix XVII, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21899\\_ICPM5\\_2003\\_en.pdf.pdf?filename=1053957860772\\_ICPM5Report\\_final\\_en.pdf&refID=21899](https://www.ippc.int/servlet/BinaryDownloaderServlet/21899_ICPM5_2003_en.pdf.pdf?filename=1053957860772_ICPM5Report_final_en.pdf&refID=21899), visited on 10 March 2008.

<sup>424</sup> As of 20 February 2008, there are nine RPPOs: the Asia and Pacific Plant Protection Commission which has 24 members, of which 22 are also WTO Members, the Caribbean Plant Protection Commission which has 22 members representing 30 countries (i.e. France represents Guadeloupe, French Guiana, Martinique, the Netherlands represents Aruba, and Netherlands Antilles, the UK represents British Virgin Islands, and the US represents United States Virgin Islands and Puerto Rico), of which 22 are WTO Members, the Comité de Sanidad Vegetal del Cono Sur which has 6 member countries, all of them WTO Members, the Comunidad Andina which has 4 member countries, all them WTO Members, the European and Mediterranean Plant Protection Organization which has 49 member countries, of which 39 are WTO Members, the Inter-African Phytosanitary Council which has 53 member countries of which 40 are also WTO Members, the North American Plant Protection Organization which has 3 member countries, all of them WTO Members, the Organismo Internacional Regional de Sanidad Agropecuaria which has 9 member countries, all of which are WTO Members, and the Pacific Plant Protection Organization which has 26 members, including 22 Pacific Island Countries and Territories and 4 founding members (Australia, France, New Zealand, and the

### 3.2.3.3 Contracting parties and observers

**Graph 28: Contracting Parties to the IPPC that are Members of the WTO by Income Level, 2007**

As an international convention, rather than an international organisation, the IPPC has contracting parties rather than members. The IPPC was open for signature by all states until 1 May 1952, and thereafter it was open for adherence by non-signatory states and member organisations of the FAO, such as the European Community.<sup>425</sup>

As of December 2007, the IPPC had 166 contracting parties,<sup>426</sup> of which 134 are also WTO Members.<sup>427</sup> Of these, 28 percent (40) are high-income Members, 20 percent (29)

US), of which 8 are also WTO Members. Not all IPPC contracting parties are members of RPPOs, nor are all RPPO members contracting parties to the IPPC. Furthermore, certain IPPC contracting parties belong to more than one RPPO. See the RPPO page of the International Phytosanitary Portal, the official website of the International Plant Protection Convention, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzMxMCY2PWVuJjMzPSomMzc9a29z>, visited on 20 February 2008. See further R. Griffin, 'Introduction to the International Plant Protection Convention (IPPC)', in *Multilateral Trade Negotiations on Agriculture: A Resource Manual. Agreement on the Application of Sanitary and Phytosanitary Measures (SPS) and Agreements on Technical Barriers to Trade (TBT)*, Food and Agriculture Organization (ed.), vol. III (Food and Agriculture Organization, Rome), 2000, 28, available at: [www.fao.org/docrep/003/x7354e/X7354e01.htm](http://www.fao.org/docrep/003/x7354e/X7354e01.htm), visited on 27 June 2001.

<sup>425</sup> According to Article XVII.2 of the *New Revised Text*, adherence is achieved by the deposit of an instrument of adherence with the FAO Director-General. Where a member organisation of the FAO becomes a contracting party to the IPPC, it must submit such modifications or clarifications to its declaration of competence submitted under the FAO Constitution, as may be necessary under the IPPC. In addition, Article XVII.3 provides that a member organisation must, upon request by any contracting party, provide information regarding which, as between the organisation and its member states, is responsible for implementation of any matter covered by the IPPC.

<sup>426</sup> As on 6 March 2008, see the list of contracting parties on the International Phytosanitary Portal (IPP), the official website of the International Plant Protection Convention, available at: <http://www.fao.org/Legal/TREATIES/004s-e.htm>, visited 6 March 2008.

<sup>427</sup> Committee on Sanitary and Phytosanitary Measures, *Membership in WTO and International Standard - Setting Bodies: Note by the Secretariat, G/SPS/GEN/49/Rev.8*, circulated on 9 October 2007. The data in this document was updated to include Guinea Bissau, which adhered to the IPPC on 24 October 2007. Djibouti, Gabon and Mozambique adhered to the IPPC only in 2008 and are therefore not included in this number. Likewise, the two 2008 accessions to the WTO (Cape Verde and Ukraine) are not taken into account here. Another revision made here to the data in the WTO Secretariat document relates to Macao. Although the Secretariat document counts Macao as a contracting party to the IPPC since Macao is a WTO Member in its

are upper-middle-income Members, 25 percent (36) are lower-middle-income Members and 27 percent (38) are low-income Members. The European Community is a contracting party to the IPPC. It adhered to the IPPC on 6 October 2005 as a ‘member organisation’.

Although observers are not mentioned in the *New Revised Text* of the IPPC, the *Rules of Procedure of the CPM* makes provision for them. Any country that is not an IPPC contracting party but is a member of the FAO as well as of the UN or any of its specialised agencies, or of the International Atomic Energy Agency, may attend meetings of the CPM and its subsidiary bodies as an observer, upon request to the FAO Director-General.<sup>428</sup> In addition, representatives of the RPPOs shall be invited to attend all sessions of the CPM and its subsidiary bodies as observers.<sup>429</sup> The Director General of the FAO, under the guidance of the CPM, may invite international intergovernmental and non-governmental organisations to attend CPM sessions as observers.<sup>430</sup> Further, any IPPC contracting party may attend meetings of subsidiary bodies as an observer upon request to the IPPC Secretary.<sup>431</sup> Observers may submit memoranda and may participate in discussions but may not vote.

At the first Session of the CPM in 2006, observers attended from 15 international intergovernmental organisations (including RPPOs, the FAO and UN specialised agencies), 2 non-governmental organisations and 8 non-contracting party countries.<sup>432</sup> At the Second Session in 2007, observers attended from 16 international intergovernmental organisations (including the FAO and UN specialised agencies), one international non-governmental organisation and 8 non-contracting party countries.<sup>433</sup>

---

own right and the IPPC applies to it by virtue of a decision of the People’s Republic of China under the Basic Law of the Macao Special Administrative Region of the PRC, in fact Macao is not officially a contracting party to the IPPC. As a result, the data presented here has been adjusted accordingly. The same problem does not arise with regard to the WTO Member Hong Kong, China since in accordance with the Basic Law of the Hong Kong Special Administrative Region of the PRC, the PRC has decided that the IPPC does not apply to the Hong Kong Special Administrative Region of the PRC.

<sup>428</sup> Rule VII.1 of the Rules of Procedure of the CPM.

<sup>429</sup> Rule VII.2 of the Rules of Procedure of the CPM.

<sup>430</sup> Rule VII.3 of the Rules of Procedure of the CPM. Rule VII.4 of the Rules of Procedure of the CPM further provides that the FAO Constitution and other pertinent Basic Texts of the FAO govern the participation of international organisations in the work of the CPM.

<sup>431</sup> Rule VII.5 of the Rules of Procedure of the CPM.

<sup>432</sup> International Plant Protection Convention, *Report of the First Session of the Commission on Phytosanitary Measures*, CPM-1 (2006)/Report (Food and Agriculture Organization, Rome), 3-7 April 2006, Appendix XX, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/133571\\_CPM\\_1\\_report\\_2006.pdf?filename=1151505665852\\_CPM\\_1\\_report.pdf&refID=133571](https://www.ippc.int/servlet/BinaryDownloaderServlet/133571_CPM_1_report_2006.pdf?filename=1151505665852_CPM_1_report.pdf&refID=133571), visited on 28 July 2006. The non-contracting party attendees were from Angola, Armenia, Gabon, Madagascar, Myanmar, Qatar, Singapore, and Uganda.

<sup>433</sup> International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/Report (Food and Agriculture Organization, Rome), 26-30 March 2007, Appendix 21, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008. The non-contracting party attendees were from Angola, the Democratic Republic of Congo, Gabon, Mozambique, San Marino, Singapore, Uganda and Zimbabwe.

### 3.2.3.4 Standard-setting procedure

The standard-setting procedure of the IPPC is composed of four stages, divided into eight steps.<sup>434</sup> The first stage is that of determination of topics and priorities (steps 1 and 2), the second that of drafting (steps 3 and 4), the third that of consultation (steps 5 and 6) and the fourth and final stage is that of adoption and publication of the standard (steps 7 and 8). Aside from the regular standard-setting procedure a 'fast track' or 'special' procedure is available for less complex situations.<sup>435</sup> Both procedures are currently at the final stages of the process of revision, and it is expected that the revised procedures will be adopted by the CPM at its Third Session in 2008.<sup>436</sup> Therefore, the discussion below sets out the new procedures, with reference to the current procedures where necessary.

At step 1, the IPPC Secretariat issues a biennial call for topics for new work on ISPMs.<sup>437</sup> Submissions for new topics for standards may be made by National Plant Protection

---

<sup>434</sup> Annex 1 of the *Rules of Procedure of the CPM*, adopted by the Second Session of the ICPM in 1999.

<sup>435</sup> The special procedure, known as the 'fast-track' procedure was adopted in 2004 by the Sixth Session of the ICPM in response to concerns with the slow pace of standard setting. It is intended to be used in highly technical situations, such as where the technical material or resources needed for a standard are available or simple to develop; where technical standards of potential global interest are available that have been approved by RPPOs or other organisations; where technical annexes to existing standards are needed; where minor revisions to standards are needed that are not of a conceptual nature; and where specifically authorised by the CPM. Interim Commission on Phytosanitary Measures, *Report of the Sixth Interim Commission on Phytosanitary Measures*, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004, Appendix X, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008. The SPTA recommended in 2007 that the name be changed to 'special procedure' due to the fact that the procedure is different, but not really faster, than the normal procedure. The change of name was adopted in 2008. The special procedure was initiated for the first time for the revision of Annex 1 of ISPM 15 (on wood packaging materials) but the resulting standard was eventually adopted through the normal standard setting procedure. Since then, work on annexes to two ISPMs (annexes dealing with particular pests, to ISPM 27 on diagnostic protocols for regulated pests; and annexes dealing with irradiation treatment for specific pests, to ISPM 28 on phytosanitary treatments for regulated pests) has been initiated under the special procedure. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 61 and footnote 10, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008. See also Commission on Phytosanitary Measures, *Report of the Second Session of the CPM: Standard Setting Work Programme*, CPM 2007/24 (International Plant Protection Convention, Rome), 26-30 March 2007, Annex 1, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/177411\\_CPM2007\\_24.pdf?filename=1169219668797\\_CPM2007\\_24.pdf&refID=177411](https://www.ippc.int/servlet/BinaryDownloaderServlet/177411_CPM2007_24.pdf?filename=1169219668797_CPM2007_24.pdf&refID=177411), visited on 11 April 2008.

<sup>436</sup> At the Second Session of the CPM, a Focus Group was established to review the procedures and criteria for identifying topics for inclusion on the IPPC work programme, the IPPC standard-setting procedure, the terms of reference and rules of procedure of Technical Panels and the issue of transparency in the standard-setting process. It proposed changes which were then reviewed and amended by the SPTA. After discussion by the SC in November 2007, these revisions have been forwarded for adoption to the Third Session of the CPM to be held in April 2008. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 5-9 November 2007, Appendices 5 and 7, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/191801\\_Report\\_SC\\_Nov\\_2007.doc?filename=1197908679365\\_Report\\_SC\\_Nov\\_2007\\_FINAL\\_with\\_ISPMs.doc&refID=191801](https://www.ippc.int/servlet/BinaryDownloaderServlet/191801_Report_SC_Nov_2007.doc?filename=1197908679365_Report_SC_Nov_2007_FINAL_with_ISPMs.doc&refID=191801), visited on 2 April 2008.

<sup>437</sup> This call is issued to contracting parties, NPPOs, RPPOs and the 'Secretary' of the SPS Committee of the WTO (which seems to refer to the member of the WTO Secretariat's Agriculture and Commodities Division that services the SPS Committee). It is also posted on the International Phytosanitary Portal (IPP), which is the website maintained by the IPPC. Submissions must be made on a prescribed form available on the IPP, and should address the applicable criteria for justification of new work. These criteria are currently under

Organisations (NPPOs), RPPOs, the IPPC Secretariat, and the WTO SPS Committee. At step 2, a summary of submissions is compiled by the IPPC Secretariat and posted on the IPP, as well as presented to the SPTA.<sup>438</sup> The SPTA reviews the submissions and identifies strategic priorities on the basis of the agreed criteria for justification of proposed topics.<sup>439</sup> These criteria are currently under revision.<sup>440</sup> Both the current and the proposed new list of criteria include as a criterion the ‘relevance and utility of a standard to developing countries’. The SC, taking into account the SPTA strategic priorities and the criteria for justification,<sup>441</sup> reviews the existing work programme and the new submissions and proposes a revised work programme.<sup>442</sup> The CPM reviews this proposal, adjusts it if necessary, and adopts the revised standard-setting work programme.<sup>443</sup>

---

revision.

<sup>438</sup> Although the current procedure still refers to the presentation of the summary of proposals to the ICPM, in practice since the establishment of the SPTA, this body determines the strategic priorities and makes a proposal to the CPM on this matter.

<sup>439</sup> For example, at its meeting in October 2007, the SPTA reviewed the submissions from the call for topics and identified as strategic priorities for the Standards Committee: pathways for spread of pests (conveyances, plants for planting, grain, cut flowers, international garbage) and certification systems (including accreditation/authorization) with the view to filling some of the gaps in the framework for standards. International Plant Protection Convention, *Report of the Second Meeting of the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* (Food and Agriculture Organization, Rome), 1-5 October 2007, para. 135, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 27 March 2008.

<sup>440</sup> As noted above a Focus Group was set up in 2007 to review, *inter alia*, the procedure and criteria for identifying new topics for inclusion on the IPPC work programme. The recommendations of the Focus Group in this regard are discussed below, in this same Section.

<sup>441</sup> Pending the decision of the CPM on the new criteria for justification and prioritisation of new topics, the SC evaluates the submissions according to the existing *Procedures for Identifying Topics and Priorities for Standards*, which was adopted in 2002 by the ICPM.

<sup>442</sup> The SC can add, delete or modify topics and gives each topic a recommended priority level (high or normal), identifying those topics that may be elaborated under the special standard-setting procedure. For example, in November 2007, the SC selected 9 submissions to recommend to the CPM for inclusion in the standard-setting work programme, of which four were identified as ‘high priority’. The IPPC Secretariat noted that although the work programme already includes a long list of topics, continuing to add to this list ensures that work can proceed steadily and that when resources become available for new work, the Secretariat will be in a position to utilise them. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 5-9 November 2007, paras 41 and 46, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/191801\\_Report\\_SC\\_Nov\\_2007.doc?filename=1197908679365\\_Report\\_SC\\_Nov\\_2007\\_FINAL\\_with\\_ISPMs.doc&refID=191801](https://www.ippc.int/servlet/BinaryDownloaderServlet/191801_Report_SC_Nov_2007.doc?filename=1197908679365_Report_SC_Nov_2007_FINAL_with_ISPMs.doc&refID=191801), visited on 2 April 2008.

<sup>443</sup> This work programme is attached as an appendix to the CPM meeting report. Note that additions to the work programme of topics for technical standards falling under the scope of work of any of the Technical Panels do not require CPM adoption. It is assumed that CPM approval has been given by the establishment of the Technical Panel by the CPM. The Technical Panels are under the authority of the SC, whose approval must be sought for the addition of topics to their work programme. The existing standard-setting procedures, including the assignment of stewards and the prior development of specifications apply. However, these technical standards will be developed under the fast-track process, unless the SC decides otherwise. For purposes of transparency, all new topics for technical standards under each Technical Panel is added to the standard-setting work programme presented to the CPM, indicating that their addition was approved by the SC. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), November 2006, para. 23, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/174127\\_SC\\_report\\_Nov\\_2006.pdf?filename=1164985290005\\_Report\\_SC\\_November\\_2006\\_FINAL\\_with\\_ISPMs.pdf&refID=174127](https://www.ippc.int/servlet/BinaryDownloaderServlet/174127_SC_report_Nov_2006.pdf?filename=1164985290005_Report_SC_November_2006_FINAL_with_ISPMs.pdf&refID=174127), visited on 27 March 2008.

At step 3, the SC appoints a steward, usually a member of the SC, for each topic (or Technical Panel). The steward, in collaboration with the IPPC Secretariat, is responsible for drafting a specification for a standard, taking into account the proposal for the topic.<sup>444</sup> As a result, the steward plays a key role in the initial formulation of the basis of the standard. The draft specification is reviewed by the SC, and may be amended and/or adopted. Thereafter the adopted specification is made available on the IPP for a 60-day consultation period.<sup>445</sup> The IPPC Secretariat compiles the comments received, posts them on the IPP and submits them to the steward and the SC. The specification is amended as necessary on the basis of the comments received, and adopted by the SC. Thereafter it is published on the IPP.

At step 4, in accordance with the relevant specification, a standard is drafted (or revised) by an expert drafting group, which may be an Expert Working Group or a standing Technical Panel designated by the SC. Expert Working Groups are established to draft standards under the normal procedure. Technical Panels are designated only where a standard is to be developed under the fast-track procedure.<sup>446</sup> As noted above, there are currently five Technical Panels each working in a specific area. The resulting draft standard is forwarded via the Secretariat to the SC. If the normal procedure is being followed, either the SC or, in most cases, the SC-7 holds a meeting to review the draft.<sup>447</sup> It decides whether to approve the draft and send it on to the consultation phase (step 5), to return it to the steward or expert drafting group for further work, or to put it on hold. If the special procedure is being followed, the SC takes its decision by email, if possible.

At step 5 draft standards approved by the SC are distributed by the IPPC Secretariat to contracting parties, RPPOs, NPPOs and relevant international organisations for consultation. The draft is also posted on the IPP. The consultation period lasts 100 days.<sup>448</sup> Written submissions are compiled by the IPPC Secretariat and, in the normal procedure, submitted to the steward and SC for consideration.<sup>449</sup> In the special procedure the Secretariat

---

<sup>444</sup> The current procedure in Annex 1 to the *Rules of Procedure for the ICPM* (now CPM) states that specifications are drafted by the IPPC Secretariat only, but the current procedural manual notes that a steward is assigned to each topic added to the IPPC work programme. International Plant Protection Convention, *Procedural Manual* (Food and Agriculture Organization, Rome), 1 June 2007, para. 9.4.1, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/159931\\_Procedural\\_manual\\_20.pdf?filename=1188388585480\\_ProceduralManual2007.pdf&refID=159931](https://www.ippc.int/servlet/BinaryDownloaderServlet/159931_Procedural_manual_20.pdf?filename=1188388585480_ProceduralManual2007.pdf&refID=159931), visited on 10 March 2008.

<sup>445</sup> The current procedures were amended in 2004 to no longer state only that the specification is made available to contracting parties and RPPOs for the 60-day consultation period, but instead to provide that the IPPC Secretariat is requested to post drafts on the IPP and to continue to send hard copies to NPPOs.

<sup>446</sup> Previously, Technical Panels had a broader mandate, but in 2004 the ICPM limited the role of Technical Panels to the fast-track procedure. Interim Commission on Phytosanitary Measures, *Report of the Sixth Interim Commission on Phytosanitary Measures*, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004, para. 77, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008.

<sup>447</sup> If only the SC-7 meets, comments by any other SC member will also be taken into account.

<sup>448</sup> The original 120 day consultation period was shortened to 100 days in 2004, to allow the SC and IPPC Secretariat enough time to review the comments. Interim Commission on Phytosanitary Measures, *Report of the Sixth Interim Commission on Phytosanitary Measures*, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004, para.77, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008.

<sup>449</sup> Compiled comments are also posted on the IPP.

submits the compilation of comments, to the Technical Panel and SC for consideration, by email if possible.

At step 6 the SC-7 and the SC take the comments into account and revise the draft standard. In the normal procedure, the SC then decides whether to forward the revised draft to the CPM for adoption, to return it to the steward or expert drafting group, to put it on hold, or to submit it for another round of consultations. In the report of the SC meeting, a summary of the discussion and of the SC reactions to substantive comments not incorporated into the standard is provided.<sup>450</sup> In the special procedure, the IPPC Secretariat tries to resolve the issues raised in comments with the countries involved. If the draft is not changed after resolution of the issues raised in comments, it is sent directly to the CPM for adoption. If comments resulted in changes to the draft, the draft is submitted to the SC, which examines the draft in consultation with the Technical Panel and if appropriate modifies it.<sup>451</sup> The SC then decides (by email if possible) whether to forward the revised draft to the CPM for adoption. Draft ISPMs are posted on the IPP at least six weeks before the next CPM Session.

At step 7, the draft standard following approval of the SC, is put on the agenda of the CPM for adoption. Comments on draft standards must be sent to the IPPC Secretariat at least 14 days before the CPM meeting. In the normal procedure, comments are discussed at the CPM meeting and the CPM decides whether to adopt the ISPM. The CPM must make every effort to reach consensus – only if ‘all efforts to reach consensus have been exhausted and no agreement has been reached’ may a decision, as a last resort, be taken by a two-thirds majority of CPM members present and voting.<sup>452</sup> An exception applies if the proposed ISPM is being introduced before the CPM for the first time. In such cases, if consensus is not reached on adoption of the ISPM, it must be referred back to the appropriate subsidiary body, together with the comments of the CPM thereon, for further consideration.<sup>453</sup> In the special procedure, if no formal objection is received up to 14 days before the CPM meeting, the ISPM is adopted without discussion. If comments are received, the draft is sent back to the SC to decide how to proceed.<sup>454</sup> At step 8, the

---

<sup>450</sup> This summary of SC reactions to unincorporated comments was included in the standard-setting procedure in response to particular concerns raised in discussions that contracting parties should receive proper feedback on how their comments on draft ISPMs were taken into account. For the first time in November 2007, the stewards, SC-7 and SC made an attempt to draft such summaries for each standard, and these were included with each standard in the SC report. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 5-9 November 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/191801\\_Report\\_SC\\_Nov\\_2007.doc?filename=1197908679365\\_Report\\_SC\\_Nov\\_2007\\_FINAL\\_with\\_ISPMs.doc&refID=191801](https://www.ippc.int/servlet/BinaryDownloaderServlet/191801_Report_SC_Nov_2007.doc?filename=1197908679365_Report_SC_Nov_2007_FINAL_with_ISPMs.doc&refID=191801), visited on 2 April 2008.

<sup>451</sup> Originally, the special procedure provided that if a draft was changed due to comments, it would be sent to the CPM for discussion. However, as noted by the SPTA, the CPM is not an appropriate forum for technical discussion as the necessary experts are unlikely to attend. Therefore the SPTA amended the procedure to refer the draft back to the SC. International Plant Protection Convention, *Report of the Second Meeting of the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* (Food and Agriculture Organization, Rome), 1-5 October 2007, para. 99, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 27 March 2008.

<sup>452</sup> Rule VI.2 of the *Rules of Procedure of the CPM*.

<sup>453</sup> Rule X.2 of the *Rules of Procedure of the CPM*.

<sup>454</sup> The SC decides, if possible via email, how to proceed, including the possibility for submitting the draft to the CPM for adoption through the normal procedure.

adopted ISPM is appended to the report of the CPM Session and published by the IPPC Secretariat, which also posts the ISPM on the IPP.

