Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

**Essays on the Role of Knowledge, R&D, and Technology-Based Firms
in the Evolution of Socio-Techno-Economic System**

By

Muhammad Shafique

1. Technological change can be understood better through the knowledge-based view than the artifact-based view of technology and technological systems.
2. Transformative technological change (TTC) occurs due to the structural change in the universe of knowledge and ultimately manifests in the structural change in the socio-techno-economic system.
3. Structural change in the universe of knowledge emerges from the changes in the zeitgeists and paradigms.
4. Zeitgeists and paradigms tend to change due to radical discoveries, inventions and innovations.
5. Radical discoveries, inventions and innovations tend to occur when explorers transcend their existing domains of experience.
6. Invention and innovation need the compass more often than the map.
7. Technology-based firms (TBFs) tend to benefit more from the technological M&As when they seek complementary knowledge bases for exploring technological opportunities beyond their existing domains of experience.
8. Technological profile and output of TBFs is determined by the interaction between the intended and emergent technological opportunities.
9. Information provides hindsight, knowledge arises out of insight, and wisdom emerges from the combination of both. Foresight is the fruit of wisdom.
10. One of the greatest challenges in the practice of science as well as technology is to escape the gravitational force of zeitgeists and paradigms.
11. Good is created when economic being serves the social being; tragedy is born when the economic being serves itself at the cost of, or to the neglect of, the social being.
