Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions related to the dissertation entitled:

Nutrition tactics to improve post-exercise recovery

1. When ingesting large amounts of carbohydrate during exercise, co-ingestion of fructose or sucrose increases the capacity for exogenous carbohydrate oxidation compared to the ingestion of an isocaloric amount of glucose only. *(This thesis)*
2. The combined ingestion of glucose and fructose helps to achieve the recommendations for post-exercise carbohydrate intake by reducing gastrointestinal distress when compared to the ingestion of an isocaloric amount of glucose. *(This thesis)*
3. A potentially important and missed opportunity to consume a high protein meal in well-trained athletes is before going to bed. *(This thesis)*
4. Combining pre-sleep protein ingestion with resistance-type exercise represents an effective strategy to maximize overnight skeletal muscle reconditioning. *(This thesis)*
5. The perpetual diet wars between factions promoting low-carbohydrate, keto, paleo, high-protein, low-fat, plant-based, vegan, and a seemingly endless list of other diets has led to substantial public confusion and mistrust in nutrition science. *(Kevin Hall)*
6. The fact is, if grandma and grandpa hit the gym for 90 minutes a day pumping iron, it is conceivable that we could arrest their osteopenia and sarcopenia. *(Bruce Spiegelman)*
7. Whether it's to please modern metrics or to make an altruistic contribution to the community understanding of exercise and nutrition, we need to move outside the conventional peer-reviewed literature. *(Adapted from Louis Burke)*
8. Protein products should be purposely designed and marketed for specific applications such as to facilitate post-workout recovery or support overnight recovery.
9. If you can't beat the man, you gotta out eat the man. *(Bryan Wolters)*