The standard-setting procedure of the IPPC is less resource intensive than that of the CAC. This is due to the fact that, since most IPPC bodies have limited membership, contracting parties need to attend a much smaller number of meetings. However, this also reduces the possibilities for a contracting party to influence the outcome of the standard-setting process. As a result, aside from increasing the importance of a balanced selection of members of the relevant bodies, as discussed above, this situation makes it even more crucial that, at those stages in the process that are open to all contracting parties, effective participation at different levels of development be ensured.

The procedure of standard setting at the IPPC has been subject to review by the external team on the Independent Evaluation of the Workings of the IPPC and its Institutional Arrangements (the Independent Evaluation team),<sup>455</sup> as well as by the IPPC Focus Group on the Review of the IPPC Standard Setting Procedures (the Focus Group)<sup>456</sup> in 2007. Some of the concerns identified in those reviews deserve to be mentioned here as they are of relevance to the effective participation of contracting parties at different levels of development.

One of these concerns relates to the procedure and criteria for identifying new topics for inclusion in the IPPC standard-setting work programme and for the prioritisation of these topics. As mentioned above, while submissions for new topics may be made by all NPPOs and RPPOs, as well as by the IPPC Secretariat and the WTO SPS Committee, the decision by the CPM on which new topics will be added to the work programme is based on the SC proposal taking into account a list of agreed criteria. The Independent Evaluation team viewed the existing criteria as useful and as a good basis for prioritisation, but noted that there are many criteria and it is not clear how they are used in the process of approving and prioritising new topics for the standard-setting work programme.<sup>457</sup> It proposed that a

---

<sup>455</sup> The Independent Evaluation of the Workings of the IPPC and its Institutional Arrangements is a result of the request by the Seventh Session of the ICPM for input on the future policy, strategy and management of the IPPC, and for analysis of the current management of the IPPC. The report of the team conducting this independent evaluation was presented to the FAO Programme Committee in its 98<sup>th</sup> Session in 2007. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>456</sup> The Second Session of the CPM in 2007 decided to convene a Focus Group on the Review of the IPPC Standard Setting Procedures. The report of the Focus Group was submitted in July 2007. Focus Group on the Review of IPPC Standard Setting Procedures, Report of the Focus Group (International Plant Protection Organization, Rome), 16-20 July 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/189350\\_Report\\_FG\\_2007.pdf?filename=1193215805220\\_Report\\_2007\\_FG\\_on\\_standard\\_set-1163088563.pdf&refID=189350](https://www.ippc.int/servlet/BinaryDownloaderServlet/189350_Report_FG_2007.pdf?filename=1193215805220_Report_2007_FG_on_standard_set-1163088563.pdf&refID=189350), visited on 9 April 2008. It was agreed that the findings of the Focus Group would be analysed by the SPTA and the outcome considered by the SC and then by the CPM at its Third Session in 2008.

<sup>457</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para.62, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

ranking or weighting of criteria be devised to facilitate prioritisation.<sup>458</sup> The Focus Group recommended three core criteria that all submissions for new standards should meet, namely the contribution of the standard to the purpose of the IPPC; the feasibility of implementation at global level (including technical complexity, relevance for more than one region and the capacity of NPPOs to implement the standard); and the clear identification of problems that need to be resolved through the development of the standard. In addition, 19 supporting criteria were recommended, subdivided into technical, practical, economic, environmental and strategic criteria.<sup>459</sup> One of the strategic criteria is the relevance and utility of the standard for developing countries. The proposed list of criteria was reviewed by the SPTA and by the SC and forwarded to the CPM for adoption in its 2008 Session.<sup>460</sup> The implementation of the new criteria is intended to result in greater transparency in the selection of new topics and a clearer basis for this selection. It should, *inter alia*, lead to a work programme that systematically takes into account developing country priorities and technical capacities.

A second concern is that the short time frame for standard setting in the IPPC results in insufficient time for consideration and incorporation of comments of contracting parties, which has a negative impact on the quality of the standards. It also diminishes the possibilities for effective participation by those contracting parties that do not have the resources to respond quickly to requests for comments. In the current procedure, draft standards approved by the SC are posted on the IPP in January and the CPM session where the standards are to be adopted takes place in March or April of the same year. Contracting parties must submit their comments 14 days before the CPM session and these comments are distributed in the CPM meeting in the language in which they were submitted. As a result, contracting parties (especially those with resource constraints)

---

<sup>458</sup> *Ibid.*, para.63. The Independent Evaluation team pointed out that the lack of clarity regarding the use of the current criteria for prioritisation has led to a disproportionate number of high priority topics for standards on the current work programme. In 2007, 77 of the total of 86 items on the work programme had been given high priority status. On the work programme for 2008, 5 of the 7 new topics are characterised as high priority. As noted by the Independent Evaluation team, the fact that the number of high priority standards on the work programme exceeds the number of standards that are adopted each year is an indication that the current designation of priority topics is not realistic.

<sup>459</sup> Focus Group on the Review of IPPC Standard Setting Procedures, *Report of the Focus Group* (International Plant Protection Organization, Rome), 16-20 July 2007, Annex 4, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/189350\\_Report\\_FG\\_2007.pdf?filename=1193215805220\\_Report\\_2007\\_FG\\_on\\_standard\\_set-1163088563.pdf&refID=189350](https://www.ippc.int/servlet/BinaryDownloaderServlet/189350_Report_FG_2007.pdf?filename=1193215805220_Report_2007_FG_on_standard_set-1163088563.pdf&refID=189350), visited on 9 April 2008. The technical criterion is the availability of information, or possibility to collect information, in support of the standard. Practical criteria are, for example, the feasibility of adopting the standard within a reasonable time frame and the availability of the necessary expertise. Economic criteria include the value of trade affected by the proposed standard and the value of new trade opportunities provided by the proposed standard. Environmental criteria are, for example, the contribution of the standard to the protection of the environment. Strategic criteria other than the relevance and utility of the standard for developing countries, include the urgent need for the standard and the extent of support for the proposal.

<sup>460</sup> CPM Informal Working Group on Strategic Planning and Technical Assistance, *Report of the Second Meeting* (International Plant Protection Convention, Rome), 1-5 October 2007, para. 16, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 1 April 2008. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 5-9 November 2007, paras 52-54, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/191801\\_Report\\_SC\\_Nov\\_2007.doc?filename=1197908679365\\_Report\\_SC\\_Nov\\_2007\\_FINAL\\_with\\_ISPMs.doc&refID=191801](https://www.ippc.int/servlet/BinaryDownloaderServlet/191801_Report_SC_Nov_2007.doc?filename=1197908679365_Report_SC_Nov_2007_FINAL_with_ISPMs.doc&refID=191801), visited on 2 April 2008.

have insufficient time to review the comments before they are discussed at the CPM session.<sup>461</sup> Both the reports of the Focus Group and of the Independent Evaluation team, contain proposals for an extended time schedule for the regular standard-setting process, adding at least one year to the current time-frame.<sup>462</sup> These proposals aim to improve the quality of the ISPMs and enable contracting parties to participate more effectively in the standard-setting process.

A third, but related, concern has been raised with regard to the overloaded agenda of the annual CPM sessions. Due to the lack of time for the consideration of comments on draft standards prior to CPM sessions in the current standard setting process, there is no possibility for consensus building in advance of the CPM session. Therefore much of the CPM session is devoted to detailed discussion of contracting parties' views on the draft standards.<sup>463</sup> However, the agendas of CPM Sessions cover not only the adoption of ISPMs but all six 'strategic directions' of the IPPC.<sup>464</sup> Between 20 and 30 agenda items are covered in each Session, among which is the adoption of international standards. The full agenda means that delegates have a heavy workload in preparing their country positions if they are to participate effectively in decision making in the CPM. In the report of the Independent Evaluation team, it is noted that stakeholders find the agenda too detailed.<sup>465</sup> This makes it difficult to devote the necessary time to the discussion of important agenda items. Further, it is not easy to ensure that all the views on draft standards expressed at CPM meetings are properly addressed in building a consensus for the

---

<sup>461</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 63, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>462</sup> In its review of the recommendations of the Focus Group, the SPTA noted that this proposal does not require a formal amendment to the standard-setting procedure, as the SC is currently free to decide when to submit a draft ISPM to the CPM for adoption. The SC will now start using this possibility to extend the schedule for review of comments on draft ISPMs sent out for consultation, so that drafts may be presented to the CPM for adoption two years after the consultation period. Both the Focus Group and the SPTA noted the need for flexibility so that urgently needed standards, or those on which few comments were received, could be adopted within the current time frame. International Plant Protection Convention, *Report of the Second Meeting of the CPM Informal Working Group on Strategic Planning and Technical Assistance (SPTA)* (Food and Agriculture Organization, Rome), 1-5 October 2007, para. 115, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 27 March 2008.

<sup>463</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 64, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>464</sup> The 'strategic directions' of the IPPC are mentioned above, Part II, Section 2.3.2.1, note 340. Since the end of 2007, the six 'strategic directions' have been replaced by the seven 'medium term goals' of the IPPC, also set out above, Part II, Section 3.2.3.1.

<sup>465</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 143, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

adoption of the standard.<sup>466</sup> This lack of time may lead to rushed changes to draft ISPMs at the CPM session.<sup>467</sup>

A fourth concern that has been raised relates to the issue of transparency in IPPC standard-setting procedures. Although some decisions to improve transparency were taken in 2004, these have not been fully implemented.<sup>468</sup> Currently access to documents containing input to and output of the SC, for example reports from Technical Panels and EWGs, is restricted.<sup>469</sup> This means that contracting parties that do not have members in these bodies, are uninformed as to the content of these documents. The Focus Group was asked to review a paper submitted by Brazil, Chile and Paraguay on this issue, which suggested broader dissemination, preferably through the IPP, of all documents exchanged and produced in the standard-setting process.<sup>470</sup> This paper noted that all contracting parties should be fully engaged in the standard-setting process, rather than only consulted at the comments stage of the process. Making available all documents, including the comments of other contracting parties and the reactions of the SC to comments received, promptly to all contracting parties would ensure that views could be enriched by the comments of others. It would also enhance the understanding of why comments are rejected or incorporated into draft standards. It would also reduce the last minute influx of comments on draft standards in the 14-day period before the CPM Session in which the draft standard is up for adoption.<sup>471</sup> In response to the proposal of Brazil, Chile and Paraguay, the Focus Group noted that documents for Technical Panels or EWGs are often drafts, and may contain personal or proprietary information, or unpublished scientific information. Making these publicly available would discourage the provision of information and could mislead the public.<sup>472</sup> The Focus Group considered, instead, that a level of transparency appropri-

<sup>467</sup> *Ibid.*, para. 54.

<sup>468</sup> Interim Commission on Phytosanitary Measures, *Report of the Sixth Interim Commission on Phytosanitary Measures*, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004, Appendix 9, paras 6-7, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008. It was decided then that all country comments should be published on the IPP, that the IPPC Secretariat should produce and make accessible a generic summary of SC reactions to these comments and that the SC members should report back to the countries in their regions. In addition, it was recommended that modern telecommunication, such as email and teleconferencing, be used to advance discussion on standards. However, it was provided that email communication be used to supplement, but not replace, face-to-face expert meetings.

<sup>469</sup> These documents are posted on the IPP, but in a restricted area access to which requires a password. The SC decides who may have access to particular documents. In some cases only members of the expert drafting group involved, or SC members, have access.

<sup>470</sup> Commission on Phytosanitary Measures, *Improvement of Transparency in the Development of International Standards for Phytosanitary Measures. Proposal of Brazil, Chile and Paraguay*, CPM 2007/31 (International Plant Protection Convention, Rome), 23-30 March 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/182254\\_CPM2007\\_31.pdf?filename=1173975771673\\_CPM\\_2007\\_31.pdf&refID=182254](https://www.ippc.int/servlet/BinaryDownloaderServlet/182254_CPM2007_31.pdf?filename=1173975771673_CPM_2007_31.pdf&refID=182254), visited on 11 April 2008.

<sup>471</sup> *Ibid.*

<sup>472</sup> It was noted that scientists may be reluctant to publicly share information before they have published their scientific papers. In addition, the concern was raised that a policy of posting all documents on the IPP could result in the withholding of information, verbal rather than documented reporting at meetings, or sending documents directly to participants, bypassing the IPPC Secretariat. Also, the fact that documents in the early stages of drafting might be misleading to the general public was noted. Focus Group on the Review of IPPC Standard Setting Procedures, *Report of the Focus Group* (International Plant Protection Organization, Rome),

ate for the standard-setting process would be ensured if the following documents would be made available to all contracting parties on the IPP: all documents *approved* at an SC meeting; all reports of Technical Panels and EWGs; the compilation of country comments made by the IPPC Secretariat; the agenda and list of participants of the SC; the revised draft ISPMs and draft specifications presented to the SC; and the list of SC documents.<sup>473</sup> Another recommendation, made by the Independent Evaluation team, is that the reports of meetings of the SC, EWGs and Technical Panels should contain sufficient detail on the discussion that took place on key issues related to the draft standards and that these reports should be available before the consultation period.<sup>474</sup> This would allow for more informed discussion, raise the level of the comments submitted in the consultation period and result in better quality standards. The SPTA has agreed with this recommendation and recommended that the IPPC Secretariat remind the relevant IPPC bodies of the need for detailed reports of their meetings.<sup>475</sup> One can expect that, if these recommendations are adopted, the resulting improved transparency will enable contracting parties, particularly those with limited resources, to be better informed and therefore to make more successful use of the opportunities available to influence the standard-setting process.

### 3.2.3.5 Participation in standard setting

The only IPPC body of which all contracting parties are members is the CPM, previously the ICPM. This body is not only responsible for making decisions on matters of policy under the IPPC, but also decides on new topics for standard setting and adopts new standards. While provision is made in its Rules of Procedure for adoption of standards by a two-thirds majority vote if consensus cannot be achieved, to date all ISPMs have been adopted by consensus.<sup>476</sup> Attendance of CPM meetings is important if a WTO Member wants to ensure that its interests are reflected in key decisions. Since the institutional reforms following the coming into force of the *SPS Agreement*, attendance of the (I)CPM has been steadily increasing, from 82 contracting parties in 1998 at the first meeting of the ICPM, to 129 contracting parties at the second meeting of the CPM in 2007. Attendance

---

16-20 July 2007, para. 96, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/189350\\_Report\\_FG\\_2007.pdf?filename=1193215805220\\_Report\\_2007\\_FG\\_on\\_standard\\_set-1163088563.pdf&refID=189350](https://www.ippc.int/servlet/BinaryDownloaderServlet/189350_Report_FG_2007.pdf?filename=1193215805220_Report_2007_FG_on_standard_set-1163088563.pdf&refID=189350), visited on 9 April 2008.

<sup>473</sup> *Ibid.*, para. 99. In addition the Focus Group suggested that, on request of an SC member or a contracting party's contact point, any other document could be made available on the IPP if the SC and the author of the document (if applicable) agree.

<sup>476</sup> Interim Commission on Phytosanitary Measures, *Developing Country Participation in IPPC Standard-Setting and Listing of Experts for IPPC Working Groups 2000-2002*, ICPM 03/INF/2 (International Plant Protection Convention, Rome), 7-11 April 2003, para. 11, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21133\\_English.pdf?filename=1051088293796\\_ICPM03\\_INF2.pdf&refID=21133](https://www.ippc.int/servlet/BinaryDownloaderServlet/21133_English.pdf?filename=1051088293796_ICPM03_INF2.pdf&refID=21133), visited on 18 April 2008. On decision making in the CPM, see above, Part II, Section 3.2.3.2.

by middle- and low-income contracting parties is growing commensurately.<sup>477</sup> In particular, attendance of African contracting parties rose sharply between the fourth and fifth meetings of the ICPM in 2002 and 2003, due to support from the Special Trust Fund for the IPPC (discussed below).<sup>478</sup>

**Graph 29: Commission on Phytosanitary Measures, Second Session: Attendance by WTO Members by Income Level, 2007**

At the Second Session of the Commission on Phytosanitary Measures in 2007,<sup>479</sup> participation closely reflected the membership of the IPPC. Of the 166 contracting parties, 129 were represented, of which 103 were WTO Members. Of these, 31 percent were high-income Members, 20 percent were upper-middle-income Members; 24 percent were lower-middle-income Members and 25 percent were low-income Members.

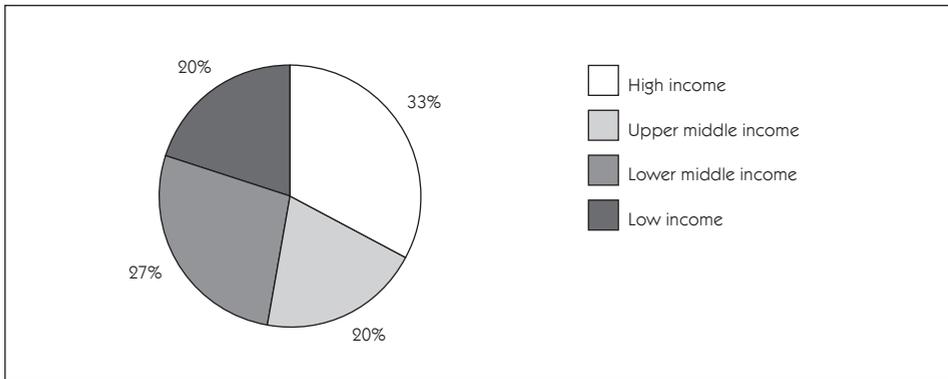

However, the strength of the representation of different WTO Members, as reflected in the size of their delegations, also deserves attention.

<sup>477</sup> At the first two sessions of the ICPM in 1998 and 1999, middle- and low-income contracting parties accounted for 80% of those represented at the sessions. At the most recent session of the CPM in 2007, they accounted for 95%. For the data on the 1998 and 1999 ICPM sessions, see *ibid.*, para. 10.

<sup>478</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 142, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_I\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_I_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008. This report notes that the number of African contracting parties attending ICPM meetings almost doubled, from 15 in 2002 to 29 in 2003. The Special Trust Fund of the IPPC is discussed further below, in this same Section.

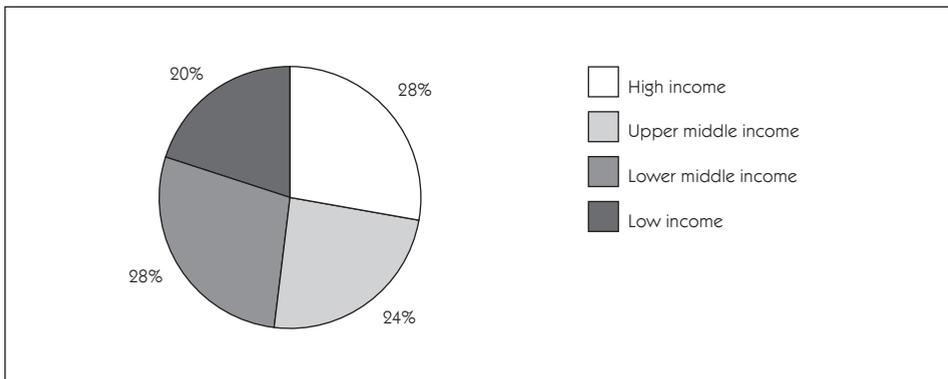

<sup>479</sup> At this meeting, 31 high-income WTO Members, 21 upper-middle-income WTO Members, 24 lower-middle-income WTO Members and 27 low-income WTO Members were represented. International Plant Protection Convention, *Report of the Second Session of the Commission on Phytosanitary Measures*, CPM-2 (2007)/ Report (Food and Agriculture Organization, Rome), 26-30 March 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184215\\_CPM\\_2\\_report.pdf?filename=1179929463410\\_CPM\\_2\\_report.pdf&refID=184215](https://www.ippc.int/servlet/BinaryDownloaderServlet/184215_CPM_2_report.pdf?filename=1179929463410_CPM_2_report.pdf&refID=184215), visited on 20 February 2008.

**Graph 30: Commission on Phytosanitary Measures, Second Session: Delegates of WTO Members by Income Level, 2007**

In total 33 percent of the participants from WTO Members at the Second Session of the CPM were delegates of high-income WTO Members, 20 percent were delegates of upper-middle-income Members, 27 percent were delegates of lower-middle-income Members and 20 percent were delegates of low-income Members.<sup>480</sup>

**Graph 31: Commission on Phytosanitary Measures, Second Session: Average Number of Delegates per WTO Member by Income Level, 2007**

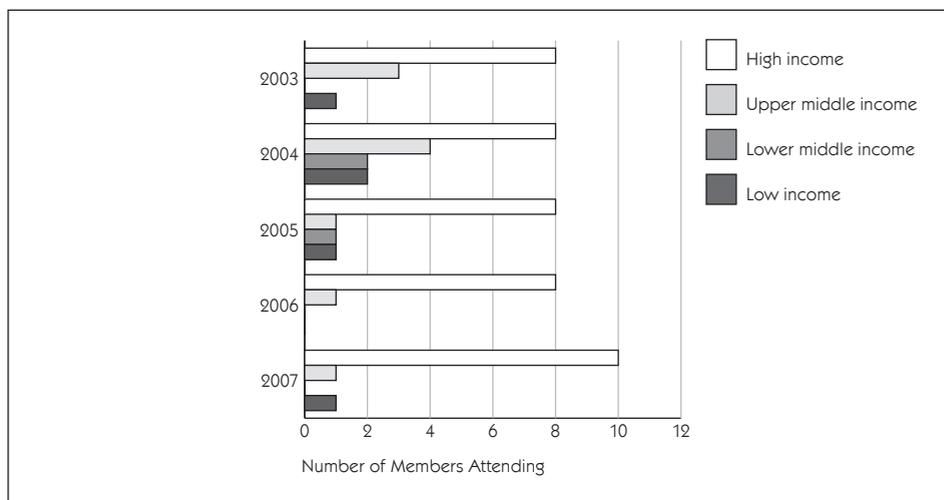

The average number of delegates per WTO Member represented at the Second Session of the CPM by income level was 2,54 for high-income Members, 2,19 for lower-middle-income Members, 2,52 for upper-middle income Members and 1,76 for low-income Members.

<sup>480</sup> In total 234 delegates of WTO Members were present. These were 79 delegates of high-income Members, 46 delegates of upper-middle-income Members, 63 delegates of lower-middle-income Members and 46 delegates of low-income Members. These numbers are based on the list of delegates provided in the report of the second session of the CPM. See *Ibid.*, Appendix 21.

As noted above, the SPTA is an open-ended working group in that, aside from its core members (the enlarged Bureau of the CPM,<sup>481</sup> and the chairpersons of the SC and the SBDS), it is open for membership to interested persons from any contracting party. This has made it possible for the SPTA to benefit from the efforts of a relatively small group of persons with extensive IPPC experience.<sup>482</sup> Members of the SPTA, where possible, fund their own travel and subsistence for the attendance of meetings. However, SPTA members that are members of the Bureau or Chairpersons of the two subsidiary bodies may request financial assistance from the FAO for meeting attendance. If financial assistance is available, priority will be given to developing-country participants.<sup>483</sup>

**Graph 32: IPPC Informal Working Group on Strategic Planning and Technical Assistance: Attendance by WTO Members by Income Level, 2003-2007**

In practice, an examination of participants' lists of SPTA meetings<sup>484</sup> shows that the composition of the SPTA in most years has been unbalanced, in favour of high-income WTO

<sup>481</sup> The Bureau which heads the CPM is currently composed of the Chairperson and two Vice-Chairpersons of the CPM. These are Chagema J Kedera (Kenya), Reinouw Bast-Tjeerde (Canada) and Ralf Lopian (Finland). As discussed above, a decision was taken by the CPM in 2007 to expand the Bureau to 7 members but this will only take effect once the new members have been elected at the Third Session of the CPM in 2008. In the meantime, in addition to the existing Bureau, the core members of the SPTA include representatives from the 7 FAO regions. *Ibid.*, Appendix 21.

