## DOI:

[10.26481/dis.20231123td](https://doi.org/10.26481/dis.20231123td)

## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

providing details and we will investigate your claim.

## Consumers in the cloud

### EU consumer protection in cloud computing contracts

#### Propositions

1. Some online applications that fulfil the definition of cloud computing have been on the market for several years. The change related to the advent of cloud computing, however, lies in the scale and range of applications available through this model of access.
2. Cloud computing is effectively a new public utility, like electricity, and should be regulated as such. Computing power became an infrastructure for the digital economy.
3. EU consumer law should specifically regulate cloud computing because the consumer is not in possession of physical and software elements of the product and more aspects need to be regulated contractually.
4. Cloud computing has a broader societal relevance beyond purely economic aspects. It may exemplify a more general trend in society. We are moving away from owning “things” towards models, based on use and access, which depend on needs.
5. Standard terms and conditions of cloud providers still contain a number of provisions which are unfair under EU consumer law.
6. Consumers never read terms and conditions of contracts.
7. Any business-to-consumer product that collects personal data should not be described as free. Any provision of personal data by a consumer, not strictly needed for the performance of the contract, is effectively a counter-performance.
8. Consumer risks in cloud computing or potential market failures can become a significant issue and deserve special attention from the regulatory perspective (impact paragraph)
