

Application of in-silico approaches to cardiovascular disease

Citation for published version (APA):

Du, J. (2014). *Application of in-silico approaches to cardiovascular disease*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20141008jd>

Document status and date:

Published: 01/01/2014

DOI:

[10.26481/dis.20141008jd](https://doi.org/10.26481/dis.20141008jd)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions of This Dissertation

Application of *in-silico* approaches to cardiovascular disease

1. Application of multiple target protein conformations is better than a single target protein conformation in a virtual ligand screen campaign.

This dissertation

2. FVIII binding to membranes is achieved through synergy between the FVIII C1 and C2 membrane binding domains.

This dissertation

3. The NF-κB activating activity of IRAK-M is dependent on at least two different sites on the death domain.

This dissertation

4. Residues W74 and R97 of IRAK-M are important for NF-κB and ERK activations.

This dissertation

5. The IRAK-M and IRAK-4 tetramers may form a sandwich structure as IRAK-M:IRAK-4:IRAK-M complex.

This dissertation

6. *In-silico* pharmacology paradigm is ongoing and presents a rich array of opportunities that will assist in expediting the drug discovery.

S Ekins, British Journal of Pharmacology, 2007, 152, 21–37

7. The effective integration of data and knowledge from many disparate sources will be crucial to future drug discovery.

D Searls, Nature reviews. Drug discovery, 2005, 4, 45-58

8. Assure but not assume.

Gert Vriend

9. Nature is a labyrinth in which the very haste you move with will make you lose your way.

Francis Bacon

10. Tolerance is power.