<sup>482</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 151, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>483</sup> Article 3 of the Terms of Reference for the SPTA.

<sup>484</sup> The data presented here was obtained from the participants' lists included in the SPTA meeting reports of 2003 to 2007. While the SPTA meeting report of 2002 is available, it does not include a list of participants and therefore data for that year cannot be included. As done elsewhere in this chapter, when presenting the data regard is had only to WTO Members that are contracting parties to the IPPC (consequently, the attendance

Members.<sup>485</sup> In the period 2003-2007, of the total of 60 participants in SPTA meetings, 70 percent (42) were from high-income WTO Members, 17 percent (10) were from upper-middle-income WTO Members, 5 percent (3) were from lower-middle-income WTO Members and 8 percent (5) were from low-income WTO Members.<sup>486</sup> In addition, the report of the Independent Evaluation team notes that it has proved difficult to ensure continuity of membership of developing country attendees.<sup>487</sup>

The unbalanced composition of the SPTA is a matter of concern when seen in the light of the significant role of this body in the governance of the IPPC. To address this problem, in 2004 a recommendation was adopted by the ICPM that the IPPC Secretariat seek to facilitate the participation of two developing country representatives per FAO region, for the 2005 SPTA meeting.<sup>488</sup> This decision applied only for that meeting and, even then,

---

of Lebanon in 2003, 2004 and 2005, and of Samoa in 2005 is not reflected in the data). Further, the data presented here does not take into account the participants that are part of the core group of the SPTA (the Bureau and representatives of the remaining FAO regions) or the Chairpersons of the SBDS or SC. In addition, participants from the IPPC Secretariat and observers from the FAO have been omitted. All of the omitted participants, aside from the non-WTO Members, do not represent particular contracting parties and therefore cannot be classified by income level.

<sup>485</sup> A similar calculation to that presented here, but taking into account SPTA core group members (i.e. the Bureau and the representatives of the 7 FAO regions), is contained in the 2007 report of the independent evaluation of the IPPC. This report notes that the attendance of developed and developing country participants in SPTA meetings between 2003 and 2006 was as follows: 2003: 8 developed and 6 developing country participants; 2004: 8 developed and 11 developing country participants, 2005: 9 developed and 7 developing country participants and 2006: 11 developed and 5 developing country participants. FAO Programme Committee, Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements (Food and Agriculture Organization, Rome), 17-21 September 2007, para.149, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Report.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Report.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>487</sup> FAO Programme Committee, Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 149, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Report.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Report.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>488</sup> Interim Commission on Phytosanitary Measures, Report of the Sixth Interim Commission on Phytosanitary Measures, ICPM-6 (2004)/Report (Food and Agriculture Organization, Rome), 29 March - 2 April 2004,

its implementation is not reflected in the data on participants.<sup>489</sup> In that and other SPTA meetings, the balance of participants has remained skewed towards high-income WTO Members.

As noted above, the permanent and *ad hoc* subsidiary bodies of the IPPC, unlike the CPM, have limited membership. This membership reflects the seven FAO regions, or, in the case of EWGs and Technical Panels, represents ‘a wide geographic area’, including the proportional representation of developing countries. Although members of the IPPC subsidiary bodies participate in their capacity as experts, rather than as representatives of particular contracting parties, it is envisioned that through their participation, the standard-setting bodies incorporate a diversity of views in order to contribute to the drafting of internationally acceptable standards.<sup>490</sup> This diversity should not only be regional, but should also reflect a range of levels of development, phytosanitary and climatic conditions, etc.<sup>491</sup> However, a major problem that has been identified with regard to the selection of members of IPPC bodies is the limited availability and readiness of individuals to participate, given the workload at their current institutions and the inadequate resources to fund their travel and time.<sup>492</sup> As a result, compromises have to be made to achieve ‘a working set of members’.<sup>493</sup> These compromises may result in an over-representation of contracting parties at higher levels of development.

It is therefore useful to examine the membership and attendance of WTO Members at different income levels in the various IPPC bodies in order to determine the extent to which the ‘diversity of views’ currently reflected incorporates the views of WTO Members at different levels of economic development.

As already mentioned, the Standards Committee is the body charged with overseeing the standard-setting process at the IPPC, and plays a critical role in this process. It is responsible for the advancement of standards at two stages in the standard-setting process.<sup>494</sup> Its members are selected by each FAO region, and are confirmed by the CPM. An examination of the membership of the Standards Committee by WTO Members across income levels is useful in determining the level of influence of WTO Members at different levels of economic development in the elaboration of IPPC standards.

---

para. 84, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/34062\\_ICPM6\\_2004\\_en.pdf?filename=1085664580297\\_ICPM6\\_Report\\_final.pdf&refID=34062](https://www.ippc.int/servlet/BinaryDownloaderServlet/34062_ICPM6_2004_en.pdf?filename=1085664580297_ICPM6_Report_final.pdf&refID=34062), visited on 26 March 2008.

<sup>489</sup> Even taking into account the non-WTO Member participants and the participant from the Bureau, the number of middle- and low-income country participants in the 2005 meeting was only 7.

<sup>490</sup> See for example para. 2 of the *Guidelines on the Duties of the Members of the Standards Committee*, discussed above, Part II, Section 3.2.3.2.

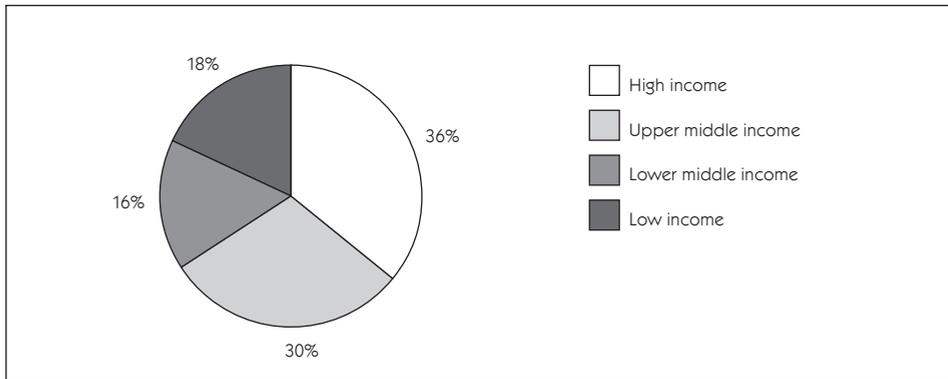

<sup>491</sup> *Ibid.*

<sup>492</sup> FAO Programme Committee, Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 57, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>493</sup> *Ibid.* Note, however, that in the case of the Standards Committee, discussed below, the attendance of meetings by its members is funded by the IPPC Secretariat.

<sup>494</sup> As explained above, the SC reviews and approves draft ISPMs before they are made available for comments in the consultation phase, and it also reviews comments received, amends draft ISPMs and decides whether to submit them to the CPM for adoption.

**Graph 33: Graph 33: IPPC Standards Committee: Standards Committee Members that are WTO Members by Income Level, 2007**

The examination of the membership of the Standards Committee in May and November 2007 indicates that this influential body was dominated by members from high-income and upper-middle-income WTO Members, respectively accounting overall for 36 percent and 30 percent of the WTO Members that were members of this body in 2007.<sup>495</sup> Lower-middle-income and low-income WTO Members respectively accounted for only 16 percent and 18 percent of the SC members that were WTO Members in that year.

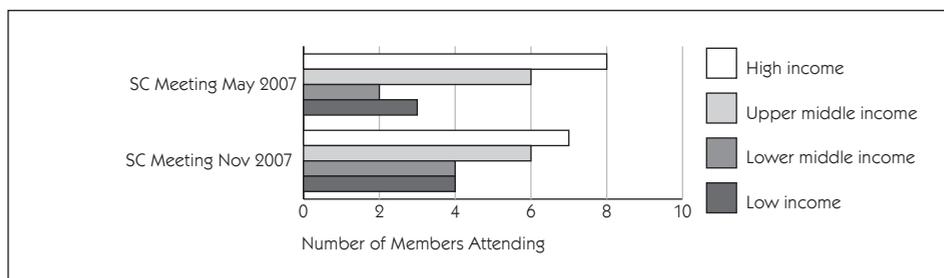

Attendance of SC meetings is funded by the IPPC Secretariat,<sup>496</sup> except where the government of the member involved voluntarily waives funding. Nevertheless, not all SC members are able to attend all meetings. In fact, one concern raised with regard to SC members is the fact that some of them are not released from their normal duties by their governments or employers in order to allow them to attend SC meetings.<sup>497</sup>

<sup>495</sup> To facilitate comparison with the data on attendance of SC meetings in 2007, the membership of the SC in 2007 is presented here, rather than that in 2008. In 2007, all but three members of the SC were from contracting parties that were WTO Members. The SC members in May 2007 were from Australia, Argentina, Brazil, Canada, China, Costa Rica, the European Community, Germany, India, Israel, Japan, Jordan, Latvia, Malaysia, New Zealand, Nigeria, South Africa, Sudan, Syria, Tonga, Uganda, the US, Uruguay, Yemen, and Zambia. In November 2007, a member from Indonesia replaced the member from Malaysia. Of all these SC members, Sudan, Syria and Yemen are not WTO Members. The membership of the SC changed again in 2008. In its current composition, the SC includes a member from Denmark (instead of the member from the European Community), a member from Turkey instead of the member from Syria and has a different member from Canada – the remaining members are the same as in the previous composition. Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 30 April - 4 May 2007, Appendix 19, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzQwMiY2PWVuJmZpSomMzc9a29z>, visited on 1 April 2008; International Plant Protection Convention, *Standards Committee Membership* (International Plant Protection Convention, Rome), 23 January 2008, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/179715\\_SC\\_members\\_contact\\_i.doc?filename=1201075805403\\_SC\\_members\\_contact\\_info\\_2008\\_01\\_23.doc&refID=179715](https://www.ippc.int/servlet/BinaryDownloaderServlet/179715_SC_members_contact_i.doc?filename=1201075805403_SC_members_contact_info_2008_01_23.doc&refID=179715), visited on 10 March 2008.

<sup>497</sup> This concern was raised by the independent evaluation team tasked with the evaluation of the operation and institutions of the IPPC in 2006 to 2007. FAO Programme Committee, *Independent Evaluation of the*

**Graph 34: IPPC Standards Committee: Attendance by Standards Committee Members that are WTO Members by Income Level, 2007**

In 2007, of the SC members that were WTO Members attending the meetings, 38 percent (15) were from high-income WTO Members, 30 percent (12) were from upper-middle-income WTO Members, 15 percent (6) were from lower-middle-income WTO Members and 17 percent (7) were from low-income WTO Members.<sup>498</sup> The SC members from India, South Africa and Tonga were unable to attend the meeting of the SC held in May 2007, and that of Australia was unable to attend the meeting held in November 2007.<sup>499</sup>

Membership of the SC-7 is even more unbalanced than that of the SC. In 2007, the members of the SC-7 were from Canada, China, Costa Rica, Germany, Jordan, New Zealand and South Africa, all WTO Members.<sup>500</sup> Of these countries, 42 percent (3) are high-income WTO Members, 29 percent (2) are upper-middle-income WTO Members, 29 percent (2) are lower-middle-income WTO Members, and none are low-income WTO Members.

The scientific expertise on which the ISPMs are based is derived from the EWGs and Technical Panels that elaborate the draft standards under the supervision of the relevant steward. The EWGs and Technical Panels have limited membership. While members participate in their capacity as experts rather than as country representatives, they are selected to represent a wide geographic area. In addition, the proportional representation of developing countries is aimed at. This reflects recognition of the fact that scientific viewpoints are influenced by the background of the expert involved.<sup>501</sup> It is useful to exam-

*Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 52, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>498</sup> As elsewhere in this chapter, the information on attendance takes into account only WTO Members. The non-WTO Members that attended the SC meeting of May 2007 are Sudan, Syria and Yemen. Sudan and Yemen also attended the SC Meeting of November 2007.

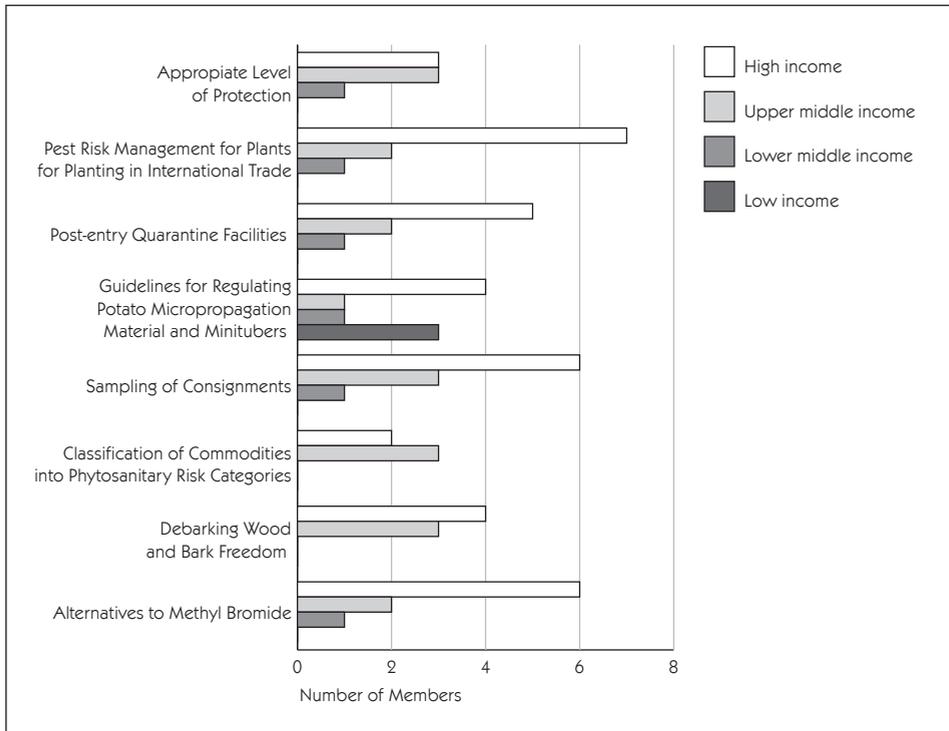

<sup>499</sup> In addition, the SC member from Syria (not a WTO Member) was unable to attend the meeting of November 2007.

<sup>500</sup> The participants' list for the SC-7 in 2007 can be found on the page on the SC-7 meeting of 2007 of the IPP, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzI5Mi4xMjc0OTkmNj1lbiYzMz1ldmVudHMmMzc9aW5mbw~>, visited on 26 March 2008. The composition of the SC-7 in 2006 was the same, except that there was a member from Brazil (also an upper-middle-income WTO Member) instead of the Costa Rican member of the SC in 2007. The participants' list for the SC-7 in 2006 is available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzM1NS40MzExMSY2PWVuJjMzPWV2ZW50cyYzNz1pbmZv>, visited on 26 March 2008.

<sup>501</sup> For a discussion of the value-laden nature of scientific expertise, and the myth of universal or objective science, see above, Part II, Section 1.5.

ine the membership and participation in these expert drafting groups by WTO Members across different income levels to determine to what extent the scientific perspectives of Members at different levels of development are incorporated in ISPMs.

**Graph 35: IPPC Expert Working Groups: EWG Members that are WTO Members by Income Level, 2007**

An indication of the membership of EWGs drafting ISPMs is provided by an examination of nine EWGs that were working on standards that were part of the IPPC standard-setting work programme in 2007.<sup>502</sup> All but two of the 65 members of these EWGs were experts from WTO Members.<sup>503</sup> Of the total number of members of the relevant EWGs

<sup>502</sup> Another indication of the membership of EWGs is provided by the review in 2007 of the drafting of a sample of ten ISPMs, carried out in the context of the independent evaluation of the IPPC. This review indicates that the majority (48%) of participants in the EWGs drafting the selected ten standards were from developed countries, with developing countries accounting for 30% and the remaining 10% being made up of RPPO participants (which include developing countries) and the IPPC Secretariat. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 57, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Report.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Report.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

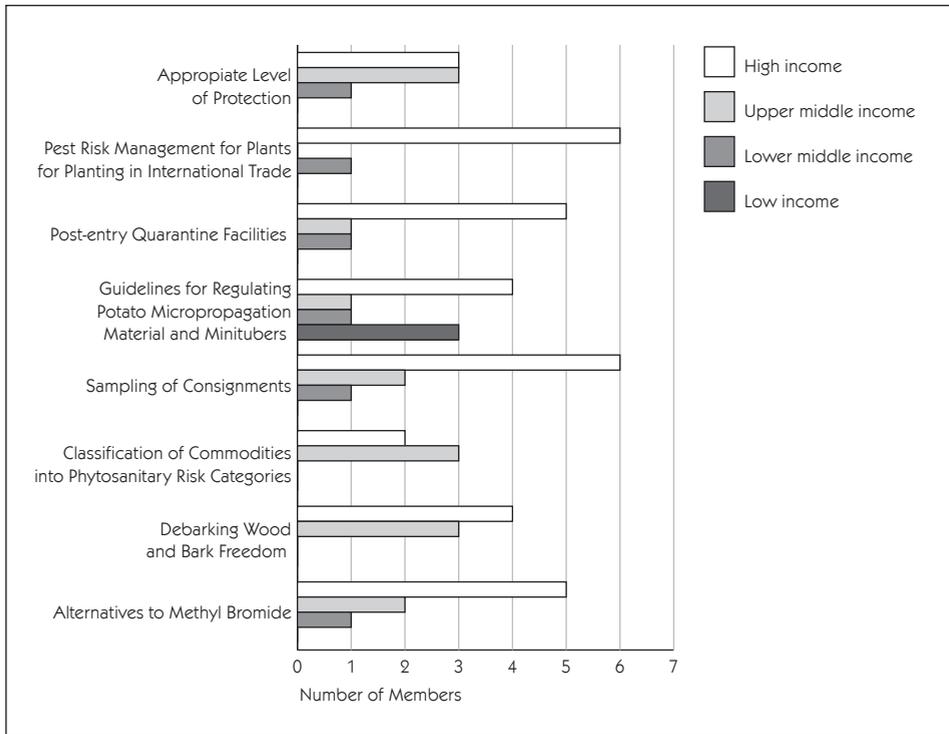

<sup>503</sup> The two EWG members that were not experts from a WTO Member were the member of the EWG on Alternatives to Methyl Bromide that was from the UNDP, Montreal Protocol, Regional Office for Latin American and the Caribbean, and the member of the EWG on Appropriate Level of Protection that was from the WTO Secretariat.

that were WTO Members, 57 percent (37) were from high-income WTO Members, 29 percent (19) were from upper-middle-income WTO Members, 9 percent (6) were from lower-middle-income WTO Members and 5 percent (3) were from low-income WTO Members.<sup>504</sup> The surprisingly high membership of low-income Members, who are otherwise completely absent from the EWGs examined here, in the EWG on Guidelines for Potato Micropropagation Material and Minutubers is explained by the importance of the topic for India and the South Pacific islands.<sup>505</sup>

<sup>504</sup> This data was drawn from the lists of participants and absent members in the EWG meeting reports of all EWGs elaborating standards that were on the IPPC standard-setting work programme in 2007. However, many of the relevant EWGs did not meet in 2007. Nevertheless, they were considered in generating this data as their work was ongoing in the year under consideration. The reports relied upon are the following: Expert Working Group on Alternatives to Methyl Bromide, *Report of the Expert Working Group on Alternatives to Methyl Bromide* (International Plant Protection Convention, Orlando), 30 October - 3 November 2006, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/183954\\_Report\\_EWG\\_Methyl\\_br.doc?filename=1178634989508\\_EWG\\_report\\_Methyl\\_bromide\\_FINAL.doc&refID=183954](https://www.ippc.int/servlet/BinaryDownloaderServlet/183954_Report_EWG_Methyl_br.doc?filename=1178634989508_EWG_report_Methyl_bromide_FINAL.doc&refID=183954), visited on 9 April 2008; Expert Working Group on Debarking of Wood and Bark Freedom, *Report of the Expert Working Group on Debarking of Wood and Bark Freedom* (International Plant Protection Convention, Aas), 6-10 June 2005, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/124443\\_Report\\_EWG\\_report\\_Debarking.doc?filename=1146746850877\\_Report\\_EWG\\_DEBARKED\\_AND\\_BARK\\_F-1150223015.doc&refID=124443](https://www.ippc.int/servlet/BinaryDownloaderServlet/124443_Report_EWG_report_Debarking.doc?filename=1146746850877_Report_EWG_DEBARKED_AND_BARK_F-1150223015.doc&refID=124443), visited on 9 April 2008; Expert Working Group on Classification of Commodities into Phytosanitary Risk Categories, *Report of the Expert Working Group on Classification of Commodities into Phytosanitary Risk Categories* (International Plant Protection Convention, Kleinmachnow), 18-22 September 2006, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/183948\\_Report\\_EWG\\_Classific.doc?filename=1178634754538\\_Report\\_EWG\\_Classification\\_of\\_c-390496381.doc&refID=183948](https://www.ippc.int/servlet/BinaryDownloaderServlet/183948_Report_EWG_Classific.doc?filename=1178634754538_Report_EWG_Classification_of_c-390496381.doc&refID=183948), visited on 9 April 2008; Expert Working Group on Sampling of Consignments, *Report of the Expert Working Group on Sampling of Consignments* (International Plant Protection Convention, Ottawa), 18-22 July 2005, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/183951\\_Report\\_EWG\\_Sampling.doc?filename=1178634852520\\_EWG\\_report\\_Sampling\\_of\\_consignments\\_FINAL.doc&refID=183951](https://www.ippc.int/servlet/BinaryDownloaderServlet/183951_Report_EWG_Sampling.doc?filename=1178634852520_EWG_report_Sampling_of_consignments_FINAL.doc&refID=183951), visited on 9 April 2008; Expert Working Group on Guidelines for Regulating Potato Micropropagation, *Report of the Expert Working Group on Guidelines for Regulating Potato Micropropagation* (International Plant Protection Convention, Edinburgh), 12-16 September 2005, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/107323\\_Report.doc?filename=1135789491954\\_Potatoes\\_EWG\\_Report.doc&refID=107323](https://www.ippc.int/servlet/BinaryDownloaderServlet/107323_Report.doc?filename=1135789491954_Potatoes_EWG_Report.doc&refID=107323), visited on 9 April 2008; Expert Working Group on Post-Entry Quarantine Facilities, *Report on Expert Working Group on Post-Entry Quarantine Facilities* (International Plant Protection Convention, Clermont Ferrand), 23-27 May 2005, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/107175\\_quarantine.doc?filename=1135691355617\\_EWG\\_Report\\_post\\_entry\\_quarantine.doc&refID=107175](https://www.ippc.int/servlet/BinaryDownloaderServlet/107175_quarantine.doc?filename=1135691355617_EWG_Report_post_entry_quarantine.doc&refID=107175), visited on 9 April 2008; Expert Working Group on Pest Risk Management for Plants for Planting in International Trade, *Report of the Second Meeting of the Expert Working Group on Pest Risk Management for Plants for Planting in International Trade* (International Plant Protection Convention, Vancouver), 26 February - 2 March 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/201554\\_2007\\_Report\\_Pest\\_ris.doc?filename=1207143261816\\_REPORT\\_EWG\\_Pest\\_risk\\_managemen1364784651.doc&refID=201554](https://www.ippc.int/servlet/BinaryDownloaderServlet/201554_2007_Report_Pest_ris.doc?filename=1207143261816_REPORT_EWG_Pest_risk_managemen1364784651.doc&refID=201554), visited on 9 April 2008; Expert Working Group on Appropriate Level of Protection, *Report of the Expert Working Group on Appropriate Level of Protection* (International Plant Protection Convention, Ottawa), 23 August - 1 September 2006, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184106\\_Report\\_EWG\\_ALOP.doc?filename=1179214789083\\_Report\\_EWG\\_ALOP\\_2007\\_04\\_24\\_final.doc&refID=184106](https://www.ippc.int/servlet/BinaryDownloaderServlet/184106_Report_EWG_ALOP.doc?filename=1179214789083_Report_EWG_ALOP_2007_04_24_final.doc&refID=184106), visited on 9 April 2008.

