

# Monoaminergic neurotransmitter systems underlie therapeutic and side effects of deep brain stimulation

Citation for published version (APA):

Alosaimi, F. M. (2023). *Monoaminergic neurotransmitter systems underlie therapeutic and side effects of deep brain stimulation*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20230712fa>

## Document status and date:

Published: 01/01/2023

## DOI:

[10.26481/dis.20230712fa](https://doi.org/10.26481/dis.20230712fa)

## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

# MONOAMINERGIC NEUROTRANSMITTER SYSTEMS UNDERLIE THERAPEUTIC AND SIDE EFFECTS OF DEEP BRAIN STIMULATION

- 1- The monoaminergic neurotransmitter systems play a crucial role in the therapeutic effects and the side effects of deep brain stimulation (DBS) in Parkinson's disease (PD). [Thesis]
- 2- High frequency stimulation of the subthalamic nucleus (HFS-STN) inhibits serotonergic neurons, induces mood-related adverse effects and changes in the serotonergic cell phenotype, indicating neuroplastic effects of DBS. [Thesis]
- 3- Optogenetic and chemogenetic approaches, along with transgenic animal models, provide valuable tools to assess the mechanistic effects of DBS on local and distant neural components. [Thesis]
- 4- HFS-STN indirectly connected to the dorsal raphe nucleus may not involve the relay by the globus pallidus externa. [Thesis]
- 5- HFS-STN improving motor symptoms in Parkinson's may not be related to the cholinergic system.
- 6- The cost and complications associated with invasive DBS surgery procedures necessitate developing of less invasive alternatives. [Thesis]
- 7- Magnetolectric stimulation of the subthalamic nucleus using magnetolectric nanoparticles shows potential as a noninvasive neuromodulation approach, although further research is needed to optimize this technology and address associated challenges. [Thesis]
- 8- Improving the DBS technology can have a positive impact not only on the symptoms of PD patients but also on their quality of life and daily activities, as well as the feasibility of DBS treatment.
- 9- "Whoever takes a path upon which to obtain knowledge, Allah makes the path to Paradise easy for them." *Prophet Mohammed*
- 10- "This world is grand, and within it lies an ocean of undiscovered findings." *Isaac Newton*
- 11- "I don't have any choice whether or not I have Parkinson's, but within that lack of choice, there are a million other choices I can make." *Michael J. Fox*
