

Breaking the silence

Citation for published version (APA):

Anand, S. (2024). Breaking the silence: nano-engineered scaffolds for tympanic membrane regeneration. [Doctoral Thesis, Maastricht University]. Maastricht University. https://doi.org/10.26481/dis.20240221sa

Document status and date: Published: 01/01/2024

DOI: 10.26481/dis.20240221sa

Document Version: Publisher's PDF, also known as Version of record

Please check the document version of this publication:

 A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.

• The final author version and the galley proof are versions of the publication after peer review.

 The final published version features the final layout of the paper including the volume, issue and page numbers.

BREAKING THE SILENCE: NANO-ENGINEERED SCAFFOLDS FOR TYMPANIC MEMBRANE REGENERATION

by

Shivesh ANAND

- 1. Geometry plays a critical role in governing the mechanical, acoustical, and biological properties of the tympanic membrane scaffolds (*Chapter 3*).
- 2. Chitin nanofibrils allow the fabrication of mechanically reinforced tympanic membrane constructs with immunomodulatory response (*Chapters 4 and 5*).
- 3. Biomimetic patches with tunable drug releasing capabilities facilitate patient-specific treatment of microbially-induced tympanic membrane perforations (*Chapter 7*).
- 4. Advanced 3D culture environments stimulate the differentiation of mesenchymal stromal cells toward tympanic membrane regeneration (*Chapter 8*).
- 5. The use of biofabrication techniques aims to simplify the overly complicated myringoplasty surgeries that demand highly specialized skills and precision (*Chapter 10*).
- 6. The peer-review process of each publication has a unique story to tell in the end.
- 7. As tissue engineers, we often forget that the world interprets the term "scaffolds" in completely different contexts.
- 8. Analogous to cells, the human mind too requires a precise set of stimuli to be "happy" and to perform optimally.
- 9. The role of societal motivation in academia can be compared to that of the high voltage power supply in electrospinning.
- 10. The best things in life and the worst things in flasks show up when they are least expected.

These propositions are regarded as opposable and defendable, and have been approved as such by the candidate's supervisors.