<sup>505</sup> The topic of the EWG relates to the development of guidance on measures to reduce the risks from regulated pests associated with potato micropropagation material and minutubers in international trade. Internationally, large numbers of pests are associated with potato propagative material. According to the Regional Potato and Sweet potato Improvement Network in Eastern and Central Africa (PRAPACE), the single most important constraint for potato production is the shortage of clean planting material. Micropropagation or propagation in vitro offers a solution to the problem, provided that the propagation material is pathogen free. As micropropagation material and potato minutubers are intended for use in vegetative propagation, if this material or tubers are infected, there is a great risk of spreading pests or diseases. Various trade-restrictive measures are

**Graph 36: IPPC Expert Working Groups: Attendance by EWG Members that are WTO Members by Income Level, 2005-2008**

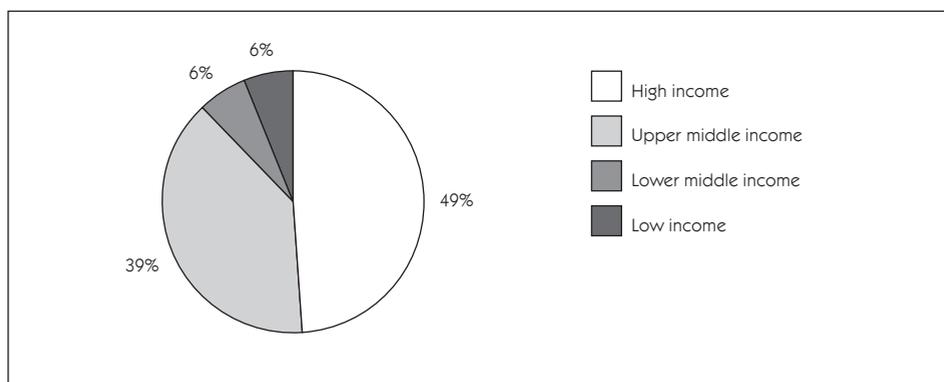

Not all EWG members attend the meetings of the relevant EWG. Of the 60 members of the relevant EWGs that actually attended the meetings, all but one were experts from

taken by importing countries to address this risk. The EWG was established to elaborate guidelines for such phytosanitary measures. In some South East Asian and South Pacific countries, including India, Thailand and Papua New Guinea (all members of this EWG), micropropagation has been promoted as a way to improve agricultural production. Transfer of technology, dissemination and adoption of micropropagation techniques from developed countries have been very successful in Thailand and India, resulting in the establishment of around 30 semi-commercial plant tissue culture companies in Thailand and more than 50 commercial laboratories, with a total capacity of 210 million plants per annum, in India. Similarly, micropropagation has been successfully introduced into South Pacific Island countries in order to diminish reliance on the extremely fragile ecosystems and limited natural resources of these countries. It was first introduced into the region through the tissue culture laboratory established by the South Pacific Commission (SPC), Plant Protection Service to increase the number of varieties of the main root and tuber crops available in the Pacific island countries, and to facilitate their trade by ensuring their pathogen-tested status. The importance of this topic for South East Asian and South Pacific countries explains the fact that both the steward and one other EWG member are from India (the latter from the Central Potato Research Institute, in Shimla, India), and another two members are from Thailand and Papua New Guinea. Edgar J. DaSilva and Mary Taylor, 'Island Communities and Biotechnology', *Electronic Journal of Biotechnology* 1 (1), 1998, 1-10, available at: <http://www.ejbiotechnology.info/content/vol1/issue1/full/1/1.pdf>, visited on 14 April 2008; J. Prakash, 'Plant Tissue Culture: Concept to Commercialisation in South East Asia', *International Society for Horticultural Science Acta Horticulturae* 560 (IV), 2001, 571-574, available at: [http://www.actahort.org/books/560/560\\_117.htm](http://www.actahort.org/books/560/560_117.htm), visited on 15 April 2008.

WTO Members.<sup>506</sup> Of these, 58 percent (35) were from high-income WTO Members, 25 percent (15) were from upper-middle-income WTO Members, 10 percent (6) were from lower-middle-income WTO Members and 5 percent (3) were from low-income WTO Members.<sup>507</sup>

As mentioned above, each topic for a new ISPM is assigned a steward by the SC, usually from among the SC members. The steward is a full member of the EWG or Technical Panel drafting the ISPM and plays a key role in its development.<sup>508</sup> It is therefore important to determine the extent to which WTO Members at different levels of development are selected as stewards.

**Graph 37: IPPC Expert Working Groups: Stewards that are from WTO Members by Income Level, 2007**

An examination of the stewards assigned to the 34 draft ISPMs on the IPPC standard-setting work programme in 2007 shows that 33 of the draft ISPMs had a steward from a WTO Member.<sup>509</sup> The remaining ISPM had a steward from the International Atomic

<sup>506</sup> The single EWG member attending the EWG meeting that was not from a WTO Member was the member from the UNDP, Montreal Protocol, Regional Office for Latin American and the Caribbean, who participated in the EWG on Alternatives to Methyl Bromide.

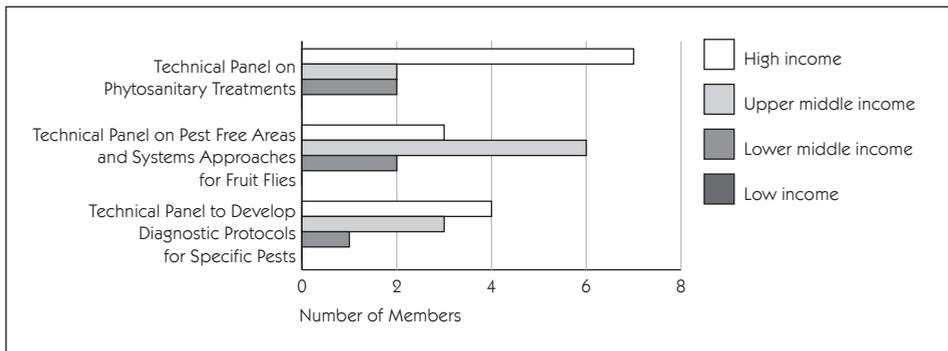

<sup>507</sup> This data covers only EWGs working on standards that were part of the IPPC standard-setting work programme in 2007. Some of these EWGs met in 2007, but several met in previous years. The data is taken from the reports of the EWGs that are available in IPPC website. It therefore does not consider EWGs which have not yet met, or for which a report is not yet publicly available. Stewards, chairs and hosts have been considered as part of the EWG, as have members of EWGs that are RPPOs (*in casu*, the member from the European and Mediterranean Plant Protection Organization, based in France). Members representing international organisations (*in casu*, the member from the UNDP, Montreal Protocol, Regional Office for Latin American and the Caribbean) are full members of EWGs but were not taken into account in the data presented here as they do not represent countries and cannot be assigned an income level. Rapporteurs, members of the IPPC Secretariat and members of the CPM Bureau participating in EWG meetings are not members of the EWG and are therefore not considered.

<sup>508</sup> On the role of the steward in the standard-setting process, see above, Part II, Section 3.2.3.2.

<sup>509</sup> Note that the same person is often steward of more than one draft ISPM. For example, Greg Wolff (Canada) was assigned 5 ISPMs, Mike Holtzhausen (South Africa) was assigned 4 ISPMs, David Porritt (Australia) and Odilson Ribeiro e Silva (Brazil) were assigned 3 ISPMs each, and Julie Aliaga (USA), Mohammad Katbeh Bader (Jordan), John Hedley (New Zealand), Magda Gonzalez (Costa Rica) and Robert Karyeija (Uganda) were assigned 2 ISPMs each. The remaining stewards were assigned one ISPM each.

Energy Agency (IAEA) and later from the North American Plant Protection Organization (NAPPO).<sup>510</sup> Of the 33 ISPMs with stewards from WTO Members, 49 percent (16) had stewards from high-income WTO Members, 39 percent (13) from upper-middle-income WTO Members, 6 percent (2) from lower-middle-income WTO Members and 6 percent (2) from low-income WTO Members.<sup>511</sup> There is therefore clearly an overwhelming representation of high-income and upper-middle-income WTO Members among the stewards.

**Graph 38: IPPC Technical Panels: Membership of WTO Members by Income Level, 2007**

As stated above, some ISPMs are elaborated by standing Technical Panels. The 43 experts that made up the membership of the five Technical Panels in 2007, were all from WTO Members. Again, these experts were predominantly from high-income and, to a lesser extent, from upper-middle-income WTO Members.<sup>512</sup> More specifically, 54 percent

<sup>510</sup> The steward assigned to this ISPM was Walther Enkerlin, who was originally from the IAEA. However, in the course of 2007, he moved to the NAPPO, resulting in a change in his affiliation.

<sup>511</sup> Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 30 April - 4 May 2007, Appendix 2, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzQwMiY2PWVuJmZPSomMzc9a29z>, visited on 1 April 2008.

<sup>512</sup> Note that the data considered in this chart does not take into account international organisation members of the Technical Panels, as these do not bring in the perspective of a specific country or region, but rather that of the international organisation from which they come. The data does, however, take into account stewards of the Technical Panels and RPPO members. Stewards and RPPO members are full members of Technical Panels. Neither stewards nor other Technical Panel members represent the interests of particular Members in the standard-setting process. Instead they act in their capacity as experts. Nevertheless, they are expected to bring in the perspective and experience of the country or region from which they come. International Plant Protection Convention, *Technical Panel to Develop Diagnostic Protocols for Specific Pests (TPDP)* (Food and Agriculture Organization, Rome), 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/186512\\_08.do.doc?filename=1186745673624\\_Members\\_TPDP\\_contact\\_info\\_2007\\_08.doc&refID=186512](https://www.ippc.int/servlet/BinaryDownloaderServlet/186512_08.do.doc?filename=1186745673624_Members_TPDP_contact_info_2007_08.doc&refID=186512), visited on 10 March 2008; International Plant Protection Convention, *Technical Panel on Forest Quarantine (TPFQ)* (Food and Agriculture Organization, Rome), 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184132\\_TPFQ\\_membership.doc?filename=1179394878295\\_Members\\_TPFQ\\_contact\\_info\\_2007\\_05.doc&refID=184132](https://www.ippc.int/servlet/BinaryDownloaderServlet/184132_TPFQ_membership.doc?filename=1179394878295_Members_TPFQ_contact_info_2007_05.doc&refID=184132), visited on 10 March 2008; International Plant Protection Convention, *Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies (TPFF)* (Food and Agriculture Organization, Rome), 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184135\\_TPFF\\_membership.doc?filename=1198056074829\\_Members\\_TPFF\\_contact\\_info\\_2007\\_12.doc&refID=184135](https://www.ippc.int/servlet/BinaryDownloaderServlet/184135_TPFF_membership.doc?filename=1198056074829_Members_TPFF_contact_info_2007_12.doc&refID=184135), visited on 10 March 2008; International

(23) of the members of the Technical Panels were from high-income WTO Members, 30 percent (13) were from upper-middle-income WTO Members, 16 percent (7) were from lower-middle-income WTO Members and none were from low-income WTO Members. The greatest number of non-high-income Members is to be found in the Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies, which may be a reflection of the importance of this issue for developing country fruit exporters.<sup>513</sup> The distribution of stewards of Technical Panels is even more skewed. All the stewards of the Technical Panels are from high-income WTO Members, except for one (the steward of the Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies), who is from an upper-middle-income WTO Member.<sup>514</sup>

Unlike the case with regard to the CAC, it is not possible to determine the extent of active participation of WTO Members at different income levels in the various IPPC bodies, by examining the frequency with which they participate in the discussions in these bodies, as meeting reports do not specify the contracting parties responsible for comments made. It is, however, possible to get some indication of the degree of active participation of WTO Members at different income levels in standard-setting work under the IPPC by examining the origin of proposals for new standards. The first time that a call was issued inviting contracting parties to propose topics for new standards (ISPMs) was in 2003.<sup>515</sup> Thereafter, the call was issued biennially. In 2003 and again in 2007, a list was published

Plant Protection Convention, *Technical Panel for the Glossary (TPG)* (Food and Agriculture Organization, Rome), 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184138\\_TPG\\_membership.doc?filename=1179394983426\\_Members\\_TPG\\_contact\\_info\\_09\\_2006.doc&refID=184138](https://www.ippc.int/servlet/BinaryDownloaderServlet/184138_TPG_membership.doc?filename=1179394983426_Members_TPG_contact_info_09_2006.doc&refID=184138), visited on 10 March 2008; International Plant Protection Convention, *Technical Panel on Phytosanitary Treatments (TPPT)* (Food and Agriculture Organization, Rome), 2007, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184141\\_TPPT\\_membership.doc?filename=1195228322930\\_Members\\_TPPT\\_contact\\_info\\_2007\\_11\\_16.doc&refID=184141](https://www.ippc.int/servlet/BinaryDownloaderServlet/184141_TPPT_membership.doc?filename=1195228322930_Members_TPPT_contact_info_2007_11_16.doc&refID=184141), visited on 10 March 2008.

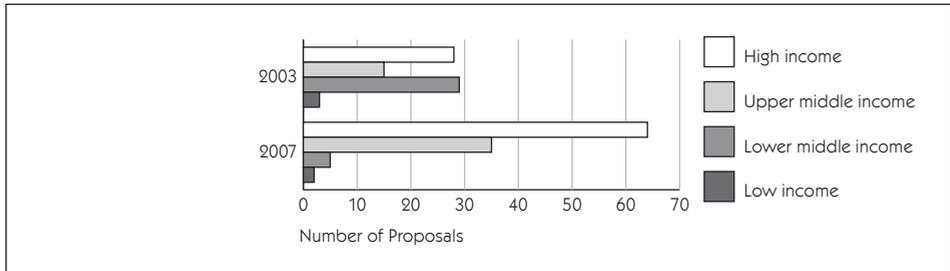

<sup>513</sup> An examination of the agreed priorities for fruit fly treatments developed by this Technical Panel reveals that the Caribbean, Mediterranean and Oriental varieties of fruit fly are addressed most often, and that the hosts of fruit flies are frequently tropical fruits such as lychee, mango, papaya, carambola (star fruit) and longan. It therefore makes sense that this Technical Panel includes experts from countries such as Brazil, Mexico, Chile, Malaysia, Surinam and Jordan.

<sup>514</sup> The following Technical Panels have stewards from high-income WTO Members: Technical Panel to Develop Diagnostic Protocols for Specific Pests (Germany); Technical Panel on Forest Quarantine (Canada); Technical Panel for the Glossary (New Zealand); Technical Panel on Phytosanitary Treatments (Australia). The only Technical Panel with a steward from an upper-middle-income WTO Member is the Technical Panel on Pest Free Areas and Systems Approaches for Fruit Flies, which has a member from Brazil as its steward.

<sup>515</sup> The SPTA at its meetings in 2001 and 2002 and the ICPM at its 2002 session recognised that the lack of phytosanitary standards is a severe impediment to the full implementation of the IPPC and impacts negatively on the facilitation of safe trade. The SPTA suggested that the Chair of the ICPM request proposals for new topics from contracting parties prior to the next meeting of the ICPM. The Chair of the ICPM sent out a letter in November 2002 requesting that national and regional plant protection organizations indicate their priority needs for standards, in order for them to be considered during the Fifth Session of the ICPM. In response 143 proposals were received. Interim Commission on Phytosanitary Measures, *Fifth Session: Topics and Priorities for Standards*, ICPM 03/14, (Food and Agriculture Organization, Rome), 7-11 April 2003, paras 1-3. In 2005, the Seventh Session of the ICPM decided that a call for proposals would be issued biennially in future. Interim Commission on Phytosanitary Measures, *Report of the Seventh Interim Commission on Phytosanitary Measures*, ICPM-7(2005)/Report (Food and Agriculture Organization, Rome), 4-7 April 2005, para. 93, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/75067\\_Report\\_ICPM7\\_E.pdf?filename=1132938412531\\_ICPM7\\_Report\\_En\\_REV\\_list\\_part.pdf&refID=75067](https://www.ippc.int/servlet/BinaryDownloaderServlet/75067_Report_ICPM7_E.pdf?filename=1132938412531_ICPM7_Report_En_REV_list_part.pdf&refID=75067), visited on 10 March 2008.

containing all new proposals for topics for new or amended ISPMs, including an indication of the source of the proposal.<sup>516</sup>

**Graph 39: IPPC: Proposals for New or Amended Standards Submitted by WTO Members by Income Level, 2003 and 2007**

In response to the first call for proposals of November 2002, 143 new proposals were received by the IPPC Secretariat. These were submitted by 26 different contracting parties (25 of which were WTO Members), and 3 RPPOs (EPPO, NAPPO and COSAVE).<sup>517</sup> The call for proposals of June 2007<sup>518</sup> resulted in the submission of 36 proposals. These came from 45 different contracting parties (all of which were WTO Members),<sup>519</sup> one member organisation (the European Community) and one RPPO (COSAVE).<sup>520</sup> Of the WTO Members that submitted proposals in 2003 and 2007, taken together, 66 percent were high-income WTO Members, 19 percent were upper-middle-income WTO Members, 13 percent were lower-middle-income WTO Members and 2 percent were low-income WTO Members. The unexpectedly high percentage of proposals from lower-middle-income Members is largely due to the fact that Peru made 21 proposals in 2003. Of the 36 proposals submitted in 2007, nine were selected by the SC to recommend to the SC for inclusion

<sup>516</sup> In the years between 2003 and 2008, no such list was made publicly available. Therefore the data provided here is necessarily limited to the proposals made in response to the calls for proposals of 2003 and 2007.

<sup>517</sup> Interim Commission on Phytosanitary Measures, *Topics and Priorities for Standards*, ICPM 03/14 (International Plant Protection Convention, Rome), 7-11 April 2003, Appendix, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21165\\_English.pdf?filename=1079446899123\\_ICPM03\\_14\\_with\\_appendix.pdf&refID=21165](https://www.ippc.int/servlet/BinaryDownloaderServlet/21165_English.pdf?filename=1079446899123_ICPM03_14_with_appendix.pdf&refID=21165), visited on 14 May 2008. In the list of proposals of 2003 is stated that six proposals were submitted by the 'Council of the European Union'. As the EC had not yet adhered to the IPPC in 2003, these proposals are counted here as having been made by the then-15 Member States of the European Community.

<sup>518</sup> As the call for proposals takes place on a biennial basis, the next call for proposals will be in 2009.

<sup>519</sup> Note that the number of proposals made by contracting parties that were WTO Members does not correspond to the number of WTO Members making proposals since many proposals were made jointly by several Members, and many Members submitted more than one proposal. In 2003, the US submitted the greatest number of proposals, and was responsible (individually) for 26 of the 143 proposals made. It was followed, surprisingly, by Peru, which made 21 individual proposals. The US again submitted the greatest number of proposals in 2007 (individually), accounting for 12 of the 36 proposals made. Canada followed with 5 proposals. Peru made no proposals in 2007.

<sup>520</sup> Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 5-9 November 2007, Appendix 3, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/191801\\_Report\\_SC\\_Nov\\_2007.doc?filename=1197908679365\\_Report\\_SC\\_Nov\\_2007\\_FINAL\\_with\\_ISPMs.doc&refID=191801](https://www.ippc.int/servlet/BinaryDownloaderServlet/191801_Report_SC_Nov_2007.doc?filename=1197908679365_Report_SC_Nov_2007_FINAL_with_ISPMs.doc&refID=191801), visited on 2 April 2008. This document states that the 2007 proposals were made by 18 different contracting parties. However, as the list of proposals for 2007 reports that one proposal was made by the EC and its Member States, these are counted as separate contracting parties here.

in the work programme.<sup>521</sup> The selected proposals were submitted by 24 high-income WTO Members, 13 upper-middle-income WTO Members, one lower-middle-income WTO Members and no low-income WTO Members.<sup>522</sup>

In order to improve the attendance and participation of developing countries in standard setting under the IPPC, a Special Trust Fund was established in 2003.<sup>523</sup> It facilitated the attendance of developing country delegates to the ICPM and CPM sessions,<sup>524</sup> to regional workshops on draft ISPMs and to various other meetings.<sup>525</sup> Financial regulations for the Special Trust Fund were adopted in 2005.<sup>526</sup> This Special Trust Fund is to be financed by voluntary contributions by members of the CPM, non-members and other sources.<sup>527</sup> In

<sup>521</sup> Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 30 April - 4 May 2007, para. 46, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzQwMiY2PWVuJjMzPSomMzc9a29z>, visited on 1 April 2008. These 9 new topics adopted for the development of ISPMs were: guidelines for the use of permits as import authorisation; accreditation systems for phytosanitary programmes; international movement of cut flowers and foliage; international movement of grain; minimising pest movement by sea containers and conveyances; minimising pest movement by air containers and aircrafts; handling and disposal of international garbage; a diagnostic protocol for *Striga* spp.; and wood products and handicrafts made from raw wood. The latter two topics were assigned to the Technical Panel on Forest Quarantine and the Technical Panel to Develop Diagnostic Protocols for Specific Pests, respectively.

<sup>522</sup> No selection of topics for new standards was carried out in 2003, as this was the first time a call had formally been made for new topics and a procedure for prioritisation of proposed topics for inclusion in the standard-setting work programme had not yet been developed, although some general prioritisation criteria had been adopted by the ICPM in 2002. At the Fifth Session of the ICPM in 2003, several contracting parties suggested that the ICPM develop a procedure for prioritisation of topics for new standards considering the large number of specific standards proposed by Members in response to the first call for topics. Interim Commission on Phytosanitary Measures, *Report of the Fifth Interim Commission on Phytosanitary Measures*, ICPM-5(2003)/Report (Food and Agriculture Organization, Rome), 7-11 April 2003, para. 76, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21899\\_ICPM5\\_2003\\_en.pdf?filename=1053957860772\\_ICPM5Report\\_final\\_en.pdf&refID=21899](https://www.ippc.int/servlet/BinaryDownloaderServlet/21899_ICPM5_2003_en.pdf?filename=1053957860772_ICPM5Report_final_en.pdf&refID=21899), visited on 10 March 2008.

<sup>523</sup> *Ibid.*, para. 86.

<sup>524</sup> Prior to the establishment of the Special Trust Fund, the IPPC Secretariat made a distinction in respect of funding between persons participating as experts in the standard-setting work of the IPPC, and persons participating as government representatives in the ICPM. While funding was provided by the IPPC Secretariat for developing country participation in expert drafting groups and committees associated with the standard-setting work of the IPPC, developing country attendance of (I)CPM meetings was not funded. Governments were expected to fund their own delegates. Interim Commission on Phytosanitary Measures, *Developing Country Participation in IPPC Standard-Setting and Listing of Experts for IPPC Working Groups 2000-2002*, ICPM 03/INF/2 (International Plant Protection Convention, Rome), 7-11 April 2003, para. 3, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/21133\\_English.pdf?filename=1051088293796\\_ICPM03\\_INF2.pdf&refID=21133](https://www.ippc.int/servlet/BinaryDownloaderServlet/21133_English.pdf?filename=1051088293796_ICPM03_INF2.pdf&refID=21133), visited on 18 April 2008.

