

# The nature of minimax search

## Citation for published version (APA):

Beal, D. F. (1999). *The nature of minimax search*. Universiteit Maastricht.

## Document status and date:

Published: 01/01/1999

## Document Version:

Publisher's PDF, also known as Version of record

## Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

**The Nature of Minimax Search**

D.F. Beal

1. Search is the judge of knowledge.  
(Chapter 3 - search produces more reliable values.)
2. Proofs can be harder to verify than the propositions they prove.  
(Chapter 5 - IBV.)
3. Reasoning backwards is harder than reasoning forwards.  
(Chapter 8)
4. We are limited not by what we can see, but by what we have time to see.  
(Chapter 9 - search envelopes.)
5. A successful strategy assumes there is always some way to improve the situation.  
(Chapter 10 - null-move quiescence.)
6. Any plan is better than no plan.  
(Minimax search on any numbers is better than random play.)
7. Probability theory is the understanding of ignorance.
8. Literature and arts represent the peaceful side of human nature. On the other side, games are better than war.
9. Human efforts are at their most successful when the work benefits other people.
10. Computers can think the unthinkable.
