## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

### **Metabolic Bone Disorders in patients attending the Fracture Liaison Service.**

“Secondary Osteoporosis” revisited.

1. Secundaire osteoporose is een begrip dat de lading niet dekt (*deze thesis*).
2. Het niet diagnosticeren van onderliggende aandoeningen kan het effect van behandeling voor fractuurpreventie in het gedrang brengen (*deze thesis*).
3. Indien alle patiënten met een recente fractuur 800IE colecalciferol per dag krijgen, is bij de meeste patiënten het vitamine D tekort afdoende behandeld (*deze thesis*).
4. Beeldvorming van de wervelkolom is de enige manier om de volledige fractuurgeschiedenis van patiënten met een recente niet-wervelfractuur te kennen (*deze thesis*).
5. Vitamine D suppletie in hoge dosis kan het risico op fracturen verhogen.
6. Monoclonal gammopathy of undetermined significance (MGUS) is ook een metabole botziekte.
7. De fractuur liaison service wordt beschouwd als de meest optimale organisatie in het kader van secundaire fractuurpreventie.
8. Het fenotype en risicoprofiel van een patiënt 50 jaar of ouder met een recente fractuur is complex.
9. Slow down and enjoy life. It's not only the scenery you miss by going too fast - you also miss the sense of where you are going and why (E. Cator).
10. La vie est dure sans confiture (niet alleen in de Alsace).
