

# Genetic mechanisms of inherited bleeding disorders as a basis for personalised medicine approaches

Citation for published version (APA):

Todaro, A. (2024). *Genetic mechanisms of inherited bleeding disorders as a basis for personalised medicine approaches*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20240424at>

## Document status and date:

Published: 01/01/2024

## DOI:

[10.26481/dis.20240424at](https://doi.org/10.26481/dis.20240424at)

## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions belonging to the dissertation:

## **Genetic mechanisms of inherited bleeding disorders as a basis for personalised medicine approach**

1. mRNA analysis has added value beyond DNA and protein analysis. (this thesis)
2. VWF propeptide persistence affects FVIII binding as well as VWF multimerization. (Casonato et al. *Blood* 2003 and this thesis)
3. A nonsense mutation is not necessarily a null mutation. (this thesis)
4. Plasma corrects the consequences of FV deficiency, but molecular therapies could correct its causes. (this thesis)
5. Since TFPI contributes to bleeding in several coagulation factor deficiencies, pharmacological modulation of FV-short splicing might be beneficial in multiple bleeding disorders. (this thesis)
6. Genetics plays a role, to a greater or lesser extent, in all diseases. (M. Jackson, *Essays in Biochemistry*. 2018)
7. Given the double role of FV in the coagulation process, deficiencies in FV may result in either haemorrhagic or thrombotic tendencies. (R. Asselta, *Semin Thromb Hemost*. 2009)
8. Rare diseases are rare, but rare disease patients are numerous. (Orphanet)
9. Actions speak louder than words; let your words teach and your actions speak. (St. Anthony of Padua)