<sup>525</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 175, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>526</sup> Interim Commission on Phytosanitary Measures, *Report of the Seventh Interim Commission on Phytosanitary Measures*, ICPM-7(2005)/Report (Food and Agriculture Organization, Rome), 4-7 April 2005, Appendix XVI, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/75067\\_Report\\_ICPM7\\_E.pdf?filename=1132938412531\\_ICPM7\\_Report\\_En\\_REV\\_list\\_part.pdf&refID=75067](https://www.ippc.int/servlet/BinaryDownloaderServlet/75067_Report_ICPM7_E.pdf?filename=1132938412531_ICPM7_Report_En_REV_list_part.pdf&refID=75067), visited on 10 March 2008.

<sup>527</sup> Paragraph 5.1 of the *Financial Guidelines for the Trust Fund for the International Plant Protection Convention*. Since its inception, the Special Trust Fund has received contributions from three donors (New Zealand, Canada and the US) amounting to US\$860 000 (as of February 2007). It has been used to fund the attendance of 60 representatives from developing countries to meetings of IPPC bodies. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and*

June 2008, however, the IPPC Secretariat reported that it had not received any indication by the contracting parties of an intention to contribute to the Trust Fund in 2008.<sup>528</sup> In addition to the Trust Fund, new funding guidelines were implemented in 2007, whereby the IPPC Secretariat provides support for attendance of IPPC meetings. The World Bank classification of countries by income level is relied upon in the allocation of financial support – participants from lower-middle-income and low-income contracting parties have their airfare paid and are given a daily subsistence allowance, whereas participants from upper-middle-income contracting parties have their airfare paid only.<sup>529</sup> High-income contracting parties are expected to pay their own participants' costs.

Financial support for attendance of meetings of IPPC bodies is, however, not sufficient to ensure full participation of IPPC contracting parties at different levels of development. In addition, the phytosanitary capacity of those contracting parties that face constraints in this area must be strengthened. Without improved phytosanitary capacity, representatives of, and experts from, some of these contracting parties will not be in a position to influence the standard-setting process in a way that takes account of the interests and situations of their respective countries. For this reason, the technical assistance supported by the IPPC Secretariat and financed by the FAO Technical Cooperation Programme (TCP),<sup>530</sup> is not limited to that related to the IPPC's core activities, but extends to strengthening of national phytosanitary capacity.<sup>531</sup> In 2007, a proposal was made by the Evaluation Team that conducted the Independent Evaluation of the IPPC to the effect that technical as-

<sup>528</sup> Committee on Sanitary and Phytosanitary Measures, *Decisions from the Third Session of the Commission on Phytosanitary Measures (Rome, 7-11 April 2008)*. Submission from the International Plant Protection Convention, G/SPS/GEN/849, circulated on 18 June 2008, para. 31. The independent evaluation of the IPPC urged the IPPC Secretariat to formulate a strategy for funding mobilisation. This work is in its initial stages. *Ibid.*, para. 35.

<sup>529</sup> Standards Committee, *Report of the Standards Committee* (Food and Agriculture Organization, Rome), 30 April - 4 May 2007, para. 3, available at: <https://www.ippc.int/servlet/CDSServlet?status=ND0xMzQwMiY2PWVuJjMzPSomMzc9a29z>, visited on 1 April 2008.

<sup>530</sup> The FAO Technical Cooperation Programme is part of the regular programme budget of the FAO. Between 2001 and 2008, this facility funded 48 projects for a total value of US\$ 10.8 million. FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 113, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Report.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Report.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008.

<sup>531</sup> Technical assistance related to the IPPC's core activities includes financial support for the attendance at IPPC meetings and workshops on draft standards, as well as training on the development and use of the IPP. Technical assistance towards strengthening phytosanitary capacity covers a wide range of activities such as the modernisation of plant quarantine facilities and laboratories, the training of staff, the drafting of phytosanitary legislation and the establishment of systems for the surveillance, management and establishment of pest-free areas and pest risk analysis. Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation, *Draft Report of the Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation* (International Plant Protection Organization, Nairobi), 29 July - 3 August 2007, Appendix 3 para. 3, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/188573\\_Draft\\_Report\\_IWG\\_TA\\_doc?filename=1191582430687\\_TA\\_PCE\\_IWG\\_Draft\\_report\\_v4.doc&refID=188573](https://www.ippc.int/servlet/BinaryDownloaderServlet/188573_Draft_Report_IWG_TA_doc?filename=1191582430687_TA_PCE_IWG_Draft_report_v4.doc&refID=188573), visited on 21 April 2008.

sistance carried out directly under the IPPC should be limited to its core business.<sup>532</sup> The Evaluation Team regarded the FAO as better placed than the IPPC Secretariat to coordinate global support for strengthening national phytosanitary capacity, and suggested that this be done outside the IPPC context.<sup>533</sup> This suggestion was rejected by both the SPTA<sup>534</sup> and by the Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation.<sup>535</sup> Both these bodies stressed the particular expertise of the IPPC Secretariat in this area,<sup>536</sup> while acknowledging the constraints it faces due to limited resources and lack of donor funding for strengthening national capacities. The importance of increasing the resources available to the IPPC Secretariat, both from donors and from other agencies, was recognised. However, it was noted that technical assistance in the area of capacity building must be based on the needs and priorities of the beneficiary countries, rather than on the interests of the donor countries.

---

<sup>532</sup> FAO Programme Committee, *Independent Evaluation of the Working of the International Plant Protection Convention and Its Institutional Arrangements* (Food and Agriculture Organization, Rome), 17-21 September 2007, para. 131, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/184229\\_IPPC\\_Evaluation\\_Repo.doc?filename=1180006371650\\_1\\_IPPC\\_Final\\_Evaluation\\_Report.doc&refID=184229](https://www.ippc.int/servlet/BinaryDownloaderServlet/184229_IPPC_Evaluation_Repo.doc?filename=1180006371650_1_IPPC_Final_Evaluation_Report.doc&refID=184229), visited on 10 March 2008. While the Evaluation Team recognised the tremendous need for technical assistance to strengthen phytosanitary capacity of developing country contracting parties, it did not see the IPPC as an appropriate provider as such assistance. Instead, it argued that this task would be best undertaken by international organisations such as the FAO that have the experience and capacity to raise funds and to implement projects.

<sup>533</sup> The Independent Evaluation Team noted that few donors support IPPC-related technical assistance activities through the FAO. It noted that due to the fact that funding for this type of technical assistance comes almost entirely from the FAO regular budget, the projects are small and catalytic, with limited long-term effects and sustainability. It recommended the development of formal links to other technical assistance agencies and more attention to the interests and priorities of donor countries in planning technical assistance activities. *Ibid.*, paras 117-125.

<sup>534</sup> CPM Informal Working Group on Strategic Planning and Technical Assistance, *Report of the Second Meeting* (International Plant Protection Convention, Rome), 1-5 October 2007, paras 39-43, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 1 April 2008. The SPTA regarded the IPPC Secretariat as best placed to undertake this task, and recommended the development of a phytosanitary capacity building strategy to address implementation, funding and linkage to FAO financing and resources.

<sup>535</sup> Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation, *Draft Report of the Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation* (International Plant Protection Organization, Nairobi), 29 July - 3 August 2007, Appendix 3 paras 3 and 21, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/188573\\_Draft\\_Report\\_IWG\\_TA\\_.doc?filename=1191582430687\\_TA\\_PCE\\_IWG\\_Draft\\_report\\_v4.doc&refID=188573](https://www.ippc.int/servlet/BinaryDownloaderServlet/188573_Draft_Report_IWG_TA_.doc?filename=1191582430687_TA_PCE_IWG_Draft_report_v4.doc&refID=188573), visited on 21 April 2008. The Informal Working Group on Technical Assistance and Phytosanitary Capacity Evaluation noted that the IPPC Secretariat has the relevant knowledge of the phytosanitary needs of the IPPC contracting parties. It argued, however, that donors and agencies should be engaged to provide more resources to the IPPC Secretariat to enable it to accomplish more.

<sup>536</sup> The SPTA noted that the delegates to the CPM are the world leaders in phytosanitary issues and that the IPPC Secretariat is staffed with some of the leading experts worldwide in this field. It viewed the recommendation of the Independent Evaluation Team as having the effect of relegating phytosanitary issues to a 'lower level' by addressing them within the wider FAO system instead of within the specialised IPPC system. CPM Informal Working Group on Strategic Planning and Technical Assistance, *Report of the Second Meeting* (International Plant Protection Convention, Rome), 1-5 October 2007, Appendix 1 item 3, available at: [https://www.ippc.int/servlet/BinaryDownloaderServlet/190812\\_9th\\_SPTA\\_Report\\_2007.pdf?filename=1196340302166\\_9th\\_SPTA\\_Report\\_2007.pdf&refID=190812](https://www.ippc.int/servlet/BinaryDownloaderServlet/190812_9th_SPTA_Report_2007.pdf?filename=1196340302166_9th_SPTA_Report_2007.pdf&refID=190812), visited on 1 April 2008.

### 3.3 Conclusion

The increasing globalisation of health concerns arising from the growth in movement of persons and products across borders has resulted in SPS regulation on international level. Such regulation reflects the realisation of governments that SPS risk cannot be effectively addressed without international cooperation, and their concern with ensuring that obstacles to trade are minimised as far as possible by the promotion of uniformity of SPS requirements across national boundaries. Consequently, international bodies have been established with the objective of drafting SPS standards on which national governments can base their SPS regulations.

Harmonisation of national SPS requirements around internationally established standards has many benefits. Conceptually, harmonisation can be seen as a tool to address the externality effects of SPS-regulation, due to the ‘global public goods’ nature of both free trade and safe products. The efficient supply of these global public goods may necessitate international cooperation in the area of SPS regulation. Such cooperation, embodied in negotiations between national governments to elaborate international SPS standards, aims to ensure that the regulatory outcome takes account of costs and benefits at the global level and therefore leads to welfare maximisation globally. On a more practical level, harmonisation provides a scientifically justified basis for regulation which is particularly useful for countries where the necessary expertise to conduct risk analyses is lacking. It also contributes to the legitimacy of SPS regulations based thereon and diminishes disputes between countries on the appropriateness of the requirements they set. Last, but certainly not least, it facilitates the movement of products across borders by reducing the diversity of requirements that exporters have to meet in order to have access to foreign markets.

At the same time, harmonisation has its fair share of pitfalls. Internationally-set standards cannot mirror the diversity of circumstances in countries around the world. Instead, they reflect a compromise position accepted by the delegates of the countries present and active in the standard-setting process, according to the procedures of the relevant standardising body. Such a compromise raises concerns regarding the appropriateness of the resulting standard for application across the globe. Not only do the demands of civil society (consumers as well as industry) differ widely across countries, but also the ability of governments to ensure implementation of SPS standards diverges. Many of these differences correspond to the differences in levels of development of the countries involved. Regulators must respond to national development priorities and therefore, it could be argued, should not be constrained by harmonisation obligations around internationally-established standards.

As aptly put by Keyser and Merbis, of the Centre for World Food Studies in Amsterdam:

...basic economic intuition tells us that consumers demand different product qualities at different levels of income. Food standards should reflect this. Clearly, as all men are born equal and have remarkably similar food as well as sanitary needs, it often is tempting to assert that food safety norms should be standardised and applied universally. Whomever expresses a different view is easily accused of violating basic ethical principles. Yet the flaw in such rights-based reasoning is that the poor only would suffer from its application unless they are given the

means to reach the stated standards without having to sacrifice more fundamental ones, such as survival.<sup>537</sup>

This reality was recognised in the procedures of the international standard-setting bodies and the legal status of the standards they adopt. Until recently, the standard setting procedures were rather informal and based on technical discussions among experts and the adoption of standards was uncontroversial. Many developing countries did not attend, or did not effectively participate in the international standard-setting process. This did not create many problems as the resulting adopted standards were voluntary in nature and states were free to implement them in their national regulations or diverge from them, as they saw fit. In addition, the international standard-setting bodies focused more on the adoption of guidelines and recommendations with respect to approaches to risk assessment and risk management, than on setting specific standards.<sup>538</sup> These guidelines were useful in disseminating information on best practices in these areas, and thereby leading to a natural convergence in resulting national SPS requirements.<sup>539</sup>

However, a change in this situation has been brought about by the use of these standards as benchmarks by the WTO's *SPS Agreement*, as will be set out in Part III of this book.<sup>540</sup> While not making international standards binding, the *SPS Agreement* has increased their relevance by creating a set of obligations for countries deviating from them, thereby problematising the informal and technocratic standard-setting procedures. It has also neglected to take into account the differences in the types of norms generated by international setting bodies. The legitimacy and appropriateness of international standards has therefore come to the forefront of discussions at the standard-setting bodies, and their procedures have become politicised. These bodies are now fora for fighting out trade-related concerns, often leading to a paralysis of the standard-setting process, particularly in sensitive areas of particular economic concern to industry groups.

In this context, this Chapter examined the institutional and procedural arrangements of the three international standard-setting bodies referenced in the *SPS Agreement* to identify possible constraints to the participation of WTO Members at different levels of development. To provide factual illustrations of the problems of participation, data on membership, attendance and active participation of WTO Members was collected to the extent available, and systematised according to the World Bank's classification of countries by income. No absolute figures accurately quantifying the extent and effectiveness of participation were generated due to problems of data and difficulty in reducing the available information into precise figures. Instead, only some indications or trends in participation

<sup>539</sup> Roberts, Orden and Josling note that knowledge gaps and chance events are 'bad' reasons for divergent national standards, and emphasis the positive impact of international guidelines on analytical techniques and mitigation technologies in reducing these divergences. *Ibid.*

<sup>540</sup> See below, Part III, Chapter 4.

can be derived from the data. More research is needed into the extent and effectiveness of participation in the international standard-setting processes by Members at different levels of development and the reasons for this. This research should be multidisciplinary, examining the economic and political factors that play a role. An examination of that nature could form the basis for more directed efforts at addressing the problems that affect the participation of some Members. However, such research goes beyond the scope of this book, which is focused on the legal aspects of international standard setting (i.e. the institutional framework and procedures in place). The analysis of data conducted here serves only to provide a factual illustration of the identified institutional and procedural problems. These limitations in mind, the analysis conducted in this Chapter permits the following conclusions.<sup>541</sup>

In recent years, due to their awareness of the increased importance of international standards under the *SPS Agreement*, the participation of developing countries in the standard-setting organisations has increased. Their level of attendance has improved and they have become more vocal in ensuring their viewpoints are taken into account in plenary sessions where standards are decided upon. However, their participation in technical committees where scientific evidence is discussed and standards are prepared often leaves much to be desired. This is often due to the lack of human and financial resources necessary to ensure attendance of the plethora of committee meetings by well-prepared specialists in the areas in which standards are set. In addition, the lack of effective national infrastructures for the evaluation of draft standards and the formulation of positions has been identified as a problem.<sup>542</sup> The weakness of the participation of many middle- and low-income WTO Members in the international standard-setting bodies, coupled with the fact that the products in respect of which they face SPS barriers are frequently insignificant in terms of world trade,<sup>543</sup> means that it is unlikely that international standards will be developed in areas of interest to them. This fact is illustrated by the lack of standards for traditional vegetables from Jamaica, such as ackee, yam and callaloo, despite the fact that Jamaican exports of these products are severely restricted by the SPS measures of its trading partners.

---

<sup>541</sup> Some of the results from the analysis of data presented here seem counterintuitive, showing higher than expected participation of Members at lower income levels in particular areas of international standard-setting. Some possible reasons for this are, first, the fact that the level of development of a Member is not fully reflected in income level, as explained in Chapter 2. While income level was used here as a shorthand for economic development, in order to be able to categorise Members, the results of the data presented here must be relativised. The complexity of the issue of development and of the various indicators of development level that play a role in SPS capacity means that income level is not determinative. Second, it is important to take into account that national priorities may differ. It is likely that differences in participation in different committees of the standard-setting bodies are due to the varying importance of the standards set in those committees for specific Members. Third, in some cases the unexpected level of attendance by delegates of Members at lower income levels may indicate that some initiatives to improve developing-country participation may be having results, at least in terms of presence if not quality of participation.

<sup>542</sup> Committee on Sanitary and Phytosanitary Measures, *Note on Developing Country Participation in Codex Bodies*. Submission by the *FAO/WHO Codex Alimentarius Commission*, G/SPS/GEN/236, circulated on 9 March 2001.

<sup>543</sup> Vinod Rege *et al.*, *Influencing and Meeting International Standards: Challenges for Developing Countries*. Volume I: *Background Information, Findings from Case Studies and Technical Assistance Needs* (International Trade Centre UNCTAD/WTO and Commonwealth Secretariat, Geneva), 2003, 86.

One result of the new situation in which international standard setting-bodies now find themselves has been the ‘re-nationalisation’ and sometimes the privatisation of SPS regulation.<sup>544</sup> Developed-country Members that do not succeed in influencing international standard setting sufficiently to obtain standards that reflect their health and trade concerns have tended to adopt national SPS measures that deviate from international standards. They have done so on the basis that existing international standards do not achieve the level of protection they have deemed appropriate for their territories. Members at lower levels of development have also shown a tendency to adopt SPS measures that are not based on international standards, often due to the lack of international standards in areas of interest to them, but also due to the inappropriateness of existing standards for their particular situations. A parallel development has been the proliferation of private standards, typically much stricter than international standards, set by global consortia of processors or retailers. These private standards reflect the high level of consumer demands to which global supermarket chains currently cater, and which are not met by international standards.

The three standard-setting bodies referenced in the *SPS Agreement* have had to re-examine their rules of procedure and functional mandates in order to adapt to the new reality in which they find themselves since the coming into force of the *SPS Agreement*. These reform initiatives seem to have been successful to a greater or lesser extent and work is ongoing to improve developing country participation.<sup>545</sup> Also outside the ‘three sisters’ there have been concerted efforts to address the problems that developing countries face with regard to effective participation in standard-setting organisations.<sup>546</sup> The Directors-General of the FAO, WHO, OIE, WTO and the President of the World Bank issued a statement at the Doha Ministerial Conference in which they affirmed their commitment to strengthening the capacity of developing countries to participate fully in international standard-setting.<sup>547</sup> However, much remains to be done if the reference to the international standards as a benchmark for justifying national SPS measures under the *SPS Agreement* is to be ‘development friendly’. This remaining work lies not only in simplifying and improving the standard-setting procedures of the relevant bodies, but also in efforts to

build the capacity of Members at lower levels of development to participate effectively in these procedures.

## Conclusion to Part II

The descriptions of national and international systems for setting SPS regulations and standards conducted in Part II of this book form the necessary factual background to the analysis of the provisions of the *SPS Agreement* that is found in Parts III to V. Only with this concrete understanding of the context within which the Agreement functions can its aim of balancing trade and health objectives and the disparate impact of its provisions on Members at different levels of development be fully understood.

In particular, the normative framework for national SPS regulation, reflected in international human rights law, is instrumental in establishing why the promotion of trade through regulatory disciplines in the *SPS Agreement* cannot be pursued in disregard of the ability of Members to protect health on their territories. While the economic growth achievements of liberalisation of agricultural trade are important to promote development, they cannot come at the cost of other rights, such as the right to life, health and safe food. Instead, international trade rules must appropriately balance these competing goals in a way that does not undermine human rights. In examining the provisions of the *SPS Agreement* the importance of this balance must constantly be borne in mind.

As stated in Part I, the *SPS Agreement* mediates the conflict between trade and health objectives by imposing regulatory disciplines on Members. The specific impact of these disciplines on a particular Member is largely a factor of its SPS capacity, as reflected in its regulatory system. It is important to keep in mind the great variety in the SPS regulatory systems of WTO Members, reflecting their levels of development and their specific health and trade priorities, when examining the *SPS Agreement*. While all Members have a normative duty to regulate against SPS risks on their territories, the manner in which they do so and the level of protection they seek to achieve varies in relation to their level of development. This is due to the fact that the costs and benefits of SPS regulation differ with factors such as the health status of the country, the existing SPS infrastructure, the dietary practices of its citizens, the economic importance of its agricultural industry, and its scientific capacity, among others. As a result, Members have in place greatly differing SPS regulatory systems.

The illustrative examples of four WTO Members across various regions and income levels, and with different trade and health priorities, give concrete form to these general conclusions. They show the range of regulatory responses in place to address the need for SPS protection. These vary not only in the level of protection sought but also in the manner in which the protection is achieved. For example, more developed Members with established and well-functioning SPS systems increasingly choose for a systems-wide approach to food-safety risks, as illustrated by Australia's farm-to-fork approach, whereas Members with more rudimentary SPS systems and limited capacity choose for regulation focused on product characteristics, as shown by Bangladesh's requirements regarding palm oil purity. In addition, the extent to which SPS regulation is supported by a rigorous risk analysis process, encompassing scientific risk assessment, policy based-risk management and risk communication to stakeholders, is determined by the capacity and priorities of the Member involved. The regulatory system in place in Australia, which is characterised by a separation of risk assessment and risk management tasks and a strong

consultative process for the involvement of stakeholders is a good example of a sophisticated system. By contrast, lacking the capacity for its own risk assessments, Jamaica sometimes takes over the SPS requirements of its trading partners. These differences in SPS systems have logical implications for the extent to which Members can comply with the prescriptive rules of the *SPS Agreement*, which as will be seen in Parts III and IV of this book embody best practices in SPS regulation.

Weakness of SPS regulatory systems affects not only the ability of Members to implement their obligations under the *SPS Agreement*. It also has significant consequences for their capacity to comply with the SPS requirements of their trading partners, or to challenge such requirements in terms of the rules of the *SPS Agreement*.

In view of these regulatory divergences and the impact they have both on health and on trade, efforts have been made to promote harmonisation of SPS requirements around international standards. As international standard-setting processes are based on the scientific assessment of risks, harmonisation around international standards provides a scientifically justified basis for regulation. This is particularly useful for countries that lack the necessary expertise to conduct risk analyses. Harmonisation also diminishes the trade restrictive effect of SPS regulation by reducing the diversity of requirements that exporters have to meet in order to have access to foreign markets. For this reason, the *SPS Agreement* uses international standards as benchmark standards for the SPS measures of WTO Members.

However, for the promotion of harmonisation to be truly 'development-friendly' it is important for the procedures by which international standards are set to facilitate the full participation of countries at all levels of development. Without such participation, the standards set by the international standard-setting bodies are of doubtful legitimacy as the basis for the promotion of harmonisation at WTO level. Standards set without full and effective participation of all Members may be technically unfeasible for some developing-country Members. In addition, standards may be lacking in areas of particular interest to such Members. Consequently, there is currently much attention to the need to ensure effective participation of developing countries in the work of the standard-setting bodies.

