Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

providing details and we will investigate your claim.

## Summary

This thesis focuses on understanding the mechanism of financial phenomena in asset markets, such as recent price bubbles in global commodity markets, and the contagion of financial crisis in the Eurozone. The contribution of this thesis is both methodological and empirical. This thesis develops novel methodologies to analyze how the interactions among investors and different markets affect commodity and stock prices. With these analyses, this thesis finds the recent price volatilities in commodity markets can be partly attributed to the co-existence of different investor groups that employ sub-rational trading strategies. This thesis also reveals how the network of mutual influences among different European stock markets change during the Eurozone crises.
