

# Resource allocation and knowledge production : studies in the economics of university research

## Citation for published version (APA):

geuna, A. (1998). *Resource allocation and knowledge production : studies in the economics of university research*. Universiteit Maastricht.

## Document status and date:

Published: 01/01/1998

## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

## **Resource Allocation and Knowledge Production**

door  
Aldo Geuna

1. Public investment in scientific research should be aimed not only at “picking winners” but also at the discovery of information on the capabilities of researchers and research centres.
2. The unintended side effects of the competitive university funding system may have perverse long-term consequences.
3. The development of university-industry co-operation can result in the capture of the former by the latter if the bargaining power of the university is low.
4. Education should be seen not only as a tool to increase human capital but also as a way of aiding students in their moral and social development.
5. An increasing number of markets can be characterised as winner-take-all markets, consequently a reduced share of people succeed in appropriating a large share of wealth.
6. The Internet, by allowing for the easy transfer of information, can open the way to a new Renaissance or to increased alienation among people.
7. Europeans still have too strong nationalist feelings, often neglecting their common cultural background and frequently exaggerating national differences.
8. Some form of regulation and bureaucratisation hinders an extremely large number of activities.
9. I discovered a lot of good things in The Netherlands, but for sure food is not one of them.