An examination of the institutional structure and procedures of the three international standard-setting bodies referenced in the *SPS Agreement* indicates that various problems exist that act as hindrances to full participation by WTO Members at lower levels of development. These differ from international standard-setting body to international standard-setting body. In some cases, the plethora of committees in which attendance is needed exceeds the financial and human capacity of some Members. The location of committee meetings in developed countries may also contribute to attendance costs. In other cases, the relevant committees are of limited membership, and as members are selected on the basis of scientific expertise, this means that they are most often dominated by developed-country experts. The insufficient participation of developing-country Members is illustrated by an examination of actual attendance of, and active contribution to discussions in, the organs of the international standard-setting bodies. While the data is incomplete and therefore not conclusive, it does provide an indication of the persistent inadequacy of participation by Members at lower levels of development across all three bodies.

As will be seen in the analysis of the harmonisation provisions in Part III of this book, the ability of a WTO Member to push forward its interests in the international standard-setting process has a significant effect on the impact of the *SPS Agreement* on that Member. This impact is particularly important for Members at lower levels of development that lack the capacity to conduct the necessary scientific analysis as a basis for their national SPS requirements. Many efforts are being made within the CAC, OIE and IPPC to enhance developing country attendance of meetings. However, this is not enough. In order to promote effective participation of developing-country Members, serious efforts at capacity building are necessary, to ensure that these Members can build strong and well-founded national positions and defend them effectively in the standard-setting process.<sup>1</sup>

---

<sup>1</sup> The issue of capacity building is addressed in Chapter 2 of Part V of this book.

## **Part III**

---

**The rules balancing  
trade and health  
in the SPS Agreement**

---

### Introduction to Part III

Having established, in Part II of this book, the factual context against which the impact of the *SPS Agreement* on WTO Members at different levels of development can be understood, Parts III to V turn to scrutinize the *SPS Agreement* itself. Part III begins this analysis by examining the regulatory disciplines of the *SPS Agreement* that give effect to its objective of balancing trade liberalisation with health protection. It does so against the historical background to the *SPS Agreement* and with specific reference to its scope of application. Part IV turns to look at the institutional and procedural mechanisms under the *SPS Agreement*. Part V follows by dealing with those provisions of the *SPS Agreement* that address the special position of developing-country Members.

The development impact of the *SPS Agreement* is clearly not limited to the provisions discussed in Part V of this book.<sup>1</sup> Instead, all the provisions of the *SPS Agreement* have an effect on developing-country Members of the WTO. This effect can be seen both in the extent to which the Agreement facilitates the lowering of market access barriers to food and agricultural products from developing-country Members, and in the restrictions the Agreement places on the ability of these Members to regulate against SPS risks. Clearly, as seen from the factual background set out in Part II, developing-country Members are not a homogeneous group when it comes to trade and health priorities and SPS regulatory capacity. Therefore the effect of the *SPS Agreement* is not the same for all developing-country Members. The discussion in Parts III and IV of this book highlights the disparate impact of the *SPS Agreement* on Members at different levels of development.

The analysis takes a critical look at the appropriateness of the general provisions of the *SPS Agreement* for Members at lower levels of development. In doing so, it recognises that technical assistance cannot be seen as a magic bullet solution to all developing-country concerns with the *SPS Agreement*. Technical assistance certainly does not obviate the need for a rigorous analysis of the substantive rules and procedural arrangements to ensure that they are appropriate for all Members as tools to achieve the balancing objectives of the *SPS Agreement*.

The examination of the provisions of the *SPS Agreement* carried out in this book is conducted in the light of the interpretation given to the relevant provisions in adopted panel and the Appellate Body reports, since such interpretation, despite the absence of a formal precedent system in WTO adjudication, is in practice followed by panels and the Appellate Body in subsequent disputes.<sup>2</sup> The rulings of the WTO adjudicatory bodies

<sup>1</sup> As noted by Joanne Scott, the development dimension of the *SPS Agreement* pervades all its provisions. Joanne Scott, *The WTO Agreement on Sanitary and Phytosanitary Measures: A Commentary*, Oxford Commentaries on the GATT/WTO Agreements (Oxford University Press, Oxford), 2007, 280.

<sup>2</sup> On the status of adopted panel reports, the Appellate Body in *Japan – Alcoholic Beverages II* found as follows: ‘Adopted panel reports are an important part of the GATT *aquis*. They are often considered by subsequent panels. They create legitimate expectations among WTO Members, and, therefore, should be taken into account where they are relevant to any dispute. However, they are not binding, except with respect to resolving the particular dispute between the parties to that dispute. In short, their character and their legal status have not been changed by the coming into force of the *WTO Agreement*.’ Appellate Body Report, *Japan – Alcoholic Beverages II*, 14. The Appellate Body clarified in *US – Shrimp (Article 21.5 – Malaysia)* that this reasoning equally applies to adopted Appellate Body reports. Appellate Body Report, *US – Shrimp (Article 21.5 – Malaysia)*, para.109. According to the Appellate Body in *US – Stainless Steel (Mexico)*: ‘[T]he legal

can therefore be regarded as clarifying the provisions of the WTO agreements, fleshing them out. Five disputes under the *SPS Agreement* have been the subject of adjudication thus far. These are: the complaints of the US and Canada with regard to the EC's ban on hormone-treated beef (*EC – Hormones*);<sup>3</sup> the complaint of Canada with regard to Australia's requirements for the importation of salmon (*Australia – Salmon*);<sup>4</sup> the complaint of the US regarding Japan's varietal testing requirement for the importation of certain fruits (*Japan – Agricultural Products II*);<sup>5</sup> the complaint of the US regarding Japan's quarantine requirements on imports of US apples (*Japan – Apples*),<sup>6</sup> and the complaints of the US, Canada and Argentina with regard to the EC's general *de facto* moratorium on the approval of biotech products for marketing in the EC, its measures regarding the approval of specific biotech products and the safeguard measures of certain EU Member States on biotech products already approved at EC level (*EC – Approval and Marketing of Biotech Products*).<sup>7</sup> In addition, two disputes brought by the EC against the continued suspension by the US and Canada of concessions against it, due to its perceived continued non-compliance with the recommendations and rulings of the Dispute Settlement Body in *EC – Hormones*, were decided under the provisions of the *Dispute Settlement Understanding* but involved an analysis of several provisions of the *SPS Agreement* (US

---

interpretation embodied in adopted panel and Appellate Body reports becomes part and parcel of the *acquis* of the WTO dispute settlement system. Ensuring “security and predictability” in the dispute settlement system, as contemplated in Article 3.2 of the DSU, implies that, absent cogent reasons, an adjudicatory body will resolve the same legal question in the same way in a subsequent case. Clarification, as envisaged in Article 3.2 of the DSU, elucidates the scope and meaning of the provisions of the covered agreements in accordance with customary rules of interpretation of public international law. ... While the application of a provision may be regarded as confined to the context in which it takes place, the relevance of clarification contained in adopted Appellate Body reports is not limited to the application of a particular provision in a specific case. Appellate Body Report, *US – Stainless Steel (Mexico)*, paras 160-161.

<sup>3</sup> Appellate Body Report, *EC Measures Concerning Meat and Meat Products (Hormones) (EC – Hormones)*, WT/DS26/AB/R, WT/DS48/AB/R, adopted 13 February 1998, DSR 1998:I, 135; Panel Report, *EC Measures Concerning Meat and Meat Products (Hormones), Complaint by the United States (EC – Hormones (US))*, WT/DS26/R/USA, adopted 13 February 1998, as modified by Appellate Body Report, WT/DS26/AB/R, WT/DS48/AB/R, DSR 1998:III, 699; Panel Report, *EC Measures Concerning Meat and Meat Products (Hormones), Complaint by Canada (EC – Hormones (Canada))*, WT/DS48/R/CAN, adopted 13 February 1998, as modified by Appellate Body Report, WT/DS26/AB/R, WT/DS48/AB/R, DSR 1998:II, 235.

<sup>4</sup> Appellate Body Report, *Australia – Measures Affecting Importation of Salmon (Australia – Salmon)*, WT/DS18/AB/R, adopted on 6 November 1998, DSR 1998:VIII, 332; Panel Report, *Australia – Measures Affecting Importation of Salmon (Australia – Salmon)*, WT/DS18/R and Corr.1, adopted on 6 November 1998, as modified by Appellate Body Report, WT/DS18/AB/R, DSR 1998:VIII, 3407.

<sup>5</sup> Appellate Body Report, *Japan – Measures Affecting Agricultural Products (Japan – Agricultural Products II)*, WT/DS76/AB/R, adopted 19 March 1999, DSR 1999:I, 277; Panel Report, *Japan – Measures Affecting Agricultural Products (Japan – Agricultural Products II)*, WT/DS76/R, adopted 19 March 1999, as modified by Appellate Body Report, WT/DS76/AB/R, DSR 1999:I, 315.

<sup>6</sup> Appellate Body Report, *Japan – Measures Affecting the Importation of Apples (Japan – Apples)*, WT/DS245/AB/R, adopted 10 December 2003, DSR 2003:IX, 4391; Panel Report, *Japan – Measures Affecting the Importation of Apples (Japan – Apples)*, WT/DS245/R, adopted 10 December 2003, upheld by Appellate Body Report, WT/DS245/AB/R, DSR 2003:IX, 4291.

<sup>7</sup> Panel Reports, *European Communities – Measures Affecting the Approval and Marketing of Biotech Products (EC – Approval and Marketing of Biotech Products)*, WT/DS291/R, WT/DS292/R, WT/DS293/R, Corr.1 and Add.1, 2, 3, 4, 5, 6, 7, 8 and 9, adopted on 21 November 2006. A single Panel was established on 29 August 2003 to hear the three complaints by the US, Argentina and Canada against the EC, and the Panel issued its three reports in a single document, comprising some common parts and some parts specific to each report. The final reports were issued to the Parties on 10 May 2006, and circulated on 29 September 2006. The Panel reports were not appealed, and were adopted by the Dispute Settlement Body on 21 November 2006.

– *Continued Suspension and Canada – Continued Suspension*).<sup>8</sup> The findings in all these cases are discussed where relevant to the analysis of the provisions of the *SPS Agreement*.

Chapter 1 of Part III addresses the history of the *SPS Agreement*. This examination is useful in elucidating the reasons behind the provisions chosen by the drafters of the *SPS Agreement* to discipline the enactment and application of SPS measures by WTO Members. In particular, the impetus for the new approach of the *SPS Agreement* in balancing the competing goals of trade and health is set out. A brief examination of the trade rules of relevance to measures for the protection of human, animal and plant life or health that were in place before the coming into force of the *SPS Agreement* aims to identify the gaps in the legal framework that led negotiators to agree on the need for new disciplines for SPS measures. It also shows the aspects of the existing provisions, or their interpretation, that were considered effective and later incorporated into the disciplines of the *SPS Agreement*. This is followed by a discussion of the negotiating history of the *SPS Agreement*, including an identification of the main actors in the negotiation process, and their positions. In particular, the *SPS Agreement's* encouragement of harmonisation around international standards, its focus on scientific risk assessment as the basis for SPS regulation, its respect for national regulatory decisions regarding the level of SPS protection and its emphasis on transparency and consultation, are seen against this background. No official record of the Uruguay Round negotiations that led to the adoption of the *SPS Agreement* exists. However, negotiation position papers and other official documents as well as the published recollections of some Uruguay Round negotiators may fruitfully be relied upon to obtain a picture of the positions of various actors in the negotiation process.<sup>9</sup>

In Chapter 2 of Part III, the scope of application of the *SPS Agreement* is determined, in order to establish the range of measures that will be subject to the disciplines discussed in the rest of this book. The provisions of the *SPS Agreement* that set out its scope of application embody particular policy choices, either consciously or inadvertently made by the drafters, with regard to the limits of the Agreement. These provisions are intended to determine which particular types of market access barriers are caught by the rules contained in the *SPS Agreement*. However, as noted above, the text of the relevant provisions cannot be seen in isolation of its interpretation by WTO panels and the Appellate Body. This interpretation has, in some cases, resulted in a surprising reach of the disciplines of the *SPS Agreement*, as is discussed in this Chapter. Further, in this Chapter some attention is given to the vexed issue of private sector SPS standards and the question whether they fall within the disciplines of the *SPS Agreement*. Finally, in discussing the scope of application of the *SPS Agreement*, the extent to which certain measures falling within its

<sup>8</sup> Panel Report, *Canada – Continued Suspension of Obligations in the EC – Hormones Dispute (Canada – Continued Suspension)*, WT/DS321/R, (at time of writing not yet adopted, pending appeal); Panel Report, *United States – Continued Suspension of Obligations in the EC – Hormones Dispute (US – Continued Suspension)*, WT/DS320/R, (at time of writing not yet adopted, pending appeal).

<sup>9</sup> In this section of Chapter 1, reliance is had on Terence P. Stewart, ed., *The GATT Uruguay Round. A Negotiating History (1986–1992)*, vol. I - IV (Kluwer Law and Taxation Publishers, Deventer), 1993. This book, in four volumes, compiles information on the Uruguay Round negotiations obtained from official documents as well as many interviews with Uruguay Round negotiations and GATT Secretariat officials over a three year period. The author of the section of this book that deals with the agriculture negotiations, including on SPS issues, is John Breen.

ambit may also fall within the scope of application of other WTO agreements deserves some attention. This Chapter therefore briefly looks at the relationship between the *SPS Agreement* and other WTO agreements, in particular the GATT 1994, the *TBT Agreement* and the *Agreement on Agriculture*.

In Chapters 3 to 5 of Part III, certain substantive rules of the *SPS Agreement* that embody its trade/health balance are examined to determine the way in which they discipline WTO Members' ability to enact and apply SPS measures. As stated above, the adjudicatory bodies of the WTO play an important role in clarifying the meaning of the provisions of WTO agreements. A detailed analysis of the relevant substantive rules of the *SPS Agreement* as interpreted in the case law is therefore necessary in order to provide a clear understanding of the precise disciplines they impose on WTO Members.

In particular, Chapter 3 of Part III addresses the basic principles laid down in Article 2 of the *SPS Agreement*. This Article embodies the underlying aim of the *SPS Agreement*, namely to balance the legitimate right of sovereign governments to take health protection measures, with the goal of promoting free trade and preventing protectionism. Chapter 4 turns to examine the rules, contained in Article 3 of the *SPS Agreement*, that aim to promote harmonisation of SPS measures around international standards. The disciplines that govern risk analysis, in Article 5 of the *SPS Agreement*, are discussed in Chapter 5.

It is the thesis of this book that the impact on WTO Members of the tools used in the *SPS Agreement* to balance trade and health varies at different levels of development. To illustrate this, the legal analysis of the relevant provisions of the *SPS Agreement* in Chapters 3 to 5 goes hand-in-hand with references to their effect in practice. In some cases, this is done in the light of practical examples of situations where WTO Members at lower levels of development have faced market access barriers that might have been addressed using the disciplines of the *SPS Agreement*, or where these Members have had difficulty in complying with the relevant provisions of the *SPS Agreement* themselves.

The aim of the legal analysis, and factual illustrations, conducted in Chapters 3 to 5 is twofold. First, by examining how effective the existing rules are in disciplining the use of SPS measures as non-tariff barriers to trade to avoid misuse for protectionist purposes, these Chapters aim to establish in how far the rules are useful in securing market access for food and agricultural exports. However, WTO Members are also *importers* of food and agricultural products. Therefore, a second objective of the discussion of the substantive rules in these Chapters is to assess whether the relevant substantive disciplines in the *SPS Agreement* sufficiently respect the right of Member governments to take measures to protect human, animal and plant life and health in their territories. This analysis therefore sketches the contours of the fragile *balance* struck by certain disciplines of the *SPS Agreement* between the right of Members to regulate against SPS risks and the competing goal of liberalisation of trade in the agri-food sector.

The conclusion to Part III therefore attempts to evaluate the balance struck by the relevant substantive provisions of the *SPS Agreement*, with specific regard to its development implications. The criteria used for this evaluation are those set out in the Introduction to this book, namely whether the *SPS Agreement* effectively increases market access opportunities for WTO Members at lower levels of development; and whether it leaves these Members sufficient policy space for SPS regulation.

Once again, as elsewhere in this book, it must be recalled that developing-country Members are not a homogenous group. Instead, there are large differences between the SPS capabilities and financial and human resources of WTO Members at different positions along the development continuum. The capacities of different developing-country Members to meet their obligations and enforce their rights under the *SPS Agreement* vary greatly. In addition, an SPS measure that one Member experiences as a trade barrier may be, for another, a competitive opportunity. The illustrative examples provided in this Part with regard to experiences of particular developing-country Members with the SPS disciplines discussed are therefore only intended as indications of the possible impact of these disciplines in a specific factual context. No generally applicable conclusions can be drawn from the experiences of one developing-country Member for the entire group of developing-country Members of the WTO.

## CHAPTER 1

### History of the SPS Agreement

#### 1.1 Rules on SPS measures before the entry into force of the SPS Agreement

The idea that trade rules should address non-tariff barriers to trade, such as national SPS measures, is not new. From the outset, the trade disciplines in the GATT 1947 covered the use of non-tariff measures, including SPS regulations, as trade barriers and tried to limit the possibilities for their misuse for protectionist purposes. However, with the proliferation of non-tariff barriers to trade, it became increasingly clear that new, more effective, disciplines were necessary. This led to the drafting of four ‘Codes’ in the Tokyo Round dealing with different types of non-tariff barriers to trade. One of these was the *Agreement on Technical Barriers to Trade* of 1979, commonly known as the *Standards Code*. The *Standards Code* covered technical regulations and standards, including but not limited to those imposed to address SPS risks.

The relevant provisions of the GATT 1947 and the *Standards Code* are discussed briefly below. This aims to establish the manner in which these rules disciplined SPS barriers to trade. Thereafter, some of the inadequacies of these disciplines are pointed out in order to explain the need for a new agreement dealing specifically with SPS measures.

##### 1.1.1 The GATT 1947, Articles III, XI and XX(b)

The most important provisions in the GATT 1947 of relevance to measures for the protection of human, animal or plant life or health are Articles III:4, XI and XX(b).<sup>10</sup> These Articles of the GATT 1947, now incorporated by reference into the GATT 1994,<sup>11</sup> contained provisions that were (and still are) applicable to health regulations and standards, to the extent that they discriminate against imports or amount to quantitative restrictions to trade.<sup>12</sup>

In order to understand the disciplines imposed by these provisions, a brief look at their interpretation in the case law is necessary. This case law has continued to evolve after the conclusion of the Uruguay Round and the incorporation of the provisions of the GATT 1947 into the GATT 1994. So as to provide a clear picture of the GATT disciplines relevant to SPS measures, the discussion is not limited to GATT panel reports, but includes more recent WTO panel and Appellate Body reports. However, it should be borne in mind that at the time of the Uruguay Round negotiations the case law on the relevant provisions was at a more rudimentary stage, as reflected in the findings of the GATT panels

---

<sup>10</sup> Article I of the GATT, which sets out the most favoured nation treatment obligation, is of course also relevant to SPS measures. However, it will not be discussed here as it adds little to our understanding of the GATT disciplines applicable to SPS measures.

<sup>11</sup> The language of Paragraph 1(a) of the GATT 1994, incorporates the GATT 1947 by reference.

<sup>12</sup> On the current relationship between the *SPS Agreement* and the GATT 1994, see below, Part III, Section 2.4.2.

mentioned below. In fact, some of the more recent interpretations of Article XX(b) of the GATT rely to a large extent on the case law that developed under the *SPS Agreement*.<sup>13</sup>

Article III contains what is commonly called the national treatment provision, which prohibits discriminatory tax and regulatory treatment of imported products from WTO Members once they have crossed the border.<sup>14</sup> According to Article III:4, Members must provide to imported products of other Members treatment ‘no less favourable’ than that granted to ‘like’ domestic products in respect of all laws, regulations and requirements affecting their sale, purchase, distribution, transportation or use.

The word ‘affecting’ was broadly interpreted by GATT panels to cover not only laws, regulations and requirements directly governing the conditions of internal sale or use of products, but also any laws, regulations or requirements that may adversely modify the conditions of competition between domestic and imported products on the domestic market.<sup>15</sup> In addition, ‘affecting’ was found to cover not only laws and regulations setting out substantive requirements but also those laying down procedural conditions.<sup>16</sup> As a result,

---

<sup>13</sup> An example of where regard has been had to findings made in disputes under the *SPS Agreement* in the interpretation of Article XX(b) is the *EC – Asbestos* dispute. Here the Appellate Body, referring to its finding in *EC – Hormones* under the *SPS Agreement*, held that ‘[i]n justifying a measure under Article XX(b) of the GATT 1994, a Member may also rely, in good faith, on scientific sources which, at that time, may represent a divergent, but qualified and respected, opinion. A Member is not obliged, in setting health policy, automatically to follow what, at a given time, may constitute a majority scientific opinion.’ Appellate Body Report, *EC – Asbestos*, para. 178. The Appellate Body also referred to its findings in *EC – Hormones* to hold: ‘as with the *SPS Agreement*, there is no requirement under Article XX(b) of the GATT 1994 to *quantify*, as such, the risk to human life or health. A risk may be evaluated either in quantitative or qualitative terms.’ Appellate Body Report, *EC – Asbestos*, para. 167. In addition, the Appellate Body noted, and the parties did not dispute, that WTO Members have the right to determine the level of protection of health that they consider appropriate in a given situation. While not expressly referring to the *SPS Agreement* and its case law, this finding mirrors the approach taken in the case law under the *SPS Agreement* to the discretion of a Member to choose its own level of protection. Appellate Body Report, *EC – Asbestos*, para. 168. Gabrielle Marceau and Joel Trachtman note that this ‘horizontal cross-fertilization’ may be based on either the requirement of ‘effective’ interpretation of the WTO Agreement or efforts in the jurisprudence to maintain coherence in WTO law. Gabrielle Marceau and Joel Trachtman, ‘GATT, TBT and SPS: A Map of WTO Law of Domestic Regulation of Goods’, in *The WTO Dispute Settlement System 1995–2003*, F. Ortino and E-U Petersmann (eds.), vol. 18 (Kluwer Law International, Deventer), 2004, 275–340, 277.

<sup>14</sup> For a detailed analysis of the national treatment obligation, see Michael J. Trebilcock and Shiva K. Giri, ‘The National Treatment Principle in International Trade Law’, in *Handbook of International Trade*, Choi E. Kwan (ed.) (Blackwell, Malden MA), 2005, 185–238. For an analysis of the interpretation of this obligation in dispute settlement, and its implications for the regulatory autonomy of Members, see Gaëtan Verhoosel, *National Treatment and WTO Dispute Settlement: Adjudicating the Boundaries of the Regulatory Autonomy* (Hart Publishing, Oxford), 2002.

<sup>15</sup> GATT Panel Report, *Italy – Agricultural Machinery*, para. 12. More recently, the Appellate Body in *US – FSC (Article 21.5 – EC)* has confirmed this broad interpretation, but stressed that the word ‘affecting’ defines the scope of application of Article III:4 by limiting the laws, regulations and requirements covered to those which affect the sale, purchase, transportation, distribution or use of the products. Appellate Body Report, *US – FSC (Article 21.5 – EC)*, paras 208–210.

