

Chondrocytes

Citation for published version (APA):

Chabronova, A. (2023). *Chondrocytes: ribosomes in the spotlight*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20230328ac>

Document status and date:

Published: 01/01/2023

DOI:

[10.26481/dis.20230328ac](https://doi.org/10.26481/dis.20230328ac)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions for the thesis

Chondrocytes: Ribosomes in the spotlight

Alžbeta Chabroňová

1. In osteoarthritis, translation is (de)regulated at the level of ribosomes altering translation rate, modus, ribosome biogenesis, and post-transcriptional modifications of ribosomal RNAs (*This thesis*)
2. Human articular chondrocytes respond to the osteoarthritic microenvironment by functionally adapting their ribosomal pool (*This thesis*)
3. snoRNAs play important roles in chondrocyte pathobiology and they have great potential as drugable targets in osteoarthritis therapy (*This thesis*)
4. The IRES-mediated translation is regulated in osteoarthritis (*This thesis*)
5. The global population is ageing and we, as a society, need to prepare for the imminent rise in musculoskeletal disorders (*Discipline*)
6. Healthy ageing can only be accomplished through scientific curiosity and method (*Discipline*)
7. Everybody knows and respects DNA. Now, it is time to appreciate ribosomes (*Discipline*)
8. When studying molecular processes driving the development and progression of osteoarthritis, we need to consider both transcriptional and translational regulatory mechanisms (*Impact of this thesis*)
9. I don't know where I'm going from here, but I promise it won't be boring (*David Bowie*)
10. The best view comes after the hardest climb (*unknown*)
11. Let's do one last experiment (*Tim J.M. Welting*)
