

Warm perfusion : a potential solution to the organ shortage

Citation for published version (APA):

Brasile, L. (2002). *Warm perfusion : a potential solution to the organ shortage*. [Doctoral Thesis, Maastricht University]. Datawyse / Universitaire Pers Maastricht. <https://doi.org/10.26481/dis.200206271b>

Document status and date:

Published: 01/01/2002

DOI:

[10.26481/dis.200206271b](https://doi.org/10.26481/dis.200206271b)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Warm Perfusion
*A potential solution
to the organ shortage*

Lauren Brasile

- 1) In the search for curative technologies for chronic illnesses, there will be no magic bullets.
- 2) In vitro experimentation does not adequately address the complexities of biologic systems.
- 3) In discerning underlying pathophysiologic processes, the concomitant need to employ controlled experimentation affects the outcomes.
- 4) The use of adequate control design in experimental protocols can lead to such close focus on the tree, that one can no longer see the forest.
- 5) The devil may not be in the details, but rather in the overview.
- 6) The paradigm between the growing demand for organs and the stagnant cadaver donor pool, threatens the future of clinical transplantation.
- 7) Xenotransplantation will not become a clinical reality in the near future.
- 8) Long before it will be feasible to develop biohybrid organs or organs generated from precursor stem cells, damaged organs will be repaired ex vivo mimicking normal physiologic processes.