<sup>16</sup> GATT Panel Report, *US – Section 337*, para. 5.10.

the coverage of Article III:4 extended to a rather broad range of measures.<sup>17</sup> This broad interpretation has been continued in WTO case law.<sup>18</sup>

However, the non-discrimination obligation of Article III:4 applies only to ‘like products’.<sup>19</sup> As noted by the GATT Panel in *EEC – Animal Feed Proteins*, the concept of ‘like products’, used in various GATT provisions, is not defined in the GATT.<sup>20</sup> Instead, GATT panels developed certain criteria as tools to establish likeness, including the characteristics of the products, their end use, consumer tastes and habits and the tariff regimes of other Contracting Parties.<sup>21</sup> In addition, initially a line of case law developed according to which an examination of the ‘aim and effects’ of the measure at issue was necessary to the determination of ‘like products’, in order to establish whether the regulatory distinction was made ‘so as to afford protection to domestic production’.<sup>22</sup> However, the ‘aim and effect’ approach to the determination of ‘like products’ has since been definitively rejected by WTO panels and the Appellate Body.<sup>23</sup> As a result, the fact that the discrimi-

<sup>17</sup> Examples of measures found by GATT panels to fall under the scope of application of Article III:4 are additional marking or labelling requirements (Working Party Report, *Certificates of Origin, Marks of Origin, Consular Formalities*, para. 13); an advertising ban on cigarettes (GATT Panel Report, *Thailand – Cigarettes*, para. 77); a restriction on wholesale distribution of imported beer and wine to in-State distributors (GATT Panel Report, *US – Malt Beverages*, para. 5.32); additional packaging requirements for sale authorisation and minimum price requirements (GATT Panel Report, *Canada – Provincial Liquor Boards (US)*, paras 5.4 and 5.30); minimum price requirements (GATT Panel Report, *Canada – Provincial Liquor Boards (EEC)*, para. 4.26); and trade-related investment measures requiring investors to submit undertakings to purchase domestic goods or to use domestic suppliers (GATT Panel Report, *Canada – FIRA*, para. 6.1).

<sup>18</sup> For examples of this broad interpretation, see Appellate Body Report, *EC – Bananas III*, para. 211; Panel Report, *Canada – Autos*, paras 10.80-10.84; Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, paras 7.170-7.171; Panel Reports, *Canada – Wheat Exports and Grain Imports*, paras 6.331-6.332, 6.165 and 6.262; Panel Report, *EC – Trademarks and Geographical Indications (Australia)*, para. 7.263; Panel Report, *Mexico – Taxes on Soft Drinks*, para. 8.113 and Panel Report, *Brazil – Retreaded Tyres*, paras 7.419 and 7.433.

<sup>19</sup> The non-discrimination obligations of Articles I and III:2, first sentence, of the GATT also apply to ‘like’ products. However, the concept of like products has been held to have different meanings in the different provisions in which it is found. Appellate Body Report, *Japan – Alcoholic Beverages II*, 21.

<sup>20</sup> GATT Panel Report, *EEC – Animal Feed Proteins*, paras 4.1-4.2. In this case the Panel relied on the different duty rates and tariff bindings, varying protein contents and differing origin (animal, vegetable and synthetic) of the protein products before it, to find that they were not ‘like products’.

<sup>21</sup> GATT Panel Report, *Spain – Unroasted Coffee*, paras 4.6-4.9; GATT Panel Report, *US – Malt Beverages*, para. 5.23; Working Party Report, *Australian Subsidy on Ammonium Sulphate*, para. 8; GATT Panel Report, *Canada/Japan – Tariff on Imports of Spruce, Pine, Fir (SPF)*, paras 5.13-5.14. Some of these GATT panel reports dealt with ‘like products’ under Article I or Article III:2 of the GATT. While the nature and extent of the competitive relationship between products that is required for a finding of likeness varies between the different GATT provisions in which the term ‘like products’ is found, the criteria used as tools to determine such a competitive relationship are the same.

<sup>22</sup> GATT Panel Report, *US – Taxes on Automobiles*, paras 5.4-5.16, 5.23-5.32 and 5.33-5.37 (not adopted); and GATT Panel Report, *US – Malt Beverages*, paras. 5.71-5.74. The phrase ‘so as to afford protection to domestic production’ is found in Article III:1 of the GATT and, as an indication of the purpose of Article III, was used in the interpretation of Article III:2 and III:4.

<sup>23</sup> Already in *US – Gasoline*, the Panel did not have regard to the regulatory intent behind the different treatment of imported and domestic gasoline (Panel Report, *US – Gasoline*, para. 6.9). In *Japan – Alcoholic Beverages II*, the Panel explicitly rejected the aim and effect test for likeness (under Article III:2), noting that regulatory aims are sometimes difficult or impossible to ascertain and that incorporating an examination of regulatory objectives into the test for ‘like products’ would render the exceptions of Article XX of the GATT redundant or useless (Panel Report, *Japan – Alcoholic Beverages II*, paras 6.16-6.17). The Appellate Body implicitly affirmed this finding of the Panel (Appellate Body Report, *Japan – Alcoholic Beverages II*, 115). For a detailed discussion of this issue, see Robert E. Hudec, ‘GATT/WTO Constraints on National Regulation: Requiem for

natory treatment in a regulatory measure was designed to address an SPS risk rather than to protect the domestic industry is irrelevant to the determination of whether the products at issue are ‘like’. Thus, such measures are not exempt from the disciplines of Article III:4 and, if found in violation, the imposing Member will have to justify them under the exception contained in Article XX(b).

As clarified in more recent case law, likeness is determined with reference to the nature and extent of the competitive relationship between the products involved.<sup>24</sup> Four general criteria are commonly used by panels and the Appellate Body as tools to establish this relationship, namely (i) the properties, nature and quality of the products; (ii) the end-uses of the products; (iii) consumers’ tastes and habits in respect of the products; and (iv) the tariff classification of the products.<sup>25</sup> However, *all* relevant evidence must be examined in the determination of likeness.<sup>26</sup> Whether in a particular case the nature and extent of the competitive relationship between the products involved is sufficient for them to be ‘like’ for purposes of Article III:4 cannot be determined in the abstract, but depends on the circumstances of the case.<sup>27</sup> A controversial issue that has arisen in this regard is whether differences in the process and production method (PPM) whereby products are made can be taken into account in the determination of likeness. Where such PPMs affect the physical characteristics of the resulting product, for example where the absence of adequate sanitation in fishing vessels results in bacterial contamination of the fish, this factor is taken into account in the normal ‘like products’ analysis and does not give rise to problems. However, in many cases governments regulate PPMs that are not reflected in the physical characteristics of the final product (known as ‘non-product-related PPMs’). Here one can think of environmental and labour standard requirements in the production process, such as sustainable harvesting requirements for tropical timber. The GATT Panel in *US – Tuna (Mexico)*, evaluating the US Marine Mammals Protection Act which banned tuna imports from countries that could not show that their tuna harvesting methods met US standards regarding minimising the incidental killing of dolphins, held:

Article III:4 calls for a comparison of the treatment of imported tuna *as a product* with that of domestic tuna *as a product*. Regulations governing the taking of dolphins incidental to the taking of tuna could not possibly affect tuna as a

<sup>24</sup> Appellate Body Report, *EC – Asbestos*, para. 99.

<sup>25</sup> These criteria have been developed in the case law to ‘assist in the task of sorting and examining the relevant evidence’ but are, as emphasised by the Appellate Body, ‘neither a treaty-mandated nor a closed list of criteria that will determine the legal characterisation of products.’ Appellate Body Report, *EC – Asbestos*, para. 102.

<sup>26</sup> Appellate Body Report, *EC – Asbestos*, para. 113.

<sup>27</sup> The Appellate Body in *EC – Asbestos*, while not ruling on the precise scope of the ‘like’ products concept in Article III:4, held that the scope of this concept in Article III:4 is broader than that in Article III:2, first sentence, but not broader than the combined scope of ‘like products’ and ‘directly competitive or substitutable products’ under the first and second sentences of Article III:2. Appellate Body Report, *EC – Asbestos*, paras 99-100.

product. Article III:4 therefore obliges the United States to accord treatment to Mexican tuna no less favourable than that accorded to United States tuna, whether or not the incidental taking of dolphins by Mexican vessels corresponded to that of United States vessels.<sup>28</sup>

This report was never adopted, and there is still much debate as to whether non-product-related PPMs can be had regard to in order to determine that the relevant products are not ‘like’ and can therefore be treated differently without violating Article III:4.<sup>29</sup> The prevailing opinion is that non-product-related PPMs are not relevant to the ‘like product’ analysis.<sup>30</sup> However, the more recent findings of the Appellate Body in *EC – Asbestos* add nuance to this matter.<sup>31</sup>

In *EC – Asbestos*, the Appellate Body considered the health risks associated with chrysotile asbestos fibres as pertinent in the examination of likeness, under the criteria of physical properties and consumer tastes and habits.<sup>32</sup> It is clear, that the SPS risk inherent in a particular product would be a relevant consideration to be taken into account by a panel or the Appellate Body when determining the likeness of the products involved, even if this risk arises from PPMs, where it is reflected in the product characteristics (for example, an increased level of toxins). However, also non-product-related PPMs can have an impact on consumer preferences to the extent that they weaken the competitive relationship between the products involved. Although it is not often the case, in practice, that consumers are guided in their purchasing behaviour by ethical considerations rather than price and

<sup>31</sup> Peter Van den Bossche, *The Law and Policy of the World Trade Organization Text, Cases and Materials*, 2<sup>nd</sup> ed. (Cambridge University Press, Cambridge), 2008, 378 and 381.

<sup>32</sup> Appellate Body Report, *EC – Asbestos*, para. 113. However, according to one Appellate Body Member who wrote a separate concurring opinion, the extent of the scientific evidence showing that chrysotile asbestos fibres are carcinogenic means that *even in the absence* of evidence regarding end-uses and consumer tastes and habits, cement-based products containing chrysotile asbestos fibres can be characterised as not ‘like’ cement-based products containing PCG fibres. This Appellate Body Member rejected the decisive nature of the test of the competitive relationship of the products on the market, stating: ‘the necessity or appropriateness of adopting a “fundamentally” economic interpretation of the “likeness” of products under Article III:4 of the GATT 1994 does not appear to me to be free from substantial doubts.’ Appellate Body Report, *EC – Asbestos*, para. 154.

quality, this may be changing.<sup>33</sup> In some situations, a difference in SPS risk, even if not reflected in the final product, depending on the circumstances of the case, could be an indication that the products involved are not ‘like’ for purposes of Article III:4, if this difference would affect the nature and extent of the competitive relationship between the products to a sufficient degree. One example would be the preference of consumers in many European countries for non-genetically modified food, even where the genetically modified product is substantially equivalent to its non-genetically modified counterpart. In many cases, while genetic modification is part of the production process (for example, a GM additive is used in processed food, or GM feed is given to beef cattle), the final product bears little or no trace of the modified genes. Still, concerns with the long-term environmental effects of genetic modification may prompt consumers to avoid such products, weakening their competitive relationship with non-GM products to the extent that they may no longer be considered ‘like’.<sup>34</sup>

It is useful to note, however, that although a difference in SPS risk may mean that seemingly like products are in fact not ‘like’, a *similarity* in the SPS risk contained in two products does *not* make them ‘like’ for purposes of Article III:4 of the GATT, since it cannot create, by itself, a competitive relationship between different products. For example, the fact that both ostriches and canaries may be carriers of avian influenza, does not mean that ostriches and canaries are ‘like’ products and should be subject to the same regulatory treatment under Article III:4, since these products clearly do not compete with each other on the market. Consequently, the non-discrimination discipline in Article III:4 of the GATT does not serve to eliminate arbitrary distinctions in regulatory treatment of different products that contain comparable risks.<sup>35</sup>

Article III:4 requires that the treatment of imported products be ‘no less favourable’ than that given to ‘like’ domestic products. It is important to note that treatment that is different is not *per se* ‘less favourable’.<sup>36</sup> Neither is identical treatment necessarily equally favourable to domestic and imported products.<sup>37</sup> Instead, as held by the GATT Panel in *US – Section 337*, the words ‘no less favourable treatment’ require ‘effective equality of competitive opportunities’ for the imported products as compared to the ‘like’ domestic

---

<sup>33</sup> See on this issue R. Howse, P. van Bork and C. Hedebrand, ‘WTO Disciplines and Biofuels, Opportunities and Constraints in the Creation of a Global Marketplace’, *IPC Discussion Paper*, October 2006; M. Araya, ‘WTO Negotiations on Environmental Goods and Services: Maximizing Opportunities’, Global Environmental and Trade Study, Yale Center for Environmental Law and Policy, June 2003, 1-2. cited in Peter Van den Bossche, *The Law and Policy of the World Trade Organization Text, Cases and Materials*, 2<sup>nd</sup> ed. (Cambridge University Press, Cambridge), 2008, 381.

<sup>34</sup> In this respect, Peter Van den Bossche notes a Zogby poll which showed that 80.7% of US consumers would be willing to pay more for eggs from hens treated humanely, as would 87% of consumers in the UK. A.B. Thiermann and S. Babcock, ‘Animal Welfare and International Trade’, *Revue Scientifique et Technique Office International des Epizooties*, 2005, 751, cited in Peter Van den Bossche, *The Law and Policy of the World Trade Organization Text, Cases and Materials*, 2<sup>nd</sup> ed. (Cambridge University Press, Cambridge), 2008, 381.

<sup>35</sup> As such a discipline with regard to the level of protection against SPS risks chosen by Members was deemed necessary by the Uruguay Round negotiators, it was included in Article 5.5 of the *SPS Agreement*. See below, Part III, Section 5.2.3.

<sup>36</sup> GATT Panel Report, *US – Section 337*, para. 5.11 and GATT Panel Report, *EEC – Animal Feed Proteins*, para. 4.12.

<sup>37</sup> GATT Panel Report, *US – Section 337*, para. 5.11. For a more recent confirmation of this interpretation, see Appellate Body Report, *Korea – Various Measures on Beef*, para. 137.

products.<sup>38</sup> If the regulatory requirements impose an additional burden on imported products that is not borne by domestic products, they will be regarded as adversely affecting the conditions of competition to the detriment of the imported products, even if they are applied in a formally identical manner to imports and domestic products.<sup>39</sup>

However, in the *Dominican Republic – Import and Sale of Cigarettes* case, the Appellate Body has held that if the detrimental effect on imported products that results from a measure ‘is explained by factors or circumstances unrelated to the foreign origin of the product’ the measure will not be held to accord ‘less favourable treatment’ to the imported product.<sup>40</sup> This ruling was followed by the Panel in *EC – Approval and Marketing of Biotech Products*,<sup>41</sup> in rejecting Argentina’s claim that the EC had violated Article III:4 of the GATT by its alleged suspension of consideration, or failure to consider, eight applications for approval of biotech products, resulting in less favourable treatment of the relevant biotech products than was given to ‘like’ non-biotech products. The Panel noted that Argentina had not alleged that the manner of processing applications under the relevant EC Regulation had differed depending on the origin of the products (i.e. that it differed between domestic biotech products and imported biotech products), neither was it self-evident that the alleged less favourable treatment of imported biotech maize was explained by its foreign origin. Instead the Panel considered that, ‘for instance, a perceived difference between biotech products and non-biotech products in terms of their safety, etc.’ could explain the different treatment.<sup>42</sup>

It would seem from this recent case law that any SPS measure that has a detrimental effect on imports, such as one laying down maximum residue levels for particular pesticides used by foreign producers or setting out pre-shipment inspection requirements to avoid the introduction of plant pests with imported products, could be regarded as applied so as to provide ‘no less favourable treatment’ to imports than to ‘like’ domestic products

<sup>38</sup> GATT Panel Report, *US – Section 337*, para. 5.11; GATT Panel Report, *Canada – Provincial Liquor Boards (US)*, para. 5.5; GATT Panel Report, *US – Malt Beverages*, para. 5.30.

<sup>39</sup> GATT Panel Report, *US – Section 337*, para. 5.11 and GATT Panel Report, *Canada – Provincial Liquor Boards (US)*, para. 5.14. More recently, in *Dominican Republic – Import and Sale of Cigarettes*, the Panel held that a stamp tax applied in a formally identical manner to domestic and imported cigarettes imposed additional processes and costs on imported cigarettes and was thus ‘less favourable’ treatment. Panel Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 7.196.

<sup>40</sup> Appellate Body Report, *Dominican Republic – Import and Sale of Cigarettes*, para. 96. This finding related to a bond requirement imposed by the Dominican Republic on importers and domestic producers of cigarettes, which had a greater detrimental effect on imported cigarettes because the resulting per-unit cost of this requirement was higher for imported cigarettes. As the higher per-unit cost was due to the smaller market share of the importer of Honduran cigarettes, rather than due to the foreign origin of the imported cigarettes, the Appellate Body agreed with the Panel that no less favourable treatment had been established. In contrast, see the Panel’s finding in the earlier case, *Canada – Wheat Exports and Grain Imports*, where the Panel held that while there may be legitimate reasons for Canada to treat domestic grain differently from ‘like’ imported grain (for example because imported grain was not subject to the Canadian quality assurance system), it did not see how these arguments could support the conclusion that the measure treated imported grain ‘no less favourably’ than like domestic grain. Panel Reports, *Canada – Wheat Exports and Grain Imports*, paras 6.209-6.214.

<sup>41</sup> This Panel Report was adopted (unappealed) on 21 November 2006.

<sup>42</sup> Panel Report, *EC – Approval and Marketing of Biotech Products*, para. 7.2514. The Panel followed almost identical reasoning to reject Argentina’s claim of violation of the second clause of Annex C.1(a) of the *SPS Agreement* which contains a national treatment provision with respect to procedures to check compliance with SPS requirements, as discussed below, Part IV, Section 1.4.4. Panel Report, *EC – Approval and Marketing of Biotech Products*, para. 7.2411.

under Article III:4 of the GATT, as the detrimental effect results from the SPS risk, or even a *perceived* SPS risk, contained in the imported product rather than from the foreign origin of the product. As with the old ‘aim and effect’ test for likeness, this incorporation of an examination of the *reasons* for the adverse effects on the conditions of competition into the ‘no less favourable’ treatment analysis seems misplaced. It allows measures that impose a greater burden on imports than on domestic products to slip through the national treatment provision, if the adverse effect on the competitive relationship can be explained by circumstances unrelated to the fact that the product originates abroad, without subjecting such measures to the disciplines of Article XX. More worryingly, it allows even ‘perceived’ differences between products to justify different treatment that adversely affects competitive conditions. It would seem preferable to begin the enquiry by determining whether the products (*in casu* biotech products and their non-biotech equivalents) are in fact ‘like’, taking account of real differences in product characteristics, including safety levels, and having regard to perceived differences only to the extent that they do, in practice, affect the market behaviour of consumers and thereby the nature and extent of the competitive relationship between the products. The reasons for the different treatment of the ‘like’ products should then be assessed for justifiability under Article XX.

Article XI of the GATT, in contrast to Article III:4, focuses on quantitative restrictions in relation to importation or exportation, rather than on internal regulations.<sup>43</sup> In terms of the Note *Ad* Article III, regulations that apply to both imported and domestic products but are enforced at the border, nevertheless fall under Article III:4. Article XI:1 prohibits prohibitions or restrictions, whether in the form of bans, quotas or other measures, on imports from or exports to Members, except in very limited cases.<sup>44</sup> As noted by the GATT Panel in *Japan – Trade in Semi-Conductors*, the wording of Article XI:1 is comprehensive.<sup>45</sup> The prohibition in Article XI extends to both *de jure* and *de facto* quantitative restrictions.<sup>46</sup> Examples of SPS measures that would be caught by Article XI are regulations prohibiting the importation of genetically-modified organisms (GMOs) or banning imports of poultry products from Members in which avian influenza outbreaks have been reported. Not only outright bans but also other types of import restrictions, such as quotas and import or export licensing schemes,<sup>47</sup> are subject to the prohibition of Article XI. For example, a licensing system for plant imports that are hosts of pests of quarantine

<sup>43</sup> These measures are not limited to border measures, as held by the Panel in *India – Autos*. Instead, the key criterion is the nature of the measure as a restriction *in relation to importation or exportation*. Whether a measure falls under Article III or Article XI depends on the manner in which it affects the competitive opportunities of imports – if it affects competitive opportunities *on* the domestic market, it falls under Article III:4 whereas if it affects the opportunities for *entering* the market, i.e. importation itself, it falls under Article XI:1. Different aspects of a measure may fall under each of the two provisions. Panel Report, *India – Autos*, paras 7.261 and 7.224.

<sup>44</sup> These limited exceptions are contained in Article XI:2, and include temporary export restrictions to relieve critical food shortages. In addition, the general exceptions of Article XX of the GATT apply.

<sup>45</sup> GATT Panel Report, *Japan – Trade in Semi-Conductors*, para. 117. According to the Panel, the use of the word ‘measures’ instead of only laws and regulations, indicated that the legal status of the measure involved was not decisive in determining whether or not it fell under Article XI:1. Therefore a non-mandatory measure restricting exports below cost price was regarded as caught by Article XI:1.

<sup>46</sup> Panel Report, *Argentina – Hides and Leather*, para. 11.17.

<sup>47</sup> Note that automatic licensing systems (i.e. those where the licence is automatically granted) do not constitute a restriction of the type prohibited under Article XI:1. GATT Panel Report, *EEC – Minimum Import Prices*, para. 4.1.

significance, which conditions the granting of a licence on the requirement that the pest-free status of plant imports be certified by competent officials, would fall under Article XI. Unlike Article III, the prohibition of Article XI is not tempered by any conditions aimed at identifying protectionism.

It is clear that in some cases regulations that discriminate against imports or constitute quantitative restrictions on imported products are a justifiable exercise of the sovereign duty of a government to protect certain societal values on its territory. For this reason, the GATT provides, in Article XX, for certain qualified exceptions from its rules for measures aimed at particular policy objectives.<sup>48</sup> One of these exceptions, contained in Article XX(b), is that for measures necessary to protect the life or health of humans, animals and plants. Such measures are allowed, provided they are not applied in a manner constituting arbitrary or unjustified discrimination between countries where the same conditions prevail, or a disguised restriction on international trade, in terms of the *chapeau* (headnote) of Article XX. Since Article XX provides an *exception* from the trade rules of the GATT, it is for the responding party to prove that its measure falls within the exception provided in Article XX(b) and is applied in a manner that meets the requirements of the *chapeau*.<sup>49</sup> This means that, under the GATT, SPS measures that fall foul of the disciplines of Articles III:4 or XI are only permitted if the regulating country can show that they meet the requirements of paragraph (b) and the *chapeau* of Article XX.

Two requirements must be met in order to justify a measure under Article XX(b), namely:

- (1) that the *policy* objective pursued by the measure falls within the range of policies designed to protect human, animal or plant life or health; and
- (2) that the inconsistent measure for which the exception is being invoked was *necessary* to fulfil that policy objective.<sup>50</sup>

The first step in an analysis of whether a measure falls under Article XX(b) is thus to determine whether the policy objective of the measure is the protection of human, animal or plant life or health. In *Thailand – Cigarettes*, the GATT Panel accepted that smoking constitutes a serious health risk and that measures designed to reduce smoking are therefore within the scope of Article XX(b).<sup>51</sup> Once it is established that the measure aims at such a

<sup>48</sup> The GATT Panel in *US – Section 337* noted that Article XX provides a limited and conditional exception from other GATT provisions. GATT Panel Report, *US – Section 337*, para. 5.9. In *US – Tuna (Mexico)* the GATT Panel recalled this finding. GATT Panel Report, *US – Tuna (Mexico)*, para. 5.22.

<sup>49</sup> For findings of GATT panels allocating the burden of proof under Article XX to the responding party, see GATT Panel Report, *Canada – FIRA*, para. 5.20; and GATT Panel Report, *US – Section 337*, para. 5.27. This allocation of the burden of proof was confirmed by the Appellate Body in *US – Gasoline* and the Panel in *EC – Asbestos*. Appellate Body Report, *US – Gasoline*, 22; and Panel Report, *EC – Asbestos*, paras 8.177-8.178. Note that although the GATT Panel in *US – Tuna (Mexico)* held that the practice of GATT panels had been to interpret Article XX narrowly due to its nature as a conditional exception, the Appellate Body has not followed this approach. Instead, the Appellate Body tries to balance the objective of trade liberalisation reflected in the normal GATT rules with the societal policy objectives reflected in the exceptions of Article XX. Appellate Body Report, *US – Gasoline*, 16-17; and Appellate Body Report, *US – Shrimp*, para. 121.

