

Generative models improve radiomics

Citation for published version (APA):

Chen, J. (2023). *Generative models improve radiomics: reproducibility and performance in low dose CTs*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20230703jc>

Document status and date:

Published: 01/01/2023

DOI:

[10.26481/dis.20230703jc](https://doi.org/10.26481/dis.20230703jc)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Generative Models Improving Radiomics

Reproducibility and Performance in Low Dose

CTs

1. Radiomics is the bridge between medical imaging and personalized medicine. (Lambin P et al.)
2. Low dose CTs should be more popular for screening and monitoring of populations at risk due to the long term risk posed by low levels of ionizing radiation exposure. (Musolino S et al.)
3. Developing a radiomics prediction model for early lung cancer classification in low-dose CT can reduce the mortality of lung cancer. (Wookjin C et al.)
4. Deep generative models outperform traditional methods in low dose CTs denoising. (Chen H et al.)
5. Not all shortcuts in encoder-decoder networks are necessary for low dose CTs denoising. (This thesis)
6. Generative models can improve radiomics reproducibility and performance in low dose CTs. (This thesis)
7. Denoising seems to be a useful pre-processing step to consider for low dose CT radiomics. (This thesis)
8. Low dose CT radiomics can be applied into a new scenario: early diagnosis of lung cancer at a patient level. (This thesis)

9. Improving low dose CT radiomics performance may reduce ionizing radiation exposure for patients. (This thesis)
10. Some people call this artificial intelligence, but the reality is this technology will enhance us and our equipment. So instead of artificial intelligence, I think we'll augment our intelligence. (Ginni Rometty)
