

Application of pyrrolidone building blocks in developing renewable 2-oxazolines based thermosets

Citation for published version (APA):

Roy, M. (2020). *Application of pyrrolidone building blocks in developing renewable 2-oxazolines based thermosets: Towards sustainable and recyclable resins*. [Doctoral Thesis, Maastricht University]. Maastricht University. <https://doi.org/10.26481/dis.20200824mr>

Document status and date:

Published: 01/01/2020

DOI:

[10.26481/dis.20200824mr](https://doi.org/10.26481/dis.20200824mr)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

Propositions

1. Be passionate. “Everyone can rise above their circumstances and achieve success if they are dedicated to and passionate about what they do.” – Nelson Mandela
2. Life's most persistent and urgent question is, 'What are you doing for others?' – Martin Luther King Jr.
3. A tidy fume hood means a lazy chemist – a modified Jöns Jacob Berzelius's quote.
4. In designing your polymer chain, imagination plays a bigger role than knowledge.
5. Making new bioplastics create not only solutions, but new problems as well.
6. Chemists hold the key to solving today's plastic problem, and to lead us towards a sustainable future.
7. One shouldn't judge a polymer by its colour.
8. Dynamic and reversible polymer networks could be the holy grail to the plastic problem.
9. Amorphous polymers are not to be underestimated. They can surprise you with their unique properties.
10. We pursue sustainability not because it is a hot topic, but to let the future generations breathe the same air as we do.
