

Causes and consequences of dilated cardiomyopathy

Citation for published version (APA):

Verdonschot, J. (2021). *Causes and consequences of dilated cardiomyopathy: integrating genotype and phenotype to redefine disease diagnostics and therapeutics*. [Doctoral Thesis, Maastricht University]. Gildeprint Drukkerijen. <https://doi.org/10.26481/dis.20210108jv>

Document status and date:

Published: 01/01/2021

DOI:

[10.26481/dis.20210108jv](https://doi.org/10.26481/dis.20210108jv)

Document Version:

Publisher's PDF, also known as Version of record

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

CAUSES AND CONSEQUENCES OF DILATED CARDIOMYOPATHY

Integrating genotype and phenotype to redefine disease diagnostics and therapeutics

Job Antonius Jozef Verdonschot

3 november 1988

1. Genetic testing should be performed in every patient with non-ischemic dilated cardiomyopathy. *(dit proefschrift)*
2. Patients with dilated cardiomyopathy and a truncating variant in *TTN* or *FLNC* are susceptible to arrhythmias and should have a lower threshold for preventive device therapy. *(dit proefschrift)*
3. The finding of truncating variants in *FLNC* concludes the era of novel prevalent monogenic dominant forms of dilated cardiomyopathy. *(dit proefschrift)*
4. Novel analytical methods are essential in understanding and comprehending large (genetic) datasets in order to make a translation towards clinical application. *(dit proefschrift)*
5. Omics-approaches will help us to define dilated cardiomyopathy subgroups and elucidate their pathophysiological differences. *(dit proefschrift)*
6. Future trials aimed at improving outcome in dilated cardiomyopathy patients should put more emphasis on phenotyping of the patient. *(dit proefschrift)*
7. Screening tools with a high sensitivity to detect dilated cardiomyopathy in an earlier stage will eventually increase the impact of genetic testing for relatives of patients with dilated cardiomyopathy. *(dit proefschrift)*
8. Embracing the complexity of dilated cardiomyopathy will lead to recognition of subtle differences, which makes the difference in a more personalized approach. *(dit proefschrift)*
9. A solid foundation in genetics is increasingly important for everyone. *Anne Wojcicki*
10. Het abstract van je artikel is als het affiche voor je live-concert. *Stephane Heymans*
11. Much to learn you still have, my young padawan. *Yoda, The Empire Strikes Back / Mark Hazebroek*
12. When we forget the infection, will we remember the lesson? *Oliver Sykes*
