Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Mitochondria in a personalized cancer treatment approach

Marika W. van Gisbergen

Maastricht, 29 maart 2017

1. Influencing mitochondrial function can be an asset for better cancer treatment modalities. (This thesis)
2. Proper patient stratification is essential for effective cancer treatment. (this thesis)
3. Selective targeting of cancer cells contributes to the reduction of side-effects in normal tissues. (this thesis)
4. GST overexpression is a promising target in the treatment of chemoresistant tumors. (this thesis)
5. The world of mitochondria is "hyper-dynamic". (Marvin Edeas)
6. Future research in the field of mtDNA and mitochondrial function in cancer should focus on the question if alterations are causes or consequences of tumorigenesis.
7. Characterizing molecular mechanisms of tumors, its micro-environment and the involved normal tissue will contribute to a personalized treatment approach.
8. Repurposing drug approaches will reduce drug development and treatment costs. (Paul Workman et al., Cell, 2017)
9. If we knew what it was we were doing, it would not be called research, would it? (Albert Einstein)
10. Dans la vie, rien n'est à craindre, tout est à comprendre. (Marie Curie)