<sup>50</sup> Panel Report, *US – Gasoline*, 6.20. This two step test was reiterated in Panel Report, *EC – Asbestos*, 8.169.

<sup>51</sup> GATT Panel Report, *Thailand – Cigarettes*, para. 73. In later WTO cases, such as *EC – Asbestos* and *Brazil – Retreaded Tyres*, the Panels have also accepted that the measure at issue aims at a policy objective that falls under Article XX(b). Panel Report, *US – Gasoline*, para. 6.21; Panel Report, *EC – Asbestos*, para. 8.194 and Panel Report *Brazil – Retreaded Tyres*, para. 7.102. In *EC – Tariff Preferences* the Panel held that not only

policy, the country involved is free to set the standard of protection it chooses. The GATT Panel in *US – Tuna (Mexico)* stressed that Article XX(b) ‘allows each contracting party to set its own human, animal or plant life or health standards’<sup>52</sup> and that the conditions in Article XX(b) and the *chapeau* which limit resort to the exception, refer to the trade measure at issue and not to the life or health standard chosen by the Contracting Party.

WTO case law on Article XX(b) of the GATT 1994, has further fleshed out this requirement by requiring sufficient scientific evidence of risk. In *EC – Asbestos*, the Panel found that the determination that the policy aimed at by the measure fell within the scope of policies ‘designed to protect human, plant or animal life or health’ required a finding of a health risk.<sup>53</sup> It held:

[W]e consider that, inasmuch as they include the notion of “protection”, the words “policies designed to protect human life or health” imply the existence of a *health risk*. We must therefore determine, on the basis of the relevant rules of evidence, whether chrysotile-asbestos, in the various forms we have considered so far, poses a risk to human life or health.<sup>54</sup>

The Panel then went on to state that it would determine whether there was sufficient scientific evidence of a risk, on the basis of the scientific evidence presented by the parties and the comments of the experts consulted by the Panel,<sup>55</sup> while not setting itself up as an arbiter of scientific opinions.<sup>56</sup> After doing so, it concluded that the evidence tended to show that asbestos and asbestos products constituted a risk to human health, rather than the opposite.<sup>57</sup>

Whether the policy objective of the protection of human, animal or plant life or health in Article XX(b) is subject to a territorial limitation is still an open question. Article XX of the GATT does not expressly state whether it can be relied upon to justify measures for the protection of the societal values listed in that Article *outside* the territory of the Member imposing the measure. In the unadopted GATT Panel report in *US – Tuna (Mexico)*, the GATT Panel found that the exception contained in Article XX(b) of GATT 1947 only

---

the express provisions of the measure at issue but also its design, architecture and structure is relevant in determining whether it is a measure designed to achieve the stated health objectives. Panel Report, *EC – Tariff Preferences*, para. 7.200. In that case, the Panel found that the policy reflected in the Drug Arrangements of the EC’s Generalised System of Preferences was not one designed for the purpose of protecting human life or health in the EC, and therefore did not fall under Article XX(b) of the GATT. Panel Report, *EC – Tariff Preferences*, para. 7.210.

<sup>52</sup> GATT Panel Report, *US – Tuna (Mexico)* (unadopted), para. 5.27. This was reiterated by the Appellate Body in *EC – Asbestos*, Appellate Body Report, *EC – Asbestos*, para. 168.

<sup>53</sup> The Panel stopped short, however, of requiring a ‘risk assessment’ within the meaning of the term in the *SPS Agreement*. For a discussion of the risk assessment requirement of the *SPS Agreement*, see below, Part III, Section 5.1.

<sup>54</sup> Panel Report, *EC – Asbestos*, para. 8.170.

<sup>55</sup> *Ibid.*, para. 8.182.

<sup>56</sup> The Panel stated: ‘In this context, in relation to the scientific information submitted by the parties and the experts, the Panel feels bound to point out that it is not its function to settle a scientific debate, not being composed of experts in the field of the possible human health risks posed by asbestos. Consequently, the Panel does not intend to set itself up as an arbiter of the opinions expressed by the scientific community.’ *Ibid.*, para. 8.181.

<sup>57</sup> *Ibid.*, paras 8.193-194. The Appellate Body upheld the Panel’s finding on this point. Appellate Body Report, *EC – Asbestos*, para. 163.

applies to measures to protect life or health *within* the jurisdiction of the Contracting Party imposing the measures.<sup>58</sup> However, in *US – Tuna (EEC)*, a later case regarding the same facts, the GATT Panel held that as Article XX(b) of GATT 1947 did not specify any limitation on the location of the living things to be protected, and neither the other provisions of the GATT nor international law in general proscribe extra-territorial application of regulations in principle, the US measures could fall under Article XX(b). Nevertheless, the Panel held that measures taken so as to force other countries to change their policies within their own jurisdictions could not fall under Article XX(b) as this would impair the objectives of the GATT.<sup>59</sup>

The Appellate Body has not yet ruled on this question. In *US – Shrimp*, in which a US ban on imports of shrimp harvested in a manner leading to incidental killing of turtles was challenged, the Appellate Body used the fact that turtles migrate and thus cross US territorial waters to avoid ruling on whether there was an implied territorial limitation in Article XX.<sup>60</sup> In *EC – Tariff Preferences*, however, the Panel held that the policy reflected in the ‘Drug Arrangements’ that formed part of the EC’s Generalised System of Preferences was not one designed to protect human life or health *in the EC* and the Drug Arrangements were therefore not a measure falling under Article XX(b) of the GATT.<sup>61</sup> Whether the Appellate Body will follow the approach of this Panel remains to be seen. This issue has implications for the controversial question of whether regulations imposing requirements on the PPM of an imported product can be justified under Article XX, if such PPM is not reflected in the characteristics of the product itself and therefore cannot affect the attainment of a particular policy objective, such as SPS protection, within the territory of the importing Member. For example, a regulation requiring that abattoirs in the exporting Member which process meat for export comply with specific hygiene requirements is a PPM requirement that bears upon the sanitary characteristics of the exported product. It therefore aims to protect health in the importing Member and would fall under the policy objective of Article XX(b). By contrast, a requirement that proper protective equipment be provided to agricultural workers administering toxic pesticides in the exporting Member in order to protect their health addresses a PPM that does not affect the final product and has no implications for health protection in the importing Member.<sup>62</sup> Instead, such a measure seeks to protect policy interests outside the territory of the importing Member. It is not clear, as stated above, whether such a measure could be justified under Article XX(b), but it seems doubtful.

The second element of the Article XX(b) test is the ‘necessity’ requirement. The GATT Panel in *Thailand – Cigarettes*, noted that Article XX(b) ‘clearly allowed contracting parties to give priority to human health over trade liberalization’.<sup>63</sup> However, it pointed out

<sup>58</sup> GATT Panel Report, *US – Tuna (Mexico)* (unadopted), paras 5.24-5.29.

<sup>59</sup> GATT Panel Report, *US – Tuna (EEC)* (unadopted), paras 5.31-5.33.

<sup>60</sup> Appellate Body Report, *US – Shrimp*, para. 133. The Appellate Body was dealing with Article XX(g) in this dispute. However, the same question arises with regard to other paragraphs of Article XX, including paragraph (b).

<sup>61</sup> Panel Report, *EC – Tariff Preferences*, para. 7.210.

<sup>62</sup> Note that this would be different if the regulation at issue addressed permissible pesticide residues on the imported product. The latter regulation would regulate a PPM that is reflected in the product characteristics and has health implications for the importing Member.

<sup>63</sup> GATT Panel Report, *Thailand – Cigarettes*, para. 73.

that to be covered by Article XX(b), the measure had to be ‘necessary’.<sup>64</sup> According to the Panel, a measure can be considered ‘necessary’ only if there is no alternative measure consistent with the GATT, or less inconsistent with it, that the respondent could reasonably be expected to use to achieve its health policy objectives.<sup>65</sup> Applying this ‘least GATT-inconsistent’ test, the Panel found that Thailand’s measures were not ‘necessary’ as its health policy goals could be achieved by measures reasonably available to it and consistent or less inconsistent with the GATT.<sup>66</sup> This test has more recently been formulated by the Appellate Body as the ‘least-trade-restrictive’ test, which requires that the measure least restrictive of trade be applied, to the extent that it is reasonably available.<sup>67</sup>

It should be noted that neither any panel nor the Appellate Body has ever questioned the necessity of the *policy objective* embodied in a measure under Article XX(b), but they have limited their enquiries to whether the *measure* applied to achieve the policy goal complied with the requirements of Article XX(b).<sup>68</sup> This was confirmed by the Panel in *EC – Asbestos*, which stated:

[W]e note that the panel in *United States – Gasoline* also made clear that it did not have to examine the necessity of the policy goal.<sup>69</sup> In other words, we do not have to assess the choice made by France to protect its population against certain risks, nor the level of protection of public health that France wishes to achieve. We must simply determine if the French policy of prohibiting the use of chrysotile-asbestos falls within the range of policies designed to protect human life or health.<sup>70</sup>

Thus the policy itself is only examined to determine whether it is a policy which falls within the ambit of one of the Article XX exceptions, *in casu* Article XX(b). In *US – Gasoline* the Panel and the parties accepted that:

<sup>64</sup> *Ibid.* para. 74.

<sup>65</sup> *Ibid.*, para. 75.

<sup>66</sup> For example, the Panel saw non-discriminatory labelling and ingredient disclosure rules, advertising bans on both domestic and imported cigarettes and non-discriminatory supply control through the government tobacco monopoly as reasonable alternatives.

<sup>67</sup> Appellate Body Report, *EC – Asbestos*, para. 172; and Appellate Body Report, *Brazil – Retreaded Tyres*, para. 178.

<sup>68</sup> With regard to the environmental exception, the GATT Panel in *US – Tuna (Mexico)* held that ‘the conditions set out in Article XX(g) ... refer to the trade measure requiring justification under Article XX(g), not however to the conservation policies adopted by the contracting party.’ GATT Panel Report, *US – Tuna (Mexico)* (unadopted). Similarly the Panel in *US – Gasoline* has found that ‘it was not its task to examine generally the desirability or necessity of the environmental objectives of the Clean Air Act or the Gasoline Rule. ... Under the General Agreement, WTO Members were free to set their own environmental objectives, but they were bound to implement these objectives through measures consistent with its provisions...’ Panel Report, *US – Gasoline*, para. 7.1. This was confirmed by the Appellate Body in the latter case, stating that ‘WTO Members have a large measure of autonomy to determine their own policies on the environment (including its relationship to trade), their environmental objectives and the environmental legislation they enact and implement. So far as concerns the WTO, that autonomy is circumscribed only by the need to respect the requirements of the *General Agreement* and the other covered agreements.’ Appellate Body Report, *US – Gasoline*, 30.

<sup>69</sup> In a footnote here the panel referred to Panel Report, *US – Gasoline*, para. 6.22; as well as GATT Panel Report, *US – Section 337*, para. 5.26; and GATT Panel Report, *Thailand – Cigarettes*, para. 74.

<sup>70</sup> Panel Report, *EC – Asbestos*, para. 8.171.

...a policy to reduce air pollution resulting from the consumption of gasoline was a policy within the range of those concerning the protection of human, animal and plant life or health mentioned in Article XX(b).<sup>71</sup>

The question of which alternative measures are to be considered ‘reasonably available’ is clearly important to the ‘necessary’ test.<sup>72</sup> In *Thailand – Cigarettes*, in which Thailand’s ban on cigarette imports was challenged, the GATT Panel examined whether alternative measures were ‘reasonably available’ by looking at whether other GATT-consistent or less GATT-inconsistent measures might be used to meet Thailand’s health objectives (reducing the quantity and ensuring the quality of cigarettes sold in Thailand). As confirmed in WTO case law, in order for an alternative measure to be reasonably available, it must achieve the chosen level of protection of the importing Member. This can be seen as a ‘weak proportionality’ requirement in that it implicitly allows the consideration of whether a measure is disproportionate because a less trade-restrictive measure is available that would achieve the same health policy objective.<sup>73</sup> The health policy objective itself is not open to challenge under this type of proportionality testing. In *EC – Asbestos*, the Appellate Body noted that:

...it is undisputed that WTO Members have the right to determine the level of protection of health that they consider appropriate in a given situation.<sup>74</sup>

According to the Appellate Body in that case, it follows that a Member cannot reasonably be expected to employ any alternative measure that would not achieve its chosen level of health protection.<sup>75</sup>

However, there is more to the ‘reasonably available’ test than an identification of less trade-restrictive alternative measures that achieve the policy objectives, including the level of protection, aimed at by the importing Member. The Panel in *Thailand – Cigarettes* did not seem to take into account the question whether the alternative measures identified, such as labelling and ingredient-disclosure regulations, or a ban on harmful additives in cigarettes, which are administratively more burdensome than a simple import ban, were technically and economically feasible for Thailand. In *US – Gasoline* the Panel did not view the administrative difficulties presented by an alternative measure as sufficient to

<sup>71</sup> Panel Report, *US – Gasoline*, para. 6.21.

<sup>72</sup> The question of which party bears the burden of proof with regard to the existence of a reasonably available alternative measure was addressed by the Appellate Body in *Brazil – Retreaded Tyres*. It found that the complaining Member must identify possible alternatives to the measure at issue that the responding Member could have taken. The responding Member then bears the burden of showing that the proposed alternatives are not, in fact, reasonable available to it. Appellate Body Report, *Brazil – Retreaded Tyres*, para. 156, referring to Appellate Body Report, *US – Gambling*, para. 307.

<sup>73</sup> Catherine Button, *The Power to Protect. Trade, Health and Uncertainty in the WTO* (Hart Publishing, Oxford and Portland, Oregon), 2004, 29.

<sup>74</sup> Appellate Body Report, *EC – Asbestos*, para. 168.

<sup>75</sup> Appellate Body Report, *EC – Asbestos*, para. 174. The Appellate Body here held that France could not reasonably be expected to adopt any alternative measure that would involve a continuation of the very risk that its chosen measure sought to halt, namely the spread of asbestos-related diseases. As scientific evidence suggested that the alternative measure of ‘controlled use’ of asbestos products could still lead to a significant residual risk of asbestos-related diseases, it could not be regarded as achieving France’s chosen level of health protection and was thus not a ‘reasonably available’ alternative measure. This approach was reiterated in Appellate Body Report, *Brazil – Retreaded Tyres*, para. 156.

show that it was not reasonably available.<sup>76</sup> This question was not appealed in that case. In *EC – Asbestos*, however, the Panel considered that the economic and administrative capacity of a country to implement alternative measures was relevant, holding that:

... in order to determine whether a measure is necessary it is important to assess whether consistent or less inconsistent measures are *reasonably* available. The term “reasonably” has not been defined as such by the panels that have referred to it in the context of Article XX. It suggests, however, that the availability of a measure should not be examined theoretically or in absolute terms. Nevertheless, in the light of the reasoning of these panels, we find the word “reasonably” should not be interpreted loosely either. The fact that, administratively, one measure may be easier to implement than another does not mean that the other measure is not reasonably available.<sup>77</sup> We consider that the existence of a reasonably available measure must be assessed in the light of the economic and administrative realities facing the Member concerned but also by taking into account the fact that the State must provide itself with the means of implementing its policies. Thus, the Panel considers that it is legitimate to expect a country such as France with advanced labour legislation and specialized administrative services to deploy administrative resources proportionate to its public health objectives and to be prepared to incur the necessary expenditure.<sup>78</sup>

In *Brazil – Retreaded Tyres*, the Appellate Body held that in the evaluation of whether an alternative measure is reasonably available, ‘the capacity of a country to implement remedial measures that would be particularly costly, or would require advanced technologies’ may be relevant.<sup>79</sup>

There would thus clearly be a difference in the requirements of this ‘least trade-restrictive measure reasonably available’ test when applied to Members at different levels of development. The additional flexibility provided could be applied in order to take account of the financial and technical constraints faced by developing countries which may affect their ability to implement alternative SPS measures that are technically complex or resource intensive.<sup>80</sup>

---

<sup>76</sup> Panel Report, *US – Gasoline*, 6.26 and 26.28.

<sup>77</sup> Here the Panel referred to *US – Gasoline*, paras 6.26 to 6.28.

<sup>78</sup> Panel Report, *EC – Asbestos*, para. 8.207.

<sup>79</sup> Appellate Body Report, *Brazil – Retreaded Tyres*, para. 156. The Appellate Body here cited its finding in *US – Gambling* (with respect to the necessity requirement in Article XIV(a) of the GATS) that an alternative measure ‘may be found not to be ‘reasonably available’ ... where it is merely theoretical in nature, for instance, where the responding Member is not capable of taking it, or where the measure imposes an undue burden on that Member, such as prohibitive costs or substantial technical difficulties.’ Appellate Body Report, *US – Gambling*, para. 308.

<sup>80</sup> In *Korea – Various Measures on Beef*, with regard to the necessity test in Article XX(d), the Appellate Body found that the alternative GATT-consistent measures at issue would be able to achieve Korea’s chosen level of enforcement, if Korea would devote more resources to this enforcement mechanism. It found Korea’s argument regarding its lack of resources to do so insufficiently persuasive. Appellate However, the Appellate Body did recognise that the alternative measures would entail higher costs for the national budget, as these costs could no longer be shifted to imported goods and retailers of imported products. Appellate Body Report, *Korea – Various Measures on Beef*, para. 181.

Further, in respect of the question whether there is a ‘reasonably available’ alternative, the Appellate Body in *Korea – Various Measures on Beef* elaborated a weighing and balancing test, involving a consideration of various factors. It regarded this test as part of the determination of whether the GATT-consistent or less GATT-inconsistent alternative measure is ‘reasonably available’.<sup>81</sup> In respect of the factors to be weighed, it held:

It seems to us that a treaty interpreter ... may, in appropriate cases, take into account the relative importance of the common interests or values that the law or regulation to be enforced is intended to protect. The more vital or important those common interests or values are, the easier it would be to accept as “necessary” a measure designed as an enforcement instrument.

There are other aspects of the enforcement measure to be considered in evaluating that measure as “necessary”. One is the extent to which the measure contributes to the realization of the end pursued, .... The greater the contribution, the more easily a measure might be considered to be “necessary”. Another aspect is the extent to which the compliance measure produces restrictive effects on international commerce, that is, in respect of a measure inconsistent with Article III:4, restrictive effects *on imported goods*. A measure with a relatively slight impact upon imported products might more easily be considered as “necessary” than a measure with intense or broader restrictive effects.

In sum, determination of whether a measure, which is not “indispensable”, may nevertheless be “necessary” within the contemplation of Article XX(d), involves in every case a process of weighing and balancing a series of factors which prominently include the contribution made by the compliance measure to the enforcement of the law or regulation at issue, the importance of the common interests or values protected by that law or regulation, and the accompanying impact of the law or regulation on imports or exports.<sup>82</sup>

This weighing and balancing approach was reiterated by the Appellate Body in *EC – Asbestos*, and applied to the specific case of measures for the protection of human health. Referring to the *Korea – Various Measures on Beef* decision, it stated:

... we observed, in that case, that “[t]he more vital or important [the] common interests or values” pursued, the easier it would be to accept as “necessary” measures designed to achieve those ends. In this case, the objective pursued by the measure is the preservation of human life and health through the elimination, or reduction, of the well-known, and life-threatening, health risks posed by asbestos fibres. The value pursued is both vital and important in the highest degree. The remaining question, then, is whether there is an alternative measure that would achieve the same end and that is less restrictive of trade than a prohibition.<sup>83</sup>

---

<sup>81</sup> *Ibid.*, para. 166.

<sup>82</sup> *Ibid.*, paras 162-164.

<sup>83</sup> Appellate Body Report, *EC–Asbestos*, para. 172.

It appears that the ‘weighing and balancing’ approach to the requirement of necessity adds an element of ‘strong proportionality’ testing<sup>84</sup> that was not present in the old GATT case law.<sup>85</sup> The examination of necessity now includes an examination of the relationship between the importance of the values protected and the nature of the measure (specifically its trade-restrictiveness and its suitability as reflected in its contribution to the objective pursued).<sup>86</sup> In other words, this test seems not to be limited to assessing the *means* used to achieve the chosen objective (termed ‘weak proportionality’) but instead seems to allow the calling into question of the *objective itself* by balancing its importance or value against the trade restrictiveness and suitability of the measure.<sup>87</sup> The latter is commonly called a ‘strong proportionality’ test.<sup>88</sup>

In *Brazil – Retreaded Tyres*, the Appellate Body set out the necessity test, as developed in the case law, concisely as follows:

...in order to determine whether a measure is “necessary” within the meaning of Article XX(b) of the GATT 1994, a panel must consider the relevant factors, particularly the importance of the interests or values at stake, the extent of the contribution to the achievement of the measure’s objective, and its trade restrictiveness. If this analysis yields a preliminary conclusion that the measure is necessary, this result must be confirmed by comparing the measure with possible

<sup>84</sup> For support for the view that the weighing and balancing test suggests a strong proportionality requirement, see Jan Neumann and Elisabeth Türk, ‘Necessity Revisited: Proportionality in World Trade Organization Law after Korea–Beef, EC–Asbestos and EC–Sardines’, *Journal of World Trade* 37 (1), 2003, 199–233, 199–200; Catherine Button, *The Power to Protect. Trade, Health and Uncertainty in the WTO* (Hart Publishing, Oxford and Portland, Oregon), 2004, 36–37. *Contra* see Peter Van den Bossche, ‘Looking for Proportionality in WTO Law’, *Legal Issues of Economic Integration* 35 (3), 2008, 283–294, 289.

<sup>85</sup> On the general agreement among authors that the early case law of GATT panels on the ‘necessary’ requirement did not include a proportionality test, see Peter Van den Bossche, ‘Looking for Proportionality in WTO Law’, *Legal Issues of Economic Integration* 35 (3), 2008, 283–294, 288, footnote 218.

<sup>86</sup> This proportionality aspect can be found in the following statements of the Appellate Body in *Korea – Various Measures on Beef*: ‘The more vital or important those common interests or values are, the easier it would be to accept as “necessary” a measure designed as an enforcement instrument’; ‘[t]he greater the contribution [of the measure to the realization of the end pursued], the more easily a measure might be considered to be “necessary”’; and ‘[a] measure with a relatively slight impact upon imported products might more easily be considered as “necessary” than a measure with intense or broader restrictive effects.’ Appellate Body Report, *Korea – Various Measures on Beef*, paras 162–163. Catherine Button criticises the importation of a strong proportionality test into the ‘necessary’ criterion, arguing that it alters the balance of authority between Members and the WTO, ‘so that Members are no longer free to take severe steps to combat what panels or complaining Members might not regard as significant risks.’ Catherine Button, *The Power to Protect. Trade, Health and Uncertainty in the WTO* (Hart Publishing, Oxford and Portland, Oregon), 2004, 36.

<sup>87</sup> For this distinction between the concepts of strong and weak proportionality, see Joanne Scott, *The WTO Agreement on Sanitary and Phytosanitary Measures: A Commentary*, Oxford Commentaries on the GATT/WTO Agreements (Oxford University Press, Oxford), 2007, 157 footnote 168.
