

Metabolic rewiring of the failing heart

Citation for published version (APA):

Kuhn, A.-R. (2021). *Metabolic rewiring of the failing heart: unravelling cause and effect*. [Doctoral Thesis, Maastricht University]. Ridderprint. <https://doi.org/10.26481/dis.20211118ak>

Document status and date:

Published: 01/01/2021

DOI:

[10.26481/dis.20211118ak](https://doi.org/10.26481/dis.20211118ak)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Metabolic rewiring of the failing heart – unraveling cause and effect

By Annika-Ricarda Kuhn
18 November 2021

1. Metabolic syndrome-associated HFpEF is accompanied by extensive cardiometabolic rewiring, particularly affecting mitochondrial function. *(This thesis)*
2. HFpEF comorbidities impact plasma metabolite levels, limiting the suitability of circulating metabolites as biomarkers for this disease. *(This thesis)*
3. Local metabolite profile changes precede the deposition of extracellular matrix in myocardial infarct regions, reflecting the dynamic nature of the fibrotic process. *(This thesis)*
4. Phenotypical modulation of cardiac fibroblasts alters cellular metabolism, and vice versa, modulation of cellular metabolism alters the phenotype of fibroblasts. *(This thesis)*
5. Metabolic interventions designed to improve cardiomyocyte function may be detrimental to other cardiac cell types due to differential substrate demands. *(This thesis)*
6. Subclassification of HFpEF patients based on the underlying pathophysiology provides the basis for the development of more individualized treatment strategies.
7. Early identification and treatment of individuals with high cardiometabolic risk will prove beneficial in the long term by reducing HFpEF incidence and associated health care expenditures.
8. Success in research needs four Gs: Glück, Geduld, Geschick und Geld.
Luck, patience, skill and money.
— Paul Ehrlich
9. Whatever it is you're seeking won't come in the form you're expecting.
— Haruki Murakami
