1. Functional tricuspid regurgitation, even of moderate degree, cannot be neglected at the time of mitral valve surgery

2. The higher the tricuspid valve tethering, the higher the rate of tricuspid annuloplasty failure over time

3. The outcome of patients undergoing associated mitral and tricuspid valve surgery is significantly impaired by preoperative RV remodeling, regardless of pulmonary hypertension

4. Tricuspid annuloplasty using ring is superior to suture annuloplasty

5. The outcome of infective endocarditis of tricuspid valve undergoing surgery is hampered by intravenous drug addiction, presence of PM leads and infected tricuspid prosthesis, regardless the type of surgery

6. LIMA-LAD, any revascularization you decide to do, is the best option you can offer to a patient

7. Preparing an operation is just as important as doing it... if not more!

8. Mitral valve annuloplasty may not be a sufficient solution for treating secondary mitral regurgitation.

9. A heart surgeon sees his/her children grow in twenty-centimeter notches and accompanies their dreams with a kiss while they sleep

10. A dog is the only thing on earth that loves you more than he loves himself

11. On stage, as an actor, I know exactly how to move. In life, I have more difficulties to get along.
12. When I write a novel, a tale, or a comedy, I taste the passions of the characters, I suffer their torments ... I feel their blood flowing inside me ... well, I get to live many lives instead of only one.
